"THE DON,"

FROM A PHOTOGRAPH OF MR. J. L. TOOLE, IN THIS CHARACTER.

OUR NOTE BOOK.

BY JAMES PAYN.

Marriage gifts are not what they used to be; they are much better, and more valuable. The chief spectacle, next to the bride, at the house where her marriage feast is held is, now, the long tables tastefully set out with the nice little things (and some pretty big ones) which have been given to her and her beloved object. "Know all men by these presents," her proud and pleased face seems to say, "how much he is liked by all who know him, and how Papa and Mamma are liked, and how some people have a regard even for me!" If I were a bride whose engagement had been broken off, one of the most serious disagreeables of the position, to *my* mind, would be the returning of them. I should prefer to keep them *for next time*, which would save a great deal of inconvenience and embarrassment, and would also make sure of them. The gifts from the man himself, or those, at least, which were eloquent of the affections—the faded flower, his poems and billets-doux, and his much-too-complimentary photograph—would, of course, have to be returned; but I don't think I would insult him by sending back valuable jewellery. He should have the "keeper" of his engaged ring (and welcome), but not the ring itself, which it is only too probable the false creature would put to the same use with some other young person. "Take back the gift (price two shillings)" was a song both the sentiment and price of which were justly and severely commented upon a quarter of a century ago. You should never take back a gift; and, therefore, it is clear you should not afford the giver the opportunity of doing so.

So thought a young lady in East London the other day, whose discarded lover, nevertheless, took out a summons against her in a police-court for the restitution of what he still believed to be his property, because he had parted with it (like the cynic's definition of gratitude) in the hope of favours to come. If his love-gifts were not very valuable they had been unusually various; comprehending tables, towels, three sets of fire-irons, an athletic costume (unhappily not more particularly described), nineteen pictures, and a lamp. This was surely pretty well as to quantity: their rather peculiar nature, as he explained, arose from the young woman's taking a fancy to things she saw in shops (such as a fire-iron), when she would say, "That's very nice, I like it," whereupon, witnessed this ungallant Romeo, "I bought it, and she kept it." Unlike the young person of Oldham, who "when she got presents she sold 'em, and when folks said 'How mean!' she replied 'All serene' and that's about all that she told 'em," this young lady did not sell her presents (very wisely, for they never bring one half they cost); but simply, and so far as they would go, furnished her house with them. Sentiment having come to an end, she took a common-sense view of the matter, and, though she may not have been exactly the girl, as the phrase goes, "*for my money*," she proved herself to be the girl for her sweetheart's, for the Magistrate decided in her favour. Some things, indeed, were ordered to be given up, but not the fire-irons; and I have searched the report in vain to find what became of that "athletic costume."

A dinner-party of the contributors to the Dictionary of National Biography has just been held, I read, at the Star and Garter. Notwithstanding the company was composed of antiquaries and learned literary experts, the affair seems to have gone off successfully and without bloodshed. But there must have been serious apprehensions. With the exception of your theologians, there is no class of men so combative, or who are so prompt to deal with those in the same line of business who disagree with them. A modern *antique*, in intaglios, is effected by polishing the cameo with a wheel to which a camel's hair brush is fixed, which gives the appearance of that mellow smoothness which is the result of time; but modern *antiquaries* are not made that way. How I should have liked to see them quenching their literary animosities in the sparkling bowl, and even, perhaps, wishing one another long life!—but I was not invited. The work they met to celebrate was worthy of the compliment. Although repeatedly importuned by literary persons, from the beginning of the century, to undertake this *magnum opus*, publishers have fought shy of it: it was not so easy to fill "an obvious void in literature" of such dimensions, and it was also very expensive. Experience was not in its favour. The *Biographica Britannica*, indeed, had been published, but the cream of its information was in its foot-notes: the names, too, were few and descanted upon at unwieldy length; but it was actually finished—begun in 1747, concluded in 1766—and in that respect had the advantage of its successors. The cost (of production) was not sufficiently "counted," and the profits were discounted. In 1777, Dr. Kippis commenced a second edition of the big, big B; but it stopped at the fifth folio volume, at the beginning of F, sixteen years after its commencement. Its subscribers probably attached a peculiar significance to that initial. In 1842 the Society for the Diffusion of Useful Knowledge projected a still more ambitious work—a "Universal Biography." It stopped at the seventh volume, still at the letter "A." In 1870 there was another biographical fiasco. The first volume of the present dictionary began in 1885. "D" is actually published, and "E," "F," and "G" are in print. Mr. Leslie Stephen has hitherto accomplished his herculean task at four times the speed of Dr. Kippis, and, like General Grant, he means to go through with it. An idea of the magnitude of his task may be formed from the fact that the fifteen parts already issued contain matter enough to fill forty octavo volumes! The work—which deserves its title of "National" in more than one sense—will be finished in 1897, in fifty volumes.

The late sale of theatrical costumes from the St. James's Theatre had more than a personal interest, and for other than playgoers. The richness of the dresses and their association with their wearers make the large sums they realised by no means surprising; but what is of more general interest is the contrast which their appropriateness afforded to the stage costumes of old. There was something of Rosalind in her attire, even when its charming wearer was "not in it," and something of Orlando even when hanging over the back of a chair. In old times a great deal was left to the imagination of the spectator in this matter. Dryden is very cynical upon the lack and cheapness of the stage costumes in the Duke of York's company of players:—

> Tack but a copper lace to drugget suit,
> And there's a hero made without dispute.
> And that which was a cupon's tail before,
> Becomes a plume for Indian Emperor.
> But all his subjects, to express the cure
> Of imitation, go, like Indians, bare."

It is a little difficult, even now, to reconcile the reciter in evening-dress, with nothing to "relieve" it but a glass of water, with the subject of his heroic declamation; but with what must even Garrick have had to contend, when he played Macbeth "with silk stockings, buckles at the foot and knee, powdered wig, and small sword"! The economy of the stage in the matter of the tailor's bill, in those days, must fill a modern manager's heart with envy. The identical coat in which Garrick played Fribble, in "Miss in Her Teens," in 1747, was used by Quick as Consol in "Cross Purposes," in 1772. What adds to the strangeness of this thrifty proceeding, the character in the one case was a fop of the highest fashion, and in the other a grave and prudent citizen. Think of Mr. Irving playing Jingle in the costume (a good deal "let out") worn by Charles Kean in "Louis XI."!

The verdict of the public upon the acting of the marionettes in the Italian Exhibition seems to be, "They are clever enough, but one soon has enough of them." It does not seem a very severe one. One knows a good many people (not *exactly* marionettes, but exceedingly like them), and in other callings besides that of the drama, of whom the same may be said. It is surely creditable to a thing of strings and wires that it can amuse a grown-up person even for five minutes. Puppet-playing is an art which, like ballooning (though not, of course, such a high art), does not progress much. In an account of the marionettes of Italy, written by a traveller seventy years ago, he passes the same criticism we hear to-day. He mentions, however, two skeletons as playing their part admirably. "They glided about, and accompanied their hollow-voiced speeches with excellent gesticulations, while their fleshless jaws moved quite naturally." The ballet, too, "danced with the agility of Vestris, and 'cut' much higher than ever he did in his life." The airs and graces of the French ballet-dancers were capitally quizzed; but what delighted the audience most were the Dutchman who took snuff, and his lady, brandy—out of a pocket pistol, between their leaps and bounds. As a medium of satire—a *Punch* on wires—the marionettes have still, perhaps, a future before them: though I suppose if they acted in too lifelike a manner the Lord Chamberlain would be down upon them.

M. Goliffe, a Swiss traveller in Italy at about the same date as the preceding, gives an account of the Passion Play, as performed by marionettes in Naples much as it is done there to-day. The overture was the famous duet of "Tu ti lascio amato bene," in Cimarosa's "Matrimonio Segreto,' and it was repeated between the acts. "Whenever our Saviour was about to appear he was announced by a solemn tune; Judas, on the contrary, was heralded by a waltz or an allemande, even when he came to hang himself, and was strangled by a fiend." There was the Last Supper, and the washing of the Apostles' feet, and St. Peter cutting off the soldier's ear—nothing, in short, was omitted; the audience took the deepest interest in the representation, and, so far from being struck by what to us would seem its extreme irreverence, evidently beheld in it an auxiliary to religion.

A legal question has just been settled as to whether or no a certain pew in a parish church was an appurtenance of a country mansion—the decision was against its proprietor, and is doubtless a matter of congratulation upon public grounds; but I confess I am, sorry for the loser. I know all that can be said for open sittings, and agree with it; but nothing is more agreeable to its tenants than a roomy old-fashioned family-pew; it makes the same difference to the worshipper that the possession of a private sitting-room makes to the frequenter of hotels. I remember one in the vale of Berkshire, which, as a boy, used to afford me infinite content. It was very large and high, and had a fire-place in it, the supplying of which with coals, so as not to disturb the preacher, was a most delicate operation. I could only see him by standing on the seat, and (what was of much more consequence) he could not see *me*: I was what good Catholics call "in retreat," and profited by the circumstance. The most interesting account of a pew in fiction is probably to be found in "The Legend of Montrose." Scott is not now read, I fear, by boys; but how I used to delight in that account of Dugald Dalgetty's impatience under the Presbyterian preacher's "sixteenthly" and "seventeenthly," while he thought of the noble Marquis bound and gagged in the dungeon below, and whether his condition would be discovered before that prodigious sermon was finished. Never, I suppose, even in real life, was discourse listened to with such unappreciating ears.

Apropos of the statement that the Flying Scotsman on Monday accomplished its accelerated journey between London and Edinburgh in four minutes less than the promised eight-and-a-half hours, the following stage-coach bill, published in 1706, will have some interest:—"All that are desirous to pass from London to York, or from York to London, or any other place on that road, let them repair to the Black Swann in Holbourne, in London, and to the Black Swann in Coney-street, in York: at both places they may be received in a stage-coach every Monday, Wednesday, and Friday, which performs *the whole journey*, if God permit, in four days." Each passenger was allowed 14 lb. of luggage, "and all above, threepence a pound." And yet there are people, at large, who want the good old coaching days revived!

THE COURT.

Her Majesty is in her usual excellent health. According to present arrangements the Court will remain at Windsor Castle until about July 17, removing then to Osborne. After a residence there of five weeks the Queen will proceed to Scotland for three months. June 28 being the fiftieth anniversary of her Majesty's coronation, the event was celebrated throughout the kingdom, more particularly in the towns which possess Royal associations. There was a special commemorative festival service in Westminster Abbey. The Prince and Princess of Wales took leave of her Majesty and left the castle. The King of the Belgians, attended by Count d'Oultremont, visited her Majesty, and remained to luncheon. The Queen held a Council on June 29. The Earl of Lytton and Sir William White were introduced and sworn in members of the Privy Council. After the Council General Mena, Envoy Extraordinary and Minister Plenipotentiary of the United States of Mexico, was introduced to the Queen's presence and presented his letter of recall. Viscount Cranbrook, the Earl of Lytton, and the Right Hon. Sir William White had audiences of her Majesty. On June 30 Princess Louise (Marchioness of Lorne) arrived at the castle from Cumberland Lodge. The Bishop of Ripon had the honour of dining with her Majesty and the Royal family. On Sunday morning, July 1, the Queen and the Royal family went to Frogmore and attended Divine service at the Royal Mausoleum. Several members of the Royal household were present. The Bishop of Ripon, assisted by the Dean of Windsor, officiated. Divine service was afterwards performed in the private chapel at the castle. The Bishop of Ripon and the Dean of Windsor had the honour of dining with her Majesty and the Royal family. On July 2 the Duchess of Albany, with her children, arrived at Windsor from Claremont on a visit to the Queen.

The Prince and Princess of Wales returned to Marlborough House on June 28 from visiting the Queen at Windsor. The Duc d'Aumale and the Duke of Cambridge visited the Prince and Princess, and remained to luncheon. The Prince presided at a meeting of the Council of the Duchy of Cornwall. His Royal Highness was present at the debate in the House of Lords on June 29. The Duke of Teck, Princess Mary Adelaide (Duchess of Teck), and Prince Francis and Princess Victoria of Teck, visited the Prince and Princess on June 30, and remained to luncheon. On Sunday, July 1, the Prince and Princess, and Princesses Louise, Victoria, and Maud, were present at Divine service. On July 2 the Prince visited the Queen at Windsor, dined with her Majesty, and subsequently returned to London. The Prince presided over a meeting of the organising committee of the Imperial Institute at Marlborough House. It was stated that the funds now available, exclusive of subscriptions from the Indian Empire and temporarily invested there, amounted to £310,000. Lord Rosebery, Lord Herschell, and Sir John Rose were appointed trustees for the endowment fund. Prince and Princess Christian, Prince and Princess Victor of Hohenlohe-Langenburg, and Countess Feodore and Countess Victoria Gleichen lunched with their Royal Highnesses on July 3. The officers past and present of the Rifle Brigade, the Prince Consort's Own, have presented the Prince, their late Colonel-in-Chief, and the Princess with a clock, on the occasion of their Royal Highnesses' "Silver Wedding." Their Royal Highnesses have fixed Tuesday, July 17, for their visit to Islington to open the Great Northern Central Hospital. Prince Albert Victor will open the Beaconsfield sea-wall and promenade at Bridlington on July 19, and will visit Bristol on July 25 to unveil the Jubilee statue of the Queen.

The King of the Belgians left England on June 29.

The Duke of Edinburgh on June 28 paid a visit to the Bologna Exhibition, where he met with a very hearty reception. Next day the Duke arrived in Rome, and in the afternoon King Humbert paid his Royal Highness a visit at the hotel where he is staying. The Duke sailed from Spezia on July 2 with the ironclads Alexandra, Téméraire, and Dreadnought for Naples. The Duchess of Edinburgh has arrived at her summer Palace of Rosenau, near Coburg, which Duke Ernst some time ago placed at her disposal. All her children are with her.

"THE DON."

Academical attire certainly suits our popular comedian. He has been handed down to posterity as an "artful dodger," a steeplechase rider, an old toy-maker in a canvas coat, a waiter, an engine-driver, and a retired soap-boiler; but when did Mr. J. L. Toole appear to greater advantage than as the genial, good-natured, twinkling-eyed "dean of chapels," in his collegiate cap and his Master of Arts gown, otherwise the Rev. Horace Millikin, in "The Don"? Mr. and Mrs. Herman Merivale, in this amusing picture of modern university life, with its summer commemoration festivities, its flirtations, concerts, garden parties, and cosy teas in the rooms of undergraduates, have managed to fit Mr. Toole to a nicety, and he seems to revel in the anxieties and the perplexities of the simple-minded bachelor Fellow who is entrapped by an artful widow, and, thanks to a scapegrace, is involved in collegiate troubles that would shock the most liberal Warden. It is not only that it is amusing to see Mr. Toole in university habit, but in the course of the play it is seen how cleverly the sketch is introduced, and with what little exaggeration our never-failing comedian caricatures the humours and social idiosyncrasies of university life. Mr. Toole's enthusiastic welcome at both the Universities of Cambridge and Oxford show that "there is no ill-feeling" on the part of the authorities, and that he has been freely forgiven for taking the name of a college tutor in vain. Since these visits the theatre has been crowded with orthodox clergy, headed by Canon Farrar, and with the generous and genial aid by Mr. Toole, in this very play, one more plank has been added to the strong bridge being built between the rival and sometimes antagonistic banks of Church and Stage. Very shortly after Saturday, July 7, Mr. Toole, who has let his pretty little theatre—first to Mr. Lionel Brough, and then to the "Pepita" Comic-Opera Company—will be off on his travels. He will play at Weymouth, Guernsey, and Jersey, and then—after a holiday trip to St. Malo, the principal points of interest in Brittany and Normandy, the bath cure at Aix-les-Bains, and a short visit to Homburg—the popular actor will start on his lengthened provincial tour, and may not be expected back in London with "The Don" until Christmastime. Whenever he returns he will be welcome home again, for London is never at its merriest without the presence of an actor who has done more than any of his companions to make men and women merry, and who, for his deeds of generosity and unselfishness, is universally beloved by friends and public alike. And there is another point that must never be forgotten. Mr. Toole in the whole of his career has never produced a play or spoken a line on the stage that could possibly offend anyone. The old era of Wright and his farcical companions has passed away, and Mr. Toole should have the credit of introducing honest, hearty fun that leaves no unpleasant taste in the mouth. He thoroughly deserves his great popularity and success.

THE "TIMES" AND THE IRISH NATIONAL LEAGUE.

An action for libel, which is of great political interest, came on for trial, on Monday, July 2, in the Queen's Bench Division of the High Court of Justice, before Lord Chief Justice Coleridge and a Special Jury. It was brought against the *Times* newspaper by Mr. Frank Hugh O'Donnell, formerly M.P. for Dungarvan, who was for some years honorary secretary and vice-president of the Irish Home-Rule Confederation, and one of the Executive of the Irish Land League and of the National League in London. In March, April, May, and June of 1887, a series of articles, entitled "Parnellism and Crime," appeared in the *Times*, charging prominent members of the Home-Rule party with the guilt of direct incitement to outrage and murder, and with "basing their movements on a scheme of assassination, carefully calculated and coolly applied." Particular stress was laid on the circumstance that Frank Byrne, the paid secretary of the Home-Rule Confederation, and subsequently of the Land League and National League at their offices in London, received and sent to Dublin the knives with which Lord Frederick Cavendish and Mr. Burke were murdered, on May 6, 1882, in the Phœnix Park; and Mr. O'Donnell and Mr. Justin M'Carthy, M.P., were stated to have been accompanied by Frank Byrne, on April 10,

Mr. F. H. O'Donnell.

Mr. Ruegg opens the case for the Plaintiff.

in meeting Mr. Parnell at Willesden Junction on his way from Ireland to Paris. It was insinuated, apparently, that the officials and leading members, or "a trusted few," of that branch of the National League which was established in England, having its offices in two small rooms at Palace-chambers, Bridge-street, Westminster, where Byrne kept the knives and a Winchester rifle and revolvers, were party to the assassination plot.

Mr. O'Donnell thereupon wrote a letter to the *Times*, which was published on June 17 last year, denying that he and other "honourable members of that Constitutional organisation" had any complicity in the abominable crimes of Frank Byrne. The *Times* made certain comments on this letter, which showed, as it said, "the extraordinary weakness of the defence set up by Mr. O'Donnell for those of his party who were associated with Byrne before and after the Phœnix Park murders."

The first witness, Mr. Lucy.

It pointed out that in October, 1882, on the motion of Mr. O'Donnell, seconded by Mr. T. P. O'Connor, the League expressed its "fullest confidence" in Frank Byrne's "capacity, energy, and honesty"; and it was stated that in January, 1883, Mr. Parnell himself provided the money for Byrne to escape to France. The article proceeded, after further discussion, with these personal references to the plaintiff: "Mr. O'Donnell, however, is fairly entitled to say that his eyes have been opened by later revelations. What requires to be explained is Mr. O'Donnell's silence upon points as to which he might speak with some authority. Mr. O'Donnell, as we have seen, either knows nothing about the matter, or does not wish to say anything. But Mr. Parnell, at least, cannot plead ignorance. It is plainly inconsistent with his whole course of conduct. Byrne was in Mr. Parnell's confidence in 1881, when the 'Invincibles' were founded, and in 1882, when the assassinations were planned."

Mr. Herbert Gladstone.

The plaintiff, Mr. O'Donnell, alleged that these and other passages in the articles of the *Times* were libellous, as imputing to him that he, along with Mr. Parnell and others, were accomplices of Byrne and the other conspirators for the Phœnix Park murders. He claimed £50,000 damages for this libel.

The defendants, the proprietors of the *Times*, denied that the articles complained of had any such meaning with regard to the plaintiff, Mr. O'Donnell, who was not, they said, closely associated with Mr. Parnell and the leading members of his party, and was never admitted to their confidence, or permitted to know their secrets. They did not include the plaintiff among "the trusted few" who might be aware of Mr. Parnell's real object, which was not the re-establishment of an Irish National Parliament, but the complete separation of Ireland from Great Britain. They said that the plaintiff always was, and still is, distrusted by Mr. Parnell and by those closely associated with Mr. Parnell; and that he could not be aware of the extent to which they were mixed up with the instigators and organisers of murders, outrages, and crimes in Ireland and elsewhere. With these reservations as to the meaning of the articles in the *Times*, it was contended that they were not defamatory of Mr. O'Donnell; that they were true in substance and in fact, and that the article of June 17 was only a fair comment on his letter.

The counsel for the plaintiff was Mr. Ruegg; for the defendants, the Attorney-General, Sir Henry James, Q.C., Mr. Lumley Smith, Q.C., and Mr. Gwynne James. Mr. Ruegg opened the case, reading the alleged libels and Mr. O'Donnell's letters to the *Times*; after which the first witness he called was Mr. Henry Lucy, who was, from 1881 to 1885, manager of the Parliamentary reporting staff of the *Daily News*, and writer of the summary of Parliamentary debates. He stated that he knew the plaintiff, Mr. O'Donnell, as a member of the Irish Home-Rule Party, and he considered that a libel referring to "Mr. Parnell and his allies" would be a libel on the plaintiff; but there were passages in the articles read which he should not suppose to refer to Mr. O'Donnell. In cross-examination, he was asked respecting the speeches made concerning the Parnellite League by Mr. Gladstone and Mr. Trevelyan, in 1881 and 1882; but the Court decided that these could not be put in evidence. Mr. W. A. Roberts, Mr. Joseph Cowen, and Mr. P. Burt, M.P., were examined on the second day of the trial, and gave it as their opinion that Mr. O'Donnell was referred to in the alleged libel. With this evidence the case for the plaintiff closed. In opening the case for the defendants the Attorney-General commented upon the fact that Mr. O'Donnell had not been called, and denied that he was a member of the Irish Land League, against which the *Times*' animadversions were directed. Sir R. Webster said he should call evidence to show the doings of the League in inciting to murder during the years 1879 to 1881. Sir R. Webster, in continuing his speech on the third day, said he would have to refer to one or two other speeches, including one by Mr. Parnell. This was delivered at Ennis. On Sept. 9, 1880, Mr. Parnell said:—"Now what are you to do if a tenant bids for a farm from which his neighbour has been evicted? (Interruption: 'Shoot him!' 'Kill him!'). Now I think I heard someone say, 'Shoot him.' But I wish to point out to you a very much better way, a more Christian, and a more charitable way. When a man takes a farm from which another has been evicted you must shun him at the roadside; when you meet him you must shun him in the streets of the town, you must shun him at the shop-counter, you must shun him in the fair and the market-place, and even

Mr. C. S. Parnell.

in the house of worship." Mr. Mally spoke later on in county Mayo, in the presence of Quinn, acting secretary of the Land League, and, referring to landlords, said:—"I am not telling you to shoot, but I am telling you to do it if you like. Only 10s. is required for a gun license for all the year round, but £3 has to be paid for a game license. With the 10s. license they could shoot vermin all the year round." He next referred to a number of letters to show what was passing just before and after the legal suppression of the Land League.

Mr. J. Burlinson has been appointed superintendent of the Great Western Railway, in the room of Mr. G. N. Tyrrell, who resigns his position after forty-six years' service.

The Liverpool Jubilee Memorial Fund Committee have decided to hand over the balance of the fund, amounting to £1400, to the authorities of the Liverpool University College for the erection in connection with the new college buildings of a Jubilee tower, to cost £5000.

THE SILENT MEMBER.

The Prince of Wales, who so judiciously occupies a neutral position as regards Party politics, dropped into his place in the House of Lords on the Twenty-ninth of June in time to hear an important debate on the defences of England. Until the piping times of peace settle in for good, and Boulangers cease from troubling and Bismarck is at rest, it is to be feared invasion "scares" will periodically recur in this country. These alarums are not wholly useless. The hectoring language of certain truculent Gallic Colonels in the time of Napoleon III. created that unexampled instance of pure patriotism, the Volunteer Movement, which has provided us with a strong army of sharpshooters. Some twenty-nine years later, the militant post-prandial speeches of Lieutenant-General Lord Wolseley, Adjutant-General of her Majesty's Forces, have again called public attention forcibly to the question of national defences. In view of the fact that each of the great Powers on the Continent is practically an armed nation, are the naval and military forces of Great Britain sufficiently powerful to repel invasion?

The Earl of Wemyss rose on the present occasion to answer this question after his fashion by moving that, under the circumstances, "this House welcomes the proposal of her Majesty's Government for an increase of our defensive means, and confidently looks to their forthwith taking such further measures as will give ample security to our Empire and just confidence to the country." No one has a greater right than the noble Earl to tackle the subject. As Lord Elcho, he was the life and soul of the Volunteer Movement in the London district. His Lordship concisely expressed his idea of the value of the Volunteers by saying, "There are 200,000 of these serving at the present time, and over a million who have passed through the ranks." But these statistics and others which Lord Wemyss expatiated on are familiar in our mouths as household words. It is open to question whether it was expedient for Lord Wolseley, the illustrious Duke the Commander-in-Chief, and other Peers to join the noble Earl in repeating a more than thrice-told tale. As the Prime Minister aptly reminded Lord Wolseley, after scouting the idea that it was possible for a hundred thousand troops to be transported in one night from the shores of France to the shores of England, "I do not think it is desirable that we should discuss in all its details for the benefit of our neighbours the precise mode in which we expect them to attack us, and in which we intend to defend ourselves; and I should be very grateful if the noble Viscount would use his official knowledge rather to guide us than to correct us." The Marquis of Salisbury occasioned a ripple of sympathetic laughter by adding, in his old ironic style, "I am afraid that if chastisement is the proof of love, the love of the noble Lord overflows all bounds." Henceforward, we may hope that political and administrative chiefs will work in unison to complete our armaments.

The "silver streak" is to remain "inviolate" yet a little while longer, to use the poetical language of Sir Michael Hicks Beach, who is not in the habit of copying the flowery style of the immortal Silas Wegg. On the last Wednesday in June, Sir Edward Watkin received the support of Mr. Gladstone and of 165 votes in moving the second reading of the Channel Tunnel Experimental Works Bill. But the Government and 307 hon. members opposed the measure, which was negatived by a majority of 142. Still, it may be prudent to remember the line of the song which protests that "Nothing is sacred to a sapper."

Mr. Ritchie energetically perseveres with the principal Ministerial measure. By further lightening the Local Government Bill, the right hon. gentleman has made progress. With respect to the vexed question of public-house licenses, the Sunday Closing clause was not got rid of on the Twenty-eighth of June without an edifying triangular duel between Mr. Caine on the one hand and Sir William Harcourt and Sir Wilfrid Lawson on the other. There was a majority of 62 in favour of excluding the clause. Omission of the remaining licensing clauses was then sanctioned. In their anxiety to show the new County Councils the way they should go, hon. members have sought to hamper the forthcoming boards with directions of various kinds, some serviceable, others unnecessary; Mr. Ritchie has done well to consult the metropolitan Conservative members as to the London County Council, and to fall in with the views in favour of adopting the Parliamentary divisions as electoral districts, and granting two members to each. It is satisfactory to know that many trustworthy and experienced administrators on existing vestries, men who have done really valuable work and effected great improvements, will be ready and willing to serve on the first London Council, which is to have its Aldermen, and should be of dignity and weight.

The land question in Wales, and agricultural depression in the Principality, gave rise to an important discussion in the House of Commons on the Twenty-ninth of June. Son of a Merionethshire tenant-farmer, Mr. Thomas Edward Ellis earnestly appealed to the Government to readjust farm rentals in Wales. Mr. Raikes blandly offered Ministerial sympathy. But the motion Mr. Ellis prayed the House to adopt was rejected by 146 against 128 votes.

The reappearance in the House of Mr. James Lowther on the Second of July, proudly escorted by Mr. Akers-Douglas and Mr. W. Lowther, as the new member for the Isle of Thanet, was the occasion of a burst of Ministerial cheering. I need hardly add that the Irish Nationalists indulged in similar cheering at the next day's sitting, when Dr. Fitzgerald took his seat as member for South Longford.

Mr. T. Sexton, M.P., has been nominated by the Dublin Municipal Council for re-election as Lord Mayor of Dublin.

The Australian Cricketers beat the team representing North of England at Manchester by five wickets.

The Flying Scotchman, which on July 2 began running between London and Edinburgh in eight and a-half hours, accomplished the journey in four minutes less than the appointed time.

Lieutenant-General Sir Gerald Graham, who commanded the Expeditionary Force at Souakim in 1885, has been appointed Governor and Commander-in-Chief at Bermuda, in place of Lieutenant-General Gallwey.

The recent Military Tournament at the Agricultural Hall will be the means of contributing a sum of £14,000 to the funds of the Cambridge Hospital for Old and Disabled Soldiers. This sum exceeds by £4000 the amount realised by any previous tournament, and the War Office has now decided that the event shall take place annually and shall be official.

The annual distribution of prizes to the students connected with the Charing-cross Hospital Medical School took place on June 29, in the lecture theatre at Chandos-street. The Rev. the Master of Trinity College, Cambridge, presided. The Dean, Dr. Bruce, submitted the annual report, which stated that in the course of the year seventy-four new students had been enrolled, and that at the present time there were 225 in daily attendance.

The Husband-Beater.

(*Umbella Plagosa.*)

How to carry it.

A problem in Fashion.

Here is a simple & obvious solution, but it is difficult to steer clear of the Drum-Major effect

This is nice & easy: but it's too obstructive: other people want to walk the pavement as well as you

The worst of this notion is that it is uncomfortably suggestive of a tight-rope walker.

You might try it this way — only if you do, little boys will ask you where your barracks are.

This would be all very well — if you were a Bengal Lancer.

There is an impression of incompletenss about this idea it seems to want a board with 'BLIND' on it to finish it off.

If you suspend the thing sword-wise, you will probably get hooted at: besides, you are not a Dragoon.

Nor a Rifle-man,

Nor a torch-bearer,

This idea is certainly not to be encouraged: — are you a lady, or a navvy?

While this recalls somewhat too vividly the familiar action of Punch.

No. we can think of no way out of it but this: you rid yourself of all responsibility, and you make a man look an unutterable fool — always a desirable achievement.

C. Hedtachel, sc.

MUSIC.

THE HANDEL FESTIVAL.

This great celebration at the Crystal Palace closed, as already stated, on Friday, June 29, with a performance of "Israel in Egypt." Our comments on this, and on the second day's programme—the miscellaneous selection—were unavoidably postponed until now. The pieces chosen for the second festival day were well calculated to give an idea of Handel's versatility—a quality for which he has not been sufficiently credited by the public at large, who are generally accustomed to think of him only as a composer of English oratorios. In this respect, doubtless, his grandest genius and highest skill have been pre-eminently displayed; but there are other phases in which, although subordinately, Handel has earned a title to be ranked as one of the greatest composers of the past. His proficiency as a performer on the organ and the harpsichord was acquired at an early age; and although his compositions for the former instrument were suited to the very limited capacities of the English organs of his period and to the volatile taste of the audiences before whom he performed them, his harpsichord music still retains its interest both in point of beauty and science. As a composer for the organ, Handel cannot compare with his great contemporary, Sebastian Bach, who, in his isolated position, wrote up to his own ideal, not, as Handel did in his adopted country, to please an unskilled audience that generally preferred prettiness to sublimity. This tendency of the English public of his time (fortunately not that of our own period) was amply proved by the cold reception of some of Handel's sublimest oratorio music—"Israel in Egypt" for instance, which was at first a comparative failure, and was repeated with interpolations of pieces from other sources made by Handel himself; and his concertos for the organ performed by him. That selected for the second day of the week of the Handel Festival just closed was No. 7 in *B* flat. This florid piece of organ music was very skilfully executed by Mr. W. T. Best, of Liverpool. Several other pieces in the selection programme were on this occasion given for the first time at a Handel Festival, and these we shall first refer to. Madame Trebelli sang the fine "Invocation" from "Esther," which was followed by the chorus "He comes" (from the same oratorio). The well-known air "Total eclipse" was rendered by Mr. B. McGuckin, followed by the chorus "Oh, first created beam." "Belshazzar" furnished the fine chorus "Ye tutelar gods." In the second part, the stately saraband from the opera of "Almira" (the original of the aria "Lascia ch' io pianga") was another festival novelty, as were the "Calumny" chorus from "Alexander Balus;" the aria (from "Ottone") "Del minacciar," sung by Mr. Santley; and the air (assigned to Mr. McGuckin), "When two fond hearts," from "Deidamia;" the programme closing with two choruses and the air "Guardian angels" from "The Triumph of Time and Truth;" the solo having been expressively sung by Madame Albani, who had previously given the more familiar "Let the bright seraphim" with brilliant effect (the trumpet obbligato of Mr. McGrath having been a feature); and the aria "Ombra mai fù" from "Serse." Other items of the selection that have before been associated with festival and other performances require mere mention. Mr. McGuckin in "Waft her, angels" (with the recitative); Mr. Lloyd in "Call forth thy pow'rs" and "Love in her eyes;" Mr. Santley in "Honour and arms;" Madame Nordica in "So shall the lute and harp" and "Hush, ye pretty warbling choir;" and Madame Trebelli in "Lascia ch'io pianga," gave effect to the respective pieces, the orchestra having been heard specially in the "occasional" overture, and the violins thereof (upwards of 200) in a wonderfully consentaneous performance of the sonata in *A*. One or two *familiar* choruses were included in the programme, which was preceded by the "Coronation Anthem" given after the "National Anthem." Miss E. Squire should be mentioned as having rendered efficient co-operation with Mesdames Nordica and Trebelli in the trio (with chorus), "See the conquering hero."

Brief notice of the closing performance—"Israel in Egypt"—will suffice; first reference being made to the choruses, on account of their being the pervading features of the oratorio, and also because—as before observed—the choral effects are necessarily those for which the vast area of the Crystal Palace is best suited. In the grand series of movements for single and double choir presented by "Israel in Egypt," Handel's capacity for the realisation of religious sublimity and dramatic expression in music is found at its highest. Nowhere—not even in "The Messiah"—is there anything finer than the choral music of "Israel," the effect of the stupendous choruses in which, as given at a Handel Festival, cannot be imagined by those who have had no experience thereof. Among the many profound impressions produced by them on the closing day of this year's celebration may be particularised those which attended the magnificent rendering of "He spake the word," the "Hailstone" chorus, "He sent a thick darkness," "But as for His people," the several masterly movements ending the first part, the wondrous double choruses of the second part including the triumphant climax. The soprano solo music was divided between Madame Valleria and Miss A. Marriott, Madame Patey having been the contralto and Mr. Lloyd the tenor. This gentleman's admirable delivery of the declamatory air "The enemy said" was a special feature. The duet for two basses, "The Lord is a man of war," was assigned to Mr. Bridson and Mr. Brereton. The names of the several solo vocalists sufficiently indicate the general efficiency of their performances.

The musical arrangements have been on a scale of grandeur fully equal to that of past celebrations; a body of instrumentalists and choristers was assembled, consisting of nearly 4000 executants, the effects having been enhanced by the gigantic organ erected in the Handel Orchestra, manipulated by Mr. Eyre, organist to the Crystal Palace. Here fresh recognition must be made of the admirable chorus-singing throughout the festival. Such a result might seem almost impossible of attainment from so vast a choral body; certainly nothing like it had been realised at any previous celebration. Long preparation, and the importation of a large number of fresh voices exercised an important influence.

In conducting the performances, Mr. Manns has again proved his exceptional fitness for the arduous task which he first essayed at the festival of 1883, when suddenly replacing Sir M. Costa, who was disabled by the illness that soon afterwards terminated fatally. Apart from the high musical interest of these festivals, the admirable arrangements for the comfort and security of visitors have always been subjects for remark. A large number of gentlemen acting as honorary stewards greatly facilitated the placing of the audience, who were directed to their respective localities by conspicuous placards corresponding with the indications on the tickets. A strong police force is another important feature of these occasions, which pass off with a freedom from confusion or disturbance truly remarkable in such enormous gatherings. Recognition is also due to Mr. Henshaw Russell, the manager, and Mr. William Gardiner, the secretary, for the facilities and courtesies rendered by them for reporting purposes. The occasion has been eminently successful; upwards of 86,000 visitors having attended during the festival.

ROYAL ITALIAN OPERA.

The production of Mozart's "Il Flauto Magico" (the Italian version of his "Die Zauberflöte"), could, owing to great pressure on space, but be barely mentioned until now. The opera was the last of Mozart's stage compositions, having been composed in 1791, and first performed, at Vienna, in September of that year, but a few weeks before his death. The libretto, originally in German, is a curious jumble of masonic mysteries and magical absurdities, that would have been sufficient to have killed music of less beauty. Intended to strike the popular ear so as to revive the fallen fortunes of the theatre of Shickaneder, a buffo actor, who furnished the book and sustained the character of Papageno, the many exquisite melodies of "Die Zauberflöte" were soon heard all over the civilised world. The Italian version, "Il Flauto Magico," was first given in London in 1811, at the opera-house in the Haymarket, then known as the King's Theatre, and has retained its musical charm here, as elsewhere, in spite of its libretto. The work is not always easily presentable, on account of the difficulty of the music assigned to the character of Astrifiammante, the Queen of Night, written for a particular singer of the day possessed of a soprano voice of exceptionally high compass. The character just specified was sustained in the representation now referred to by Miss Ella Russell, who sang the difficult music with much brilliancy. A character of more importance, both dramatically and musically, is that of Pamina, who has music of pathos and sentiment to sing instead of the mere bravura roulades and show passages belonging to the Queen of Night. Madame Minnie Hauk as Pamina gave full effect to the several passages of tenderness and passion, and threw genuine earnestness of expression into the part, that was in strong contrast to the absurdity of the surroundings. Tamino, the tenor, is not dramatically interesting, but has some charmingly melodious music to sing, and this was well rendered by Signor Ravelli, with a good sostenuto style in accordance with the requirements of the music. In the small part of Papagena Mdlle. Sigrid Arnoldson sang and acted with liveliness and piquancy, and Signor Del Puente, as Papageno, rendered the music and the farcical character with excellent judgment and discretion. Signor Novara (vice M. E. De Reszké, indisposed) gave the grand music of Sarastro with impressive effect, and was especially successful in the aria "Qui sdegno." Signor Rinaldini was (as often before) efficient as Monostatos; the incidental passages for the three attendants of the Queen of Night and the three Genii were well sung by Mdlles. Dotti, Desvignes, Bauermeister, and L. Lablache, and Madame Scalchi (this lady having been a member of each trio), and subordinate parts were sufficiently well filled. The stage accessories were as elaborate and splendid as usual under Mr. Harris's management. The interpolated ballet was an innovation that might well have been spared. Mr. Randegger conducted.

The next specialty of Mr. Augustus Harris's remarkable season was announced for Thursday, July 5, when Rossini's "Guglielmo Tell" was to be produced—too late, of course, for present notice.

The present series of the Richter Concerts at St. James's Hall is within one performance of its close. At the eighth concert, on July 2—a concerto by Bach, for three oboes, bassoon, two horns, solo violin, two violins, viola, violoncello, and contrabasso—was introduced for the first time here. The term "concerto" formerly meant a concerted piece for several or many instruments; not as now, a piece for the special display of the skill of one performer (perhaps two, or three), with the accompaniment of others. Bach and Handel both produced many works of the former description. That now referred to consists of three movements, and is characterised by the dignity and antique grace which so largely prevail in Bach's music. The solo violin part was played by Mr. E. Schiever. The vocal music consisted of the closing scene of the first act of Wagner's "Siegfried," the declamatory passages in which for the title-character were finely declaimed by Mr. E. Lloyd, those for Mime having been assigned to Mr. W. Nicholl. The important orchestral details were excellently realised by the fine band conducted by Dr. Hans Richter, full justice having also been rendered to the other items of the programme:—Weber's overture to "Oberon," that by Mendelssohn to "A Midsummer Night's Dream," and Beethoven's Symphony (No. 7) in A.

Otto Hegner, the extraordinary young pianist, gave a farewell recital at St. James's Hall on June 28, when his performances were of the same remarkable excellence as on previous occasions.

Among recent miscellaneous concert announcements have been those of Mr. John Thomas (the well-known harpist), Mdlles. M., C., F., and E. Eissler (violinist, harpist, and pianists), Miss E. Barker (an esteemed vocalist), Signor Chiostri, Madame Zagury (*Court singer to the King and Queen of Portugal*), Mrs. Cunnah, Herr Von Czeke, Mr. W. Ganz (the eminent pianist and conductor), Miss E. Sturmfels and Mr. A. Napoleon (accomplished pianists), the Hyde Park Academy of Music, Signor De Cristofaro, and Mr. R. Stuart's Chopin recital.

The special festival service at Westminster Abbey on June 28—in celebration of Coronation Day—included some important musical features. A collection was made in aid of the funds of the Westminster Hospital.

The Canadian team for Wimbledon arrived at Liverpool on July 1 by the mail-steamer Sarmatian, from Quebec.

The Association of Original Engravers, heretofore known as the Society of Painter-Etchers, is to be henceforth entitled "The Royal Society of Painter-Etchers."

The Kennel Club's summer dog-show has been held in the picturesque grounds of the Ranelagh Club, Barnes. The large number of 1400 was entered, including exhibits from the kennels of the Prince of Wales, Prince Francis and Princess Victoria of Teck, and Prince Albert Solms.

At the great lamp exhibition recently concluded at St. Petersburg, the Imperial Technical Society have awarded their gold medal to the Defries Safety Lamp and Oil Company for the "manufacture of durable and safely-constructed lamps burning satisfactorily kerosine or heavy oils," this being the only award of the kind made, and the fifth such honour given to the celebrated Defries' Safety Lamps.

The literary services Mr. Clement Scott has rendered to the theatre as a dramatic critic for the past twenty-five years are about to be recognised in a pleasant fashion. What the *World* terms the "professional silver wedding" of this brilliant writer is to be celebrated by a dinner in his honour at the Arts Club, at which the *élite* of the theatrical profession will, no doubt, be present.

At the Crystal Palace on July 3 the eighty-second anniversary festival of the Licensed Victuallers' School, in which the children of deceased or deceased victuallers are maintained and educated, was held under the presidency of Mr. A. H. Bevan, of the firm of Barclay and Perkins. The firm of Barclay and Perkins gave 500 gs., and the chairman, whose list amounted to £2500, gave 100 gs. In the whole about £6000 was obtained as the result of the festival.

THE PLAYHOUSES.

Opinions differ widely on the subject of the new play at the Strand Theatre. The majority of the experts will have nothing to do with Mrs. Coffin's half-comic, half-pathetic domestic drama, "Run Wild"; they think it exaggerated, crudely done, and improbable; and do not hesitate to say that the leading character does not suit Mr. Willie Edouin at all, and that in it he is quite out of his element. The minority, however, dive below the surface: they detect in the drama a human ring; they extract from it a measure of consolation; and they desire to see the chief character played by Mr. Edouin when he is master of his emotions and can do some sort of justice to a very admirably-written and correctly-conceived character. Mr. Edouin is not the first comic actor who has essayed a part that departs from the regions of broad farce. He has an essentially funny personality no doubt, an elastic countenance, a droll manner, a nature redolent of humour. People cannot conceive the possibility of a purely burlesque actor turning himself into a man who can at turns be as serious as he is funny. But, after all, laughter and tears are near neighbours. Robson, inimitable in burlesque, was more excellent still in "The Porter's Knot" and "Daddy Hardacre"; Mr. Toole can be excruciatingly funny in farce and delightfully pathetic as Caleb Plummer. Mr. David James set the Strand and the Vaudeville in a roar in the wildest extravaganza, and drew tears from his audience as well as laughter in "Apple Blossoms" and "Our Boys." Why, then, should not the author of "The Heathen Chinee" represent and understand this delightful, good-natured, tender-hearted Mr. Parker, who is courteous, deferential, and respectful to the woman who insults him and galls the better part of his nature. The essence of this play is contained in a memorable stanza from "In Memoriam":—

> Oh! yet we trust that somehow good
> Will be the final goal of ill,
> To pangs of Nature, sins of will,
> Defects of doubt, and taints of blood.

A good-hearted man, free from prejudice, and essentially noble in nature, can, with the assistance of his generous daughter, subjugate and win over to a higher humanity the worldly wife and the unnatural son. That is all. The theme is very simple, but it is effective. It is a picture that must come home to the audience, for it is truthfully if unskilfully painted, and, take it for what it is worth, there is not much more improbable about it than the scenes of real life in "Our Boys." Had Mrs. Coffin possessed the knowledge of the stage acquired by Mr. H. J. Byron, and his skill in word-play, the theme of her drama would have been by no manner of means inferior to that enormously successful work. On the occasion of the first performance, Mr. Edouin manifestly did not do himself justice. He was "all abroad," as they say, and made others as nervous as himself. But he read the part admirably, and eventually, with practice, he will act it just as well. The personation of the "stuck up" wife was an admirable piece of true art by Miss Susie Vaughan. It would be difficult to find any fault with it in tone, style, or colour. And there were innumerable other parts well acted: an impudent London man-servant, by Mr. Chevalier; a young, impulsive lad, by Mr. Fawcett; a generous youth, by Mr. B. Webster; a pretty, bouncing girl, by Miss Grace Huntley; and, to the delight of the audience, Miss Alice Atherton was present to play the gay, excitable child of Nature who, reared in the wilds of Connemara, comes to take London by storm, and to brighten domestic gloom with her fresh and breezy manner. As such, the sweet sister makes an admirable contrast to her "unlicked cub" of a brother, one of the most disagreeable characters ever written, but one boldly attacked and conscientiously carried out by Mr. Harry Eversfield. He never flinched, and bore his artistic punishment like a man. Actors should be congratulated on these acts of self-denial, for plays of contrast will be impossible if actresses refuse to play ugly women, or if actors shy at bad young men. There is too much disposition on the stage to carry private characters on to the boards. "Oh! if I play that part," says Miss Footlights, "they will think me just as bad." "But if I really play that part well," says young Tyro, "they will think me a horrid cad." Extend the argument, and the actress may be made out a poisoner and the actor a murderer, in fact and deed. Mr. Eversfield plays young Parker with great skill.

AT HENLEY REGATTA.

Fine Midsummer weather only is needed to make the annual meeting for the Thames boating men and their numerous friends and admirers, on that pleasant part of the river below the town of Henley, one of the most delightful entertainments of the season. We are unable to say, at this time of writing, that Henley Regatta has been favoured with a bright and rainless sky, and with long hours of sunshine and dry sitting on the green-sward of parks and meadows. If it should be so, as we hope it may be, the agreeable scene depicted by our Artist will have been realised, no doubt, in many places along the river-banks, where cheerful parties of companions for the day will have awaited the most interesting races, not without much collateral pastime in sociable talk, in temperate luncheon, and even in the diverting ordeal of consultation with an artful old fortune-teller, who pretends to reveal to a young lady the complexion, position, and character of her predestined lover. The young man who lies at her feet, anxiously watching in her face the effect of this momentous prediction, is probably more interested in its result than in that of any of the aquatic contests on the Thames.

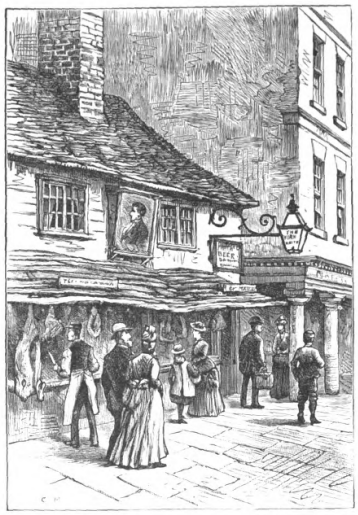
Major-General E. H. Clive, Commandant of the Staff College, is to be Governor of the Royal Military College at Sandhurst.

Earl Compton, Sir Charles Warren, Sir J. Parker Deane, Q.C., and the Hon. T. Allnutt Brassey have become vice-presidents of the Bethnal-green Free Library.

Lady Magheramorne, who was accompanied by Lord Magheramorne, on June 30 laid the foundation-stone of a new parish church at Hornsey.

Colonel Paley, of Cantley Hall, Doncaster, has presented the Rev. Canon Fleming with an organ for the new church of St. Philip, Buckingham Palace-road, at a cost of £1100.

The Rev. J. H. Bernard, Junior Fellow of Trinity College, Dublin, has been elected by the Board of Fellows to Archbishop King's lectureship, as successor to Archdeacon Gwynne, appointed Regius Professor of Divinity.

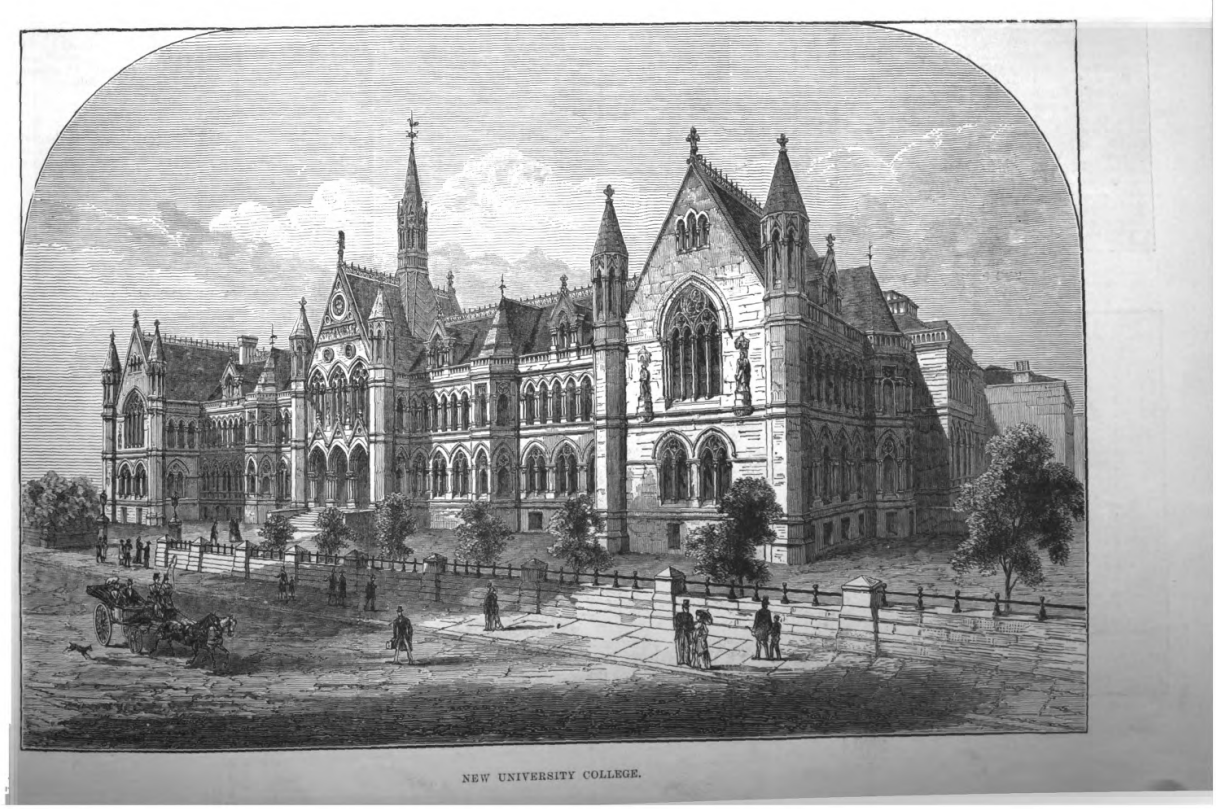


An exhibition of works executed in trades and in the recreative evening classes in connection with St. Andrew's Home and Club for Working Boys, was opened on June 30 by the Duchess of Buccleuch at the Home, 30, Great Peter-street, Westminster.

The Government of Victoria having asked her Majesty's Government to send out an inspector of schools as a Commissioner on Education in connection with the Centennial Exhibition at Melbourne, the Rev. R. Wilde, of Westbourne, Emsworth, inspector of the south-western district, has been selected for the appointment.

NOTTINGHAM AND THE MEETING OF THE ROYAL AGRICULTURAL SOCIETY.

ST. PETER'S CHURCH.



BIRTHPLACE OF KIRKE WHITE.

ST. MARY'S CHURCH.

The meeting of the Royal Agricultural Society of England, this week, at Nottingham, though not favoured, as was hoped, with the presence of his Royal Highness the Prince of Wales, is likely to be successful; and our Illustrations of that interesting town and neighbourhood will be appreciated by many readers. Nottingham, with its hosiery and lace manufactures and sundry other trades; with its population, including the suburbs and neighbouring industrial villages, of a hundred and twenty thousand, is one of the most important towns in the English Midlands. It is a place of much note in English history; and the supposed derivation of its name from a Saxon word meaning that its primitive inhabitants, ancient Britons, dwelt in caves of the rock, suggests a curious contrast between its condition now and in ages past. The rock, of soft red sandstone, with its caves of artificial formation, rises visibly enough on the north side of the broad valley of the Trent, nearly a mile from the bank of that river, and a stream called the Leen flows at its foot.

On the summit of this caverned cliff, in the time of the Norman Conquest, William De Peverel built his castle, which became the property of the Crown under Henry II. It was enlarged and strengthened by the Plantagenet Kings, who often visited it, sometimes held their Parliaments here, and occasionally fought for its possession, as when the rebel John, in 1194, stood a siege of the castle against his brother Richard. They used it also for a State prison; the twenty-four Welsh hostages were put to death here in 1212; the traitor Mortimer, in 1330, was here captured by Edward III.; David, King of Scotland, was imprisoned here in 1346; and this place of confinement admitted a Speaker of the House of Commons, and a Lord Mayor and Sheriffs of London, who were punished for denying the absoluteness of Royal prerogative in the fourteenth century. It was at Nottingham, in 1485, that Richard III. mustered his army for the Battle of Bosworth; it was at Nottingham again, in 1642, that Charles I. raised his standard for the Civil War against the English Parliament. In that war, after the occupation of the Castle by the Parliamentary forces, it was bravely defended by the garrison under Colonel Hutchinson; after that war the fortress was demolished, like many others. Its site was granted by Charles II. to Villiers, Duke of Buckingham, who sold it to the first Duke of Newcastle. A stately mansion was built there, the modern Nottingham Castle, belonging to successive Dukes; but in 1831 it was burnt down by a mob of rioters during the Reform Bill

agitation. Most of the adjacent park is now built over; a public Museum and Gallery of Art, and the drill-hall of the Nottinghamshire (Robin Hood) Rifle Volunteers, have been established on this site. The gatehouse or barbican of the ancient castle, much altered, and some fragments of walls and bastions, are the only remnants of considerable antiquity—that is to say, aboveground; but there are subterranean caverns and passages, one called "Mortimer's Hole," through which Edward III., with Sir William De Eland and his band of men-at-arms, is said to have entered to surprise Mortimer in the Keep of the Castle.

The town, which held its charter as a corporate borough seven centuries ago, and has elected its Mayor and Aldermen since the later Plantagenet reigns, owed its prosperity at first to the weaving of woollen cloth, and to fine iron manufactures, the skill of its smiths being noted in an old proverb. Its great Market-place, a triangular space of nearly six acres, with wooden colonnades in front of some of the shops, has an old-fashioned air; at one end is the Exchange Hall, a handsome building. Three old parish churches, St. Mary's, St. Peter's, and St. Nicholas', claim precedence over a dozen or twenty of more recent date. St. Mary's is a large cruciform edifice of Perpendicular Gothic architecture, the better part of it constructed in the fifteenth century; its most commanding feature is the high and broad central tower at the intersection of the nave by the transepts. The south porch, of earlier Decorated Gothic style, is said to have belonged to the neighbouring Priory of Lenton, and its stones to have been removed thence and rebuilt as part of this church. The interior, which measures 216 ft. in length of nave, choir, and chancel, 97 ft. in length of the transepts, and 67 ft. in width of nave and aisles, is lighted by unusually large windows; it has been carefully restored, and is adorned with sculpture, paintings, and stained glass. St. Peter's Church, with its lofty tower and spire, is perhaps rather older than St. Mary's, but has undergone more alterations. The old church of St. Nicholas, being too near the Castle, was entirely destroyed in the siege of Nottingham in 1647; the church was rebuilt in 1671, of red brick, with a plain square tower, and was enlarged in the last century. Among the finest new churches is that of All Saints, near the Arboretum, built at the cost of Mr. Windley, silk manufacturer. St. Barnabas', the Roman Catholic Cathedral, one of Pugin's best works, owes its construction to the late Earl of Shrewsbury.

The new public buildings dedicated to civil and secular purposes have added much to the dignity of the aspect of Nottingham. An example of this may be observed by comparing the new Townhall with the old Guildhall, as shown in our Illustrations; or by reference to the new University College building. The County Hall and Assize Courts, the Mechanics' Institute, the General Hospital, the Free Grammar School, and other institutions, are worthy of Nottingham. Improvements are changing the appearance of the old streets. A rather humble subject of one of the Artist's Sketches, the house partly occupied by a licensed beershop and partly by a butcher's shop, is associated with the name of Henry Kirke White, the Nottingham poet, who was born in this house in 1785. His early promise of genius, and his passion for learning, attracted the notice of friends, who released him from a clerkship in an attorney's office and placed him at St. John's College, Cambridge. His premature death, in 1806, was noticed by Lord Byron in a pathetic passage of "English Bards and Scotch Reviewers."

To those who have read either Kirke White's poems, or the poems of another native of Nottingham, still living—Mr. Henry Sutton—the pleasant riverside scenery of Wilford, and of Clifton Grove, will be familiar in their imagination. We remember, also, in some of the writings of the late William and Mary Howitt, who long resided at Nottingham, agreeable descriptions of the banks of the Trent near that town. Wilford, a mile and a half from Nottingham, to the south-west, is a pretty rural village with an old church surrounded by fine elm-trees; in the church is a memorial stained-glass window, also a tablet medallion portrait, the gift of admirers of Kirke White. "Wilfrid Boat," the well-known ferry, of which Henry Sutton wrote his verses forty years ago, takes passengers across to the opposite bank. Two miles higher up the river is Clifton, with its "Grove," a beautiful avenue of fine old trees more than a mile long; and with its romantic cliff and deep ravine, down which the "Fair Maid Margaret," who broke her oath to a lover and caused his death by her infidelity, was hurried by remorse, or by fiends, as the grim old legend says, to her doom in the avenging river. The Clifton family, knights and baronets, have been seated at Clifton ever since the reign of Henry III.; and the village, its fine old church filled with their tombs, the plain old Hall, the almshouses and cottages embowered in foliage, standing amidst verdant meadows, are thoroughly characteristic of English country life.

In the immediate vicinity of the town, Nottingham is favoured with the possession of agreeable suburban places of recreation. The public garden styled the Arboretum, on the north side, is tastefully laid out; beyond it lie the Church Cemetery, portions of forest-land called "Robin Hood's Chace," and "the Coppices," with St. Anne's Well. In the rock that overhangs the Leen, not far from the Castle, are the hewn-out caverns which have got the name of "The Papists' Holes," from having been occupied as hermits' cells in the Middle Ages, but which are believed to be of much more ancient origin. The Lenton road or boulevard, skirting the Park west of the Castle, is a favourite promenade. Farther west of the town is the village of Wollaton, with the grand old Elizabethan Hall and Park of the Willoughby family and of Lord Middleton. The showyard of the Royal Agricultural Society will be found in this direction.

The clock-tower erected at the bottom of Queen's-road, Brighton, at the charge of Mr. James Willing, as a Jubilee memorial, was formally unveiled on June 28, and handed over to the municipal authorities. It has been built from designs by Mr. John Johnson, and is an ornament to the town. The clock, manufactured by Messrs. Gillett and Johnston, of Croydon, has four dials five feet in diameter, made of transparent opal, so as to admit of illumination by night. There are no bells, but at every hour a ball at the summit rises and descends by hydraulic pressure. Upon the base of the tower are medallions of the Queen, the Prince Consort, and the Prince and Princess of Wales. Shortly before one o'clock the Mayor and Mayoress, Lord Alfred Paget, Sir Robert Peel, and a number of townsmen, with Mr. James Willing, appeared on the spot. The houses around were gaily decorated and the large space outside the barrier was filled with spectators. Mr. Willing formally handed a gold key of the tower to the Mayor, who, at the stroke of one, unveiled the tower. The Mayor acknowledged the gift and Mr. Willing said a few words in reply. At a subsequent luncheon in the Pavilion the Mayor presented Mr. Willing with an illuminated address and a silver centre-piece, subscribed for solely by the members of the corporation "as a mark of their esteem on the occasion of his dedicating to the use of the inhabitants the handsome clock-tower in commemoration of the Jubilee year of the reign of Queen Victoria."

NEW BOOKS.

Old Glasgow: the Place and the People. By Andrew Macgeorge. (Blackie and Son).—The Glasgow International Exhibition this summer attracts thousands of visitors to that great commercial city which, besides the view of its mighty trades and industries, and of the Clyde shipping and shipbuilding, enjoys near access to some of the finest mountain, lake, seashore, and river scenery in Great Britain. Its historical and antiquarian associations, next to those of Edinburgh, must engage the attention of those who feel an interest in the past in Scotland; they will do well to consult this learned and accurate treatise, of which a third edition, revised and corrected by the most recent statistics, is opportunely published on the present occasion. The author begins with the advent of Kentigern, the Celtic missionary of the sixth century, better known as "St. Mungo," the latter name, which signified "Dear Friend," having been given him by his grateful flock. He had been preceded, however, towards the end of the fourth century, by St. Ninian, who abode some time among the Picts on the banks of the Molendinar. St. Mungo, however, was the first Bishop and the founder of Glasgow. The native people retained little or no effect of Roman civilisation; they afterwards became Anglicised by Saxon conquest. Ecclesiastical, baronial, and municipal jurisdictions, the one more or less than the others with the changes of times, protected the growth of the local community. It is perhaps not feasible to narrate the progress of Glasgow in a continuous history from the earliest ages. Mr. Macgeorge rather deals, in separate chapters, with particular features of the subject: the rule of the Bishops, their Castle, and their Cathedral; the civic Corporation; the tenure of property; the old streets and buildings; the ports and military defences; the river and harbour; the habits and manners of the citizens; their education, trades, social life, and amusements; the city police; the water supply, and other matters, down to the end of the eighteenth century. A few statistics are added concerning the present position of Glasgow.

The Clyde, from its Source to the Sea. By W. J. Millar, C.E. (Blackie and Son).—This volume, written by the Secretary to the Institution of Engineers and Shipbuilders in Scotland, may profitably be studied in connection with "Old Glasgow," although its instructive account of the improvement of the river navigation belongs to a more recent period, and the vast development of trade and industry which it has facilitated contrasts greatly with the former affairs of that city. It supplies, at least, much authentic and scientific information concerning the works of a bold and successful local enterprise, only paralleled by that of the Tyne at Newcastle, in its actual results, and possibly to be equalled hereafter by the construction of the Manchester Ship Canal. The description of an important river, even in its natural relation to the topography of a country with such varied and striking features as the southern part of Scotland, is always an interesting study, when aided by reference to the map; geology, orography, and meteorology, with regard to the course of streams, the amount of rainfall, the picturesque and utilitarian conditions of the district, must also be consulted. Mr. Millar's treatment of these matters is concise, but sufficiently minute and exact; while his narrative of the deepening and clearing of the river channel below Glasgow, the first introduction of steam-boats, the construction of docks, and the progress of shipbuilding, marine-engine making, and other important works on the Clyde, seems tolerably complete. The professional and official position of the author should be a guarantee for its correctness in all points of detail.

Ranks, Badges, and Dates in her Majesty's Army and Navy. By Ottley Lane Perry, Captain 2nd Volunteer Battalion Royal North Lancashire Regiment. Second edition, revised and enlarged (W. Clowes and Sons).—The merits of this unique work of reference, which is the only guide that has ever been prepared to a complete acquaintance with all naval and military distinctions, points of precedence, dates of the formation of regiments and corps, salutes, marks of rank, colours, heraldry, honorary mottoes or titles, ornamental badges, tokens or signs, both in the Army and Navy and in the Auxiliary Forces, the Militia, Yeomanry, and Volunteers, are sufficiently approved by the very favourable reception that it has already gained. Captain Ottley Perry, who is known in Lancashire as a zealous and diligent officer of Volunteers, has bestowed on it an extraordinary amount of laborious research, and rare skill in packing a countless variety of precise statements into his copious annotations, but especially in the arrangement of so vast a mass of minute details, and in furnishing the links of citation, from one page to another, by which related facts are brought together with the least possible trouble. In this respect, we do not scruple to say, after much experience of statistical and historical compilations, that "Ranks, Badges, and Dates" is a very superior literary achievement; and, granting the quality of the information to be valuable or desirable, it seems to us that no compiler has ever succeeded better in putting all that could be positively ascertained from a wide and diverse range of inquiries into the closest array, including many pages of tabular views, and hundreds of concise notes, in the small compass of a neat handbook. The new edition, containing about one hundred additional pages, makes Captain Perry's work more complete by giving the Royal Navy distinctions; historical notes concerning the Board of Ordnance, the Royal Artillery, with dates of the formation of its Batteries, and the Royal Engineers, with dates of the Companies; the Royal Bodyguards, the disbanded Colonial Regiments, the Auxiliary Cavalry and Yeomanry, and the Militia, with dates of formation; also sundry details of Crown heraldry, and such matters as changes in regimental facings, and the dress and badges of musicians and drummers. It should be observed, however, that the utility of this treatise is not confined to formalities of mere professional observance, for which use it is evidently perfect. As a correct record of the campaigns and battles in which every regiment of the British Army has served, it is, in part, a compendium of our national military history, and of our conquests all over the world, that may be perused with interest by the general reader. We only regret that the existing official documents relating to the old exploits of the British Navy are in so imperfect a condition that no similar precise record of all the ships engaged in some of our famous sea-battles can now be procured.

Christian Symbolism in Great Britain and Ireland before the Thirteenth Century. By J. Romilly Allen, F.S.A., Scot.—This is the course of the Rhind Lectures in Archæology for 1885. The author is a careful and painstaking writer, who has accumulated a valuable mass of materials bearing on his subject. He first describes early Christian symbolism in foreign countries, and then points out the influences which were introduced from abroad into the art of our own islands. The results of this inquiry shew that the comparative method is here, as it is in some other branches of study, the only true one. The early art of this country had some features which were peculiar to itself; but either from illuminated MSS. or art objects being brought by ecclesiastics or pilgrims from abroad, ideas were imported of which we have unmistakable evidence. As an illustration, the Chi-Rho monogram, better known as the Constantine monogram, may be given. This was common in our country from the end of the fourth to the end of the fifth century. The monogram is understood to be formed of Greek letters, hence it must have been brought from Rome, where the Byzantine influence prevailed for some centuries. At a later date, the Alpha and Omega appears, and with it the Roman letters I H C—the equivalent of I H S—and X R C—this last appears in some instances on sculptured stones as χρς, or in what a compositor would now call "lower case letters"—the Greek monogram of *Xristos*. If monograms could be brought in and incorporated in the art, it would be quite possible for other forms of art to be transplanted. One of the most interesting of the lectures is the one on "Mediæval Bestiaries." This is quite a new line of inquiry, and the author gives Dr. J. Anderson the credit of being the first to begin it. It is also a following up of the comparative method. There are a number of mediæval works in existence, called Bestiaries, or Books of Beasts; these deal with beasts mentioned in Scripture, but they also accept all the wonderful and doubtful legends about them that were current at the time. All this was used as a means of religious edification, and the various animals, according to their supposed characters, were either Christ or his enemy Satan. The result already is that from the study of these Bestiaries some of the quaint groups of animals to be found on the Celtic crosses of Ireland and Scotland have been explained; and much more is to be expected from this line of inquiry.

Early Christian Art in Ireland. By Margaret Stokes.—This lady's name is not unknown among archæologists; and her work is more than a mere handbook: it contains a large amount of knowledge, recorded in a methodical way. It treats metal-work, and of sculpture; the last chapter is on building and architecture, which, of course, includes the round towers first of the old illuminated books, and of the scribes; then of of Ireland. Lord Dunraven has traced these towers to France, where some still exist, and the type has been followed up as far as Ravenna. They were bell-towers; but they were constructed when the Norsemen began to make incursions into Ireland, and one purpose they were intended for was that of towers of refuge. The height of the doors of these towers above the ground is almost a complete proof that this was the case. O'Brien and other writers, who urged a profound symbolical meaning as expressed by these towers, claimed for them an Oriental origin. As towers of refuge this claim can still be made for them, and the Sketches of our Special Artist, Mr. W. Simpson, in *The Illustrated London News* three years ago, showed that towers of refuge are still common in Persia. Those belong, indeed, to a more primitive style of construction than the Irish towers, for they are built of mud; but they tell, like the old Irish towers, of an unsettled state, and of a country liable to the continued ravaging of a merciless enemy. Such was Ireland, no doubt, in the ninth century. The antiquarian collection now on view at the Irish Exhibition in London contains some objects which may be appreciated the better after reading what Miss Stokes has written on these subjects.

A Wanderer's Notes. By W. Beatty-Kingston, author of "Music and Manners," "Monarchs I have Met," &c. Two vols. (Chapman and Hall).—The personal experiences and observations of a gentleman who has passed many years as special foreign correspondent of the *Daily Telegraph*, in visiting the different countries and cities of Europe, often upon occasions of great political interest, with access to the leaders of native society, cannot fail to be entertaining. These volumes will be preferred by many to those of his last publication, which were chiefly filled with accounts of the Sovereigns of Continental States, the Emperors and Kings and Princes, not forgetting the Pope, whose manners in public, and their habitual style of receiving any Englishman admitted to a formal interview, are pretty well known. Such a blaze of journalistic illumination surrounds the figures of those illustrious personages in our times, pervading the interior of their courts and palaces, and lighting up every stage of royal journeys and progresses, that curiosity is already satisfied with regard to their ordinary mode of life. It is only when, as recently at Berlin and Potsdam, human sympathies are deeply stirred by events bringing the most honoured and esteemed inheritors of the highest rank within reach of afflictions common to mortality, that people in general care to learn anything of their domestic habits. In this new work of Mr. Beatty-Kingston's, on the contrary, we are glad to find a great deal of more interesting description of the every-day life of foreign nations, and of all classes of society. He is not here "modò reges atque tetrarchas, omnia magna loquens," but frankly and vivaciously portraying the Germans, the Austrians, the Dutch, the Belgians, the Piedmontese, the Romans, the Spaniards, and the Roumanians, as he found them at home, folks of all classes—civil, military, and ecclesiastic, nobles, soldiers, tradesmen, and peasants. This is really instructive, as well as highly amusing; and he spares us the repetition of mere topographical guide-book details concerning the towns and buildings and galleries of art, which all Cook's tourists have seen for themselves, if they pleased to do so. Every piece of description that he gives us is fresh, original, novel in its effect, usually inclining to the grotesque and humorous aspect of the scene, from an Englishman's point of view, though seldom unkind to the foreigners, and inspired by a mood of tolerant liberality, which less experienced travellers might do well to adopt. There are many things, to be sure, which he does not admire, and some which he even denounces in rather forcible language: the dismal, tedious canal voyages in Holland, with the bad smells from the water, the ugliness of the people and of their dwellings; the sea-bathing customs in Ostend; the discomfort and negligent attendance in Viennese supper-room and beer-gardens, and the impudent profligacy of behaviour at masquerade balls; the gambling, in former years, at some German spas; the bad performances at certain theatres; the inconvenient railway arrangements, and the vexatious Custom-house official practices; the neglect of washing, the bad taste in dressing, the rowdiness and boorishness of this or that section of mankind. On the other hand, he bestows unstinted praise on what seems to him commendable in foreign institutions; and his account, especially, of the organisation, discipline, and spirit of the Prussian army, and of the Berlin battalion of Landwehr, at whose officers' mess he dined, is in the highest terms of commendation. Among the notable incidents related with some particularity is the opening, in 1871, of the ingenious Fell railway over Mont Cenis, superseded after three years by the Mont Cenis Tunnel. The Spanish Revolution of 1868, when General Prim was Dictator, the condition of Papal Rome in 1870, the last year of the Pope's temporal power, and the persecution of the Jews in Roumania in 1874, are likewise events of contemporary importance which led Mr. Beatty-Kingston to visit the scene of action. But politics do not form the staple of these pleasant volumes, which, though extremely discursive, with sudden and swift transitions from one place and time to another, yield a large amount of information, such as could be furnished only by a clever man of the world, "qui mores hominum multorum vidit et urbes."

DRAWN BY A. FORESTIER.

In his hand he carried his bible. . . . Beside him walked my mother, holding in her hand my brother Barnaby, then three years of age.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIDEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER I.

FAREWELL SUNDAY.

The morning of Sunday, August the 23rd, in the year of grace 1662, should have been black and gloomy, with the artillery of rolling thunder, dreadful flashes of lightning, and driving hail and wind to strip the orchards and lay low the corn. For on that day was done a thing which filled the whole country with grief, and bore bitter fruit, in after years, of revenge and rebellion. Because it was the day before that formerly named after Bartholomew, the disciple, it hath been called the Black Bartholomew of England, thus being likened unto that famous day (approved by the Pope) when the French Protestants were treacherously massacred by their King. It should rather be called "Farewell Sunday," or "Exile Sunday," for on that day two thousand godly ministers preached their last sermon in the churches where they had laboured worthily and with good fruit, some during the time of the Protector, and some even longer, because among them were a few who possessed their benefices even from the time of the late King Charles the First. And, since on that day two thousand ministers left their churches and their houses, and laid down their worldly wealth for conscience' sake, there were also, perhaps, as many wives who went with them, and, I dare say, three or four times as many innocent and helpless babes. And, further (it is said that the time was fixed by design and deliberate malice of our enemies), the ministers were called upon to make their choice only a week or two before the day of the collection of their tithes. In other words, they were sent forth to the world at the season when their purses were at the leanest; indeed, with most country clergymen, their purses shortly before the collection of tithes have become wellnigh empty. It was also unjust that their successors should be permitted to collect the tithes due to those who were ejected.

It is fitting to begin this history with the Black Bartholomew,

*All Rights Reserved.

because all the troubles and adventures which afterwards befell us were surely caused by that accursed day. One knows not, certainly, what other rubs might have been ordained for us by a wise Providence (always with the merciful design of keeping before our eyes the vanity of worldly things, the instability of fortune, the uncertainty of life, and the wisdom of looking for a hereafter which shall be lasting, stable, and satisfying to the soul). Still, it must be confessed, such trials as were appointed unto us were, in severity and continuance, far beyond those appointed to the ordinary sort, so that I cannot but feel at times uplifted (I hope not sinfully) at having been called upon to endure so much. Let me not, however, be proud. Had it not been for this day, for, certain, our boys would not have been tempted to strike a blow—vain and useless as it proved—for the Protestant religion and for liberty of conscience: while perhaps I should now be forbidden to relate our sufferings, were it not for the glorious Revolution which has restored toleration, secured the Protestant ascendancy, and driven into banishment a Prince, concerning whom all honest men pray that he and his son (if he have, indeed, a son of his own) may never again have authority over this realm.

This Sunday, I say, should have wept tears of rain over the havoc which it witnessed; yet it was fine and clear, the sun riding in splendour, and a warm summer air blowing among the orchards and over the hills and around the village of Bradford Orcas, in the shire of Somerset. The wheat (for the season was late) stood gold-coloured in the fields, ready at last for the reaper; the light breeze bent down the ears so that they showed like waves over which the passing clouds make light and shade; the apples in the orchards were red and yellow and nearly ripe for the press; in the gardens of the Manor House, hard by the church, the sun-flowers and the hollyhocks were at their tallest and their best; the yellow roses on the wall were still in clusters; the sweet-peas hung with tangles of vine and flower upon their stalks; the bachelors' buttons, the sweet mignonette, the nasturtium, the gilly-flowers and stocks, the sweet-williams and the pansies, offered their late summer blossoms to the hot sun among the lavender, thyme, parsley, sage, feverfew and vervain of my Lady's garden. Oh! I know how it all looked, though I was then as yet unborn. How many times have I stood in the churchyard and watched the same scene at the same sweet season! On a week-day one hears the thumping and the groaning of the mill below the church; there are the voices of the men at work—the yo-hoing of the boys who drive; and the lumbering of the carts. You can even hear the spinning-wheels at work in the cottages. On Sunday morning everything is still, save for the warbling of the winged tribe in the wood, the cooing of the doves in the cote, the clucking of the hens, the grunting of the pigs, and the droning of the bees. These things disturb not the meditations of one who is accustomed to them.

At eight o'clock in the morning, the Sexton, an ancient man and rheumatic, hobbled slowly through the village, key in hand, and opened the church-door. Then he went into the tower and rang the first bell. I suppose this bell is designed to hurry housewives with their morning work, and to admonish the men that they incline their hearts to a spiritual disposition. This done, the Sexton set open the doors of the pews, swept out the Squire's and the Rector's in the chancel, dusted the cushions of the pulpit (the reading-desk at this time was not used), opened the clasps of the great Bible, and swept down the aisle: as he had done Sunday after Sunday for fifty years. When he had thus made the church ready for the day's service, he went into the vestry, which had only been used since the establishment of the Commonwealth for the registers of birth, death, and marriage.

At one side of the vestry stood an ancient, black oak coffer, the sides curiously graven, and a great rusty key in the lock. The Sexton turned the key with difficulty, threw open the lid, and looked in.

"Ay," he said, chuckling, "the old surplice and the old Book of Common Prayer. Ye have had a long rest; 'tis time for both to come out again. When the surplice is out the book will stay no longer locked up. These two go in and out together. I mind me, now"—— Here he sat down, and his thoughts wandered for a space; perhaps he saw himself once more a boy running in the fields, or a young man courting a maid. Presently he returned to the task before him, and drew forth an old and yellow roll which he shook out. It was the surplice which had once been white. "Here you be," he said. "Put you away for a matter of twelve year and more and you bide your time; you know you will come back again; you are not in any hurry. Even the Sexton dies; but you die not, you bide your time. Everything comes again. The old woman shall give you a taste o' the suds and the hot iron. Thus we go up and thus we go down." He put back the surplice and took out the great Book of Common Prayer—musty and damp after twelve years' imprisonment. "Fie!" he said, "thy leather is parting from the boards, and thy leaves they do stick together. Shalt have a pot of paste, and then lie in the sun before thou goest back to the desk. Whether 'tis Mass or Common Prayer, whether 'tis Independent or Presbyterian, folk must still die and be buried—ay, and married and born—whatever they do say. Parson goes and Preacher comes; Preacher goes and Parson comes; but Sexton stays"——. He chuckled again, put back the surplice and the book, and locked the coffer.

Then he slowly went down the church and came out of the porch, blinking in the sun and shading his old eyes. He sat down upon the flat stones of the old cross, and presently nodded his head and dropped off asleep.

This was a strange indifference in the man. A great and truly notable thing was to be accomplished that day. But he cared nothing. Two thousand godly and learned men were to go forth into poverty for liberty of conscience—this man's own minister was one of them. He cared nothing. The King was sowing the seed from which should spring a rod to drive forth his successor from the kingdom. In the village folk but the weather and the market prices. As for the good Sexton, he was very old: he had seen the Church of England displaced by the Presbyterians and the Presbyterians by the Independents, and now these were again to be supplanted by the Church of England. He had been Sexton through all these changes. He heeded them not; why, his father, Sexton before him, could remember when the Mass was said in the church and the Virgin was worshipped, and the folk were driven like sheep to confession. All the time the people went on being born, and marrying, and dying. Creed doth not, truly, affect these things nor the Sexton's work. Therefore, this old gaffer, having made sure that the surplice was in the place where it had lain undisturbed for a dozen years, and remembering that it must be washed and ironed for the following Sunday, sat down to bask in the sun, his mind at rest, and dropped off into a gentle sleep.

At ten o'clock the bell-ringers came tramping up the stone steps from the road, and the Sexton woke up. At ten they use to begin their chimes, but at the hour they ring for five minutes only, ending with the clash of all five bells together. At a quarter past ten they chime again, for the service, which begins at half-past ten.

At the sound of these chimes the whole village begins to move slowly towards the church. First come the children, the bigger ones leading those who are little by the hand; the boys come next, but unwillingly, because the Sexton is diligent with his cane, and some of those who now go up the steps to the church will come down with smarting backs, the reward of those who play or laugh during the service. Then come the young men, who stand about the churchyard and whisper to each other. After them follow the elders and the married men, with the women and the girls. Five minutes before the half hour the ringers change the chime for a single bell. Then those who are outside gather in the porch and wait for the Quality.

When the single bell began, there came forth from the Rectory the Rector himself, Mr. Comfort Eykin, Doctor of Divinity, who was this day to deliver his soul and lay down his charge. He wore the black gown and Geneva bands, for the use of which he contended. At this time he was a young man of thirty—tall and thin. He stooped in the shoulders because he was continually reading; his face was grave and austere; his nose thin and aquiline; his eyes bright—never was any man with brighter eyes than my father; his hair, which he wore long, was brown and curly; his forehead high, rather than broad; his lips were firm. In these days, as my mother hath told me, and as I well believe, he was a man of singular comeliness, concerning which he cared nothing. Always from childhood upwards he had been grave in conversation and seriously inclined in mind. If I think of my father as a boy (no one ever seems to think that his father was once a boy), I am fain to compare him with Humphrey, save for certain bodily defects, my father having been like a Priest of the Altar for bodily perfection. That is to say, I am sure that, like Humphrey, he had no need of rod or ferule to make him learn his lessons, and, like that dear and fond friend of my childhood, he would willingly sit in a corner and read a book while the other boys played and went a-hunting or a-nesting. And very early in life he was smitten with the conviction of sin, and blessed with such an inward assurance of salvation as made him afterwards steadfast in all afflictions.

He was not a native of this country, having been born in New England. He came over, being then eighteen years of age, to study at Oxford, that university being purged of malignants (as they were then called), and, at the time, entirely in the hands of the godly. He was entered of Balliol College, of which Society he became a Fellow, and was greatly esteemed for his learning, wherein he excelled most of the scholars of his time. He knew and could read Hebrew, Chaldee, and the ancient Syriac, as well as Latin and Greek. Of modern languages he had acquired Arabic, by the help of which he read the book which is called the Koran of the False Prophet Mohammed: French and Italian he also knew and could read easily. As for his opinions, he was an Independent, and that not meekly or with hesitation, but with such zeal and vehemence that he considered all who differed from him as his private enemies—nay, the very enemies of God. For this reason, and because his personal habits were too austere for those who attained not to his spiritual height, he was more feared than loved. Yet his party looked upon him as one of their greatest and stoutest champions.

He left Oxford at the age of five or six and twenty, and accepted the living of Bradford Orcas, offered him by Sir Christopher Challis of that place. Here he had preached for six years, looking forward to nothing else than to remain there, advancing in grace and wisdom, until the end of his days. So much was ordered, indeed, for him; but not quite as he had designed. Let no man say that he knoweth the future, or that he can shape out his destiny. You shall hear presently how Benjamin arrogantly resolved that his future should be what he chose; and what came of that impious resolution.

My father's face was always austere; this morning, it was more serious and sterner than customary, because the day was to him the most important in his life, and he was about to pass from a condition of plenty (the Rectory of Bradford Orcas is not rich, but it affords a sufficiency) to one of penury. Those who knew him, however, had no doubt of the course he was about to take. Even the rustics knew that their minister would never consent to wear a surplice or to read the Book of Common Prayer, or to keep holy days—you have seen how the Sexton opened the box and took out the surplice; yet my father had said nothing to him concerning his intentions.

In his hand he carried his Bible—his own copy, I have it still, the margins covered with notes in his writing—bound in black leather, worn by constant handling, with brass clasps. Upon his head he had a plain black silk cap, which he wore constantly in his study and at meals to keep off draughts. Indeed, I loved to see him with the silk cap rather than with his tall steeple hat, with neither ribbon nor ornament of any kind, in which he rode when he afterwards went about the country to break the law in exhorting and praying with his friends.

Beside him walked my mother, holding in her hand her boy, my brother Barnaby, then three years of age. As for me, I was not yet born. She had been weeping; her eyes were red and swollen with tears; but when she entered the church she wept no more, bravely listening to the words which condemned to poverty and hardship herself and her children, if any more should be born to her. Alas, poor soul! What had she done that this affliction should befall her? What had her innocent boy done? For upon her—not upon her husband—would fall the heavy burden of poverty, and on her children the loss. Yet never by a single word of complaint did she make her husband sorry that he had obeyed the voice of conscience, even when there was nothing left in the house, not so much as the widow's cruse of oil. Alas, poor mother, once so free from care! what sorrow and anxiety wert thou destined to endure, for the tender conscience of thy husband!

At the same time—namely, at the ringing of the single bell—there came forth from the Manor House hard by the church, his Honour, Sir Christopher, with his family. The worthy knight was then about fifty years of age, tall and handsome still—in his later years there was something of a heavenly sweetness in his face, created, I doubt not, by a long life of pious thoughts and worthy deeds. His hair was streaked with grey, but not yet white; he wore a beard of the kind called stiletto, which was even then an ancient fashion, and he was dressed more soberly than is common with gentlemen of his rank, having no feather in his hat, but a simple ribbon round it, and though his ruffles were of lace and the kerchief round his neck was lace, the colour of his coat was plain brown. He leaned upon a gold-headed cane on account of an old wound (it was inflicted by a Cavalier's musket-ball when he was a Captain in the army of Lord Essex). The wound left him somewhat lame, yet not so lame but that he could very well walk about his fields and could ride his horse, and even hunt with the otter-hounds. By his side walked Madam, his wife. After him came his son, Humphrey, newly married, and with Humphrey his wife; and last came his son-in-law, the Reverend Philip Boscorel, M.A., late Fellow of All Souls' College, Oxford, also newly married, with his wife, Sir Christopher's daughter, Patience. Mr. Boscorel, like my father, was at that time thirty years of age. Like him, too, his face was comely and his features fine; yet they lacked the fire and the earnestness which marked my father. And in his silken cassock, his small white bands, his lace ruffles, and his dainty walk, it seemed as if Mr. Boscorel thought himself above the common run of mankind and of superior clay. 'Tis sometimes the way with scholars and those who survey the world from the eminence of a library.

Sir Christopher's face was full of concern, because he loved the young man who was this day to throw away his livelihood; and although he was ready himself to worship after the manner prescribed by law, his opinions were rather Independent than Episcopalian. As for Mr. Boscorel, who was about to succeed to the ejected minister, his face wore no look of triumph, which would have been ungenerous. He was observed, indeed, after he had silently gone through the Service of the day with the help of the Common Prayer-book, to listen diligently unto the preacher.

The people, I have already said, knew already what was about to happen. Perhaps some of them (but I think not) possessed a copy of the old Prayer-book. This, they knew, was to be restored, with the surplice, and the observance of Holy days, Feasts, and Fasts, and the kneeling at the celebration of the Holy Communion. Our people are craftsmen as much as they are rustics; every week the master clothiers' men drive their packhorses into the village laden with wool, and return with yarn: they are not, therefore, so brutish and sluggish as most country folk; yet they made no outward show of caring whether Prelacy or Independence was to have the sway. Perhaps the abstruse doctrines which my father loved to discuss were too high for them; perhaps his austerity was too strict for them, so that he was not beloved by them. Perhaps, even, they would have cared little if they had heard that Bishop Bonner himself was coming back. Religion, to country folk, means, mostly, the going to church on Sunday morning. That done, man's service of Prayer and Praise to his Creator is also done. If the form be changed the church remains, and the churchyard; one shepherd followeth another, but the flock is always the same. Revolutions overthrow kings, and send great heads to the block; but the village heedeth not unless civil war pass that way. To country folk, what difference? The sky and the fields are unchanged. Under Queen Mary they are Papists: under Queen Elizabeth they are Protestants. They have the Prayer Book under King James and King Charles; under Oliver they have had the Presbyterian and Independent; now they have the Book of Common Prayer and the surplice again. Yet they remain the same people, and tell the same stories, and, so far as I know, believe the same things—viz., that Christ Jesus saves the soul of every man who truly believes in Him. Why, if it were not for his immortal soul—concerning which he takes but little thought—the rustic might be likened unto the patient beast whom he harnesseth to his plough and to his muck-cart. He changeth no more: he works as hard; he is as long-enduring; his eyes and his thoughts are as much bound by the hedge, the lane, and the field; he thinks and invents and advances no more. Were it not, I say, for the Church, he would take as little heed of anything as his ox or his ass; his village would become his country; his squire would become his king; the nearest village would become the camp of an enemy; and he would fall into the condition of the Ancient Briton when Julius Cæsar found every tribe fighting against every other.

I talk as a fool. For sometimes there falls upon the torpid soul of the rustic a spark which causes a mighty flame to blaze up and burn fiercely within him. I have read how a simple monk, called Peter the Hermit, drew thousands of poor, illiterate, credulous persons from their homes and led them, a mob armed with scythes and pikes, across Europe to the deserts of Asia Minor, where they miserably perished. I have read also of Jack Cade, and how he drew the multitudes after him, crying aloud for justice or death. And I myself have seen these sluggish spirits suddenly fired with a spirit which nothing could subdue. The sleeping soul I have seen suddenly starting into life; strength and swiftness have I seen suddenly put into sluggish limbs; light and fire have I seen gleaming suddenly in dull and heavy eyes. Oh! it was a miracle: but I have seen it. And having seen it, I cannot despise these lads of the plough, these honest boys of Somerset, nor can I endure to hear them laughed at or contemned.

Bradford Orcas, in the Hundred of Horethorne, Somerset, is a village so far from the great towns, that one would think a minister might have gone on praying and preaching after his own fashion without ever being discovered. But the arm of the Law is long.

The nearest town is Sherborne, in Dorsetshire, to which there is a bridle-path across the fields; it is the market-town for the villages round it. Bradford Orcas is an obscure little village, with no history and no antiquities. It stands in the south-eastern corner of the county, close to the western declivity of the Corton Hills, which here sweep round so as to form a valley, in which the village is built along the banks of a stream. The houses are for the most part of stone, with thatched roofs, as is the custom in our country; the slopes of the hills are covered with trees, and round the village stand goodly orchards, the cider from which cannot be surpassed. As for the land, but little of it is arable; the greater part is a sandy loam or stone brash. The church, which in the superstitious days was dedicated to St. Nicolas, is built upon a hillock, a rising ground in the west of the village. This building of churches upon hillocks is a common custom in our parts, and seemeth laudable, because a church should stand where it can be seen by all the people, and by its presence remind them of Death and of the Judgment. This practice doth obtain, for example, at Sherborne, where there is a very noble church, and at Huish Episcopi and at many other places in our county. Our church is fair and commodious, not too large for the congregation, having in the west a stone tower embattled, and consisting of a nave and chancel with a very fine roof of carved woodwork. There is an ancient yew-tree in the churchyard, from which in old times bows were cut: some of the bows yet hang in the great hall of the Manor House. Among the graves is an ancient stone cross, put up no man knows when, standing in a six-sided slab of stone, but the top was broken off at the time of the Reformation: two or three tombs are in the churchyard, and the rest is covered with mounds, beneath which lie the bones and dust of former generations.

Close to the churchyard, and at the north-east corner, is the Manor House, as large as the church itself, but not so ancient. It was built in the reign of Henry VII. A broad arched gateway leads into a court, wherein is the entrance to the house. Over the gateway is a kind of tower, but not detached from the house. In the wall of the tower is a panel, lozenge-shaped, in which are carved the arms of the Challis family. The house is stately, with many gables, and in each are casement windows set in richly-carved stone tracery. As for the rooms within the house, I will speak of them hereafter. At present I have the churchyard in my mind. There is no place upon the earth which more I love. To stand in the long grass among the graves; to gaze upon the wooded hills beyond, the orchards, the meadows, the old house, the venerable church, the yew-tree; to listen to the murmur of the stream below and the singing of the lark above; to feel the fresh breeze upon my

check—oh! I do this daily. It makes me feel young once more: it brings back the days when I stood here with the boys, and when Sir Christopher would lean over the wall and discourse with us gravely and sweetly upon the love of God and the fleeting joys of earth (which yet, he said, we should accept and be happy withal in thankfulness), and the happiness unspeakable that awaiteth the Lord's saints. Or, if my thoughts continue in the past, the graveyard brings back the presence and the voice of Mr. Boscorel.

"In such a spot as this," he would say, speaking softly and slowly, "the pastorals of Virgil or Theocritus might have been written. Here would the shepherds hold their contests. Certainly they could find no place, even in sunny Sicily or at Mantua itself, where (save for three months in the year) the air is more delightful. Here they need not to avoid the burning heat of a sun which gently warms, but never burns; here they would find the shade of the grove pleasant in the soft summer season. Innocent lambs instead of kids (which are tasteless) play in our meadows; the cider which we drink is, I take it, more pleasing to the palate than was their wine flavoured with turpentine. And our viols, violins, and spinets are instruments more delightful than the oaten pipe, or the cithara itself." Then would he wave his hand, and quote some poet in praise of a country life—

> There is no man but may make his paradise,
> And it is nothing but his love and dotage
> Upon the world's fool joys that keeps him out on't.
> For he that lives retired in mind and spirit
> Is still in Paradise.

"But, child," he would add, with a sigh, "one may not always wish to be in Paradise. The world's joys lie elsewhere. Only, when youth is gone—then Paradise is best."

The service began after the manner of the Independents, with a long prayer, during which the people sat. Mr. Boscorel, as I have said, went through his own service in silence, the Book of Common Prayer in his hand. After the prayer, the minister read a portion of Scripture, which he expounded at length and with great learning. Then the congregation sang that Psalm which begins—

> Triumphing songs with glorious tongues
> Let's offer unto Him.

This done, the Rector ascended the pulpit for the last time, gave out his text, turned his hour-glass, and began his sermon.

He took for his text those verses in St. Paul's second epistle to the Corinthians, vi., 3-10, in which the Apostle speaks of his own ministry as if he was actually predicting the tribulation which was to fall upon these faithful preachers of a later time—"In much patience, in affliction, in necessities, in distresses, in stripes, in imprisonments, in tumults, in labour, in watchings, in fastings,"—could not the very words be applied to my father?

He read the text three times, so that everybody might fully understand the subject upon which he was to preach—namely, the faithfulness required of a minister of the gospel. I need not set down the arguments he used or the reasons he gave for his resolution not to conform with the Act of Uniformity. The rustics sat patiently listening, with no outward sign of assent or of sympathy. But their conduct afterwards proved abundantly to which side their minds inclined.

It behoves us all to listen with respect when scholars and wise men inquire into the causes of things. Yet the preachings and expositions which such as my father bestowed upon their flocks did certainly awaken men's minds to consider by themselves the things which many think too high for them. It is a habit which may lead to the foundation of false and pernicious sects. And it certainly is not good that men should preach the doctrines of the Anabaptists, the Fifth Monarchy men, or the Quakers. Yet it is better that some should be deceived than that all should be slaves. I have been assured by one—I mean Humphrey—who hath travelled, that in those countries where the priest taketh upon himself the religion of the people, so that they think to be saved by attending mass, by fasting, confession, penance, and so forth, not only does religion itself become formal, mechanical, and inanimate, but in the very daily concerns and business of life men grow slothful and lack spirit. Their religion, which is the very heat of the body, the sustaining and vital force of all man's actions, is cold and dead. Therefore, all the virtues are cold also, and with them the courage and the spirit of the people. Thus it is that Italy hath fallen aside into so many small and divided kingdoms. And for this reason, Spain, in the opinion of those who know her best, is now falling rapidly into decay.

I am well assured, by those who can remember, that the intelligence of the village-folk greatly increased during the period when they were encouraged to search the Scriptures for themselves. Many taught themselves to read, others had their children taught, in order that they might read or hear, daily, portions of the Scriptures. It is now thirty years since Authority resumed the rule: the village-folk have again become, to outward seeming, sheep who obey without questioning. Yet it is observed that when they are within reach of a town—that is to say, of a meeting-house—they willingly flock to the service in the afternoon and evening.

It was with the following brave words that my father concluded his discourse:—

"Seeing, therefore, my brethren, how clear is the Word of God on these points; and considering that we must always obey God rather than man; and observing that here we plainly see the finger of God pointing to disobedience and its consequences, I am constrained to disobey. The consequence will be to me that I shall stand in this place no more: to you, that you will have a stranger in your church. I pray that he may be a godly person, able to divide the Word, learned and acceptable.

"As for me, I must go forth, perhaps from among you altogether. If persecutions arise, it may behove me and mine to seek again that land beyond the seas whither my fathers fled for the sake of religious liberty. Whatever happens, I must fain preach the gospel. It is laid upon me to preach. If I am silent, it will be as if Death itself had fallen upon me. My brethren, there have been times—and those times may return—when the Elect have had to meet, secretly, on the sides of barren hills and in the heart of the forest, to pray together and to hear the Word. I say that these times may return. If they do, you will find me willing, I hope and pray, to brave for you the worst that our enemies can devise. Perhaps, however, this tyranny may pass over. Already the Lord hath achieved one great deliverance for this ancient Realm. Perhaps another may be in His secret purposes when we have been chastened, as, for our many sins, we richly deserve. Whether in affliction or in prosperity, let us always say, 'The Lord's name be praised!'

"Now, therefore, for the sand is running low and I may not weary the young and the impatient, let me conclude. Farewell, sweet Sabbaths! Farewell, the sweet expounding of the Word! Farewell, sweet pulpit! Farewell, sweet faces of the souls which I have yearned to present pure and washed clean before the Throne! My brethren, I go about, henceforth, as a dog which is muzzled; another man will fill this pulpit; our simple form of worship is gone; the Prayer-book and the surplice have come back again. Pray God we see not Confession, Penance, the Mass, the Inquisition, the enslavement of conscience, the stake, and the martyr's axe!"

Then he paused and bowed his head, and everybody thought that he had finished.

He had not. He raised it again, and threw out his arms and shouted aloud, while his eyes glowed like fire:

"*No!* I will not be silent. I WILL NOT. I am sent into the world to preach the gospel. I have no other business. I must proclaim the Word as I hope for everlasting life. Brethren, we shall meet again. In the woods and on the hills we shall find a Temple; there are houses where two or three may be gathered together, the Lord Himself being in their midst. Never doubt that I am ready, in season and out of season, whatever be the Law, to preach the gospel of the Lord!"

He ended, and straightway descended the pulpit stair, and stalked out of the church, the people looking after him with awe and wonder. But Mr. Boscorel smiled and wagged his head, with a kind of pity.

(To be continued.)

THE NEW GERMAN EMPEROR.

The scene in the White Saloon of the Old Schloss or Royal Palace at Berlin, on Monday, June 25, when the new and young German Emperor, William II., King of Prussia, opened a Session of the Imperial Reichstag or Diet, was one of imposing pomp. His Imperial and Royal Majesty, wearing the crimson velvet mantle of the Order of the Black Eagle, with a military uniform and helmet, was seated on a dais three steps high, carpeted with purple velvet, and overcanopied by a golden baldachin, emblazoned with black Imperial eagles. On his left were the Federal Council, headed by Prince Bismarck; in front of him were the representatives of the German nation; on his right, two steps above the floor, sat all the chief German Sovereigns and the members of the Prussian Royal House: behind them, a little higher, was a seat for the Empress next the throne; and there were places for the other Princesses, all in deep mourning. The Empress was holding by the hand the little blond-haired Crown Prince, evidently astonished at all this pageantry. There was a crowd of Ministers and Generals behind and on each side of the throne, holding the insignia of rule and the symbols of Imperial power—the sword of the realm, the ball of rule, the sceptre, and the banner of the realm, upborne by old Field-Marshal Von Blumenthal, flanked by two Generals with drawn swords, and supported by Count Moltke with his Marshal's baton in his hand. Most of these dignitaries were robed in their crimson velvet mantles of the Black Eagle. The list of German reigning Sovereigns includes the King of Saxony, the Prince Regent of Bavaria, the King of Würtemberg (represented by the heir-apparent), the Grand Dukes of Baden, Hesse, Oldenburg, Mecklenburg-Strelitz and Mecklenburg-Schwerin, the rulers and Princes of Saxe-Meiningen, Schwarzburg-Rudolstadt and Schwarzburg-Sondershausen, Saxe-Coburg-Gotha, Saxe-Altenburg, Anhalt, Reuss, Waldeck-Pyrmont, Schaumburg-Lippe, Lippe-Detmold, and others—all, like the Emperor, wearing their plumed helmets and their Black Eagle mantles. The Emperor received from Prince Bismarck, the Imperial Chancellor, a written copy of the speech to be read from the throne, and proceeded to read it in a firm and emphatic tone. The purport of this speech was reported last week; a loyal Address in reply has been voted by the Reichstag, and the Session has been adjourned.

Besides an Illustration of the scene at the opening of the Reichstag in Berlin, we present a View of the Marble Palace at Potsdam, in which the new Emperor and Empress have taken up their abode. It is situated beyond the Nauener suburb, in the "New Garden" on the banks of a small lake called the Heilige See, north-east of the town. The palace, built in 1787 by King Frederick William II., in the Dutch style, stands at the water's edge; its entrance hall is adorned with frescos paintings of scenes from the Nibelungen legend, and landscapes of the Rhineland. The park is very pretty, and contains summer-houses, grottoes, a hermitage, and beautiful groups of trees.

The Queen has approved of the nomination of Mr. Herbert Davies Evans, of Highmead, to be Lord Lieutenant of the county of Cardigan, in the place of the late Colonel Edward Lewis Pryse.

The festival dinner of the Newsvendors' Benevolent and Provident Institution was held at Cannon-street Hotel, on July 4, when Viscount Lymington, M.P., presided, and a distinguished company of ladies and gentlemen were present.

The ninetieth anniversary festival of the Royal Masonic Institution for Boys was held on June 27 at Freemasons' Hall, Viscount Ebrington, M.P., Provincial Grand Master of Devonshire, being in the chair. The subscriptions amounted to £8660, of which amount London contributed £4186.

The Incorporated Society of Authors, of which Lord Tennyson is the president, have resolved to invite Mr. Lowell and as many other American men of letters as may be in England to a public dinner, in recognition of their distinguished and persevering efforts on behalf of international copyright. The date fixed is Wednesday, July 25.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

JULY 7, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates:—To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny*; THIN EDITION, *One Penny*. To Australia, Brazil, Cape of Good Hope, China (via United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence*; THIN EDITION, *One Penny*. To China (via Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny*; THIN EDITION, *Three-halfpence*.

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

MR. RIDER HAGGARD'S NEW STORY,

"MR. MEESON'S WILL,"

FORMING THE

EXTRA SUMMER NUMBER

OF THE

ILLUSTRATED LONDON NEWS.

Fully Illustrated by A. FORESTIER and G. MONTBARD.

TWO PRESENTATION PICTURES

IN COLOURS,

"LOVE ME, LOVE ME NOT," AND "A TIFF."

ONE SHILLING. By Inland Parcel Post, 1s. 3d.

198, Strand, London; and of all Booksellers and Newsagents.

WILLS AND BEQUESTS.

The will, (dated Aug. 1, 1883), with a codicil (dated April 25, 1885), of Mr. Fleetwood Pellew Wilson, J.P., D.L., late of No. 30, Portman-square, and of Wappingham Manor, Northamptonshire, who died on April 24 last, at Boscombe, near Bournemouth, was proved on June 21, by Charles Colin Macrae, and Thomas Rannie Grant, two of the executors, the value of the personal estate in the United Kingdom amounting to upwards of £269,000. The testator devises his freehold house in Portman-square to his daughter, Miss Frances Wilson; and he bequeaths to her all the furniture, plate, pictures, effects, horses and carriages there or at his principal residence. He also bequeaths £2000 to St. Mary's Hospital Paddington; an annuity of £400 to his "brother, Edward Pellew" Wilson; £20,000, upon trust, for his niece, Mrs. Jane Nicoll, her husband and issue; and numerous legacies to nephews, nieces, executors, servants, and others. The residue of his real and personal estate he leaves, upon trust, for his daughter, for life; then, as to £20,000, as she shall appoint; and the ultimate residue to her children; or, in default of children, to his next of kin, according to the Statute for the distribution of an intestate's effects.

The will (dated Feb. 4, 1888), with a codicil (dated March 27 following), of Mr. William Chickhall Jay, late of No. 247, Regent-street, mourning-warehouseman and silk-mercer, and of Tollesbury, Essex, who died on April 27 last, was proved on June 27 by Charles Durourc Davies, William John Starkey, Charles Lee Nichols, and Thomas Simpson Jay, the son, the executors, the value of the personal estate amounting to upwards of £101,000. The testator makes special gifts of houses, furniture and effects, and policies of assurance to, or upon trust for, his children and his granddaughter, Annie Matilda Shekelton; and he bequeaths £1000 to his brother, Samuel Jay; and £100 to each of his executors. As to the residue of his real and personal estate he leaves one sixth to his said son; one sixth, upon trust, for his said granddaughter; and one sixth, upon trust, for each of his daughters, Ellen Matilda, Ada Wylie, Alice Jane, and Eugenie Maria.

The will (dated Nov. 14, 1887), with a codicil (dated Nov. 21 following), of Mr. Robert Valentine Leach, formerly of Devizes Castle, Wilts, and late of Bordighera, Italy, who died on May 7 last, was proved on June 22 by Mrs. Annette Wright Cunnington, the daughter, Charles Pegge, William Saunders, and Wickham Flower, the executors, the value of the personal estate amounting to over £52,000. The testator bequeaths £8000 and three hundred £10 shares paid up in Leach, Flower, and Co. (Limited), to his said daughter; and there are numerous and considerable legacies to his other daughters, grandchildren, and others. As to the residue of his property he leaves one half to his said daughter, Mrs. Cunnington, and one half to his grand-daughters, Ethel Vaughan Willett and Frances Emily Willett.

The will (dated April 8, 1888) of Mr. Charles Harrison, J.P., formerly M.P. for Bewdley, late of Areley Court, Stourport, Worcestershire, who died on May 11 last, was proved on June 21 by Charles King Harrison, the son, and George King Harrison, the brother, the executors, the value of the personal estate amounting to over £28,000. The testator bequeaths £100 and his wines, consumable stores, and live stock to his wife, Mrs. Elizabeth Augusta Harrison; he also bequeaths to her, so long as she shall reside at Areley Court, all his furniture and personal effects, and on her ceasing to reside there he gives the same to his son. All his real estate and the residue of his personal estate he leaves to his said son conditionally on his paying to his (testator's) wife, for life, one half of the net profits of his share of the business of a carpet manufacturer heretofore carried on by the testator.

The will (dated Nov. 17, 1879) of Miss Clare Bridget Strong, late of No. 17, Stafford-terrace, Kensington, who died on May 24 last, was proved on June 16 by Madgwick George Davidson, the surviving executor, the value of the personal estate amounting to upwards of £24,000. The testatrix bequeaths legacies to godchildren and her maid; and the other provisions of the will are in favour of her nephews, nieces, sisters, brother-in-law, and executor.

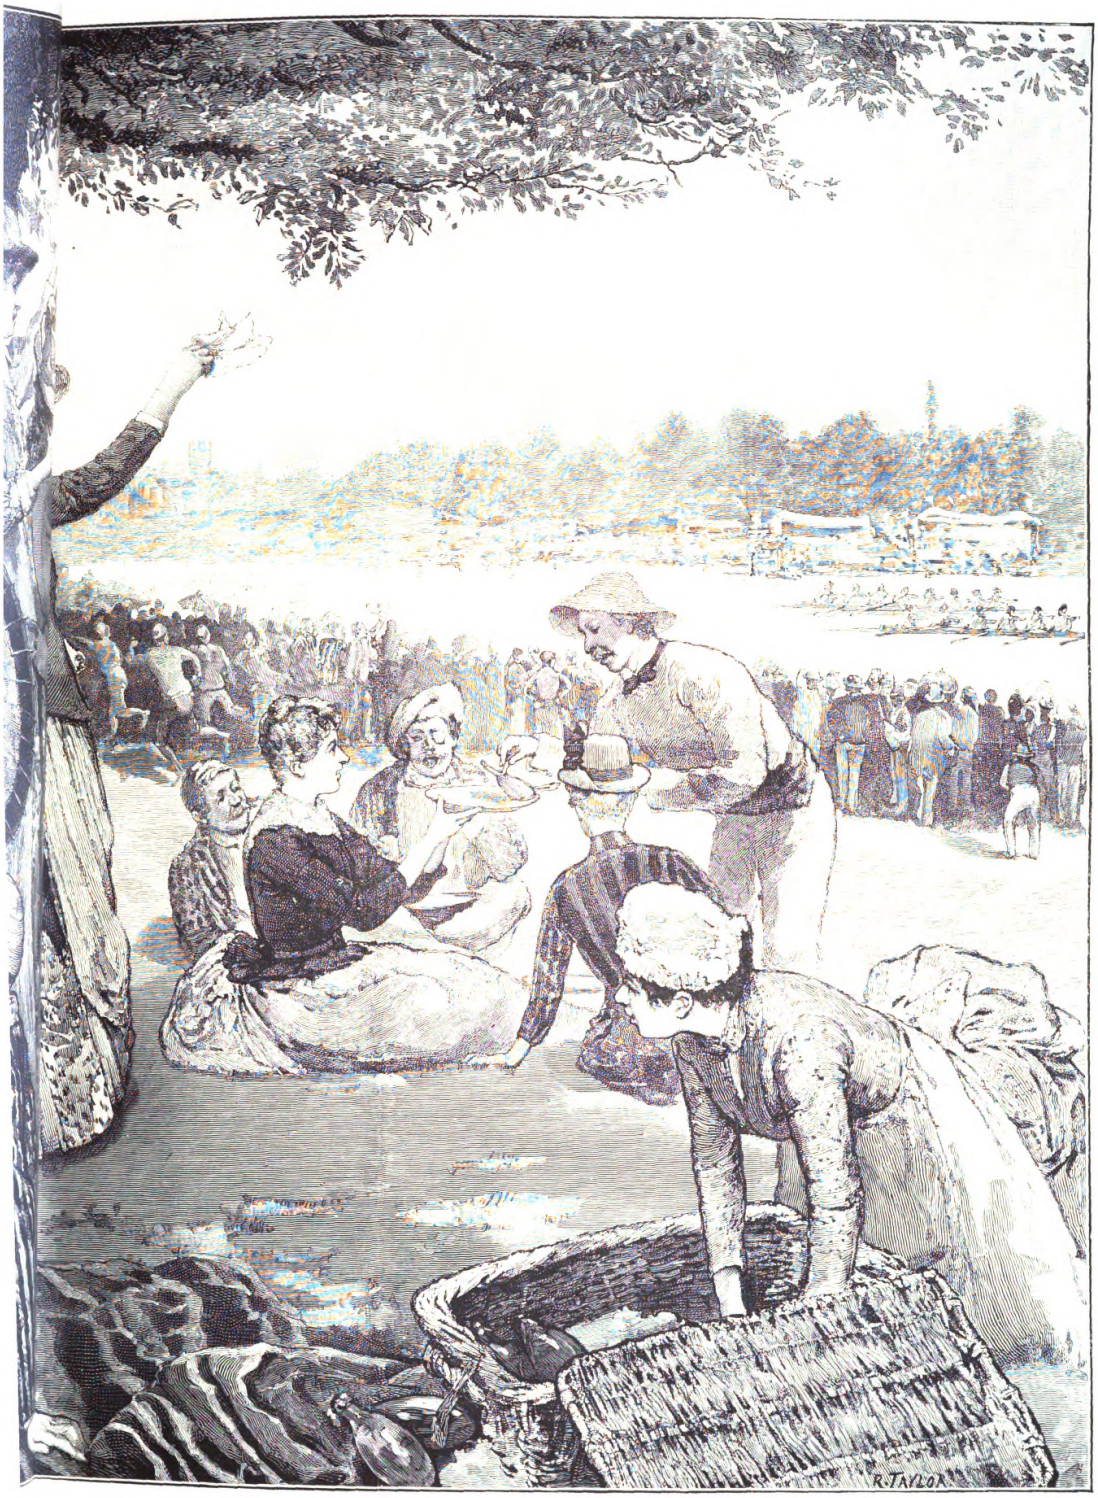
The will (dated Aug. 8, 1876), with a codicil (dated May 1, 1877), of Mr. John Christian Cowley, late of Leinster-gardens, Hyde Park, who died on April 16 last, was proved on June 15 by Mrs. Julia Cowley, the widow, and John Herbert Baynes Cowley, the son, two of the surviving executors, the value of the personal estate amounting to upwards of £22,000. The testator gives an immediate legacy of £500, and his household furniture and effects, to his wife; he also gives her an annuity of £1500, to be reduced to £500 in the event of her marrying again; £5000, upon trust, for each of his two daughters, Edith Julia and Alice Margaret Emma; and a further sum of £3000 each on the death of his wife; £15,000 to his eldest son, John Herbert Baynes; and legacies to five nieces and to his executors. The residue of his real and personal estate he leaves to all his sons, including his eldest son.

The will (dated Oct. 14, 1878) with a codicil (dated Sept. 19, 1884), of Mrs. Elizabeth Sarah Bourke, formerly of St. George's-place, Knightsbridge; but late of Cannes, who died on Jan. 10 last, was proved on June 22 by Philip Wellesley Colley, and Frederick Willis Farrar, the executors, the value of the personal estate amounting to over £17,000. The testatrix gives annuities to her daughter Mary Celine Georgiana, and to her sister, Selina Georgiana Stubley; her diamonds, books, pictures, and china to her daughter Frances Charlotte Mary, the wife of Viscount Gabrielle De Selle; and one or two other legacies. As to the residue of her personalty she leaves one half, upon trust, for her son James Adrian Bourke, and the other half, upon trust, for her daughter the Viscountess Gabrielle De Selle.

The Railway Clearing-House Athletic Club held their annual meeting on July 7 at Stamford-bridge, Chelsea.

Mr. A. J. Newton and Mr. Alderman Gray have been chosen Sheriffs of London and Middlesex for the ensuing year.

The Inner Temple gardens will be open to children on Sunday afternoons for the rest of the summer, from half-past four to eight. The gardens will not be open on Saturdays.



The annual show of the Essex Agricultural Society was opened at Cranbrook Park, Ilford, on June 28. £1550 was offered in prizes, £200 of this being given by the president, Mr. James Theobald, M.P. The entries, numbering 722, were in excess of the average for the last ten years, although they were lower than the number at Chelmsford last year.

The annual general meeting of the Catholic Union of Great Britain was held in Willis's Rooms on June 28, the Duke of Norfolk, president of the union, being in the chair. The annual report, which gave a good account of the operations of the union during the past year, was unanimously adopted upon the motion of Lord Clifford of Chudleigh, seconded by Mr. Wegg-Prosser. The Earl of Denbigh and Mr. John Young were re-elected treasurers. Among the speakers were the Bishop of Emmaus, the Earl of Denbigh, Sir Charles Clifford, Lord Herries, Mr. Alderman Stuart Knill, and Colonel Lenox Prendergast.

AT HENLEY

REGATTA.

TOM TAYLOR.

MAGAZINES FOR JULY.

Nineteenth Century.—Mr. Gladstone's revolving light of critical studies is again turned on the domain of ecclesiastical history; the Elizabethan "settlement of religion," which was only the settlement of the English Church Establishment, is the subject of his article, designed to prove the "legality" of the Reformation, while admitting that Nonconformists are the true heirs of the old English Puritans. Sir W. W. Hunter, a great authority on Indian statistics and on the social position of Mahommedans in India, presents a favourable view of Christian missionary efforts there. The injurious effect of too many picture exhibitions on the purity of Art is sternly denounced by Mr. Frederick Harrison; while Lord Armstrong reproves the undue expectation of manufacturing and commercial prosperity being restored by technical schools. Professor Tyndall, formerly scientific adviser to Government on lighthouses, relates his experiences of official reluctance to adopt valuable inventions; he explains, more especially, that devised by Mr. J. R. Wigham, of Dublin, and put in use at Howth in 1865, which seems of the greatest value. The labour question, as it is regarded by orators in Trafalgar-square, is pleaded by Mr. H. Champion on behalf of the "New Labour Party." Mr. Walter Hammond records the steps taken for the abolition of slavery in Brazil. Lord Eustace Cecil attacks "the curse of the War Office," by which he means over-centralisation. Buddhism, as it exists in Ceylon, is examined by the Bishop of Colombo in a polemical spirit of disparagement. The French Ambassador, M. Waddington, continues his useful exposition of Local Government in France.

Contemporary Review.—"The Future of Religion," a question of grave anxiety to many who assume that it is dependent on human opinion, is discussed by M. Emile De Laveleye, an eminent foreign writer on problems of social welfare. The Rev. J. Guinness Rogers attacks Mr. Chamberlain as a dissentient from the Gladstonian phalanx, while Professor Seeley advises the impartial study of politics. Mr. James Runciman exposes the faults of common school teaching, especially those of verbal and statistical cram, and of pedantic terminology, and the abuse of grammatical analysis. The Rev. Sir George Cox strongly censures the fantastic and unscriptural mythology in a certain favourite Church hymn-book. The ethical tendencies of modern science provoke the indignation of Miss Cobbe. Indian national congresses are regarded by Dr. R. Spencer Watson with sympathetic approval. Professor G. T. Stokes reviews some of the late researches in ecclesiastical history. There is an article by Lord Hobhouse, on the local taxation of rents in London; and one by Mr. J. Scott Keltie, on British interests in Africa.

Fortnightly Review.—An unsigned essay on "Our True Foreign Policy" insists on joining, with augmented naval and military forces, the alliance of the Central European Powers. The French Boulangist movement, "patriotic and anti-Parliamentary," is extolled by M. Henri Rochefort, a politician too well known. Ben Jonson's minor poems give employment to Mr. Algernon Swinburne's superlative terms of estimation in prose. The present aspect of Bulgaria, and the character of Prince Ferdinand, are described by Mr. J. D. Bourchier after a recent visit. On the witty and sceptical genius of Lucian, the Greek satirist contemporary with the Roman Antonines, Mr. Andrew Lang contributes a paper of some literary interest. Pawnbroking, in England and among foreign nations, a subject ably treated by Miss Mabel Robinson, has an important bearing on the condition of the poor. The lecture by Professor Dowden to the English Goethe Society, on Goethe's sojourn in Italy, is printed here. Colonel Frederick Maurice vindicates his narrative of the Egyptian campaign against the strictures in the *Edinburgh Review*. Students of mental philosophy may find something worth their notice in Mr. Edward Carpenter's remarks on "Custom," and in Mr. Herbert Spencer's on the basis of Kant's ethical doctrine.

National Review.—The state of our maritime defences is discussed by Sir Samuel Baker, who thinks we might have a volunteer fleet in aid of the Royal Navy. The Pan-Anglican Conference of Clergy at Lambeth is explained by the Rev. Morris Fuller, as in accordance with ecclesiastical traditions. Welsh Nonconformity is historically examined by Mr. Stanley Leighton, M.P., to show that it is on the decline. A scheme for superseding Civil Service pensions by compulsory Government life assurance is propounded by Mr. Edgar Bates. The management, resources, and benefits of Friendly Societies are reviewed by Mr. W. Greswell, who proposes that they should exert themselves to assist the emigration of the unemployed, and should become agencies of industrial colonisation. There are several articles of literary interest. One relates to Ibn Batoutah, the Moorish traveller in the fourteenth century, whose curious narrative, in Arabic, of his long wanderings in Africa and Asia deserves a new translation. Mr. J. D. Bourchier's description of the village of Beaconsfield and the home of Edmund Burke is a very good piece of writing. In a comparative analysis of "Gipsy Folk-Tales," Mr. F. H. Groome finds evidence that many Asiatic legends and myths were imported into Europe, and got into the popular literature of Western nations, by means of the Gipsies. Lady Jersey writes an account of the ancient silver mines of Laurium, in Attica, which yielded a revenue to the Republic of Athens under Pericles, and which are now again worked by a Greek and by a French company. Mr. Alfred Austin produces a tender poem of the song of the cuckoo in May, and of the drowning of a forlorn girl in the deep pool at the end of the field.

Blackwood's Magazine.—A reviewer of "Robert Elsmere" strenuously opposes the assumption that the orthodoxy of the Church of England cannot defend itself by effective arguments in the present state of knowledge. The story of "A Stiffnecked Generation" runs through several new chapters. There is a North Frisian island called "Sylt," off the coast of Holstein, and we suppose that very few Englishmen have ever heard of it; but it is said to have sent forth the Saxon warriors under "Hengist and Horsa," fourteen centuries ago, to their conquest of our own country. Sylt, now belonging to Prussia, has a little sea-bathing town called Westerland, which one would like to visit. The islanders, numbering three thousand, have a treasure of antique legends in their peculiar dialect, which is halfway between English and Low German. We are indebted to an anonymous contributor of *Blackwood's* for samples of this romantic lore. Mr. John Skelton, continuing his minute investigation of the conduct of Queen Mary Stuart, finds some reason to believe that she was the victim of actual force in her disgraceful connection with the ruffian Bothwell, after the murder of Darnley, in which crime she had passively acquiesced. The amateur of entomology has a treat provided for him in Mr. P. Hordern's account of certain Indian insects. Mr. Coutts Trotter's "Impressions of Australia" include a visit to the Fish River caves, with their beautiful stalactites, in the Blue Mountain region, near Sydney. An article on the Portuguese dominions in Eastern South Africa, the Delagoa Bay Railway, and the communication with the Transvaal is of some interest at this moment. The short tale of Scottish domestic life, called "An Elie Ruby," is agreeably told

Murray's Magazine.—The author of "The Silence of Dean Maitland" begins a new story, which is entitled "The Reproach of Annesley." Mr. Lewis Morris, in his ballad of the defeat of the Spanish Armada, gives us rugged and lumbering couplets of lines fourteen or fifteen syllables long, which defy metrical reading, and in which the tale is not very effectively told. We prefer the imaginary narrative of a naval battle in the future, supposed to be related by the Commander of H.M.S. Majestic, ironclad turret-ship, of 12,000 tons, with engines of 12,000-horse power, running nearly twenty miles an hour, and armed with hundred-ton guns. "In a Conning Tower" is the title of this spirited sketch, which seems to be correct in its details of steam-ship movements and of modern gunnery; tremendous work it will be, with such mighty instruments of warfare, whenever it has to be done! The enemy's ship is finally sunk by ramming. This is followed by a pleasant description of the North Devon Coast and Exmoor, written by Mr. L. J. Jennings, M.P. The series of articles on the traffic working arrangements of the great Railway Companies is continued by Mr. W. M. Acworth, now dealing with the London, Brighton, and South Coast lines. Captain Shaw's practical advice on the protection of dwelling-houses from fire should have the consideration of builders. Anecdotes of the great public schools in the olden time of severe flogging and fagging and Latin, collected by Mr. R. J. Mackenzie, have a retrospective interest. Mr. A. M. Wakefield treats of the early history of English music. A humorous writer sets all the fish at a London fishmonger's talking with each other; and the ways of human anglers are discussed "from a salmon's point of view." Mr. Paul Cushing's "Just for the Fun of it" is an amusing bit of American social life.

Longman's Magazine.—The long story of "Eve" has reached its fiftieth chapter. The ostrich-farming business in South Africa, with the trade in ostrich feathers, is described by Mr. George Nathan. Miss E. Nesbit's "Two Lives" must be allowed to be true and high-toned poetry. "Bamborough Sands" is an agreeable little story by Mrs. Alfred Hunt. The common notion that savages have more powerful eyesight than civilised men is disputed by Mr. W. H. Hudson, who contends that their faculty of distinguishing some particular objects at a great distance is only the result of having been obliged to give more attention to objects of that kind. Mrs. Reeve's calculations of just economy in the cost of dress contain useful hints both to ladies and gentlemen. Mr. Grant Allen writes of the evolution of the camel by the effects of an animal's life in the desert. "Orthodox," by Miss Dorothea Gerard, is a story of Jews in Poland.

Macmillan's Magazine.—Lucian comes to the fore in this publication, as well as in the *Fortnightly*; and Mr. H. D. Traill's critical appreciation of that author, which had already been proved, is shown afresh in his article on a new translation of some of the Dialogues by Mr. Howard Williams. The continuation of Mr. Walter Pater's "Gaston de Latour," a biographical commentary on French provincial life in the sixteenth century, offers a complete picture of the old town of Chartres, with its noble cathedral. There is also an article on Jacques Tahureau, a French poet of that age. A memoir is supplied by Mr. R. D. Bell of the almost forgotten founder of St. Leonard's College, at the University of St. Andrew's—namely, the young Archbishop Alexander Stuart, an illegitimate son of King James IV., killed with his father on the field of Flodden. The Hon. G. Curzon, M.P., describes the Yosemite Valley and its Waterfalls. Captain H. M. Hozier descants on "England's Peril," and holds the singular opinion that it is to be lessened by constructing the Channel tunnel; because, he thinks, if we get more trade with the Continent, we shall get more wealth, and then we can afford increased naval and military forces to repel our Continental foes! A poem by the late Sir Francis Doyle, "Lord Rodney's Bantam Cock," recalls the droll anecdote of that gallant bird crowing through the din of a great battle on the poop of the Admiral's flag-ship. "Dissensions of a Pedagogue" exhibit some comical blunders in schoolboy themes and translations. "The Lost Match" is a story of the cricket-field, neatly told.

Cornhill Magazine.—The wearisome disappointments of a briefless barrister waiting in chambers are related in a vein of ludicrous self-commiseration. Memoirs of Schopenhauer, the pessimist philosopher, have become rather a magazine here. "The Dean's Sister" is an amusing hoax played on a dignified clergyman staying in Malta. In "A Celibate's Wife," likewise, a clerical person is the victim; but this is a tragical story. "Padding" must be scarce, one would think, when a few pages are filled with stale instances of typographical errors. But "Mammoth-hunting in Siberia" is an interesting topic, and is treated with evident knowledge. "One day" is a melodious and effective piece of verse. Mr. George Gissing proceeds with "A Life's Morning," and his stories are worth reading.

Temple Bar.—"From Moor Isles," by Miss Jessie Fothergill, and "The Rogue," by Mr. W. E. Norris, are far on their way; Lady Lindsay's "Caroline" is brought to a conclusion. These stories, when published in a complete form, may be noticed hereafter. "A Chapter on Proposals" is the commencement of the fictitious autobiography of a maiden lady. There is much interest in the romantic adventures of the Count De Benyowski, a Hungarian nobleman who joined the Poles against Russia, was captured and sent to Kamstchatka, but escaped by sea, visited the island of Formosa, afterwards went to Madagascar, and became the King of a barbarian nation, and was finally killed in a fight with the French. "The House of Percy" is a review of Mr. E. B. De Fonblanque's book on the history of that famous English noble family of the Northern Border.

Time.—The personal qualifications and conditions of the diplomatic service, as a regular profession, are explained by one of its members. Brief memorial tributes, by several writers, to the character of the late German Emperor, are followed by an account of Potsdam and the Prussian Kings and Princes. Mr. H. Schütz Wilson notices the performances of actresses in male parts. In a thoughtful essay on immortality, Professor Knight advances the interesting proposition that a belief in the pre-existence of the individual soul tends to support the faith in a future life, and that it has great moral and religious efficacy. Mademoiselle F. Blaze De Bury describes the state of French journalism before the Second Empire. The fatigues of the fashionable London season are discussed by Mr. Norman Pearson; the "bee-pastures of poetry," a collection of poetical sayings about bees, are fluttered over by Mr. Arthur Grant. Miss Amy Levy contributes a little tale of which the scene is laid at Prato, near Florence. The present dispute on the Sikkim frontier of India with Thibet is explained by Mr. J. Horton Ryley. A story of the Knights Templars, reminding us of some incidents in "Ivanhoe," is related by Mr. G. F. Underhill. Mr. E. Salmon examines the pleas for direct and express representation of the labouring classes in the House of Commons. "Kophetua the Thirteenth," Mr. Julian Corbett's strange political romance, draws to its consummation.

English Illustrated Magazine.—Here is a further instalment of Professor W. Minto's historical tale, "The Mediation of Ralph Hardelot." Miss C. F. Gordon Cumming treats learnedly, but pleasantly, of the ceremonial use of umbrellas among Asiatic nations, and thereby of pagoda canopies, and of aureoles or haloes around the heads of sacred persons. There are many illustrative engravings to this article; likewise to Mr. Outram Tristram's "Old Coaching Days," with Dick Turpin on the York road; and to the account of a rural hamlet near Liphook, in Hampshire. Dr. G. Birkbeck Hill contributes a memoir of William Hutton, of Birmingham, a local antiquary and judge of the local Small Debts Court. The frontispiece is an engraving of Reynolds's portrait of Dr. Johnson.

The excellent American magazines, *Harper's Monthly*, *The Century*, *Scribner's*, and others, maintain their high claims to public favour in England by the variety of instructive and entertaining literary matter which they contain, the beauty of their numerous wood-engravings, and the quantity of fresh information that they supply concerning topics both of the New World and of the Old World; but it is not possible, within our limited space, to enumerate their contents for this month. For the same reason, we can only mention "The Woman's World," "Atalanta," "Belgravia," "The Gentleman's Magazine," "The Atlantic Monthly," "Tinsley's Magazine," "The Argosy," "Cassell's Family Magazine," and "Myra's Journal of Fashion."

THE ITALIAN EXHIBITION.

The bright and interesting Exhibition organised by Mr. J. P. Whitley at Earl's Court has proved far and away the most attractive of the series of expositions opened in London this season. This success has been distinctly deserved. The art and industrial exhibits within the building, particularly the beautiful and extensive collection of sculpture, and the pictures, have never failed to be admired by the general public; and the scenic and musical charms of the tastefully-adorned gardens have yielded enjoyment every fine afternoon and evening since the opening. It only needed the addition of Cæsar's Triumphal Procession, the Roman chariot-races and Roman sports in the Coliseum Arena (site last year of "Buffalo Bill's Wild West Show"), and the illumination of the Borghese Gardens and the cosy Welcome Club and grounds at night on a comprehensive scale by Messrs. T. Brock and Co., and the glowing lights from countless Japanese lanterns in shrubs and trees, to crown the popularity of the Italian Exhibition.

In the Central Garden—gained through the large marquee in which the gay and debonair Sorrento singers and tarantella performers afford amusement—stands the remarkably well-painted panorama of the Roman Forum. Given a suitable sky overhead, this strikes the spectator as a marvellous example of scenic illusion, reflecting great credit on the clever artist, Cav. Liverani, who also painted the adjoining Italian Market Place. It is close by that the troupe of marionettes represent the Deluge, and dance the Excelsior Ballet with grotesque effect in the spacious theatre. We cross a bridge to reach the West Garden. Entering the canvas cave labelled the "Blue Grotto of Capri," we find ourselves within a model of the islet whose ultramarine beauties have to be seen by every visitor to the Bay of Naples. Near this Blue Grotto is the small building which shelters the diorama of Naples and Mount Vesuvius, another object of interest. Facing this is the Alpine Switchback Railway, a favourite form of recreation first brought into vogue in London on this same spot last year. The rush, the jerks, and the surprises of a trip down and up the undulating track of the "Switchback" apparently still yield large delight to young people; but visitors must experience the novel sensations of a journey for themselves to judge of the effects of the "Switchback," which the Princess of Wales and Princesses Louise, Victoria, and Maud are said to have greatly enjoyed last summer. The Hunting Tent of the "Re Galantuomo" recalls the fact that Victor Emanuel, King of United Italy, was a great sportsman, and was never happier than when he was roughing it as a Nimrod. His Majesty's grandson, the Prince of Naples, as President of the Exhibition, will be certain to be warmly welcomed on his forthcoming visit to London; the Reception Committee, of which Colonel John T. North is the genial President, having already afforded proof of its graceful hospitality.

Grace to such agreeable open-air entertainment as may be obtained at the Garden Concert of the Italian Exhibition, London residents are becoming so attached to the healthy recreation of the Continental Volksgarten that it is safe to say London could not well do without these musical promenades now in summer-time. When night falls, and innumerable lamps and lanterns glimmer and glow on the lawns and in the foliage, and from the terrace of the Welcome Club can be heard the seductive strains of the last new valse by Strauss as played in the illuminated orchestra, the enchanting scene is like Fairyland, and the brilliant gardens are left with regret.

THE ROYAL AGRICULTURAL SHOW AT NOTTINGHAM.

The Show of the Royal Agricultural Society, which opens at Nottingham on Saturday, July 7, will be the largest that the society has held since the International Show at Kilburn in 1879. The show of implements and machinery in motion will be upon a larger scale than last year, with 10,743 ft. of shedding, as against 8217 ft.; but this is not to be regarded as an unmixed advantage, for this section of the show is too unwieldy as it is to be of so much practical benefit as it might be. There will be a small show of poultry as well; but the chief attraction outside the live-stock section will be the working dairy, with the trials in butter and cheese making, and the horse-shoeing competitions—a new feature which has been borrowed from the Bath and West of England Society. There will also be displays of bee-driving, and lectures on bee-driving and the management of bees; but the exhibition of fruit and vegetables, which was included in the programme of the week at one of the preceding shows, has unfortunately been abandoned.

Mr. S. Jerrard concluded his series of dramatic recitals at Steinway Hall, on Saturday afternoon, June 30.

Lady Dalby distributed the prizes to the successful pupils of the School for the Oral Instruction of the Deaf and Dumb on July 5. The annual meeting and a short examination of the pupils was held previous to the distribution.

The fifteenth annual conversazione of the Royal Colonial Institute, which was founded in 1868, and incorporated by Royal charter in 1882, took place on June 28 in the Albert Hall. There was a large attendance of eminent colonists, who met in the arena, and discoursed of the strength of England's real "auxiliary forces"—her Colonies. The band of the Royal Marine Light Infantry performed during the evening in the hall, and that of the Coldstream Guards (Chatham division) in the conservatory. Many distinguished guests came to meet their brethren from across the seas, and a pleasant and thoroughly fraternal evening was spent under excellent auspices.

ABBOTSFORD.

If the most interesting spot on English ground is the birthplace of Shakspeare, Abbotsford, which Scott loved so well, and where he breathed his last, is the most attractive spot in Scotland to all lovers of literature. The house is not noble as a building, neither is the situation one of great beauty. Moreover, such beauty as it does possess is not fully visible to the tourist, who enters the mansion by a back door, is ushered through the show-rooms, and then departs without gaining what is most to be desired—a general impression of the place. Curious objects—some of them historically interesting, and many of them of doubtful authenticity—may have, indeed, their special value; but those of us who love and honour the great Master of the House do not go to it chiefly for the purpose of seeing the curiosities with which the rooms are crowded. Napoleon's first blotting-book and pen-tray, a piece of Queen Mary's dress, Persian sabres, Indian daggers, Russian muskets and snuff-boxes innumerable, are worth looking at, perhaps; but they tell us nothing of Sir Walter, nor, indeed, are we sure in all cases that they passed through his hands. In the catalogue edited by the Hon. Mrs. Maxwell-Scott, the great-grandchild of the founder of Abbotsford, there are many objects closely associated with the poet's life. Every eye will rest with interest on his own writing-table and chair; on the miniatures exchanged before their marriage by Sir Walter and Lady Scott; on Montrose's sword, and on Rob Roy's gun and old Highland sporran—on any curiosity or picture, indeed, which had a special value in the owner's eyes. At the same time, these cherished treasures are not Abbotsford, and they do not satisfy the imaginative craving of which most of us are conscious on entering a house so memorable. A young American poetess expressed a common feeling when she wrote:—

> I'd stand where sceptred kings have stood,
> Or kneel where slaves have knelt,
> Till, wrapt in magic solitude,
> I feel what they have felt.

But in all cases in which we strive to bring before the mind's eye what has passed away, there is a sense of inadequacy and dissatisfaction. This is especially felt by the tourist after a guide-directed inspection of Sir Walter's home. To feel the emotion the spot may well call forth, the pilgrim should be free to gaze on the building from the grounds which Scott loved so well, to walk or ride through the woods he planted, as the Great Magician was wont to do with Tom Purdie; or to listen while loitering on the terrace to the ripple of the Tweed over its pebbles, the last and sweetest sound Sir Walter heard on earth.

In the spirit we can do this if we are not allowed thus to wander over Scott's domain in the flesh, and, as we do so, how many strange thoughts—half melancholy, half joyful—fill the mind! The greatest mistake of Scott's life—is it too much to say his single and signal folly?—is associated with Abbotsford, and may be traced to his proud wish to found a family: the noblest act of his life was the manly courage with which he met the difficulties Abbotsford brought upon him. His weakness was the source, ultimately, of his greatest strength; and, as Mr. Hutton finely says, "like the headland stemming a rough sea, he was gradually worn away, but never crushed." In misfortune Scott was strong: in his unbounded prosperity his winning sweetness of nature won all hearts. This great man of genius had not a trace of meanness, of jealousy, of ignoble vanity. He was one of the manliest of men, and had a heart open as the day to all kindly influences. "Sir Walter talks to us," said a poor person, "as if we were all blood-relations"; and when his great losses came, not a servant in the house but was ready to take his share in the change of circumstances. Here was the most popular author of the century, and, next to Shakspeare, perhaps the most famous in our literature, proving by example the absurd fallacy of Thomas Moore that genius is incompatible with domestic happiness. The nonsense is still echoed in our day; and only recently it has been implied in a journal of some reputation that if Burns had been a moral man, he would not have been so great a poet: that it was for the benefit of the world and in the proper order of things, that he should have neglected duty and yielded to sensual gratifications. Burns was far too just and honest to deceive himself in this way, and acknowledged, with genuine sorrow, that

> Thoughtless folly laid him low,
> And stained his name.

Scott's name was unstained, but this did not diminish his sympathy or render less forcible his representation of character. With the fine imagination of a poet, he had the steady perseverance of a man of business. While living so much in the past, he did not lose his hold of the present, and the versatility of his genius was none the less wonderful because he was never known to fall drunk in the gutter like Sheridan, or to give way to the grossest excesses as Lord Byron did at Venice.

There is often a flaw in the character of a great literary benefactor which tempers our admiration of his genius. The imperial imagination of Milton dazzles us with its splendour; but, while we reverence the poet's purity and loftiness of aim, we cannot forget his scurrility as a controversialist, his unkindness to his first wife, and his harsh conduct as a father. Scott's life, on the contrary, lies in it a daily beauty. It is almost as delightful to read what Lockhart relates about him as to read what he has himself written. In both the works and the biography there are the same fine qualities of graciousness and loftiness of tone. Scott was pre-eminently a gentleman, not by birth alone, but by nature; and in his novels there is at once masculine strength and the refinement that rejects with a poet's sense of fitness all subjects unsuitable for art. With what contempt and loathing his healthy nature would have regarded the theory and practice of some living novelists of the French school whose "realism" panders to whatever in human nature is impure, unlovely, and of foul report!

In reading ordinary novels the feelings are often unduly excited, but in the highest creations of genius there is a moderation that prevents an excess of emotion. The time spent on authors like Homer, Shakspeare, Dante, and Cervantes, is a mental and moral gain. They widen our horizon, deepen our sense of beauty, and fill our lives with some of the wealth that has enriched their own. And this is what Scott does in abundant measure. It is one end of all art to give delight; but it is not the sole end, and Sir Walter's works may be justly said to "inbreed and cherish" in the hearts of all who read them "the seeds of virtue and nobility."

Therefore, if the reader cannot go to Abbotsford to recall on the spot where he died the memory of Scotland's worthiest son, let him read once more the glorious books he has left behind him. His manly art as a poet affords a fine contrast to the eccentric verse-making, too familiar now-a-days, which revels in obscurity and in fantastic forms alien to the spirit of the language; his consummate genius as a writer of romance is beyond praise and beyond rivalry. Truly does Sara Coleridge say that the Waverley novels fill a place in literature which they have entirely to themselves. Assuredly there are few imaginative prose works we could not part with more readily.

J. D.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

H B NEDHAM (Rosendale).—We are much obliged for your letter and enclosed slip. The game is very acceptable.

GUSTAV MORSCH (Windsor).—Delayed, but not forgotten. It shall appear next week or week after.

PERCY ANDREA (Clapham).—You have not considered Black's defence of 1. Kt to Q4th.

SHALFORTH, COLUMBUS, AND OTHERS.—In reply to 1. R to Kt 6th or 1. P to R 4th, Black can play 1. Kt to Q 5th, &c.

C E P.—Look at the position again, and you will discover there is no mate in three moves by your proposed mate.

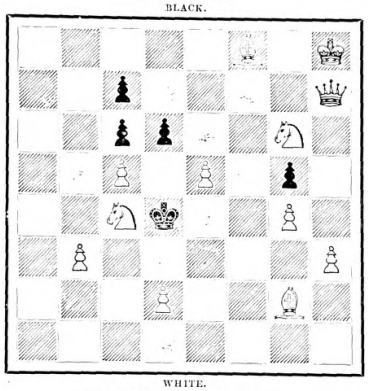
CONRAD FOLTZER (Bootroff, South Africa).—We willingly comply with your request, and will write to you on the subject.

J DIXON.—Your problem is next in type; but leave you not overlooked that your solution is defeated by 1. B to R 3rd?

G C HEYWOOD.—We shall look forward to the promised particulars.

W S.—We really cannot inform you. Apply to the editor of the magazine in question.

CORRECT SOLUTIONS OF PROBLEM No. 2297 received from F R Keoughan, St Paul (Minn.); of No. 2296 from P R Keoughan and H B (Bombay); of No. 2300 from Lance-Corporal P Edwards (Hankbell, India), and H B (Bombay); of No. 2301 from G Hewitt (Middle Colville); of No. 2302 from H B (Bombay); of No. 2304 from A Wheeler, An Old Lady (Paterson, U.S.A.), and T Monk (New York); of No. 2305 from Oldham Club and A W Hamilton Gell; of No. 2306 from A Wheeler, W H D (Wadsley), J T Pullen, J W Pratt, J A Schumacher, Lieut.-Col. Lorraine, W Shaw (Sheffield), A W Hamilton Gell, John Graves, C Harper, and W W.



CORRECT SOLUTIONS OF PROBLEM No. 2302 received from L Desanges, Dr F S, Dawe, R H Brooks, Jupiter Junior, Rev. Winfield Cooper, L Wyman, E Cassella (Paris), Hereward, T Roberts, Jos. A Short, J D Tucker (Leeds), R P S Banks, E Silverwood, H Lucas, L Coad, Thomas Chown, Major Prichard, W R Baillie, J R Newman (East Sheen), J Hepworth, Shadforth, W T G Ware, D Wolfe (Huddersfield), E E H, D McCoy, R Worters (Canterbury), F Drew, and J Dixon.

SOLUTION OF PROBLEM No. 2305.

WHITE.	BLACK.
1. Q to Q 2nd	B to R 6th
2. P to B 3rd (ch)	K takes P
3. Q mates.	

If Black play 1. B to Q 3rd, then 2. Q to K 2nd (ch), &c.; if 1. Q to R sq, then 2. Kt to B 7th, &c.; if 1. Kt to Q 4th, then 2. R takes P (ch), &c. This problem cannot be solved by 1. K to Kt 2nd or 1. Q to Q sq. Correspondents propose; but the author has overlooked the effect of 1. B takes Kt, &c.

PROBLEM No. 2309.
By J. G. CAMPBELL.
BLACK.

WHITE.
White to play, and mate in three moves.

CHESS AT CLIFTON.

Game played in the Clifton Chess Club between the Rev. J. POLLOCK and Mr. N. FEDDEN.
(Scotch Gambit.)

WHITE (Mr. P.)	BLACK (Mr. F.)	WHITE (Mr. P.)	BLACK (Mr. F.)
1. P to K 4th	P to K 4th	22. P takes P	P takes P
2. K Kt to B 3rd	Q Kt to B 3rd	23. R to K Kt 3rd	K to R 2nd
3. P to Q 4th	P takes P	24. Q R to K B sq	Q to Q 4th
4. Kt takes P	Kt takes Kt	Black's position calls for the closest attention; if R to K 8th, R to K sq, and White gets a check with the Rook at K 7th.	
5. Q takes Kt	Kt to K 2nd	25. R takes P	
6. B to Q B 4th	Kt to Q B 3rd	A bold stroke, nevertheless, unsound; if Black take the Rook, then 26. Q to Kt 3rd (ch), and wins.	
7. Q to Q 5th	Q to K 2nd	25.	R to K Kt sq
8. Q Kt to B 3rd	P to Q 3rd	By this clever reply Black gets the better game.	
9. B to Q Kt 5th	B to Q 2nd	26. R to R 6th (ch)	
10. B takes Kt	B takes B	Desperation. If 26. R to R 5th (ch), K takes R, 27. R to B 6th (ch), K to R 2nd, and White's attack is over.	
11. Q to Q 4th	Q to K 4th	26.	K takes R
12. Q to K 3rd	P to K Kt 3rd	27. Q to K 3rd (ch)	R to Kt 4th
13. P to K B 4th	Q to K 2nd	28. R to B 6th (ch)	K to R 2nd
14. Castles	B to Kt 2nd	29. Q to K 7th (ch)	K to Kt sq,
15. B to Q 2nd	Castles K R	If R covers, then R to R 6th (ch), and mates next move.	
16. Q R to K sq	K R to K sq	and Black wins.	
17. P to B 5th	B takes Kt		
18. R takes B	Q takes P		
19. Q to R 3rd	Q takes Q B P		
20. Q R to Q R sq	Q to K 5th		
21. R to K B 3rd			

A difficult move to answer.

21.	P to K R 4th

The only satisfactory reply on the board.

CHESS IN HERTFORDSHIRE.

Game played at Ware, between Mr. T—— and Mr. F. N. BRUND.
(Dog Loper.)

WHITE (Mr. T.)	BLACK (Mr. B.)	WHITE (Mr. T.)	BLACK (Mr. B.)
1. P to K 4th	P to K 4th	22. R to K 2nd	Q to Kt 4th
2. Kt to K B 3rd	Kt to Q B 3rd	23. P to K 5th	P to Q 4th
3. B to B 4th	P to Q 3rd	24. P to K 6th	
A move frequently played by Mr. Bird, which rarely fails to bring about interesting situations.		White gives up a Pawn for a similar attack, and weakens his position for the endgame.	
4. Kt takes Kt	P takes Kt	24.	B takes P
5. P to Q B 3rd		25. R to K 5th	Q to Kt 2nd
Castles is the correct continuation, the text move appears to lose time.		26. B to B 5th	K to Q 2nd
5.	B to B 4th	27. P to Kt 5th	B takes B
6. P to Q Kt 4th	B to Kt 3rd	28. R takes B	K R to K Kt sq
7. B to Kt 2nd	Q to Kt 4th	29. R to B 2nd	P to R 6th
8. B to B sq	Q to B 3rd	30. R takes B P	P takes K Kt P
9. P takes P	B takes P	31. P takes P (ch)	P takes P
10. B takes B	Q takes B	32. R to Kt 4th	Q to R 3rd
11. Kt to B 3rd	Kt to B 3rd	33. K R takes P	
12. P to B 3rd	P to B 3rd	A slip; but White has under any circumstances the inferior game; if Q R takes P, the following is a probable continuation:—33. Q R takes P, Q to K 6th; 34. P to Q 8th, K R to Kt sq; 35. R to Kt 7th, K to K 3rd; 36. K to Kt 2nd, K to B 3rd; 37. R to Kt 4th, R to Kt 5th, and Black has some advantage.	
13. P to Q R 3rd	P to Q 3rd	33.	Q to K 6th (ch)
14. Kt to B 2nd	Q to K 4th	34. K to R sq	R takes R
15. P to Q 4th	Q to K 2nd	35. R takes R	Q takes R P
16. Kt to B 3rd	P to K R 4th	36. R to Kt 7th	Q to K 2nd
17. B to Q 3rd	P to R 5th	37. P to B 4th	Q to K 8th (ch),
18. Castles	Kt to R 4th	and wins.	
19. R to R 2nd	Kt to B 5th		
Threatening to continue with P to R 6th.			
20. Kt to K 2nd	P to K Kt 4th		
21. Kt takes Kt	P takes Kt		

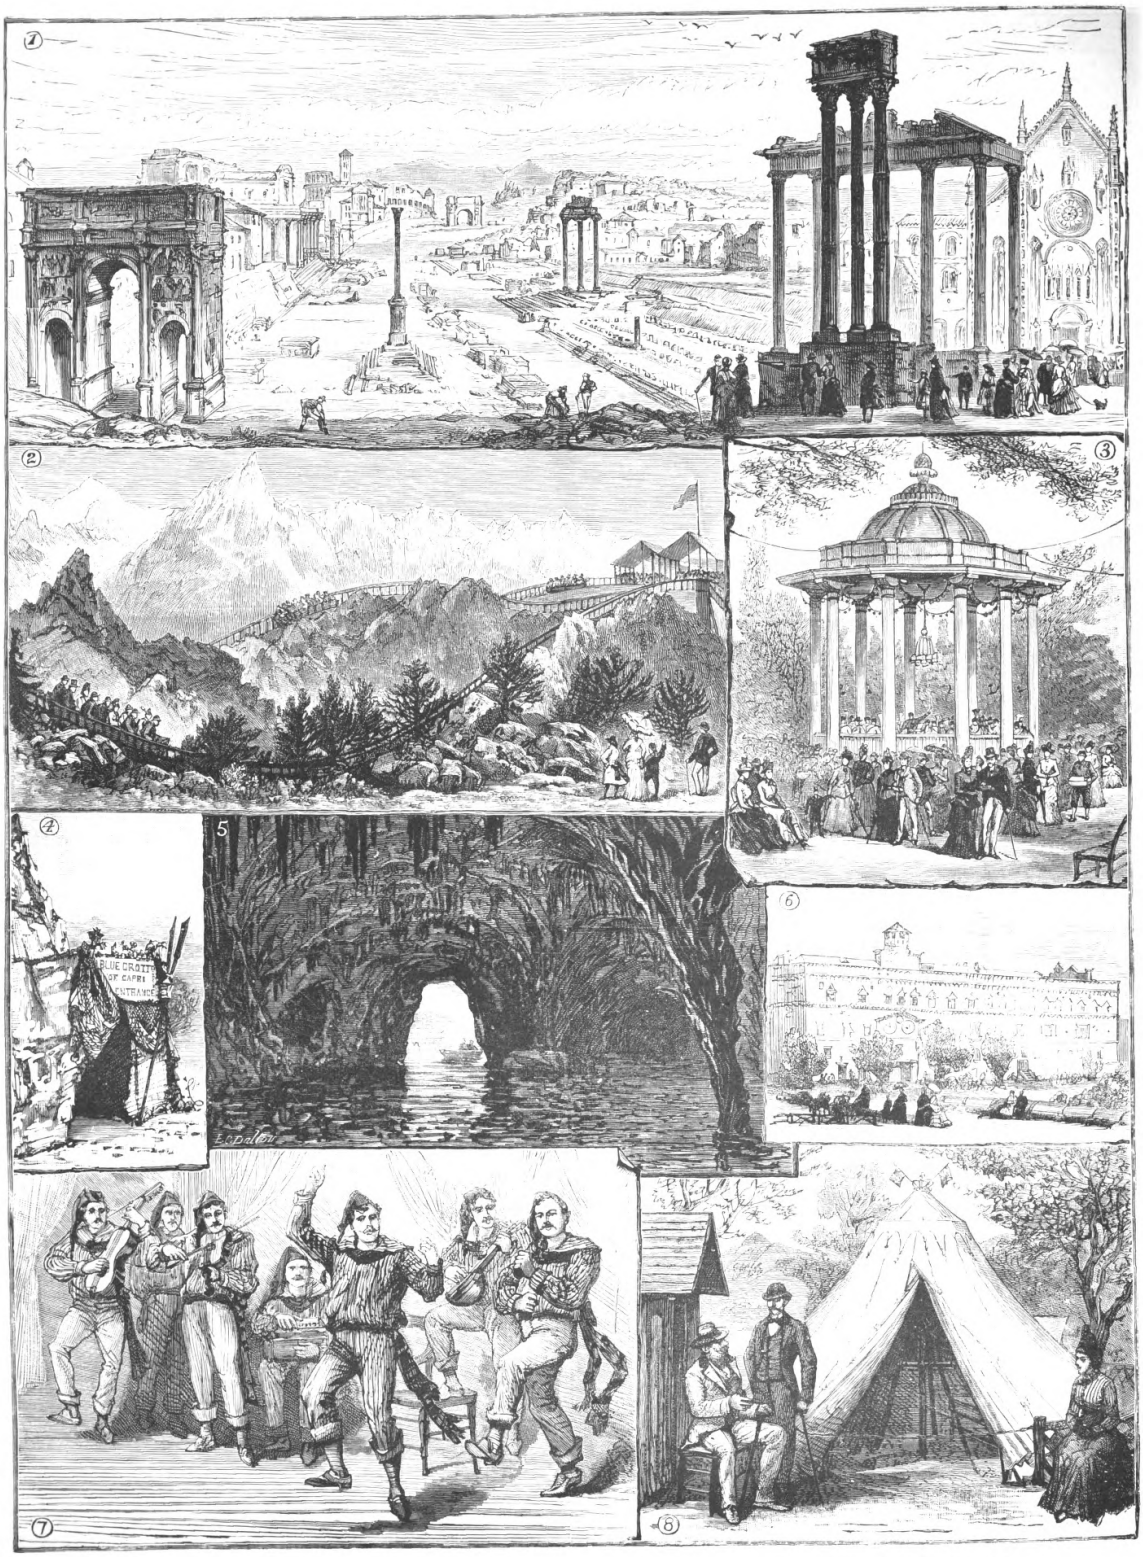
The handicap at the British Chess Club has made considerable progress during the past week, and the closing struggle has now commenced. Owing to Mr. Blackburne's absence on a professional tour he has only completed three games, but as he is an admirable tourney-player it is quite on the cards that he will take a prominent place in the final score. When we went to press the following were the scores:—Wainwright, 10; Bird, 9½; Mortimer, 6½; Gunsberg, 5½; Gattie, 5; Michael, 4½; Jeffrey, 4½; Pollock, 4; Ingoldsby, 4; Wyman, 4; Nelson, 2½; Blackburne, 2; Abercrombie, 1.

The programme of the British Chess Association meeting at Bradford, on Aug. 6, has now been issued. The matches include a masters' tournament, to which the principal foreign players are invited; the amateur championship contest for the Newnes Challenge Cup; the Yorkshire championship, and the Ruskin and Tennyson contests. The Yorkshire County Chess Club co-operate with the B.C.A. in the arrangements of the congress, and a very successful gathering is expected. The entries close on Aug. 3; and application should be made to L. Hoffer, British Chess Club, King-street, Covent-garden. Amongst the visitors expected is Mr. Loyd, the famous American problem composer

THE LADIES' COLUMN.

Gowns for Henley, this season, are made much less, generally, than is usual for that event, of the positive "washing materials." The weather, variable and dull, is to blame for this, not the dictates of fashion. Dressmakers have a large stock of cottons in hand; but to order a zephyr or a muslin gown when the skies were so heavy and the winds so cold as they have been on four out of every six days, so far, during this phenomenal "midsummer," would have required the exercise of more than common imagination and faith. Summer, forsooth! It is "midsummer," as Lord Brougham once said an unpopular Duke was noble—"according to the usages of speech of this country, and not according to reality." Hence, the charming delaines, lace and muslin striped fabrics, cambrics and zephyrs prepared by the manufacturers have been comparatively neglected. Soft silks and the more dressy woollen materials are having a great run, in consequence. Silk, however thin, is much warmer than cotton, and a great deal better as a protection from the wind; it is a preservative of the natural warmth, owing to its non-conducting the animal electricity. Experience teaches us this, and there is a sense of protection against possibilities in a merveilleux, or even a pongee, or a foulard gown, that cotton cannot give. Many of the sateens and faced muslins—delaines, mousselines-de-soie, &c.—are so beautifully designed and finished this season as almost to look like silk, but the temperature has been too much against them for them to be used. Hence, they are likely to be sold very cheaply at the summer sales which are now upon us; and at the same time they cannot fail to be again fashionable next summer, since the large stocks in hand cannot possibly be got rid of: so that it will be the part of wise economy to lay in a few dress pieces of these materials, either for the possible bright days of the autumn or for yet more distant sunshine and warmth.

Amongst the Henley gowns, a very successful one was in steel-grey alpaca mohair, with trimmings of green watered-silk and white lace. There was a Directoire coat of the grey alpaca, with revers of green watered silk and a vest of grey alpaca laid in tiny pleats on either side of two central gathered lace frills, which went right down the middle of the vest. The skirt over which this coat opened was in alternate panels of the green silk and the alpaca, each panel of alpaca being almost covered with a series of narrow gathered flounc-ings of lace. A foulard, with a biscuit-coloured ground dotted with tiny clusters of rosebuds, was made up very prettily into a full, and almost plain, skirt, reaching to a high-waisted Empire bodice, the sleeves of which were puffed, while the narrow vest appearing between the folds, from shoulder to waist, of the foulard, as also the wide sash finishing off the waist, and the tight cuffs into which the sleeves were gathered, were all of pale green ponit-de-soie. A simple gown was in a material of which many variations on the one idea may be seen this season—viz., alternate transparent stripes and close ones, each about two inches wide. In this case, the contrasting stripes were white Madeira work and watered silk ribbon, made up over a white foundation, with bodice of black and white striped silk. Another simple and pretty toilette was a black foulard with white lightning stripes over it, the front of the skirt put on a little full and longer than the back, and then caught up about the knee to the proper length by a broad scarf of white silk, which started at the right hip, passed round so as to make the drapery as described, and finished in a long loop and ends at the left hip; the back was very full, but undraped, and the bodice a plain coat one with white vest. White serge and white nun's veiling with ribbons of various colours, composed many effective dresses.



Hats are now being worn almost invariably big-brimmed and flat-crowned. Never was a disappearance more sudden and complete than that of the tall-crowned turned-up-brimmed hats of the past few seasons. The trimming all being piled on the top of the new hats, however, the difference in the general outline is not so great as might be pre-supposed. The brims are most diverse in shape; in fact, they may be bent about and caught up just as becomes the wearer's face, while perfectly straight round brims turned up nowhere but at the extreme back are equally correct. Flowers and ribbon or tulle or crêpe bars are almost exclusively employed for trimming; feathers are not used on hats, and rarely on bonnets. Roses appear to be the favourite flowers. Brims are frequently lined with the tulle or China crêpe used for the outer trimming; and long scarves of the same or ends of the ribbon that forms the bars often hang down at the back, and are either left so or drawn round the throat and knotted in front loosely, as may be most becoming to the wearer. The newest and for the moment the most fashionable kind of straw for hats is that called crenoline. A chapeau of one coloured crenoline is often lined with another, so thin and pliable is this extremely fine straw. Thus a black crenoline hat has the brim lined with white crenoline, and this is shown by the brim being caught up to the crown at both sides; yellow roses in two shades and black ribbon bows form the trimming, and ends of the black ribbon are loosely drawn round to the front.

The long Directoire handles to parasols are in great favour, and one or two ladies have even appeared in the park with tall thick sticks in lieu of simply having long-handled *en tout cas*. A posse of bridesmaids the other day, who wore Directoire coats of white silk with heliotrope moiré sashes over white lace skirts, had their costumes finished off by carrying long white sticks with their bouquets of pink and white roses tied on the top by means of heliotrope moiré ribbon, from which long streamers depended. Smocking, as fashionable as ever for gowns, has extended its empire to parasols, the newest being of soft silk elaborately honeycombed towards the top, with the edges fringed out and hanging all round very loose.

The periodical attempt to turn married women teachers out of their employment was made at the London School Board recently, and failed as ignominiously as it deserved, the mover, Mr. Dillon, finding only two persons to vote with him as against twenty-seven opponents of the proposal. The unjustifiable and nauseous character of the motion may be judged from this overwhelming majority, which ought likewise to permanently settle the question and prevent the married mistresses being periodically harassed by such a motion in future. The fact is that a very large proportion of the best and most successful teachers under the Board are married women. When I was a member of the Board, I once, in order to crush this vexatious perennial motion for the dismissal of mothers from the teaching staff, showed that every mistress mentioned as a model teacher that year by the inspectors was, without a single exception, married. The reasons for this are not difficult to perceive. The married women are, as a whole, the elder teachers, and, therefore, the more experienced; they have that special management for and sympathy with all children that the touch of her own baby's lips gives to a true woman; and they are likely to be more settled to their duty than the young single ones, having drawn their lot in the great chance of a woman's life, and found that it includes for them the desirability of wage-earning. For these reasons, the married women teachers ought to form a large proportion of the best mistresses in our schools; and, as a fact, they do so.

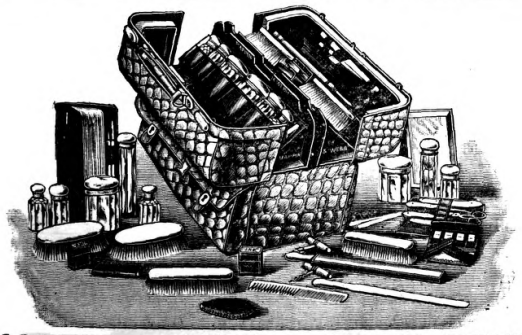
HOW TO AVOID THE INJURIOUS EFFECTS OF STIMULANTS.

The present system of living—partaking of too rich foods, as pastry, saccharine and fatty substances, alcoholic drinks, and an insufficient amount of exercise—frequently deranges the liver. I would advise all bilious people, unless they are careful to keep the liver acting freely, to exercise great care in the use of alcoholic drinks, avoid sugar, and always dilute largely with water. Experience shows that porter, mild ales, port wine, dark sherries, sweet champagne, liqueurs, and brandies, are all very apt to disagree; while light white wines and gin or old whisky, largely diluted with seltzer-water, will be found the least objectionable. ENO'S "FRUIT SALT" and ENO'S "VEGETABLE MOTO" are peculiarly adapted to any constitutional weakness of the liver; they possess the power of reparation when digestion has been disturbed or lost, and place the invalid on the right track to health.



CAUTION.—Examine each Bottle, and see the Capsule is marked "ENO'S FRUIT SALT." Without it, you *have been imposed on by worthless imitations.* SOLD BY ALL CHEMISTS.

Prepared only at ENO'S "FRUIT SALT" WORKS, LONDON, S.E., by J. C. ENO'S PATENT.

A VISITING CARD PLATE, elegantly engraved, and 100 CARDS Printed, for 4s. 6d.
RODRIGUES, 42, PICCADILLY, LONDON.

VALUABLE DISCOVERY for the HAIR. If your hair is turning grey, or white, or falling off, use "The Mexican Hair Renewer," for it will positively restore in every case Grey or White Hair to its original colour, without leaving the disagreeable smell of most "Restorers." It makes the hair charmingly beautiful, as well as promoting the growth of the hair on bald spots, where the glands are not decayed. "The Mexican Hair Renewer" is sold by Chemists and Perfumers everywhere, at 3s. 6d. per Bottle.

FLORILINE. For the Teeth and Breath. Is the best Liquid Dentifrice in the world: it thoroughly cleanses partially-decayed teeth from all parasites or living animalcule, leaving them pearly white, imparting a delightful fragrance to the breath. The Fragrant Florilline removes instantly all odours arising from a foul stomach or tobacco smoke; being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly delicious to the taste, and as harmless as sherry. Sold by Chemists and Perfumers everywhere, at 2s. 6d. per Bottle.

HOOPING-COUGH.
CROUP.
ROCHE'S HERBAL EMBROCATION.
THE celebrated effectual cure without internal medicine. Sole Wholesale Agents, W. EDWARDS and SON, 157, Queen Victoria-street, London, whose names are engraved on the Government Stamp.
Sold by most Chemists. Price 4s. per Bottle.

MONTE CARLO
AS A SUMMER RESORT.
For a summer stay, Monaco, next to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea-breezes. The beach is covered with the softest sand; the Hotels are grand and numerous, with open sea-baths, and there are comfortable villas and apartments, replete with every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean coast where under all conditions of the weather sea-bathing is possible. Establishments on the banks of the Rhine—Theatre, Concerts, Venetian Fêtes, &c.
There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo, or in its special fascinations and attractions—not only by the favoured climate, and by the inviting scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it to-day the rendezvous of the aristocratic world, the spot most frequented by travellers in Europe; in short, Monaco and Monte Carlo enjoy a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY,
SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the Gothard line. Through-going Sleeping-Cars from Ostend to Milan. Balcony Carriages, Safety Brakes. Tickets at all corresponding Railway Stations, and at Cook's and Gaze's Offices.

AIX-LES-BAINS, SAVOY, Thermal Station. Most important of Continental Sulphurous Spas. Eleven hours from Paris. Sciatica, gout, and catarrh of the pharynx, larynx, and nasal passages efficaciously treated. The most celebrated doctors attend this luxurious and curative station.

AIX-LES-BAINS.—Grand Hôtel Europe. One of the most renowned and best conducted in Europe. Patronised by Royal Family. 300 sunny chambers. Refined table. Large gardens; lawn-tennis.—DENARCOS, Proprietor.

COCKLE'S ANTIBILIOUS PILLS.

COCKLE'S ANTIBILIOUS PILLS. FOR LIVER.

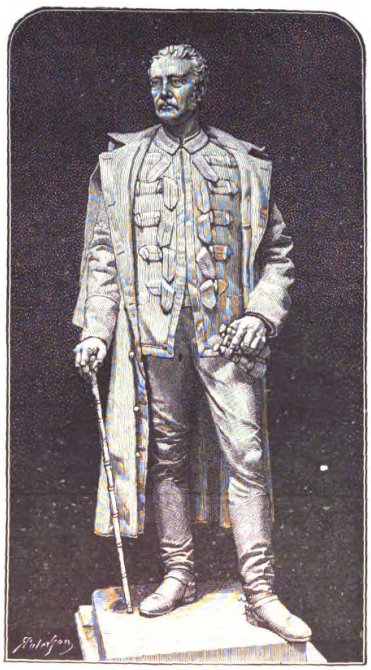
COCKLE'S ANTIBILIOUS PILLS. FOR BILE.

COCKLE'S ANTIBILIOUS PILLS. FOR INDIGESTION.

COCKLE'S ANTIBILIOUS PILLS. FOR HEARTBURN.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of MRS. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep, by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure and ask for Mrs. Winslow's Soothing Syrup, and see that the name of "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

THROAT IRRITATION and COUGH. Soreness and dryness, tickling and irritation, inducing cough and affecting the voice. For these symptoms use EPPS'S GLYCERINE JUJUBES. In contact with the glands at the moment they are excited by the act of sucking, the pure saccharine confections become actively glycerine in those sarcenalie confections become actively healing. Sold in Boxes, 7½d., Tins, 1s. 1½d., labelled "James Epps and Co., Homœopathic Chemists, London."



LATE CAPTAIN H. B. URMSTON, 6TH PUNJAUB INFANTRY.
KILLED ON THE PUNJAUB FRONTIER.

DOWNING COLLEGE, CAMBRIDGE.

At the recent election to the Mastership of Downing College, Dr. Alexander Hill, M.A., M.D., Fellow of the College, was chosen to succeed Professor Birkbeck, Q.C. The new Master was born in 1856, and is a son of Mr. John Hill, of Torrington-park, Finchley. He entered as a pensioner at Downing College in October, 1874, and was subsequently elected a foundation scholar. He graduated in the Natural Sciences Tripos of 1877, obtaining a first class for proficiency in botany, zoology, and comparative anatomy, human anatomy, and physiology. After taking his B.A. degree he devoted himself to medicine and surgery. He has upon two occasions filled the office of Hunterian Professor of the Royal College of Surgeons; is demonstrator of anatomy and teacher of physiology in the University; has acted as an examiner for the M.B. examinations at Cambridge and for the Natural Sciences Tripos; and is also examiner in anatomy to the University of Glasgow. He is author of a work entitled "The Plan of the Central Nervous System," and has contributed to the medical journals.

Our Portrait of the new Master of Downing College is from a photograph by Messrs. Elliott and Fry, of Baker-street.

STATUE OF GENERAL GORDON AT ABERDEEN.

ABERDEEN STATUE OF GENERAL GORDON.

The monument erected in front of Robert Gordon's College at Aberdeen, to the memory of the late General C. G. Gordon, whose death in the heroic defence of Khartoum has excited so much public feeling, was unveiled on June 16 by the Marquis of Huntly, as head of "the Gordon clan." It is a fine bronze statue, the sculptor of which was the late Mr. Stuart Burnett, A.R.S.A., and which was cast by Mr. Adam Walker at Sir John Steell's foundry in Edinburgh. The figure of General Gordon is 9 ft. 6 in. in height, and it stands on a pedestal of granite 9 ft. high. The Art Gallery and Museum, and Gray's School of Art, adjacent to the building of Gordon's College, are situated in the new square adorned by this monument. The late Lord Provost, Mr. Matthews, of Springhill, co-operated zealously with Lord Huntly and the committee of gentlemen who obtained subscriptions for this work; and Lord Provost Henderson, with Mr. Gordon of Newton and others, took part in the proceedings at its formal dedication. Among those present was General Man, of the Egyptian Army, who had served under General Gordon both in China and in the Soudan.

DR. ALEXANDER HILL, M.D.,
THE NEW MASTER OF DOWNING COLLEGE, CAMBRIDGE.

The Revenue Returns for the first quarter of the financial year show a net increase of £265,033 compared with the corresponding quarter of last year. There are decreases of £465,000 in property and income-tax, and £20,000 in house duty; but these are more than counterbalanced by large increases in the revenue from stamps, customs, excise, the telegraph service, Crown lands, and miscellaneous sources. For the year ended Saturday, June 30, the net decrease was £332,024.

THE WAR IN SIKKIM: ATTACK BY THE TIBETANS ON THE CAMP AT GNATONG.
SKETCH BY LIEUTENANT A. HEYMAN, 2ND BATTALION DERBYSHIRE REGIMENT.

THE WAR IN SIKKIM.

The British and Indian troops in the mountainous region of Sikkim, north of Bengal, are opposed to a force of Tibetan invaders in and about the Jalap Pass. It is stated that the immediate cause of the attack was a letter addressed to the leaders, informing them that the oracle of Naitoang, near Lhassa, had prophesied victory if the attack were delivered between the 11th and 15th days of the third Tibetan month, corresponding with May 21 and 25. After a council of war the force marched in two bodies, one by the Jalap and the other by the Pembyring Pass. Having reached the low Tukola ridge, between Gnatong and the Jalap, the Tibetans formed into three columns, one to make a front attack, and the other two to advance along the spurs flanking the Gnatong position. These worked round to the end of the jungly ridge, north of the camp. Here several men crept through the wood upon a picket of the Sherwood Foresters (Derbyshire Regiment), which retired, but not before it had shot the Tibetan leader, a giant of 6ft. 7in. The Tibetans now came down in large numbers on the north-eastern face of the camp. It was defended by some of the pioneers and by a company of the Derbyshire Regiment. The assailants crept through the jungle, availing themselves of cover, until they occupied a front of 500 yards, within a distance of 200 to 500 yards from our intrenchment. Here they opened a hot fire from both rifles and matchlocks, and dropped slugs and bullets among our ranks and through our tents. One man crept up to within 300 yards of our position, and kept up for at least half an hour a most galling, though ineffectual, fire, completely enfilading one face of our camp. It required a round of case and a section of Pioneers to dislodge him. Meantime, the fire from a wooded hill in front had become so heavy that a half-company of the Derbyshire Regiment, under Lieutenant Iggulden, was sent round to take the men holding it in flank. The half-company worked right round the valley, and became hotly engaged, losing Sergeant Leckington, who was shot through the head. This diversion had the effect of checking the Tibetans' fire, obliging them to retire up the hill; and they seemed to lose a good many men killed and wounded. The enemy was now inclined to retreat, and another half-company of the Derbyshire Regiment and a party of the 32nd went out under Captain Gossett. These detachments, joining hands with the remainder of the Derbyshire Regiment, worked up the valley between the hills, driving before them the retiring enemy among the trees and jungle. The Tibetans, in full retreat, as they crossed the Tukolo were fired into by the guns, which made admirable practice at 2500 yards, bursting a shrapnel shell among a large party. Our troops took some prisoners, mostly wounded, and the enemy's loss must be close upon 200 in killed and wounded. They were pursued nearly two miles by the Derbyshire Regiment and by Colonel Bromhead's Sikhs. Our loss amounted to three men killed and eight wounded. The men engaged were the flower of the Tibetan army, and many came from Chumboo, beyond Lhassa. The road from the Tukola to Nimla is strewn with the arms, blankets, and bundles of the retreating force. The position at Gnatong has since been strongly fortified, and the latest news, to June 26, is that the Tibetans seem disinclined to make a further attack.

Our *Illustration of the conflict* is from a sketch by Lieutenant A. Heyman, of the Derbyshire Regiment.

The Great Hall at Madame Tussaud's Exhibition is looking very bright just now, the figures in the Court group having been bedecked in some costly new dresses.

THE LATE CAPTAIN H. B. URMSTON.

Two distinguished officers of the Indian Native Army, Major Battye, of the 5th Ghoorkas, and Captain Urmston, of the 6th Punjaub Infantry, were killed in June, with six of their men, near the Oghi outpost in the Agror valley, to the north of Abbotabad, being suddenly attacked by a large body of Akozais, a Black Mountain tribe. Captain Urmston, who lost his life in attempting to rescue his wounded comrade, was eldest son of Colonel H. Brabazon Urmston, of Ardenlee, Maidstone. He was educated at Winchester College, and at Brasenose College, Oxford, but entered the Army in 1871, and joincd the 14th Foot till he was qualified for the Indian Staff Corps. After passing the higher standard examinations in two native languages, he was appointed to the Frontier Force (2nd Sikh Regiment), and soon became Adjutant of the 6th Punjaub Infantry. He served throughout the Jowaki Campaign, on the Afghan border, receiving a medal, and was mentioned in the General's despatches for his able military surveys and sketches. In the Afghan War of 1879 he was selected by Sir Frederick Roberts for the duties of transport officer with the Kuram Force, and received another medal. In 1885 Captain Urmston was attached to the intelligence branch of the Army at head-quarters, Simla; and in 1886 he was appointed by the Government of India to escort a mission of Japanese officers through India to examine our chief military stations and arsenals, and the organisation of our Army.

Sir Coutts Lindsay has been induced to hold an Exhibition of Pastels at the Grosvenor Gallery, during the autumn, on account of the increasing importance of that branch of art. The exhibition will open on Saturday, Oct. 20, and the receiving days will be Monday and Tuesday, Oct. 1 and 2.

RAMBLING SKETCHES: A DESERTED VILLAGE—WITTERSHAM, KENT.

The "Rambling Sketches" published this week were taken at Wittersham, a small village in the south-west corner of Kent, almost on the border-line between that county and Sussex. It is in the centre of the "Isle of Oxney," an elevated tract of land, containing Wittersham and two other parishes, between two branches of the little river Rother. In its prosperous days Wittersham was a wealthy place, as may be inferred from the size of the beautiful old church, which stands high above the village, a conspicuous landmark for miles round. One Boner, a "spicer and mercer" of Wittersham, was a thorn in the side of the Mayor of Wye in Henry VI.'s time. He insisted upon "hawking with spices" about the streets of Rye in spite of the Mayor's frequent warnings, and was punished at last by the forfeiture of his stock and a fine. The grants of lands and marshes to parishioners of Wittersham under the Lancastrian Kings indicate that the old commune was in a happier condition in the Middle Ages than it is at present. The agricultural folk had their village plays. The "players of Wittersham," the "players of Romney," the "players of Herne," and other little local commonwealths of East Kent, used to visit the towns and exhibit their "plays" at Whitsuntide. The "Play of the Passion," as rendered by the ancestors of the Wittersham agricultural population four centuries ago, was doubtless akin to the still extant Passion plays of Ober-Ammergau and other villages in Germany.

The whole village, with its still increasing number of empty houses, wears a sleepy and decayed look, and has changed its condition sadly since the Middle Ages, when it formed the centre of a rich and flourishing parish. But the view, seen from any point of the compass, is very picturesque. It is so

from the Rye-road, whence the place is seen lying in a hollow, with a lovely stretch of distance beyond. The approach to the main street from Sussex, where the tower of the church groups wonderfully well with the houses below it, is also pleasing; and so is the road at the opposite end of the village, stretching away towards Tenterden and Ashford. These views are worthy subjects for the artist's pencil. There is also a charming prospect from the churchyard, where the great grey tower of the church contrasts admirably with the red roofs and chimneys of the village street. The inside of the church is worth a visit, if only to see the interior of the tower, where the great weights of the clock hang down in very primitive fashion.

STATUE OF SIR WILLIAM WALLACE.

The Aberdeen bronze statue of Sir William Wallace was unveiled on June 29, by the Marquis of Lorne. The hero is represented giving an answer of defiance to the English demands. The sum of £3000 was left by the late Mr. John Steell, sculptor, of Edinburgh, for the erection of this statue; and the trustees, with the aid of their coadjutors, Sir J. Noel Paton, R.S.A., and Dr. Rowand Anderson, selected the design by Mr. W. Grant Stevenson, from twenty-five competing models. The statue, which has been successfully cast in bronze by Messrs. Young and Co., Pimlico, is 16 ft. high, and is the largest in Scotland. The freedom of the city of Aberdeen was presented to the Marquis of Lorne, who in his speech referred to the project of Imperial Federation and united defences.

PICTURE OF QUEEN VICTORIA AND FAMILY.

The picture of the Queen surrounded by her family, fifty-four in number, which is now on view at the St. James's Gallery (King-street, St. James's), has a special claim to our notice, for it is really interesting as a work of art. M. Tuxen, the Danish artist, shows that, though difficult, it is nevertheless possible to arrange artistically and satisfactorily a number of persons, all claiming certain rights as to position and precedence, and, so far as the men are concerned, arrayed in costumes which admit of no modification or poetic treatment. M. Tuxen has, moreover, gone a step farther in managing to group, in a great measure, the various branches of the Queen's family. Her Majesty, seated on a sofa, occupies the centre of the canvas, and she is in the act of receiving a bouquet from her grandchild, Princess Alice of Albany, whose widowed mother is kneeling beside the child. All the small children and grandchildren occupy places in the foreground, so that they are not obscured by their relatives of larger growth. The Empress of Germany occupies the other end of the sofa on which the Queen is seated, and behind her is Princess Christian, over whose chair the stalwart figure of the late Emperor Frederick towers, the most majestic figure in the scene. Immediately behind him, leaning against the mantelpiece, is Prince Albert Victor, the Prince of Wales being the central standing figure behind the Queen's sofa; whilst the Duke and Duchess of Edinburgh, with their family, occupy the whole of the left of the picture—their two youngest children, Princesses Alexandra and Beatrice, being seemingly far more interested in their delightful dog than in the gorgeous company assembled in the drawing-room of Windsor Castle one day last year.

STATUE OF SIR WILLIAM WALLACE AT ABERDEEN.

FASHIONABLE MARRIAGES.

Sir Charles Stewart Forbes, Bart., of Castle Newe, Aberdeenshire, and Miss Emma Theodora Maxwell, youngest daughter of the late Mr. Robert Maxwell, were married, on July 2, at St. Peter's Church, Eaton-square. Sir Charles was accompanied by the Earl of Dudley, his cousin, as best man. The eight bridesmaids were—Miss Angela Maxwell, sister of the bride; Misses Evelyn, Blanche, and Mabel Forbes, sisters of the bridegroom; Miss Mariquita Grenfell and Miss Winifred Sandbach, cousins of the bride; Lady Edith Ward and Miss Ida Forbes, cousins of the bridegroom. The bride was conducted to the altar by her brother, Captain John G. Maxwell (of the Black Watch). Her train was held by three little pages, namely, Master Francis FitzGibbon, her nephew; and Masters Francis and Riversdale Grenfell, her cousins.

The marriage of Mr. E. Grenville Gore-Langton with the Hon. Florence Emily Murray, sister of Lord Elibank, took place in the parish church of Newton St. Loe, Somerset, on June 23. Mr. Reginald Gordon Wickham was the best man and the bride was attended by five bridesmaids—the Hon. Nina Murray, Miss Aline and Miss Clara Gore-Langton, Miss Margaret Skrine, and Miss Geraldine Waring. Masters Evelyn and Robert Gore-Langton acted as pages to the bride.

The marriage of Lord Carew with Miss Julia Lethbridge, daughter of the late Mr. Albert Lethbridge, and grand-daughter of the late Sir John Lethbridge, Bart., of Sandhill Park, Taunton, was solemnised in St. George's Church, Hanover-square, on June 27. The Earl of Caithness attended his cousin as best man; and the five bridesmaids were Miss A. Lethbridge, sister of the bride; Miss Prideaux Brune, Miss Cliffe, Miss Hoste, and Miss Nesta Carew. The bride was led to the altar by her uncle, Sir Wroth Lethbridge, who afterwards gave her away. The service was fully choral, the Rev. Edward S. Prideaux Brune, cousin of the bridegroom, officiating.

The inspection of the Royal Military Asylum, by the Duke of Cambridge, took place on July 4.

Mr. Klinkicht, the well-known engraver, has had the Cross of the Order of Francis Joseph conferred on him by the Emperor of Austria for exhibiting some of the large portraits engraved for this Journal.

On June 30 the 2nd City of London Rifles were inspected on the Horse Guards Parade by Colonel Home, Grenadier Guards, the battalion of nearly 700 officers and men being under the command of Colonel Cantlow. In Regent's Park Colonel Tucker inspected the 1st Volunteer Battalion Royal Fusiliers, which had on parade over 800 officers and men, commanded by Colonel Clark; and the West Middlesex Rifles, about 500 strong, were also inspected in the same park by Colonel Stracey. In Hyde Park the St. George's Rifles were paraded before Colonel Wigram of the Coldstreams, Colonel Stanley Bird being in command. In Kennington Park the 4th Volunteer Battalion of the West Surrey Regiment were inspected by Colonel Hervey, commanding the Guildford Regimental District, 650 officers and men being on parade.

THE MARBLE PALACE AT POTSDAM, THE RESIDENCE OF THE NEW EMPEROR.

PARISIAN SAYINGS AND DOINGS.

(From our own Correspondent.)

PARIS, Tuesday, July 3.

The election in the Charente has ended, as might have been expected, in the victory of the Conservative, M. Gellibert des Seguins, by 37,514 votes; M. Weiller, Opportunist, came second, with 11,691; and M. Deroulède, third, with 11,691. In the Loiret, the Conservative candidate, M. Julien Dumas, was elected. Boulangism being apparently on the wane, the attacks against the Floquet Ministry have begun once more, and, unless Boulanger succeeds in stirring up the country by some new manœuvre, we may expect a Ministerial crisis one of these days; or, at the best, we may look forward to the fall of Floquet with the first autumn leaves. Thus, it appears, the political situation in France is, as usual, unsettled, but not gravely so.

At the church of St. Sulpice last Sunday Cardinal Lavigerie, Archbishop of Algiers and of Carthage, preached a sermon in favour of the abolition of slavery in Africa. St. Sulpice is the first station of the crusade which the Cardinal will continue to preach next week in Belgium. The Cardinal described the African slave-trade as being more violent and atrocious than ever in Morocco, in the oases of the Sahara, at Timbuctoo, on the Niger, on the Red Sea, along the Zambesi, and especially in the region of the great lakes in the very centre of Equatorial Africa. The number of slaves captured amounts to from four to five hundred thousand a year—almost exclusively women and children, for the slave-hunters kill the men. The slave-dealers, who are all Mussulmans, have ferocious hordes of half-breeds and even of negroes at their orders; they attack villages, burn the houses, kill the men who resist, and drive the women and children to the slave-markets, exercising horrible cruelty upon all. Cardinal Lavigerie says that if this slave traffic continues, the interior of Africa will become an absolutely depopulated desert in less than fifty years. In concluding his discourse, the Cardinal made an appeal to the press, without distinction of opinions or tendencies, to make known these horrors to the whole universe. The dream of Cardinal Lavigerie would be the creation of a new military-religious order, for it is only possible to put an end to this slave trade by armed force. Indeed, it is announced from Rome that the Pope is preparing a bull to confirm the Order of Malta with all its ancient privileges, specially with a view to stamping out this Central African slave trade.

The scaffolding is now being removed from round the Gambetta monument on the Place du Carrousel, which is to be inaugurated with some ceremony on July 13. Designed by the sculptor Aube and the architect Boileau, the monument is composed of a pylon, slightly pyramidal in shape, surmounted by a winged lion, on whose back sits a nude female figure wearing a Phrygian cap, and representing "Triumphant Democracy." In one hand this figure holds *thunderbolts*, while with the other she inscribes on a tablet the "Declaration of the Rights of Man." At the base of the pylon, on the front, is a high relief group, representing Gambetta stimulating the national defence, figured by a soldier and a sailor, while above, the genius of France soars with spread wings, seeming to listen to Gambetta's soul-stirring words. The pylon is further ornamented with emblems in bronze, and with citations from Gambetta's speeches graven in the stone; and on the lateral façades are bronze figures symbolising the army, industry, truth, strength. The monument is entirely of stone and of bronze; its total height is 80 ft.; its cost has been 350,000f. Some of the sculpture is very fine, but it is to be feared that the monument as a whole is wanting in simplicity and clearness of signification. What a strange idea, too, to cover the column with fragments of speeches, which are, after all, mere newspaper phrases that have already lost their force! In another ten years these high-sounding phrases will require volumes to explain them. But the great objection to be made to the inscriptions is that they break up the monument, and leave no simple surfaces where the eye might rest.

The Paris Municipal Council is meditating grave modifications in the contract between the city of Paris and the General Omnibus Company, which, since 1854, has enjoyed an exclusive monopoly, in return for which it is bound to maintain certain lines at a loss, for the convenience, however, of the public. Thus at present there are thirty-six lines of omnibuses running in Paris, and of these last year eighteen produced a net total of 1,845,736 francs, while the other eighteen were worked with a loss of 1,015,361 francs. There are two propositions before the Council: one to abolish the monopoly, the other to authorise the creation of rival lines. Either course will lead to complicated lawsuits between the city and the company.

The great feature of the July 14 celebration this year will be a monster dinner offered to the Mayors of France. This dinner of over 4000 covers will be served on the Champ de Mars in one of the galleries of the Exhibition building parallel with the Avenue de la Bourdonnais, which will be splendidly decorated for the occasion with tapestry hangings and plants. On July 14, likewise, by decision of the irrepressible Municipal Council, the Avenue du Trône and the Place du Trône will be rebaptised in the name of the famous brewer, Santerre, who distinguished himself in the capture of the Bastille, and also in massacring the prisoners of the Abbaye.

There is once more talk, and this time serious talk, of erecting a monument of some kind in honour of Honoré de Balzac, the author of the "Comédie Humaine." The Société des Gens de Lettres have taken the matter up, the press is beating the drums of publicity, and the subscription-list has started well. It is proposed to inaugurate the monument during the Exhibition year. Now-a-days everything is connected with 1889. The Government itself is setting the example by seizing every opportunity of making the Exhibition of 1889 and its success a political lever.

The *Journal Officiel* has published elaborate and curious statistics on the application of the divorce law in France, in 1884, 1885, and 1886. In 1886 the number of divorces and separations exceeded 7000. The average of marriages ending in divorce appears to be 9 in 1000. The class of people who head the list of demands for divorce are workmen and day-labourers, then come tradespeople, next independent persons and members of the liberal professions, next domestic servants, and, last of all, farmers. Of the divorces, 40 per cent are demanded by the husband and 60 per cent by the wife.

The total receipts of the Salon exhibition of paintings and sculpture, which closed last Saturday, amounted to 332,000f., and the number of free entries to 314,000. The expenses of the Salon amount to 240,000f., so that there remains a profit of 160,000f., which, added to the already existing capital, 747,429f., thus makes the Société des Artistes Français possessors of a capital of upwards of 900,000f.

T. C.

The Emperor and Empress of Germany were present at Divine service in the Friedenskirche on Sunday morning, July 1, and prayed in silence beside the coffin of the Emperor Frederick. The Emperor has addressed a Rescript to Prince Bismarck, in which he deplores the "evil days" which have recently fallen upon the Imperial House, and speaks of the deep affection manifested for his father throughout Germany and foreign lands. He gives his assurance that like his ancestors he will devote himself to promote and consolidate the welfare of the country. It is stated in Berlin that an interview of the Emperor with the Czar will take place in a German Baltic port some time in July.—The Empress Victoria, in returning thanks for the addresses of condolence presented to her Majesty by the civic authorities, expressed her resolve to continue to give her co-operation in all efforts for humanitarian objects.

The Emperor and Empress of Austria, accompanied by the Archduchess Marie Valérie, have gone to Gastein. The Austrian and Hungarian Delegations having passed the Bills required by the Ministry, their sessions have been closed.

The Spanish Cortes virtually closed on July 2 with the vote of the Budget by the Senate, after protracted debates with the Protectionists, whose amendments were all defeated, the Government declaring its determination to persevere with the present tariff policy.

The Great Horse Show at Brussels has been closed with a procession of all the horses exhibited before the Queen of the Belgians, one of the best judges of a horse in Europe. Mr. Walter Gilbey, of Elsenham Hall, received a gold medal as the foreign exhibitor who had contributed most to the success of the show.—The exhibition of hygiene and life-saving apparatus in the Park Léopold, at Ostend, is now open. The exhibitors number about 400, and the exhibits, of which many possess considerable interest, are divided into seven sections.

A New York correspondent telegraphs that the Duke of Marlborough was married, on June 29, by the Mayor, Mr. Hewitt, to Mrs. Lilian Warren Hammersley.—A hundred thousand ironworkers in the Western States of America have gone on strike.

Severe fighting is reported from Zululand. A force, composed of British troops and police, with native levies, attacked the rebel chief Ishingana, and utterly routed him, the loss being heavy on both sides.

The *Theatre* for July contains excellent photographic portraits of Miss Marie Tempest and Mr. Charles Santley.

A meeting was held at the Mansion House on June 29 in support of the movement to obtain an endowment towards the maintenance of College Hall, Byng-place, Gordon-square, established to provide a residence for women studying at University College and the London School of Medicine for Women. Earl Granville presided; and the meeting was addressed by Mrs. Scharlieb, the Rev. J. C. Harrison, Sir George Grove, Sir J. Lubbock, Professor Henry Morley, and Lady Grant Duff.

MARRIAGE.

On June 21, at the parish church of All Saints', Wandsworth, by the Rev. C. H. Andrews, Vicar of Kentish Town, assisted by the Rev. Wm. Reed, Vicar of All Saints', H. W. P. Kooystra, Fleet Paymaster R.N., to Lucy Constance Maria, second daughter of Thomas Symonds Howell, of The Old Vicarage, Wandsworth.

DEATHS.

On June 16, at Oakwood House, Taptonville-crescent, Sheffield, Joseph Barnsley, of the firm of George Barnsley and Sons, aged 46.

On June 27, at Westgate-on-Sea, Joseph Sherwood, Esq., of 61, Westbourne-terrace, W., aged 78.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings.*

MAPLE and CO., Manufacturers of DINING-ROOM FURNITURE. The largest assortment to choose from, as well as the best possible value. Three more houses have just been added to this important department. Half a century's reputation.

MAPLE and CO.'S NEW SPECIMEN DINING-ROOMS, decorated and fully appointed with *furniture in pollard oak, brown oak, Chippendale mahogany,* antique carved oak, American walnut, and other woods, are now open to the public, and should be seen by all intending purchasers.

THESE ROOMS are not only helpful as showing the effect of the furniture when arranged in an apartment, but also most suggestive as regards decorative treatment, as well as a guide to the entire cost of furnishing in any selected style.

THE SEVILLE LADY'S EASY CHAIR,
In Saddlebags of rich Persian design and colourings, mounted on velvet, £3 15s.

DINING-ROOM FURNITURE

MAPLE and CO. devote special attention to the production of high-class DINING-ROOM FURNITURE that will afford permanent satisfaction in wear. The numerous recommendations with which Messrs. Maple and Co. have been favoured by customers who have used the furniture for years is a pleasing testimony to the excellence of the articles.

MAPLE and CO.—DINING-ROOM SUITES. The LICHFIELD SUITE, in solid oak, walnut, or mahogany, consisting of six small and two elbow chairs in leather, dining table with patent screw, also Early English sideboard with plate glass back; and fitted with cellaret, 16 guineas.

MAPLE and CO.—DINING-ROOM SUITES.—The STAFFORD SUITE, comprising six small chairs, two easy chairs in leather, telescope dining table, sideboard with plate glass back and cellaret, and dinner waggon, in light or dark oak, walnut or ash; very substantial in character; 23 guineas.

FURNITURE FOR EXPORTATION.

VISITORS as well as MERCHANTS are INVITED to INSPECT the largest FURNISHING ESTABLISHMENT in the world. Hundreds of Thousands of Pounds' worth of Furniture, Bedsteads, Carpets, Curtains, &c., all ready for immediate shipment. DR. DE JONGH'S
KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM
KNIGHT OF THE LEGION OF HONOUR
LIGHT-BROWN COD LIVER OIL
Incontestably proved by Thirty Years' Medical Experience to be
THE PUREST, THE MOST PALATABLE, THE MOST DIGESTIBLE, AND THE MOST EFFICACIOUS
IN CONSUMPTION, THROAT AFFECTIONS, AND DEBILITY OF ADULTS AND CHILDREN.

SELECT MEDICAL OPINIONS.

Dr. PROSSER JAMES,
Lecturer on Materia Medica, London Hospital.
"DR. DE JONGH'S Oil contains the whole of the active ingredients of the remedy, and is easily digested. Hence its value, not only in Diseases of the Throat and Lungs, but in a great number of cases to which the Profession is extending its use."

JOSEPH J. POPE, Esq., M.R.C.S.,
Late Staff-Surgeon, Army, India.
"The value of 'hydro-carbons' in all debilitated states of the system is now becoming thoroughly recognised. DR. DE JONGH'S Oil places in everyone's reach a reliable and valuable remedy."

Dr. THOMAS NEDLEY,
Physician to the Lord Lieutenant of Ireland.
"The most uniformly pure, the most palatable, and the most easily retained by the stomach, is DR. DE JONGH'S Light-Brown Oil. I have habitually prescribed it in cases of Pulmonary Consumption, with very beneficial results."

LENNOX BROWNE, Esq., F.R.C.S.E.,
Senior Surgeon, Central London Throat Hospital.
"The action of DR. DE JONGH'S Oil has proved, in my own experience, particularly valuable in many cases of Weakness of the Singing and Speaking Voice, dependent on Bronchial or Laryngeal Irritation."

CLARKE'S "FAIRY" LAMP & FLOWER BOWL,
IN TAPESTRY WARE,
as purchased by HER MAJESTY THE QUEEN.

These are the latest and most beautiful designs yet produced for burning CLARKE'S DOUBLE-WICK "FAIRY" LIGHTS. They must be seen to be appreciated. They can be obtained Wholesale from the Patentee, S. CLARKE, "Pyramid" and "Fairy" Lamp and Light Works, CRICKLEWOOD, LONDON, N.W.

SHOW-ROOMS: 31, ELY-PLACE, HOLBORN VIADUCT, E.C.
Open from 10 till 5 daily, where all New Patterns in "FAIRY LAMPS" can be seen.

CLARKE'S "FAIRY" LIGHTS,
with Double Wicks, give a beautiful light, are no trouble, burn ten hours each. 6 Lights in a Box, **1s.** per Box. Purchasers having any difficulty in obtaining either "FAIRY" LAMPS or "FAIRY" LIGHTS are solicited to apply to the Patentee, who will give the name of his nearest Agent.

If a cheaper light will suffice, "Pyramid" Lights are the most suitable for burning in the "Fairy" Lamps.

CLARKE'S "FAIRY" MENU CARDS.
1s. per Dozen, Post-free.
A "FAIRY" MENU CARD is given FREE with every "FAIRY" LAMP. Please ask for it. A specimen "FAIRY" MENU CARD will be sent post-free on application.

N.B.—See that the Patentee's name and Trade-Mark "Fairy" is on every Fairy Lamp.

Illustrated Pattern Books, with upwards of 200 designs, post-free, price 2s. 6d., or returnable.

The "WHIPPET" CYCLES.

In designing our Cycles for this season, we have devoted our attention to perfecting those styles which have been so successful in the past. We have also added several new designs which we have thoroughly tested ourselves before placing them on the Market, and we are able, therefore, to submit them to the approval of our patrons without hesitation.
We removed the one great inconvenience which interfered with the pleasures of cycling—viz., the vibration communicated by every inequality of the road through handle, saddle, and pedals to the rider. This great inconvenience has long been patiently submitted to, because it was supposed to be inevitable.
The success of the "WHIPPET" Spring Frame has caused nearly the whole of the Cycle Trade to imitate our specialty—**NON-VIBRATING CYCLES.** Intending purchasers should remember that **"THE WHIPPET"** stands out clearly as **THE ONLY MACHINE** upon which **THE RIDER IS COMPLETELY INSULATED FROM ALL VIBRATION.**
SOLE MANUFACTURERS AND PATENTEES,
LINLEY & BIGGS,
29, Clerkenwell-road, London, E.C.

ADAMS'S FURNITURE POLISH.
THE OLDEST AND BEST.
"THE QUEEN"
Feels no hesitation in recommending its use.—Dec. 22, 1883.
Sold by Grocers, Ironmongers, Cabinetmakers, Oilmen, &c.
MANUFACTORY: SHEFFIELD.

TORPID LIVER
CARTER'S LITTLE LIVER PILLS.
Positively cured by these Little Pills.
They also relieve Distress from Dyspepsia, Indigestion, and Too Hearty Eating. A perfect remedy for Dizziness, Nausea, Drowsiness, Bad Taste in the Mouth, Coated Tongue, Pain in the Side, etc. They regulate the Bowels and prevent Constipation and Piles. The smallest and easiest to take. 40 in a phial. Purely Vegetable, and do not gripe or purge, but by their gentle action please all who use them. Established 1856. Standard Pill of the United States. In phials at 1s. 1½d. Sold by all Chemists, or sent by post.
Illustrated pamphlet free. British Depot, 46, Holborn Viaduct, London, E.C.

MELLIN'S
FOR INFANTS AND INVALIDS.
FOOD.

Certain | HARNESS' | Cure.
ELECTROPATHIC BELT
FOR
Rheumatism.
Major FAKENHAM, Longstone House, Armagh, writes:—"*The Electropathic Belt has* **completely cured** *me of rheumatic gout. I suffered intense agony for two years. I now feel strong and active.*"
Guaranteed to generate a mild continuous current of Electricity, which speedily cures all Disorders of the Nerves, Stomach, Liver and Kidneys. Thousands of Testimonials. **Pamphlet & Advice free on application to Mr. C. B. Harness,** *Consulting Electrician,* **the Medical Battery Co. Ltd.**
Only Address,
52, OXFORD ST. LONDON, W. (*Corner of Rathbone Place.*)

EDISON'S PERFECTED PHONOGRAPH IN USE IN THE PRESS GALLERY DURING THE HANDEL FESTIVAL AT THE CRYSTAL PALACE.

RECEIVING A MESSAGE FROM AMERICA BY EDISON'S PHONOGRAPH.

OUR NOTE BOOK.

BY JAMES PAYN.

To the Lambeth Conference I have not been an invited guest, which I regret for many reasons, but especially because I miss the society of the American Bishops. During the Pan-Anglican Synod I was more fortunate, and I found them charming. Though not a whit, of course, less of divines than our English dignitaries, they are much more human. They mix with their fellow-creatures more as if they belonged to them, and wear their lawn with a difference—as it were, tucked in. There is more frankness and freedom in their talk, and they don't think it wicked even to be witty; whereas, when our Anglican prelates (with some exceptions, however) condescend to joke, it is rather a serious business. The Transatlantic Bishop never forgets that he is an ecclesiastic, but he is not afraid of dropping the dignitary. In the first place, he generally smokes. We are told, and with truth, by Kingsley, that tobacco begets solemn and devotional thoughts; and no doubt that is why he smokes. My first introduction to the most charming Bishop I ever met, I owed to a cigar. I offered him one, after a certain dinner, not without trepidation—but, as I was going to smoke myself, I only thought it civil—and he accepted it with rapture. "This is the best hospitality," he said, "that I have enjoyed since I came to England." "But did not our Bishops give you good dinners?" I said (much distressed for the honour of the Bench), for I knew he had been on a round of visits to them. "Oh, yes; nothing could be kinder, Sir. But there was no tobacco. *Even at Lambeth*," here his voice took that pathos, for which he was so justly admired in the pulpit, "there was no tobacco!"

A few weeks ago the air was "full of farewells to the dying and mourning for the dead;" a touch of nature seemed to have made the whole world kin; but, since then, human nature has been "restoring the average" by showing its seamy side. The atmosphere of the sick-room has been changed for that of the Law Courts with its actions for libel. There is nothing like these for bringing out, with their unwholesome heat, the worst spawn of humanity. I suppose they are necessary evils. The Greeks alone, we are told, were sufficiently philosophic to despise what anybody chose to say of them. There was no law against the provocation of either words or gesture; "they looked upon any resentment for such contumely (says Hobbes) as arising from the pusillanimity of him who was offended by it." As there was no complainant there was no defendant, and, therefore, no occupation for the gentlemen of the long robe. The Greenlanders, I read, employ no lawyers in cases of slander, but when a gentleman wishes to "say things" of a libellous character he gives his adversary notice of his *intention*, and "it is reckoned a want of spirit if the antagonist does not attend or give a very smart answer." An American gentleman has, however, delivered his testimony against this promptness to defend one's character. "I suppose no man alive," he says, "had been so persecuted by slanderers as I had been: for many years I bore it in contemptuous silence; at last I brought my action, and have regretted it ever since. Those libels were all shown to be justified."

Another and another controversy about smoking! How fond of fighting people must be to wage war against so general a practice! What is the use of it? Do they for a moment suppose that persons who like tobacco, and with whom it agrees, will give it up because other persons who don't like it, and with whom it *disagrees*, affirm they ought to do so? The egotism of such a supposition is amazing. For my part I hate walking; to my mind it is disagreeable in itself, and renders those who indulge in it morose and silent; but I should never dream of attempting to persuade people not to walk. A Canon of St. Paul's, lamenting the spread of smoking, which "accentuates the separation of the sexes"—meaning, I suppose, that poor little half-hour one snatches for a cigar after dinner—thinks that there will be nothing for it but that ladies must smoke too. That would be deplorable indeed; but if the alternative is to be the man's giving up tobacco, I can assure the reverend gentleman that to that we shall come. The peculiarity of the antieverythingarians of all sorts is, however, that they are never right about their data. Smoking does *not*, like drinking, separate the sexes; the most intelligent of the many ladies whom I have had the honour to know are far from hostile to tobacco. A few, no doubt—just as there are a few men similarly constituted—dislike its odour; but with the majority their repugnance to it is not really genuine. They regard the gentle Nicotine as a rival in man's affections, and hope that by abusing her they will induce him to cast her off: a little reasoning (by analogy) would teach them better. An argument, too, that should have some force with them—for this class of dame is generally addicted to the aristocracy—is the fact that the higher the rank of a lady the more leniently, not to say more favourably, does she regard the smoking of her male friends. As to the Don Quixotes who would put an end to it, they might as well recommend the extinguishing of our hearth fires—with which, indeed, it has a much closer connection than they suspect.

Another practice which it is as useless to fight against as "smoke," or a shadow, is that of giving tips to guards and porters. Nevertheless, it has found a new antagonist in one of the railway "organs." Any stick will do to beat a dog with, and this journal actually finds offence in the conduct of the tippers because they do not add to the enormity of their crime by fleeing the engine-drivers and stokers. If the principle is wrong these unpaid persons should surely rejoice in their untempted virtue! Is it possible that this shrill cry of protest proceeds from the engine itself? There is a little scalding steam in it, directed against those wretches who not only tip guards, but "beguile the tedium of a journey by taking one another's money at shilling whist." It can hardly be suggested that they should take, instead of one another's shillings, the money of passengers who are not playing whist; and yet one does not otherwise clearly see the application of this sarcasm. Tips are not given from mere lavishness, but because of some particular service rendered, or supposed to be rendered, to the donor; with some persons—though not very many, after all—it is as natural to reward civilities with a coin of the realm as with a "Thank you." Perhaps, however, even thanks may be demoralising; in that case, let us have a bye-law, by all means, that "no servant of the company is to accept of thanks under pain of instant dismissal": it will be quite as sensible, and just as much respected as the ordinance against tips.

There is great consternation among that respectable sect the Jezreelites on account of the demise of their Queen, who had always proclaimed her own immortality. It was impossible, she said, that the bodies of the elect could ever decay, and now that she has been proved to be in error, there is great alarm among the chosen lest they should be mistaken (and taken) also. It is curious how great a hold many persons have obtained over their fellow-creatures by assuring them they should live for ever, though it is a very easy thing to say, and nobody can ever prove them wrong so long as they live. Generally speaking it is the decease of a gentleman or lady rather than his or her immortality which is looked forward to by those concerned with such excessive interest; the (implied) promise to die is equivalent to a promise to pay, and is esteemed accordingly. It is difficult to put oneself in the position of a personage like Queen Esther, either as regards herself or her friends. The case of Joanna Southcote was in some respects a similar one, only, in addition to her undertaking not to figure in the obituary, she had made a rash promise to appear (so to speak) in a preceding portion of the newspaper, and had, therefore, only a limited time at her disposal. When "the child of many prayers" did not make its appearance, the prophetess had no *raison d'être*. She was like one of those foretellers of the end of the world who place the catastrophe too early: the game was up before it had well begun. "Queen Esther" was only thirty, and might reasonably have looked forward to, at all events, a good long beginning of her immortality. Curiously enough, the "Latter House of Israel," as the Jezreelites call themselves, lost their immortal Prophet, a few years ago, by the same unlooked-for accident of death. The matter was explained by the statement that, though "very good, he was not good enough" (which seems probable), and was therefore forbidden to make one of the 144,000 persons who are predestined to be "the remnant." They are not many as compared with the population, ancient and modern, of the globe; but contrasted with the narrow limits of some theological creeds the company is numerous, and, I need not say, "select." It will be interesting to see whether, having lost both Prophet and Queen, Jezreel and Co. (Limited) will go on or not. As they are said to have £50,000 invested in "plant" (of various kinds), it is probable that some spiritual person will be found to carry on the business.

The existence of a French Archery Club, of which we have heard something lately, must have been a surprise to many of us. One would have thought the bow and arrow were too full of unpleasant associations for a Frenchman to handle; if there is one thing in our English histories which is more typical of our pre-eminence over our neighbours across the Channel than another, it is the Long Bow. There can be no question of our superiority with that weapon; but I confess I have my doubts about the excessive skill with which our use of it has been credited. Is it this exaggeration, I wonder, which has associated the "drawing the long bow" with lying? The Persians were taught "to draw the bow and speak the truth," which seems to be a contradiction in terms. To anyone who has attended a modern archery meeting the difference of its results to those recorded in "Ivanhoe" (which is a fiction) is certainly very marked. No one has ever split a willow wand at a hundred yards, to my knowledge, and far less notched one arrow with another, as at Ashby-de-la-Zouch. I always admired the honest archer in that novel, who confined himself to saying that his grandfather had drawn a good bow at the battle of Hastings, instead of performing any very striking feat himself. In these days of competition for money prizes, which, however low the motive, certainly produce the most excellent performances in every branch of athletics, there is a significant absence of the bow and arrow. If anything could really be done with them, such as one reads of in the historical novel, it certainly would be done. I can fancy no advertisement more attractive than that of "Feats with the old national weapon." If there is "money" in anything, there would certainly be money in that; and yet there are no feats, unless hitting a target the size of a barn-door can be so called. We have "the Foresters" annually at the Crystal Palace, but I am not aware that they attempt to rival Robin Hood. It has been proved incontestably that William Tell never split an apple on his son's head with an arrow, and I don't believe that the similar miracles attributed to the English archer rest upon any more solid foundation. If they do, let us see them. It was once observed to one of old, who boasted of the jumping powers he had exhibited at Rhodes, "Here is Rhodes, here is the leap"; and the same remark may be made to the English archer.

It is not generally known that the question of "appeal," which has been so much mooted of late, had at one time a more important bearing upon the interests of barristers themselves than upon those of the public. In the middle of the seventeenth century the Lords of Session in Scotland took it into their heads to deny to the Faculty of Advocates the right of appeal from their Lordships' decisions to Parliament. The advocates strenuously resisted, whereupon the Lords of Session obtained an order from the King and Council discharging all appeals, and commanding instant submission from the members of the Bar. Then the advocates withdrew in a body from the Courts, and brought the legal business of the country—save what could be carried on by solicitors—to a complete standstill. This was something like patriotism. To punish this contumacy the Lords banished the whole lot of them to "twelve miles from Edinburgh." It must have been a high time for "the lower branch of the profession." Self-denial, however, has its limits. The advocates got tired of living upon one another, with appetites increased by unlimited games at golf; and perhaps the Lords of Session began to perceive that their co[ercion] might possibly go, too, if the state of siege cont[inued]. Sir George Mackenzie, afterwards Lord-Advocate—to [whom] Edinburgh is indebted for its admirable library—proposed to plead the cause of his brethren before their oppressors, and was permitted to do so. He spoke with great warmth and eloquence, and, both sides having probably become aware on which side their bread was buttered, a compromise was effected, to the general joy of a litigious public. What "the writers to the Signet" and "the solicitors to the Supreme Court" (or whoever were their equivalents in those days) thought about it is not recorded.

THE EDISON PHONOGRAPH.

The phonograph, which has nothing to do either with the telephone or the telegraph means of instantaneous communication, is a wonderful instrument for preserving, and for repeating in any place, from a permanent acoustic record, the tones, accents, and articulate syllables uttered by the human voice, perfect discourse in its original pronunciation, as well as every kind of musical and other sounds, after conveyance of the inscribed record, by ordinary carriage, to within hearing of a future auditor. Professor Edison, of Orange, New Jersey, in the United States of America, renowned for his improvements of the electric-light apparatus and other most valuable scientific contrivances, is the inventor of the phonograph, a rudimentary form of which, exhibited in London ten years ago, then excited much public curiosity. He has, during the past twelvemonth, brought it to a degree of comparative perfection, which was practically tested here, on June 25, by experiments at the house of Colonel G. E. Gouraud, the agent in London for Mr. Edison's inventions, residing at Little Menlo, Beulah-hill, Upper Norwood; and on June 29, in the Press Gallery at the Handel Festival, in the Crystal Palace. Our Illustrations represent the scenes on these two occasions: in the first instance, a private family party at Norwood listening to the tones and words of Mr. Edison's voice, ten days after he had spoken in America, at a distance of nearly three thousand miles—the "phonogram" having been sent from New York on June 16, with the regular United States mail, by the German Lloyd's steam-ship Eider, to Southampton; in the other case, during the grand performance of Handel's music, the phonograph reporting with perfect accuracy the sublime strains, vocal and instrumental, of the "Israel in Egypt," received by a large horn projecting over the balustrade in the vast concert-room in the north transept of the Crystal Palace. The machine was worked by Mr. De Courcy Hamilton, one of Mr. Edison's assistants, who had brought it from America. The "phonograms" being sent to Mr. Edison, all the Handel choruses, as sung here by four thousand voices, with the orchestral and organ accompaniments, will be heard in New York and in other American cities. They can be repeated to a hundred different audiences for years to come.

We can only give a brief account of the essential parts of the phonograph. There is a disc of bright metal, rather larger than a shilling piece, so poised as to vibrate in correspondence with any sound that is received by the instrument. Below, and attached to this disc, is a minute point of metal, like a fine pin, which, as the diaphragm or disc vibrates, cuts an exceedingly delicate, sinuous, hair-like line into a revolving cylinder of wax. When the record is once engraved on the cylinder, we can, by reversing the movement, get back from the instrument the sounds that were put into it. In the phonograph first exhibited in this country ten years ago, which was illustrated in this journal on Aug. 3, 1878, the sound-marks were made, in a similar manner, on tin-foil; and their tone was metallic, nasal—sometimes a squeak, indeed—very often ludicrous or miserable; but Mr. Edison has now constructed a phonograph which, by substituting a composition of wax for the tin-foil, and by other important contrivances, has entirely got rid of any harshness or weakness of tone. In external appearance, Mr. Edison's wax cylinders are like ivory napkin or serviette rings, only rather larger, and about three inches long; they fit on a small iron rod, which is put in rapid motion when wanted by a little bi-chromate galvanic battery, seen in our Illustration under the table. When Mr. Edison, in the earlier period of his experiments, desired to use one of the cylinders over again for new matter, much time was wasted in passing it through the apparatus. He now arranges a minute knife upon the same arm which bears the diaphragm stylus. The knife cuts off a shaving, and the diaphragm stylus follows in its wake; both operations being accomplished at once. Wax cylinders are made thick enough to allow the indented surface to be planed off twenty times or more, so the same cylinder can be used for as many different transcriptions. Another new device perfects the method of duplicating phonograms containing matter which may be worth selling, such as books, music, sermons, speeches, or plays. When a phonogram of special interest or value is obtained, which it is desired to multiply, it is coated electrically with nickel until a thick plate is obtained. This plate, when detached from the wax and pressed against a fresh sheet of warm wax, gives an exact reproduction of the original phonogram: and such duplicates may be made so easily and rapidly as to cost scarcely anything. To obtain the first phonogram of the book or of a piece of music may require care and special skill. Once obtained, a million can be made from this one nickel mould. So far as countless experiments in the laboratory show, there is no perceptible or audible wear in the wax phonogram, no matter how frequently it is made to repeat a message.

If Colonel Gourand wants to phonograph a despatch to New York he talks into the mouthpiece, the cylinder is turned round by the electric current, the repeating disc vibrates in harmony with the voice, and the minute point below traces on the wax surface of the cylinder its invisible curves, and that is all. The message is done; you can now take it off and post it—at the ordinary letter rate—to America. In those four inches he has a thousand words, which would be a very long letter. Probably he does not wish to send more than 250 words. If so, a corresponding length can be cut off and dispatched by post. The phonogram produced would in New York be placed on a corresponding machine, and exactly reproduced. We have a copy of the first phonogram, which was a private letter from Mr. Edison to Colonel Gourand, consisting of about two hundred words, treating of business and family affairs. Mr. Edison's voice was recognised by every hearer in Colonel Gouraud's house, including a child seven years old. Several pieces of music, vocal solos and duets, and performances on the pianoforte, cornet, and other instruments, sung or played in America, have been repeated in England by the phonograph. A poetical ode, of four verses, dictated by the Rev. Horatio Nelson Powers, D.D., of Piermont, on the Hudson, has also been spoken, in the author's own voice, through this marvellous machine.

Many of the most important parts of the phonograph are concealed in a small metal-covered box; but, as Mr. Edison has expressed a wish for the present to keep secret the details as to some new points in the construction of the phonograph until his patents have been obtained, we therefore omit further description of its interior workings.

THE SILENT MEMBER.

Limp legislators see Henley, Wimbledon, one after the other of the social landmarks of the London Season, pass by, but have up to the present time been prevented by drenching showers from seeking recreation far from Westminster. One recompense some have had: their path has been figuratively strewn with roses at the few fêtes which Court mourning did not suppress, and which were fragrant with the sweet odour of the queen of flowers, richly abundant this inclement July—out of compliment, mayhap, to Mr. Alma-Tadema's lustrous Academy painting, "The Roses of Heliogabalus."

The Marquis of Salisbury, notwithstanding the fact that noble Lords, by their grasp of every variety of subject of great Imperial and tiny local importance have continued to rival the Nasmyth hammer in graduated force, perseveres with his diminutive measure for the reform of the House of Lords by the introduction of a handful of life Peers. The Prime Minister on the Tenth of July secured the second reading of this measure, which may be summed up in one sentence: it empowers her Majesty, by the advice of the Premier, to create a maximum of five new life Peers per year, the total number not to exceed fifty. How jealously even so infinitesimal an addition as this to the House is scrutinised was shown by the more or less grave utterances of Earl Beauchamp, the Earl of Derby (who gave his approval in a wet-blanket fashion), Lord Colchester, Lord Midleton, the Earl of Dunraven, the Duke of Argyll, Earl Granville, the Earl of Feversham, and the Earl of Rosebery, who developed a fine vein of ironic banter not unworthy the favourite style of Lord Salisbury himself. The noble Earl occasioned a little mild laughter by thus neatly epitomising the Bill, whilst the Lord Chancellor beamed amiably as usual from the woolsack on which he looks so comfortable: "It is as if, when one wanted to go to America, the noble Marquis offered you a hansom cab; it would take you to Euston Station, but there would still be very many miles to go."

An incident not without its pathos opened the proceedings of the House of Lords on the previous day. The Lord Chancellor evoked fresh sympathy with the bereaved Empress Victoria of Germany by reading her Imperial Majesty's gracious reply to their Lordships' resolution of condolence. The reply was conveyed by the British Ambassador at Berlin, and its closing words deserve to be quoted:—"Her Imperial Majesty desired me to convey to their Lordships' House, through your Lordship, her gratitude for these marks of sympathy with her deep distress, and to express the hope that the memory of the Emperor Frederick, her dearly-beloved husband, may ever be preserved."

We are in for a new Zulu War. That is clear from the despatch, dated the Eighth of July, from Sir Arthur Havelock to the Secretary for the Colonies. Lord Knutsford communicated this to the House of Lords on the Ninth of July. The gist of the telegram from South Africa was that, "In consequence of the defeat of Usibepu and the withdrawal of police magistracy at Ivuna, June 23, disturbance has become serious. Natives of coast district to the north of Zulu Native Reserve, through fear of Dinizulu, have taken part in rebellion. Attack upon the Magistrates of district threatened. The British troops and native contingents gave assistance to-day. Am confident forces now in Zululand are sufficient for the restoration of good order, unless any unexpected complications arise." Lord Knutsford himself explained that Dinizulu, the son of Cetewayo, and his uncle, Undabuco, are at Kezah, with a force computed at about 4000 men; but his Lordship had every confidence in the ability of Sir Arthur Havelock and General Smyth to cope with the Zulus. Lord Knutsford summed up the policy of the Government at this juncture tersely: "My Lords, our duty is a plain one, and it is to put down Dinizulu and Usibepu, and to prevent any further raids on the British authority." A memorable past disaster in Zululand will doubtless induce the Generals engaged in the present campaign to employ amply sufficient troops to terminate the operations with swift success.

It was generally felt that by far the gravest feature of Mr. Frank Hugh O'Donnell's fruitless libel action against the *Times* was the reading in open court by the Attorney-General of the series of incriminatory letters purporting to have been written by Mr. Parnell before and after the terrible murders of Lord Frederick Cavendish and Mr. Burke in the Phœnix Park. The publication of these seemingly sinister epistles demanded instant notice at the hands of the Irish Home Rule Leader. In anticipation of this personal explanation, hon. members filled the House on the Sixth of July, the day after the jury returned a verdict against Mr. O'Donnell. Earl Spencer was conspicuous in the Peers' Gallery; and from the gallery to the right of the Speaker, Sir George Trevelyan, naturally as keenly interested as the noble Earl in what was to come, eagerly scanned the Parnellite ranks, in the centre of which sat Mr. Parnell, apparently as cool and collected as ever. Sir Richard Webster, seated next the Solicitor-General at the gangway end of the front Ministerial bench, looked calmly on; and the Marquis of Hartington, with hat down over his eyes, bore himself in the corner seat of the front Opposition bench with a characteristic stolidity, in strong contrast to the restlessness of Mr. Gladstone, who leant forward in his seat, and fixedly regarded Mr. Parnell when he rose, with a sheaf of papers in his hands, to make his speech. Mr. Parnell spoke with habitual deliberation and clearness: and the pith of his statement was that the criminatory letters read by Sir Richard Webster were "absolute forgeries." Mr. Justin McCarthy followed, and declared that the cheque for £100, alleged by Frank Byrne to have been received from Mr. Parnell, at the time of his flight, was actually paid to Byrne by himself (Mr. Justin McCarthy) in the ordinary course of business in connection with the Home-Rule League; and Mr. McCarthy explicitly added that he had no suspicion of any sinister designs on the part of Byrne.

The member for Cork moved further in the matter on the Ninth of July. Mr. Parnell quickly followed Sir Wilfrid Lawson (he had risen, indeed, before the hon. Baronet) in requesting that a Select Committee be appointed to inquire into the authenticity of the allegations made against the Home-Rule chief at the recent O'Donnell trial. Mr. Smith replied that his view remained precisely the same as last year: that there existed impartial tribunals—alluding to the Law Courts—more competent than the House to try the case. Whereupon, Mr. Parnell promptly gave the First Lord of the Treasury notice of motion for a Select Committee, or for a day for discussion, in order that he might "have an opportunity of repelling the foul and untruthful charges which have been made against me by the Attorney-General."

We are to have an autumn session. Mr. Smith stated on the Tenth of July that the Local Government Bill would be pushed forward with energy. If this measure and Supply should be finished early in August, the Leader of the House thought "we might then hope to adjourn until the last week in October or the first week in November." Sanctioned by Mr. Gladstone, Mr. Smith's proposition that Government business have precedence for the rest of the Session was agreed to.

THE NATIONAL RIFLE ASSOCIATION.

On Monday, July 9, the annual prize-meeting of the National Rifle Association opened at Wimbledon—the last, probably, which will be held on that familiar ground. There is no falling off in the number or importance of the rewards offered for good marksmanship, in the character and variety of the programme, or in the general alacrity of competition. On the contrary, the value of the prizes to be contended for at Wimbledon at the meeting amounts to over £16,500, being the largest total yet given. Excluding the challenge cups, the value is about £12,500, the Association giving nearly £10,000. Throughout the whole fortnight's proceedings, from July 9 to July 21, an ample list has been prepared of matches and contests. In spite of the changeable weather, the shooting, on the whole, was remarkably good on the first day. Only three competitions were brought to a conclusion. The Alexandra Prize was won by Colour-Sergeant Vicars, of the Queen's Westminsters, with an aggregate score of 64; Colour-Sergeant Semmence, 4th Norfolk, £20; Corporal M'Mooran 1st Highland Light Infantry, and Sergeant Palmer, 1st Warwick, £15 each. In the team match for officers of the Regulars against the Auxiliaries, the latter won by 110 points. The Inter-University match for the Humphry Cup was won by Oxford, their total being 626 against 562 made by Cambridge.—The shooting was much above the average at Wimbledon on July 10, especially in the 200 yards for the Queen's Prize, in which many gold medallists of previous years took prominent positions. The Albert Prize of £20 was won by Private Jory, of the Guernsey Militia. In unfinished competitions two highest possible scores were made at the 200 yards range, three at 500 yards, and two at 800 yards. The men under canvas spent a very uncomfortable time on the night of July 10, there being a strong wind and a deluge of rain, followed by very low temperature. The thermometer went down to within nine degrees of the freezing point, and though the weather was fair on the 11th, it was cold and dull. A great part of the common was converted into a sort of bog, so that the competitions were carried on under considerable difficulties. The principal business was the shooting at 500 yards in the first stage of the Queen's Prize competition. Among the best scores made were the following:—Sergeant Baines, 2nd Somerset; Private High, 2nd Norfolk; Lieutenant Clark, 1st Norfolk; Private Simpson, 1st Argyle and Sutherland; and Colour-Sergeant Allan, 2nd Northumberland.

Among the recent donations to the Polytechnic Endowment Fund are the Grocers' Company, £200, and the Clothworkers' Company, £500.

Sir Thomas Francis Wade, M.A., K.C.B., Professor of Chinese, has been elected to the lately-vacant Professorial Fellowship at King's College, Cambridge.

The "Silver Fête," in the Exhibition Grounds, South Kensington, was opened on Wednesday, for the benefit of the Victoria Hospital for Children, Chelsea.

The Hastings Town Council have conferred the honorary freedom of the borough on Lord Brassey, who is the first recipient of the distinction since the passing of the Municipal Reform Bill.

Mr. Charles St. Clair Bedford has resigned the post of Coroner for the City and Liberty of Westminster, which he held for the past forty-three years. Mr. John Troutbeck has been chosen in his stead.

The Duke of Devonshire has issued a circular to his tenants informing them that he will allow an abatement of 22½ per cent off their rents this year. They were allowed 30 per c...e last year.

Vice-Admiral Sir William Graham retires, through ill-health, from the post of Controller of the Navy, and he will be succeeded by Rear-Admiral J. O. Hopkins, at present Admiral Superintendent of Portsmouth Dockyard.

The recumbent effigy of the late Bishop Moberly, erected in the Lady Chapel of Salisbury Cathedral to the memory of that prelate, was unveiled on July 9 in the presence of a large number of spectators.

The grant of life-annuities, and annuities for terms of years, which has been suspended in consequence of the recent conversion of the National Debt, will be resumed by the National Debt Commissioners at their office, Old Jewry, on and after Monday, July 16.

It is understood that the Emperor William will leave Berlin for Kiel on the evening of July 13. After remaining there for one day his Majesty will proceed by sea to St. Petersburg, reaching the Russian capital on the evening of the 18th. The Emperor will only be accompanied by a very small suite.

The King and Queen of Saxony arrived at Copenhagen on July 6. They were received at the railway station by King Christian and the members of the Royal family. They visited the Exhibition, and opened the section for German exhibits next day. There was a State dinner in their honour on Monday. They proceeded to Stockholm.

The trial of Mr. O'Donnell's action against the *Times* came to a somewhat abrupt termination on July 5. When the Attorney-General had concluded his speech the question was raised whether there was any case to go to the jury, the Lord Chief Justice intimating that he could not consider there was any case then against the defendants, the plaintiff not having gone into the box. Mr. Ruegg, however, addressed the jury on one or two points, and, Lord Coleridge having briefly summed up, a verdict for the defendants was at once returned. Judgment was entered accordingly, with a certificate for a special jury and costs.

The bronze statue of the famous Scottish patriot and warrior, Sir William Wallace, recently unveiled by the Marquis of Lorne at Aberdeen, of which we gave an Illustration last week, was provided by the trustees, Mr. J. O. Macqueen and others, under the will of the late Mr. John Steill, of Edinburgh, a native of Arbroath, who died in 1871, a bachelor, aged sixty-three, leaving money for this purpose to be deferred until after the death of a friend, his faithful housekeeper, Margaret Strachan, who survived him till 1877. The statue is a fine work of art by Mr. W. Grant Stevenson, A.R.S.A., of Edinburgh, and has cost, with the pedestal, £3250. It stands near the centre of Union-street, in one of the best sites in Aberdeen.

The show of horses and cattle under the auspices of the Royal Agricultural Society was opened at Nottingham on Monday, July 9. The number of entries is large, and the quality is reported to be very good. Her Majesty sends seven animals in various competitions, and the Prince of Wales nineteen. The Queen and the Prince both take prizes. Mr. R. Thompson, of Penrith, has carried off, for the first time in the history of the society, the first prizes in four classes of cows and heifers. On July 10 the horses were paraded for the first time. A meeting of the council was held, at which the prizes in the farm competitions were awarded. It was announced at the general meeting of the society that the Queen has accepted the presidency of the society for next year, and that the active and necessary duties of the office will be undertaken by the Prince of Wales.

THE PLAYHOUSES.

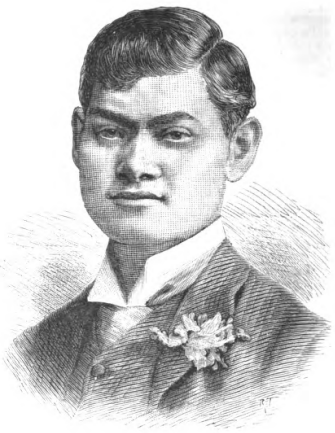
Last Saturday evening three of our most popular artists made their bow gracefully, and bade us all "Good-bye!" until Christmas comes. Mr. Henry Irving—who, *mirabile dictu*, actually got through his season with the little "Amber Heart" and the farcical "Robert Macaire"—is going to pay a round of visits and to dream about "Macbeth" and to have long conversations with scene-painters and decorators until he is ready to start on his provincial tour with "Faust," accompanied by Miss Marion Terry, now, happily, recovered from her illness, and who is not likely to be very long out of an engagement. Miss Ellen Terry, at last released from work, is in the "seventh heaven" of delight at the thoughts of taking her daughter, Ailsa Craig, abroad to Switzerland, and Italy, and Venice, and "her lovely spots, and so home by Germany to pick up her toy, who ought to be a musician, like his sister; but, like all artists' children, have both of them a hankering after the stage. The third departing swallow is Mr. J. L. Toole, who left his theatre in fits of laughter over a little joke he had arranged in his farewell speech, and left, moreover, crowded houses; for during this bitterly cold weather of an English July "The Don" has "caught on," as they say, and could well have run on all the summer. But Mr. Toole had other fish to fry. He has never acted in Guernsey or Jersey, so away to the Channel Islands he has gone this week, resting for a few hours at Weymouth whilst the vessel was getting up steam. After a five-weeks' holiday, spent, as usual, abroad, and some of it devoted to the water-cure at Aix-les-Bains, the merry comedian will be off on his usual popular provincial tour. This being the case, we have to depend mainly for our entertainment and amusement on our foreign guests. The engagement of the Daly company is drawing to a close at the Gaiety, and before they go home they will play at Stratford-on-Avon, Glasgow, several other provincial centres, and in Paris, where Shakspeare's "Taming of the Shrew" will astonish the boulevardians. Before leaving London, Mr. Daly has promised the revival of a few of his most popular farces, and amongst them there will be found, no doubt, "A Night Off" and "Nancy."

Sara Bernhardt has arrived in London, and appeared in "La Tosca" with the result everyone anticipated. People seem to admire the actress more than ever, but do not profess to be particularly enamoured with Sardou's play. It is at best but a tawdry and commonplace melodrama, arranged with little skill, and written with no effect. Still, the actress, who has gained enormously in physical power, is able to get the whole audience into her grip during the scene of Mario's torture and the grim position of Scarpia's base proposal. Her cries in the torture-scene are heartrending, and she works up the spectator to a state of frenzy; in fact, on the first night one of our most popular actresses fainted dead away in her private box when the curtain fell. In the murder of Scarpia this great actress showed stronger and more effective tragic power than has ever been observed before, and a pin might have been heard to drop from the moment that she plunges the carving-knife into the wretch's heart to that silent awful second when the woman who has prepared her victim for burial steals horror-stricken from the accursed room. There are certainly very violent instances of bad taste in this play, and scenes calculated roughly to shock religious susceptibilities. It is not quite fair to say that the Cathedral scenes are no worse than those presented on the same Lyceum stage in "Much Ado About Nothing" and "Faust." They are not the same because there is a church in both. There is nothing gross or material in the Benedick and Beatrice scenes in Shakspeare's play, and there is no possible comparison between Margaret's prayer to the Virgin when she is overburdened with sorrow and the pictures of the Tosca's hypocritical devotion in the new play. Unless superbly done, the final moments of Scarpia's death-scene would provoke ridicule in this country. But whatever may be thought of the play, Sara Bernhardt is sure to be a great success. It is a pity, however, that so sombre a drama has no relief: the comedy-scenes are wholly unworthy of so fine a dramatist as Sardou.

One of the very best of the modern comedies of complication is an ingenious and well-written play called "The Paper-Chase," now being acted at Toole's Theatre by a clever little company collected by Mr. Lionel Brough. Mr. Charles Thomas is evidently an adept at construction. He is your true dramatic puzzle-maker, and he is able to tell a capital story in a lively manner and without offence. The plot is as innocent as it is wholesome, and there is no need for Mr. Charles Wyndham or Mr. Charles Hawtrey to subsidise French or German dramatists when there is one at hand who can build skilfully and adorn with taste. Mr. Lionel Brough's performance of old Busby, the incarnation of logical obtuseness and of intelligible inconsequence, is one of the best things of the kind that have been seen in modern plays. The part is acted with really remarkable artistic skill, and Mr. Brough, the comedian, never for one instant obtrudes above the idiotic old Busby. Every movement and gesture have been the result of careful study, and it is not too much to say that the audience roars with laughter whenever the actor opens his mouth. Mr. Brough has so often been called over the coals for extravagance that it is all the more gratifying to congratulate him on so genuinely comic and artistic a performance as this. Miss Kate Phillips is the only possible successor to Mrs. Bancroft on the modern stage. Her excellent comedy powers, her sparkle of expression, and her lightness of touch are exhibited to great advantage in this play, and her pretty dresses fit her like a glove. All the acting, however, is good, and the play is helped to its success by excellent endeavours on the part of Mr. E. W. Garden, Mr. E. D. Ward, Mr. R. Soutar—who is very welcome on his return to the stage—Miss Helen Leyton, a clever and earnest actress, and Miss Margaret Brough, a pretty and intelligent young girl.

July 14 being fixed for the annual holiday of the Arsenal employés, the Hospital Saturday collection in Woolwich was made on Saturday, July 7. The amount collected was £207, being £60 in excess of any former collection.

Strawberry-hill Estate, at Twickenham, the residence of Horace Walpole, and subsequently of the late Countess Waldegrave, was offered for sale at the Auction Mart on July 10 by Messrs. Hampton and Sons. The mansion and grounds extend to about fifty acres. Although the auctioneer asked for an offer of £70,000 as the minimum value of the property, the only bid was £15,000, and the property was withdrawn.



The programme for the Official Inspection of the Fleet by the Lords of the Admiralty has now been completed. On Friday, July 13, they inspect the Fleet at Spithead, which measures three miles in length, and return to harbour in the evening. Their Lordships sleep on board. On Saturday morning they proceed to Portland to inspect the B Squadron, and will remain there until Monday, when the A and B Squadrons will combine and manœuvre in presence of their Lordships. On Monday evening the Fleet will proceed down Channel to Plymouth, where they will remain a few days. From the time of leaving Portland the Fleet will be away eight weeks.

THE RIGHT REV. R. C. BILLING, D.D.,
THE NEW BISHOP OF BEDFORD.

SIR EDWARD BLOUNT, K.C.B.,
DIRECTOR OF FRENCH RAILWAYS.

MR. CHAN-TOON,
A DISTINGUISHED BURMESE LAW STUDENT OF THE MIDDLE TEMPLE.

THE NEW BISHOP OF BEDFORD.

The Rev. R. C. Billing, Rector of Spitalfields and Prebendary of St. Paul's Cathedral, was recently appointed Bishop Suffragan of Bedford. Robert Claudius Billing was educated at Worcester College, Oxford, where he took his degree of B.A. in 1857. In the same year he was ordained deacon, and, in the year following, priest, by the Bishop of Rochester. He held the curacy of St. Peter, Colchester, from the date of his ordination till 1860, and then for one year that of Compton Bishop, in Somersetshire. In 1861 he was appointed one of the secretaries of the Church Missionary Society in the diocese of York. After two years he became Vicar of Holy Trinity, Louth, where he stayed ten years, till his appointment to a London living as Vicar of Holy Trinity, Islington. Here he was Vicar five years, until 1878, when he was transferred to the rectory of Spitalfields, where he has been well known for his earnest work among the poor. Mr. Billing has been Chaplain of the London Lay Helpers' Association since 1885, Commissioner under the Pluralities Act for the Archdeaconry of London since 1886, and Prebendary (of Holborn) in the see of London since the same date.

It should be a cause of satisfaction to the London clergy that one of their own number, who has worked long and successfully in the East-End of London, has been appointed to succeed the Bishop of Wakefield.

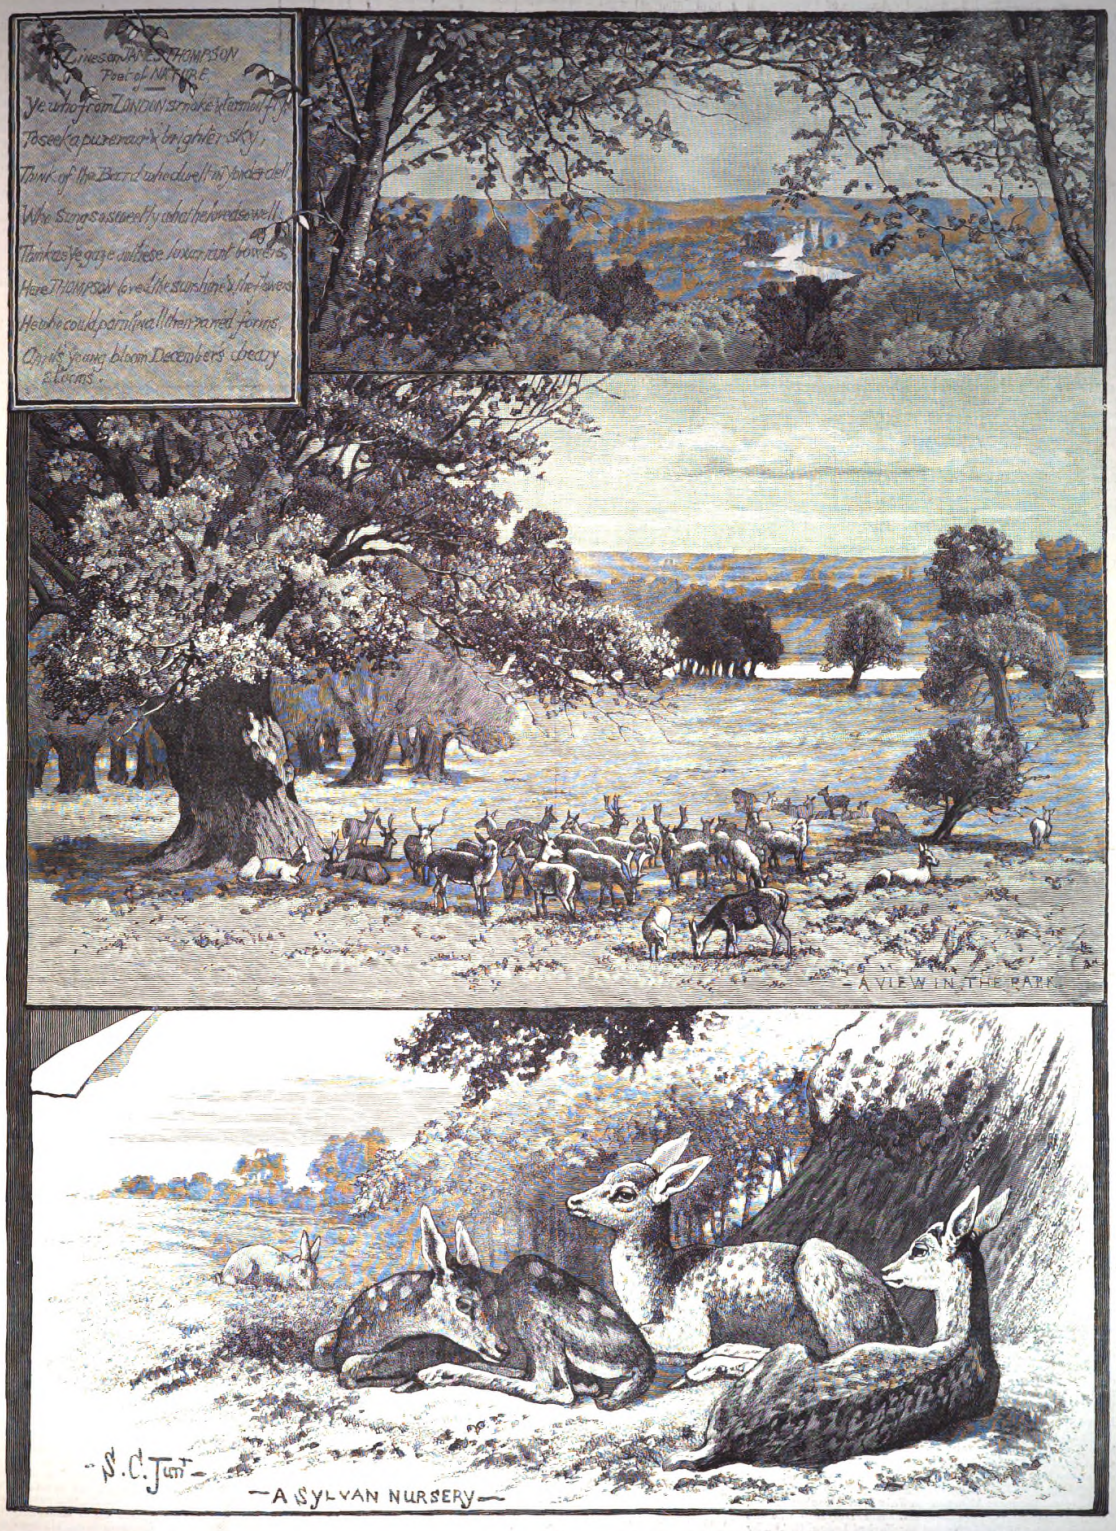
SIR EDWARD BLOUNT, K.C.B.

This gentleman, on whom her Majesty has conferred the honour of Knighthood, is second son of the late Edward Blount, Esq., of Bellamore, Staffordshire, M.P. for Steyning. He is uncle to the head of the family, Sir Walter De Sodington Blount, Bart., of Mawley Hall, Shropshire. Mr. Edward Blount began life in the Home Secretary's office in 1827, during the Ministry of Mr. Canning. He soon afterwards left England for Rome, and removed to Paris in 1831, from which time he has principally resided in that city, and was engaged there as a banker till 1870. During many years past Mr. Edward Blount's name has been associated with the most considerable public works in France. He was among the chief founders of the Paris and Rouen Railway, one of the first lines opened in France, in 1843, and of the Havre, Dieppe, Cherbourg, and Brest lines, now amalgamated with the Western Railway of France, of which Sir Edward Blount is chairman. He is also deputy chairman of the Paris, Lyons, Mediterranean Railway Company, and is connected with railways in Austria, Spain, Italy and Portugal. He is chairman of the Paris Compagnie Générale des Eaux, which is executing works all over Europe. Mr. Edward Blount was created a Companion of the Bath in 1871, for the services he rendered to the British Government and British residents during the siege of Paris, when he held temporarily the post of British Consul. He is now raised to the rank of Knighthood in that order. He married, in 1834, the youngest daughter of the late Mr. William Jerningham, brother of the eighth Lord Stafford. He has one surviving son, Mr. Henry Blount, who is Deputy-Lieutenant for the county of Sussex.

Nearly 6000 Volunteers in the Home District command underwent their annual official inspection on July 7.

Under favourable conditions the annual night fête of the Royal Botanic Society in their grounds in Regent's Park is one of the pleasantest gatherings of the season. The heavy showers which fell at intervals during the day rather interfered with the enjoyment of those who attended the fête this year. It is true that there was no rain during the evening, and that the night air was warm and genial, but the grassy slopes were so damp that to walk upon them was a risky undertaking. The grounds were illuminated as usual with thousands of Clarke's "fairy lights" and transparent globes, which marked out the shapes of the paths and flower-beds, and glistened among the foliage of the trees. There was a large and fashionable gathering.

MODEL OF A GROUP BY C. B. LAWES, AT THE ROYAL ACADEMY EXHIBITION.



"They bound me on, that menial throng,
Upon his back with many a thong;
They loosed him with a sudden lash,
Away! away! and on we dash!"

A BURMESE LAW STUDENT.

Among the students of the Middle Temple called to the Bar last term was Mr. Chan-Toon, a native of Burmah. During his studentship, Mr. Chan-Toon competed for the eight principal prizes open to law students and gained them all. The Masters of the Bench of the Middle Temple have passed a resolution to offer their best congratulations to Mr. Chan-Toon on his most distinguished career as a student of the Inn, recognising the great honour Mr. Chan-Toon has, by his success, gained for the Society. To no other student of the Inn has a similar compliment ever been paid. We are informed that Mr. Chan-Toon is the third son of Mr. Re Kyaw Thoo, and was born at Akyab, British Burmah, Feb. 23, 1867. At the age of eight he was sent to Calcutta to enter the Doveton College, where he was principally educated. There he distinguished himself by winning the best prizes. At the age of fifteen he matriculated at the Calcutta University. He left India for England early in 1883, with a view to enter the Indian Civil Service. For this purpose he entered University College, London, and latterly became a pupil of Messrs. Wren and Gurney. But the method and subjects of study of the Indian Civil Service were not suited to him; and he chose to pursue the study of the law. He entered the Middle Temple at Michaelmas Term, 1885. His taste for law soon showed itself, and within two years he has won the following prizes: the Inns of Court Studentship in Roman Law and Jurisprudence, Hilary, 1888; £50 Roman Law, International and Constitutional Law, Council of Legal Education Prize, Hilary, 1888; first class Common Law Middle Temple Scholar, Hilary, 1888; first class International and Constitutional Law Scholar, Hilary, 1887; second class Common Law Scholar, Trinity, 1887; second class International and Constitutional Law Scholar, Trinity, 1886; £15 Roman Law Jurisprudence, Council of Legal Education Prize, Hilary, 1887. Mr. Chan-Toon was called to the Bar in Trinity Term, 1888. We hope that he will have a successful professional career, and that others of the Burmese race, who are now our fellow-subjects of the British Empire, will emulate his bright example.

Notwithstanding the unpromising weather, twenty-two coaches assembled at the Magazine, Hyde Park, on July 7, at the second meet for the season of the Coaching Club.

Henley Regatta was concluded on July 6. The Grand Challenge Cup was won by the Thames R.C.; the Ladies' Challenge Plate by the Lady Margaret B.C.; the Stewards' Challenge Cup by Trinity Hall B.C.; the Silver Goblets by Buck and Symonds; the Thames Challenge Cup by the Lady Margaret B.C.; the Wyfold Challenge Cup by the Thames R.C.; the Diamond Challenge Sculls, by Nickalls, of Magdalen College B.C.; and the Visitors' Challenge Cup by Brasenose College B.C.

RAMBLING SKETCHES: RICHMOND PARK.

OBITUARY.

LORD WOLVERTON.

The Right Hon. Henry Richard Glyn, third Baron Wolverton, of Wolverton, in the county of Buckingham, died at Warren House, Coombe, on July 2. He was born July 18, 1861, the elder son of the late Vice-Admiral the Hon. Henry Carr Glyn, C.B., C.S.I., by Rose, his wife, daughter of the Rev. Denis Mahon, of Dromore Castle, in the county of Kerry. He succeeded to the peerage at the death of his uncle, George Grenfell, second Lord Wolverton, so lately as Nov. 6 last. The family of Glyn is one of the chief banking houses of the City of London. Lord Wolverton having died unmarried, the title devolves on his brother Frederick, now fourth Lord Wolverton, born in 1864.

THE HON. F. J. TOLLEMACHE.

The Hon. Frederick James Tollemache, formerly M.P. for Grantham, died at his residence, Ham House, Petersham, Surrey, on July 2, aged eighty-four. He was the fifth son of William, Lord Huntingtower, son of Louisa, Countess of Dysart, and was brother of Lionel, seventh Earl of Dysart. He was educated at Harrow, and represented Grantham in Parliament, as a Conservative, from 1826 to 1831, 1837 to 1852, 1857 to 1865, and, as a Liberal, from 1868 to 1874. He married, first, Aug. 26, 1831, Sarah Maria, daughter of Mr. Robert Bomford, of Rahinstown, in Meath; and secondly, Sept. 4, 1847, Isabella Anne, eldest daughter of Mr. George Gordon Forbes; and leaves issue, by his second wife, an only child, Ada Maria Katherine, wife of Lord Sudeley.

We have also to record the deaths of—

Sir William Wellington Cairns, K.C.M.G., half-brother to the late Earl Cairns, on July 7, in his sixty-first year.

The Rev. George Edward Prescott, M.A., for forty-nine years Rector of Digswell, Herts, on June 25, aged eighty-three.

Mr. James Pankhurst, H.B.M.'s Vice-Consul at Lausanne, on June 22, aged forty-two.

Major Alexander Carre Boswell, late Bengal Army, at Ramsgate, on June 7, aged seventy-five.

Lieutenant-Colonel George Henry Wildes, 3rd Battalion Cheshire Regiment, on June 18, aged forty-three.

Mr. James Tabor, of Rochford Hall, Essex, J.P. and D.L., on June 26, aged eighty-nine.

The Rev. Charles Hodgson Harbord, B.A., R.N., Chaplain of her Majesty's Dockyard at Bermuda, aged forty-nine.

Mr. Charles Steer, late Judge of the High Court, Calcutta, at Sutton Manor House, on July 1, aged seventy-seven.

Dr. Henry J. Domville, C.B., Inspector-General of Hospitals and Fleets, suddenly, at Paignton, on July 8.

Rev. Alan Marmaduke Alington, M.A., for twenty-four years Rector of Benniworth, Lincolnshire, at Outram-terrace, Stoke, Devonport, on June 22, aged fifty-two.

Lieutenant-Colonel Frederick Schuler Leacock, Bombay Infantry, at Baroda, India, on May 23. He served with distinction throughout the Abyssinian Expedition of 1867-68.

Captain Robert Augustus Ritherdon, 1st Madras Pioneers, son of Major-General Augustus William Ritherdon, Madras Staff Corps, of Waltair, Sydenham, on June 1, at Madras.

Mr. James Anderson, Q.C., at his residence at Clapham, on June 22, aged eighty-four. Mr. Anderson married, in 1871, Minnie, daughter of Mr. George Upward, of Blackheath.

The Rev. Willoughby William Townley Balfour, late Rector of Aston Flamville-cum-Burbage, Leicestershire, at Fairy-hill, Rostrevor, in the county of Down, on June 29, aged eighty-six.

Mr. John Charles Marriott Forbes, at Calcutta, on May 27, aged forty-six. He was the fifth son of the Hon. Robert Forbes, son of the seventeenth Lord Forbes.

Sir John Hardy, Bart., elder brother of Viscount Cranbrook, the Lord President of the Council, on July 9, in the eightieth year of his age, from the effects of a carriage accident. His memoir will be given in our next Issue.

Mr. George West, C.B., late H.B.M.'s Consul at Suez, on June 23. He was born in 1817. Mr. West married, in 1848, Emily, daughter of Mr. John Haines and widow of Mr. William S. Leese.

Colonel Edward Christopher Codrington, late Bengal Staff Corps, at Exmouth, on July 1, aged fifty. He served in the Indian Mutiny, for which he received four medals, with clasps, for his gallantry.

The Rev. David Bruce, M.A., Hon. Canon of Durham Cathedral, some time Vicar of Ferry Hill and Merrington, Durham, at 82, Lexham-gardens, Kensington, W., on June 24, aged seventy-eight.

The Ven. W. J. Phillpotts, Archdeacon of Cornwall, and Chancellor of the Diocese of Exeter, on July 10, at his Vicarage, St. Gluviais, near Truro, aged eighty-two. He was the son of the celebrated Bishop of Exeter.

The Ven. Henry Sanders, M.A., Archdeacon of Exeter, Chancellor and Canon Residentiary of Exeter Cathedral, and Rector of Sowton since 1847, at Oxford, on June 24, aged eighty-two.

Lieutenant Robert Bruges Briscoe, Royal Inniskilling Fusiliers, killed in the recent engagement in Zululand. He served in the Soudan Expedition of 1884-85, and was present in the engagements at Abu Klea and El Gubat (mentioned in despatches, medal with two clasps, and Khedive's star).

The Hon. Mrs. Hare (Mary Christina), widow of Lieutenant-Colonel the Hon. Richard Hare, brother of William, second Earl of Listowel, K.P., and fourth daughter of Vice-Admiral W. Windham, of Felbrigge Hall, Norfolk, at St. Michael's Lodge, Stoke Damerel, on June 22, aged seventy-six.

The Rev. Lionel Dawson-Damer, M.A., Hon. Canon of Salisbury, and for fifteen years Vicar of Canford, Dorset, at Parkstone, on July 3, aged fifty-five. He was the eldest surviving son of the Hon. William Mackenzie Dawson-Damer, and grandson of John, first Earl of Portarlington.

Augusta, Baroness Alington, on July 3, at Alington House, South Audley-street, aged fifty-six. Her Ladyship was the eldest daughter of Field-Marshal the Earl of Lucan, G.C.B., by Lady Anne Brudenell, his wife, seventh daughter of Robert, sixth Earl of Cardigan, and married, Sept. 10, 1853, Henry Gerard, present Lord Alington, by whom she leaves, with five daughters, an only son, Humphrey Napier, who married, in 1883, the Lady Feodorowna Yorke, elder daughter of the Earl of Hardwicke.

The Hon. and Rev. William Whitworth Chetwynd Talbot, Rector of Bishop's Hatfield, Herts, on July 3. He was born Jan. 17, 1814, the sixth son of Charles, second Earl of Shrewsbury. He married, July 4, 1843, Eleonora Julia, eldest daughter of the Hon. William James Coventry, fourth son of George, seventh Earl of Coventry, and leaves two sons.

Major-General Joseph Shekleton, late Royal Artillery, at 30, St. John's-park, Ryde, suddenly, on July 4. He served in the Punjaub Campaign of 1848-49, including the siege and capture of Mooltan and Battle of Goojerat (medal with two clasps), in the Persian Expedition of 1857 (medal with clasp), and with the Rajpootana Field-Force in 1858 (medal).

Mrs. Lloyd, of Bronwydd, in Cardiganshire, and Kilrhue, in Pembrokeshire, in the ninety-fourth year of her age. She was the only daughter and heiress of Mr. John Thomas, of Llwycoed and Lettymawr, in Carmarthenshire. She married, in 1819, Mr. Thomas Lloyd, of Bronwydd, in Cardiganshire, and had five sons, the eldest of whom, Sir Thomas Lloyd, was father of the present Baronet.

Admiral George Goldsmith, C.B., R.N., on July 2, aged eighty-two. He served in the China War of 1841-42, commanded the Wellesley 1848-51 on North America and West India stations, and served as Captain of the Sidon in the Black Sea during the Russian War, including the capture of Fort Kinburn. He received, in requital, two medals with clasps, the Turkish medal, and the fourth class of the Medjidieh. He married, in 1856, the daughter of Mr. Richard Rawes.

Admiral Hargood, at Worthing, aged eighty-seven. He entered the Navy as a first-class volunteer in June, 1813, on the flag-ship of his uncle, Sir William Hargood, on the Jersey and Guernsey station. In 1822 he was created a Lieutenant; in 1828, Commander; in 1834, Captain; and was made Rear-Admiral in 1857. He attained to the rank of full Admiral in 1867. He was a Justice of the Peace and Deputy-Lieutenant for the county of Sussex.

General Sir Charles Trollope, K.C.B., at his residence, 19A, Grosvenor-square, on July 5, in his eightieth year. The deceased officer entered the Army in 1825, became Colonel of the 1st Battalion of the King's (Shropshire L.I.) in 1868, and General in 1877, retiring in the succeeding year. He commanded the troops in Cephalonia from 1848 to 1850, and served as Brigadier-General in the Crimean War, receiving the medal with clasps, the Sardinian and Turkish medals, the Legion of Honour, and the third class of the Medjidieh.

General John Hamilton Elphinstone-Dalrymple, C.B., Colonel 1st Battalion Highland Light Infantry, at 7, Beaufort-gardens, on June 28. He was the eighth son of Sir Robert Dalrymple Horn Elphinstone, first Baronet, of Horn and Logie, Elphinstone, in the county of Aberdeen. He married, April 23, 1851, Georgina Anne, eldest daughter of Mr. William Brigstocke, M.P., of Birdcombe Court, Somersetshire, and widow of Mr. Francis Garden Campbell, of Troup and Glenlyon, which lady died, April 15, 1887, without issue.

The Hon. and Rev. Robert Liddell, for thirty years Vicar of St. Paul's, Knightsbridge, at his residence in New Cavendish-street, on June 29. He was the fifth son of Thomas Henry, first Lord Ravensworth, and was born in 1808. He was one of the pioneers of the High Church movement. He married, Jan. 26, 1836, Emily Anne Charlotte, eldest daughter of the late Hon. and Rev. Gerald Wellesley, niece of the Duke of Wellington. By that lady, who died in October, 1876, he leaves three sons.

Major Charles Edmund Thornton, of Kirkland Hall and Beaumont Cote, in the county of Lancaster, late 7th Fusiliers, at Whittington, near Hove, Sussex, on June 23, aged sixty-three. He married, firstly, in 1862, Eliza Amanda, eldest surviving daughter of Lieutenant-Colonel Stephen Williams, 56th Bengal Native Infantry, and widow of Mr. William Campbell Deane Campbell, of Corraith House, Ayrshire, which lady died in 1872; and secondly, in 1873, Marion, only surviving daughter of Mr. William Pole, of Cheltenham, and leaves issue.

RICHMOND PARK.

The proposal to hold the future annual meetings of the National Rifle Association, removed henceforth from Wimbledon-common, in the beautiful Royal Park of Richmond, has recently been discussed with a lively difference of opinions. The residents in that town and neighbourhood, among whom is Sir J. Whittaker Ellis, M.P., the munificent donor of a valuable public recreation-ground on the banks of the Thames below Richmond-hill, have signified their strong opposition by a public meeting and a deputation to the Chief Commissioner of Works. Mr. Vernon Heath, the well-known landscape photographer, Mr. Thornycroft, Mrs. Maxwell, and others who feel an interest in preserving the tranquil charms of the sylvan scenery, have individually protested against this scheme, which we certainly do not support. On the south, the north, and the east sides of London, within about the same distance, several open spaces could be found—especially in the Essex and Kentish marshes, and on the Surrey Downs—more suitable for the purpose without spoiling a picturesque locality, and without interrupting the enjoyment of a favourite resort for seekers of rural quiet and wholesome fresh air. Our Artist's Rambling Sketches will serve opportunely to suggest pleasing reminiscences of the haunts and "nursery" of the noble herd of deer, the delightful walks over "some of the most perfect turf in England," and the fine old oak-trees, many of which are now threatened with destruction. The preservation of Richmond Park from disfigurement, from noise and bustle during a whole fortnight in summer every year, from hideous shooting-butts, a large encampment of tents, the mob of vulgar camp-followers, the wearisome popping of rifle-shots, and the danger of stray bullets, is of much importance to Londoners, though it may be of less concern to three or four noblemen, patrons of the Association, who are the happy owners of fine private parks in several English counties. Richmond Park, moreover, is classic ground, consecrated by memories of poetry and literary history which should not be so wantonly disturbed.

SUBSCRIPTION TO THE ILLUSTRATED LONDON NEWS.

AT HOME.

Twelve months (including Christmas Number), £1 9s. 3d.	
Six months, 14s.	Christmas Half-Year, 15s. 3d.
Three months, 7s.	Christmas Quarter, 8s. 3d.

Copies will be supplied direct from the Office to any part of the United Kingdom and the Channel Islands, for any period, at the rate of 6d. for each Number, paid in advance.

ABROAD.

The yearly subscription abroad, including the Christmas Number, is £1 18s. 4d. (on thin paper, £1 12s.), with the following exceptions:—

To Abyssinia, Aden, Bechuanaland, Borneo, Ceylon, India, Java, Labuan, Penang, Philippine Islands, Sarawak, Siam, Singapore, and Zanzibar, £2 1s. (on thin paper, 31s.)

To Diego Garcia and Madagascar (except St. Mary and Tamatave), £2 5s. (on thin paper, £1 16s. 4d.)

Subscribers are specially advised to order the thick paper edition, the appearance of the engravings on the thin paper copies being greatly injured by the print at the back showing through.

Newspapers for foreign parts must be *posted* within eight days of the date of publication, irrespective of the *departure* of the mails.

Subscriptions must be paid in advance, direct to the Publishing Office, 198, Strand, in English money; by cheque, crossed "The Union Bank of London"; or by Post-Office Order, payable at the East Strand Post Office, to INGRAM BROTHERS, of 198, Strand, London.

ANNIVERSARIES.

It is always an anniversary. The world has been in existence so long that no day passes over our heads which does not record the completion of a year on some event more or less important to somebody, somewhere. Now it is a mighty nation celebrating its independence, the jubilee of a reign, or mourning over a deceased Monarch; now it is a humble and obscure individual rejoicing or lamenting over memories to which the exact round of life gives a significant vividness. Between these two high and low extremes every class of humanity is hourly touched almost, by those recollections of the past which are brought conspicuously to the mind by the precise lapse of twelve months. Everywhere, each succeeding twenty-four hours adds another notch to the scores of notches in the yearly calendar, date for date. And so we go on annually, month for month, week for week, day for day, all and every one of them bringing a well-defined span of time back, as it were, to its starting-point, to be again renewed and carried on until yet another year is completed.

It is, however, only on the quite young or the very old that these recurrent dates make much impression. By the young, they are looked forward to eagerly; by the old, sadly, retrospectively, and regretfully. When we have not had time to add up many, or to get tired over the arithmetical calculation, it is a joy to make the sum larger and larger unit by unit; and there is no more delightful opportunity for doing this, no occasion more fraught with pleasure for increasing the total than a birthday. This is the anniversary by far the most important of all to the juvenile community. To lad and lass a birthday is unclouded by that shadow which creeps over it in later life—the dread of growing old. There is no sorrowing for that other year gone, which is bringing the end closer and closer; on the contrary, we cannot believe in an end, or if we do, it does not affect us: we cannot realise it and never think of it. The peep we get of the prospect of life lying before us looks simply interminable, inexhaustible—a path of roses that must, like the brook, go on for ever. With a vista like this opening to our view, there is little wonder that the birthdays of the young, with all they include, are conspicuous and paramount among anniversaries. After our own natal day has been celebrated, the next in importance is that of a brother, sister, parent, or friend, each carrying with it its due observance and relative amount of pleasure, presents, and fun.

Ranking only second to birthdays in favour comes Christmas, and there are a thousand good reasons for this being a very notable anniversary during our days of adolescence. It is holiday time, feasting time, pantomime time, and a time for high jinks generally.

Very much the same may be said of every season and date, as they spin round one after another, if they are signalised by a cessation of study or labour—such as Easter, midsummer, and the like. But after a while, when we begin to get rather startled by the rapidity with which we find all anniversaries turning up, and are made a little bit uneasy by the recollection that we are growing older and older, the repetition of the dates becomes slightly tiresome. We cease to look forward to them with pleasurable sensations, and we thus, step by step, disregard them more and more until we almost forget them, or try to do so; and certainly resent any reminder as unnecessary and obtrusive. Whether it be the anniversary of a birthday, a wedding-day, or what not, we would prefer that it should be allowed to pass by unnoticed. With our coming of age, or soon after, we think the celebration of our birthday should cease; and if any particular regard is to be paid to the nuptial day, well, when the first half dozen are over, let us defer further fuss about it until the twenty-fifth is reached—that silvery period which too frequently with bitter irony asserts its character in our Hyperion locks, and, by way of giving an emphasis to it, calls itself a quarter of a century.

Again, what applies to these occasions does so equally to Christmas and the rest, until the years are allowed to fly by with all their dates and seasons undistinguished, unmarked.

Only, at length, when the journey is drawing towards its close, and the road narrows, and the prospect dims on our sight, do we again take up any interest in particular dates in the calendar. And what a different sort of interest it is then! How changed are all our sensations when the fifties associate themselves with births, marriages, deaths, Christmases, or notable periods and events of any description, private or public! Then, truly, we may say with Goethe—

> The near afar off seems; the distant, nigh;
> The new a dream, the past reality.

For the oldsters record not the flight of time year by year, but jump back at a bound, by twenties and thirties, and forties; and the intervals being thus omitted, the forty looks as short a way behind us as the twenty. The oblivion shrouding the central epoch of life's journey, that period when we disdained to note or honour anniversaries, acts like a valley-mist, above and beyond which all that is prominently visible are those mountain-tops or conspicuous landmarks, which we regarded with so lively an interest when standing in their midst. The impression they then made on the youthful mind is in a sort indelible; the then pliant wax received it willingly, and being cut deep and sharp, it has become, under the hardening influence of time, wellnigh indelible. In casting back to it, therefore, it starts into existence again with all the strong reality of yore. Thousands of our fellow countrymen, to whit, look back at the Queen's accession to the throne as an event of yesterday, and fail entirely to realise that half a century and more has passed away since 1837. It seems incredible. Equally so to a somewhat younger generation does the fact that twenty-five years have vanished since the Prince and Princess of Wales were wed.

Thus it is with public affairs, and you will find scarcely any difference with your own. You can remember vividly certain notable anniversaries in your family long ago—sad, alas! no less than joyous; and some half-dozen or more happy birthdays, with their many trifling details, and especially your twenty-first. Then soon after comes the misty gap, and lo! it is as if the intervening span of years had never been; unless, that is, from out that uncertain haze some day of bitter trial that befell rises forth, clear and distinct as the years roll by, bringing with it a memory of pain never to be allayed, and that only eternity can obliterate. But this is an exception, let us hope, to the rule which guides memory's action; and as, mercifully, few sorrows fix themselves in our minds so firmly as do our joys, it is, after all, the brighter, happier, red-letter days which are the most readily recalled. Still, this retrospective process, this renewal of our interest in happy anniversaries, is quite sufficiently tinged with melancholy to make our observance of them a very different business now to that which it used to be! Since, however, recollections, reminiscences, autobiographical memoirs of the past, and the like, have lately formed the popular reading of the day, and as there have been a good many celebrations of anniversaries going forward, it is to be supposed they claim the willing attention of the middle-aged no less than of the young and old, affording, on the whole, infinite pleasure to all.

W. W. F.

THE COURT.

The Queen and the Royal family went to Frogmore on Sunday morning, July 8, and attended Divine service at the Royal Mausoleum. The Dean of Windsor, assisted by the Rev. Canon Duckworth, officiated, and the latter preached the sermon. Divine service was afterwards performed in the private chapel at the castle. Lady Frances Baillie and the Rev. Canon Duckworth, D.D., had the honour of dining with her Majesty and the Royal family. The Duc d'Aumale visited her Majesty on July 9, and remained to luncheon. Prince and Princess Christian of Schleswig-Holstein dined with her Majesty. Lady Frances Baillie had the honour of being invited. Prince and Princess Henry of Battenberg went to London. Princess Frederica, Baroness Von Pawel Rammingen, arrived at the castle. Lady Frances Baillie left. The Queen, on July 10, conferred the honour of knighthood upon the following gentlemen:—Mr. Charles Hallé, Mr. John Stainer, Mus. Doc.; John James Harwood, Mayor of Manchester; John Hasard, Principal Registrar of the Province of Canterbury; George Barclay Bruce, President of the Institution of Civil Engineers; and George David Harris, of the Bahamas, formerly member of the Executive Council. According to the latest arrangements, the Queen and Court are expected to leave Windsor Castle on July 17 for Osborne.

The Prince and Princess of Wales left Marlborough House on July 4 for Sandringham. Their Royal Highnesses were accompanied by Princesses Louise, Victoria, and Maud, and travelled by a Great Eastern train from St. Pancras at 2.35 to Wolverton, en route for Sandringham. On Sunday, July 8, the Prince and Princess of Wales, with Princesses Louise, Victoria, and Maud, and attended by the Ladies and Gentlemen of the Household, were present at Divine service at the Church of St. Mary Magdalen, in Sandringham Park. The Rev. F. Harvey, Rector of Sandringham, and domestic chaplain to the Prince of Wales, officiated and preached. Their Royal Highnesses will return to town on Monday, July 16, to attend the opening of the Great Northern Hospital on the day following.

FASHIONABLE MARRIAGE.

The marriage of Mr. H. F. Cavendish, R.M., eldest son of the late Colonel W. H. and Lady Emily Cavendish, to Lady Harriet Godolphin Osborne, eldest daughter of the Duke and Duchess of Leeds, was solemnised on July 10 at St. Paul's Church, Knightsbridge, before a large and fashionable congregation. The bridegroom, accompanied by the Hon. Hedworth Lambton, R.N., as best man, arrived early; and shortly afterwards came the following ten bridesmaids—the Ladies Alice, Ada, Alexandra, and Constance Godolphin Osborne, sisters of the bride; the Misses Edith and Alice Foljambe, nieces of the bridegroom; the Ladies Eleanor and Anne Lambton, Lady Victoria Leveson-Gower, and Miss Blanche Egerton. They wore dresses of cream French crêpe trimmed with white moiré ribbon and broad sashes, and hats of Panama straw trimmed with white crêpe lisse, ribbons and feathers to match. Each wore a brooch—a serpent (the Cavendish crest) in brilliants—the gift of the bridegroom, and carried a bouquet of mixed roses. The bride entered the church at half-past two o'clock, leaning on her father's arm; and, the service being choral, a nuptial hymn was sung as the bridal procession passed to the chancel. The bride's dress was of white peau-de-soie, draped with Honiton lace, caught up with clusters of orange-blossoms and myrtle: she wore a spray of the same flowers in her hair, and a tulle veil. Her ornaments included a diamond star (the gift of the Duke of Leeds) and a diamond brooch (the bridegroom's gift). The Archbishop of York officiated, assisted by the Rev. W. Page Roberts, uncle of the bride, and the Rev. William Shaw, Rector of West Stoke, Chichester; the Duke of Leeds giving his daughter away. Among the numerous wedding presents were a silver-gilt box and a tourmaline and diamond bracelet, from the Prince and Princess of Wales.

A portrait of the late Sir Charles Macgregor was unveiled at Simla on July 2 by the Commander-in-Chief.

The Commissioners for the Reduction of the National Debt have appointed Mr. G. W. Hervey, of the Treasury, to be Assistant Comptroller, in the place of Mr. J. F. Daly, resigned.

Before returning to America Mr. Sidney Woollett recited "Enoch Arden" on July 11, at Stanley Hall, Holloway, in aid of the St. Joseph's Church Building Fund. He was assisted by Mr. Ludwig, who sang selections from Gounod and others. Mr. Woollett will give at the same hall "Hiawatha" for the same purpose on July 18, when he will again be assisted by Mr. Ludwig, who will sing selections from Sullivan and others.

At a meeting on July 6 of the Mansion House Committee formed to promote the success of the Royal Agricultural Society's Show in Windsor Great Park next year, a letter from Sir Henry Ponsonby was read stating that the Queen would contribute £105 to the fund, and the Prince of Wales £50. Many other subscriptions were announced: Messrs. N. M. Rothschild and Sons contributing £250, Lord Revelstoke £100, Mr. J. Stewart Hodgson £100, Lord Hillingdon £100, Mr. F. Shoolbred £105, Messrs. W. and A. Gilbey £105, and Mr. Walter Gilbey £105.

The Australian cricketers have been defeated by Leicestershire, the county team winning by twenty runs. The match at Brighton between Sussex and Kent ended in the victory of the visitors by five wickets. At Manchester, Lancashire obtained an easy victory over Middlesex by an innings and twenty-one runs. At Trent-bridge the match between Notts and Yorkshire ended in a draw. On July 10, at Lord's Cricket-ground the Gentlemen, after a very sensational and exciting finish, beat the Players by five runs. At Derby the Derbyshire team were put out in the second innings of their match with the Australians for 57, leaving the Colonists victorious by an innings and 79 runs.

Australia is suffering from a plague of mice. It is said that from Coomebarabran to Coolah there is hardly a residence that is not troubled in this way. The mice come in droves, and eat everything in the place. On one station 2s. per 100 was offered for their destruction, and during a single night 2000 were killed. The price then went down to a 1s. In one hotel in three nights 1000 mice were killed with a mixture of flour and strychnine. At another place the mice ate the whole carcase of a freshly-killed sheep in one night, leaving only the bare bones by the morning. At another station a man was kept whose sole duty was to keep the mice away from the provender during the time the horses were eating it, and this the man found a difficult task. The week before the races at Coolah, the vermin got into the horse-boxes at the station, and actually ate the bandages from the legs of the race-horses. Sleeping people are said to have been attacked by them. The crops were being destroyed. The mice climbed up the stalks, and ate the cobs. Many fields, acres in extent, had been abandoned, the corn being eaten completely away. People were at their wits' end to devise the best means for destroying the pest. The mice burrowed in the fields, like rabbits, in miniature warrens.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

DELTA.—We are much obliged for the game, which shall be examined. We would be very pleased to receive the one you speak of with the late Herr Falkbeer.

ELAND.—You do not appear to have profited by the possession.

J J J (Khartoum).—Thanks for calling our attention to your new venture, which we wish all success.

LIEUT.-COLONEL LORAINE.—Your name was inadvertently omitted, an error which we correct below.

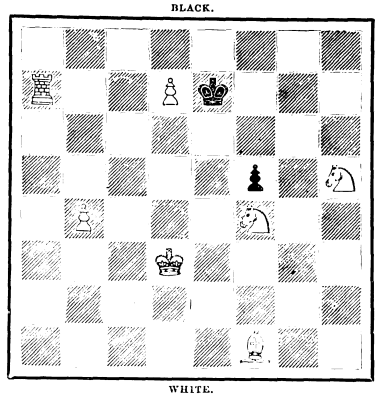
T CROWN.—We were not aware that our correspondents intrusted you with their confidence, and they have certainly given us no hint of making you their mouthpiece.

H COOPER (Hadleybury).—Received, and shall be reported upon.

W T SMITH.—If in 294 Black play Kt takes R in reply to your move, where do you mate? No. 297 cannot be solved in either of your ways.

CORRECT SOLUTIONS OF PROBLEM No. 294 received from D A; of No. 295 from D A, and J G Bankin; of No. 296 from Lieut.-Colonel Loraine, D A, and W W; of No. 297 from C E P, John Hodgson, D A, W Shaw (Sheffield), Alpha, W W, G J Veale, and R S Gale.

CORRECT SOLUTIONS OF PROBLEM No. 298 received from Eland, R S Gale, G J Veale, Jupiter Junior, Janet M Kelly, C E P, Samuel Parry, F O Simpson, H Luera, Ercoelin (Paris), Ruby Rook, F E H, R F N Banks, D McCoy, Caradoc W Wood, J G Bankin, A J Durell (Wokingham), Dr F St. T G (Wem), Rev. Winfield Cooper, Columbus, R Worters (Canterbury), Mrs W J Baird, E Phillips, Howard A, T E E, T Roberts, Shadforth, W J (Victoria), Dr. Gustav Waltz (Heidelberg), Rev. Leonard Watson (Bedford), Major Prichard, J Ross, H P (Dudley), W R Raillem, R H Brooks, Bernard Reynolds, J D Tucker (Leeds), G T Addison, John Short, J Hepworth Shaw, Thomas Clown, Lieut.-Col. Loraine, L Desanges, E Sharswood, W Wright, J Dixon, and P D.



SOLUTION OF PROBLEM No. 2306.

WHITE.	BLACK.
1. R to K B 5th	Any move
2. Mates.	

PROBLEM No. 2310.

By G. E. BARBIER.

BLACK.

WHITE.

White to play, and mate in three moves.

CHESS IN LANCASHIRE.

One of twenty games played simultaneously by Mr. BLACKBURNE during his recent visit to Rossendale.

(King's Gambit declined.)

WHITE (Mr. Blackburne)	BLACK (Mr. Bell)
1. P to K 4th	P to K 4th
2. P to K B 4th	B to Q B 4th
3. K Kt to B 3rd	P to Q 3rd
4. B to Q B 4th	B to K Kt 5th
5. P to Kt 4th	B to Kt 3rd
6. P takes P	P takes P
7. B takes P (ch)	K to Kt 2nd
8. R takes B	R takes B
9. Kt to Q B 3rd	P to B 3rd
10. P to Q 3rd	P to K R 3rd
11. K R to B sq	R to B sq
12. P to Kt 5th	R to B 3rd
13. B to R 3rd (ch)	K to K sq
14. Q to Q 2nd	Kt to Q 2nd
15. Castles	B takes Kt
16. P takes B	K to B 2nd
17. Kt to K 2nd	P to R 3rd

A good move; compelling White to take B P, and improving his own position.

18. P takes B P	P takes P
19. Kt to Kt 3rd	R to Kt 3rd

We see no object in this: R to Kt sq with the view of an attack on the Queen's side is decidedly preferable.

20. Kt to B 5th	Q to Kt 4th

Of no avail: White can easily defend himself on the King's side.

21. P to B 3rd	P takes P
22. R takes P	Kt to B 3rd

A move that ought to have cost Black the game.

23. Q R to B sq	B to Q 2nd

WHITE (Mr. Blackburne)	BLACK (Mr. Bell)
White here missed an opportunity of winning straight off, by 23. P to R 4th. Black can only answer with Q to R 4th or Kt 7th, and 24. Q to R 3rd wins either a piece or mates.	
23.	B to B 2nd
24. B to Q 6th	B takes B
25. Kt takes B (ch)	K to Kt sq
26. P to K R 4th	

Overlooking Black's rejoinder. Before making this move he should have brought the Kt back to B 5th, threatening the R and shutting the Queen out of play.

26.	Q to K 4th

A great relief to Black's cramped position.

27. Q to Kt 4th	Q to R 8th (ch)
28. K to Q 2nd	R to Kt 7th (ch)
29. K to K 3rd	Q to K 4th
30. K to B 3rd	

Q to Kt 3rd (ch) affords White an escape from the pressure of Black's growing attack.

30.	Kt to Q 4th
31. K takes R	Kt takes Q
32. Kt to B 7th	Q to B 2nd
33. K R to B 2nd	Kt takes R P
34. P to K 5th	Kt to B 6th
35. Kt to Q 6th	Kt to Q 4th
36. R to B 7th	Q to Kt 3rd
37. K to B 3rd	Kt to K 6th (ch)
38. K to B 3rd	Q to Q 5th

And in a few more moves White resigned.

Game between Mr. G. MORSCH and Mr. H. R. COULDREY.

(Evans Gambit.)

WHITE (Mr. M.)	BLACK (Mr. C.)
1. P to K 4th	P to K 4th
2. Kt to K B 3rd	Kt to Q B 3rd
3. B to B 4th	B to B 4th
4. P to Q Kt 4th	B takes P
5. Castles	P to Q 3rd
6. P to B 3rd	B to B 4th
7. P to Q 4th	P takes P
8. P takes P	B to Kt 3rd
9. P to Q 5th	Kt to R 4th
10. B to Kt 2nd	K Kt to K 2nd
11. B to Q 3rd	Castles
12. Kt to B 3rd	B to Kt 5th
13. P to K 5th	P takes P

Black should have taken the Kt before capturing the P.

14. B takes R P (ch)	K takes B
15. Kt to Kt 5th (ch)	K to Kt sq
16. Q takes B	Q to Q 3rd

WHITE (Mr. M.)	BLACK (Mr. C.)
Weak; Q to B sq is best; and if White play Q to R 6th, then Q to B 4th.	
17. B to R 3rd	
Very well played.	
17.	Q takes B

There seems to be nothing better, for if Black move his Q the Kt is lost.

18. Q to R 5th	K R to Q sq
19. Q takes B P (ch)	K to R sq
20. Q Kt to K 4th	R to Q 3rd

White threatens Kt to B 6th. There is no defence to save the game.

21. Q takes Kt	B to B 4th
22. Kt takes B	Q takes Kt
23. Kt to K 6th	R takes Kt
24. Q takes Q	R to R 3rd
25. Q takes B P, and wins.	

As noticed last week, Mr. Blackburne's arrears in the British Chess Club Handicap due to his visit to his native county, where he has been delighting large audiences by striking exhibitions of his skill. His principal performances were at Rossendale, where on one evening he engaged twenty opponents at once, and defeated them all, with a single exception; whilst the next evening he exhibited similar games simultaneously with equally the same success. We give above the game lost on the first occasion, from which it will be seen that the single player ought to have had what in the language of Wimbledon is a "highest possible score."

The quarterly magazine of Wesley College, Dublin, has started a chess column, and offers prizes for a solution and a problem tourney, particulars of which can be obtained from the Chess Editor, 17, Royal-terrace, Kingston. The column itself seems attractively conducted, but it is to be hoped too much space will not be devoted to the poetry and prose notion of the game, a sort of stuff that makes neither players nor composers. A little of such sentiment goes a long way, and one article in the number under notice provides enough for the rest of the column's career.

We are requested to state that the widow of the late Earl of Seafield wishes it to be known that in future her proper designation is "Georgiana, Countess of Seafield." There being now three Countesses of Seafield, this distinction is necessary to avoid confusion.

MUSIC.

ROYAL ITALIAN OPERA.

Rossini's dramatic masterpiece, "Guillaume Tell," was produced on July 5. "Guillaume Tell," the crowning work of Rossini's career, and one of the finest productions of the lyric stage, was first brought out at Paris, in 1829, when the composer was under forty years of age. All the tempting offers made to him for another opera failed to induce him to make any fresh essay in that direction. By his "Guillaume Tell" he had achieved a grand success and world-wide renown; he was possessed of ample wealth, and would therefore not risk the possibility of falling short of the result already attained—greater popularity being impossible, and money being no object. Perhaps his determination is to be regretted, as he gave up dramatic composition when his powers were at their greatest height, as is proved by his "Stabat Mater," produced some years after his "Guillaume Tell." That this opera has been heard only at intervals is chiefly, if not entirely, owing to the rare appearance of a tenor gifted with a voice of the very exceptional kind capable of realising the music of the character of Arnold, which was written for a very high French tenor, commanding an upper range of notes but seldom possessed. M. Prévost, who sustained the character on the occasion now referred to, made his first appearance here in the same part last year. His recent performance was fully equal to that in the former instance. In each of the great situations the singer displayed high merits, especially in the declamatory passages, his best success having perhaps been in the great trio with Tell and Walter, in which he sang with alternate expressive pathos and heroic passion. The graceful music of Mathilde was very pleasingly sung by Miss Macintyre, who gave the romanza "Selva opaca" (with the preceding recitative), and her share in the love-duet with Arnoldo, with vocal fluency and refined style. A little more dignity of bearing would have been an improvement. The co-operation of M. Lassalle as Tell, and M. E. De Reszké as Walter, was a highly important feature in several instances, notably in the grand trio already referred to. Mdlle. Bauermeister was a very efficient Jemmy (Tell's son), her co-operation in the concerted music of the first act having been especially valuable. Signor I. Corsi gave the Fisherman's Song in the opening scene with fair effect, and the cast included efficient representatives of other characters. The orchestra was competent to the execution of the elaborate instrumental details, and the choral music was finely sung by an augmented chorus, the freshness of the voices having been in agreeable contrast to the chorus-singing of some past opera seasons. The magnificent music in the scene of the meeting of the cantons was admirably rendered. The general representation of the opera, indeed, was such as has scarcely ever been surpassed, if equalled, and the stage arrangements were worthy of Mr. Augustus Harris's high reputation. The ballet action included the skilful dancing of Mdlles. Giuri and Cornalba.

Since the performances noticed by us in our previous issue, "Un Ballo in Maschera" has been given, with the appearance of Madame Rolla as Amelia. The lady, it may be remembered, sustained the character of Donna Elvira, in "Don Giovanni," on May 21, in sudden replacement of Miss Macintyre, who was disabled by indisposition, but who afterwards filled the part with marked success. The ready efficiency of Madame Rolla on the occasion first referred to was matter for favourable comment at the time, and fully justified her assumption of the character of the heroine in the recent performance of "Un Ballo in Maschera," in which she again obtained a genuine success, vocally and dramatically. Mdlle. Sigrid Arnoldson was a bright representative of the Page, and the cast was rendered exceptionally strong by the co-operation of Madame Scalchi, M. J. De Reszké, and M. Lassalle in principal parts.

On July 7 a new Carmen appeared in Bizet's opera so entitled. Mdlle. De Lussan, the débutante, achieved a decided success, notwithstanding the disadvantage of appearing in a very arduous part that has been identified with some exceptionally great artists. The new comer has the advantages of youth and good looks, bright vocalisation, and dramatic instincts. She produced a favourable impression throughout, and especially in the later scenes of the opera. The cast was otherwise a familiar one. Signor Mancinelli conducted the performance.

The season (which is being prolonged for a fortnight beyond the original intention) will close on July 21.

The second of Mr. Augustus Harris's operatic concerts at St. James's Hall consisted—as on the previous occasion—of an attractive programme, contributed to by most of the principal artists of the Royal Italian Opera.

The Richter Concerts closed the series at St. James's Hall with the ninth concert on July 9. The programme was occupied by Beethoven's "Missa Solemnis," that leviathan piece of Catholic service music which, like his ninth (choral) symphony, seems to have realised the highest possible degree of grandeur and sublimity. A more impressive climax could not have been provided for the series of excellent concerts just terminated.

Mr. De Lara's annual concert at the Opera Comique Theatre, on July 9, included the first public performance of a musical comedietta entitled "A Serenata in Grenada," an adaptation from the French, with music composed by Mrs. Lynedoch Moncrieff, who, and Mr. De Lara, were the vocalists in the piece: Madame Filipi and Miss A. Hughes having sustained the acting portions. The music is light and tuneful, and well suited for drawing-room performance. The concert comprised a miscellaneous vocal and instrumental selection, among which were some clever performances by Señor Manjon, a blind guitar player, and violin solos by Mdlle. Levallois. Mrs. Bernard Beere contributed a recitation, and the singing of Mr. De Lara's choir of ladies was a feature in the programme.

Mr. Charles Hallé's series of chamber-music concerts at St. James's Hall closed, on July 6, with the eighth performance, the programme having included his rendering of Beethoven's last solo pianoforte sonata (in C minor, Op. 111), besides some important concerted instrumental works.

Herr Ludwig (violinist) and Mr. W. E. Whitehouse (violoncellist) gave the fourth of their interesting chamber concerts at Prince's Hall on July 11, with a programme of strong interest in its instrumental details.

A performance of Otto Nicolai's opera "The Merry Wives of Windsor" ("Die lustigen Weiber von Windsor") was announced to be given at the Savoy Theatre on July 11, by pupils of the Royal College of Music, conducted by Professor Stanford.

Among recent miscellaneous concerts were those of Mdlle. Brönnum (a meritorious Scandinavian vocalist); Mr. C. Wade (the esteemed tenor); Professor S. D'Odiardi (of Paris), who, in association with Miss E. Harrison, and with vocal and instrumental assistance, announced the performance of compositions for the first time, including portions of an oratorio, entitled "Jesus"; Viscountess Folkestone's concert at St. James's Hall (including the co-operation of the ladies' string band and chorus) in aid of the fund for distressed Irish ladies; and the concerts of Mdlle. Bartkowska, Signor Villa, Mdlle. Isabelle Levallor, the Countess Delbremont, and Mr. Val Marriott.

THE LADIES' COLUMN.

Quite unique in its way is the annual fête at the Royal Botanical Gardens. Admission is only secured by the vouchers of fellows of the society; still, there were nearly two thousand guests there on this occasion. It is a rule that evening dress must be worn, and, as far as the male portion of the company went, the regulation was observed. But very few ladies went with either low dresses or uncovered heads, the damp, cold atmosphere forbidding such risks. There were, however, some pretty new-fashioned demi-toilette dresses. One successful gown had a Directoire polonaise of black velvet, with cut steel buttons, opening over a white silk vest and underskirt; sleeves to a little below the elbow, and finished with a pointed white silk cuff, with one button on it. Another, in pale grey silk, with silver embroidery down the front and round the bottom of the skirt, was effective in the subdued light of the illuminations. It is an opportunity for the display of handsome opera-mantles, and one or two were noticeably pretty. A short coat of silver brocade on a white ground was made gathered into a collar and cuffs of pale-yellow silk. A *chaudron* plush had the sleeves draped over with an open-work embroidery of jet, producing the effect now so fashionable of a mere drapery from the shoulder, while at the same time allowing the arm to be protected by the undersleeve of plush. A long coat of primrose and moss-green striped silk with trimmings of green moire was very striking.

But this fête is one of the few fashionable events when the interest of the people and the gowns is quite eclipsed by that of the occasion. The beautiful grounds of the Royal Botanic Society take on the appearance of fairyland. The broad walk lit by chains of large-globed gas-lamps, the trees and lawns dotted with variegated lights, the lake spanned between the islands and the shore with semicircular arches hung with lamps of many colours, which are reflected in the water so as to appear like a great far-stretching oval avenue of parti-coloured light, the tall water-tower and the castellated east gate completely covered with soft pink brilliance—all this makes up an unequalled *tout ensemble*. The great conservatory was entirely lit with the charming "fairy lights," a most effective decoration—some placed about amidst the growing tree ferns and flowers, and others arranged on chandeliers, clusters, and branches of them together, shedding a full yet soft and becoming light. One chandelier had fairy lights with cut-glass supports and delicately-tinted pink covers; another had pink saucers and shades of white thick glass cut into many facets; and yet another of the many forms of fairy light had a porcelain cover painted with sprays of flowers, which showed up with the light beneath just as a transparency does in a window. Nothing could be prettier than the conservatory so lit; each delicate little lamp emitting an unobtrusive flame, while the general effect was brilliant. Banks of orchids here and of roses there; tables fully dressed for dinner with flowers, fruit, wax candles, fairy lights holding menus or surrounded by blossoms, china figures bearing bowls for fruit, glass and silver of the most tasteful description; four military bands playing by turns, in diverse situations; and the immense throng of well-dressed people to give life and movement—the Royal Botanical fête is an attractive event.

The Liberal Unionists are to follow the example of all the other political parties, and engage the assistance of women in their campaign in the country. They have not, any more than the Gladstonian Liberals, learned the great lesson taught by the Primrose League, that it is the association of men and women in political work that produces an active, influential, and powerful organisation. The new Women's Liberal Unionist Association is "to be in communication and act in co-operation" with the Men's Unionist Associations, but is to be a subordinate affair altogether. "No important step will be taken by the women's committee without consultation with the officials of the older and more experienced organisations." This is not the way to make the new association successful. The Primrose League is a power precisely because there the women *really* have a full, or even a paramount, share in the management. Doubtless they receive counsel, and even take orders from the central organisation of the party; but men and women combine on equal terms in the organisation in the country, and the most active spirits, the true leaders of the Primrose League, are ladies. The separation of the women, the marking them off, as it were, as though they were not part of the regular army of the party, but only auxiliary forces, to be alternately patronised and snubbed as the council of war may find convenient—this is the "Liberal" blunder.

The meeting in the Dowager Lady Stanley of Alderley's drawing-room was a very full and influential one; Lady Edward Cavendish, the Countess of Strafford, Lady Stalbridge, Lady Lawrence, Lady Powerscourt, Lady Lymington, Lady Henley, Lady Grant-Duff, and a great many other women of social position being present, while the Countess of Portsmouth, Lady E. Biddulph, Lady Trelawny, and Mrs. H. Fawcett took part in the proceedings. The Duke of Argyll made the principal speech. He mentioned, as a proof that women in public life are not mere chatterers, that the late Lord Lawrence, when Chairman of the London School Board, said to his Grace that the distinguishing feature of the women members of that Board was that "they did not talk so much as the men." This is quite true; *in* public life, as tested by the London School Board, at all events, unrestrained garrulity is *not* a feminine weakness. Lady Portsmouth's speech was a very favourable specimen of female oratory, her voice being soft and musical, her manner refined and graceful, and her sentiments elevated and sincere in tone. Mrs. Fawcett spoke forcibly, as she always does; but her suggestion that this movement on the part of women was based entirely on high moral grounds and was composed of those outside the current of ordinary party politics, received a curious commentary when one looked at the list of the general committee, and saw that nearly all the ladies on it are simply the relatives of men active in the Unionist party—just as the Gladstonian Liberal women's associations are almost exclusively composed of the wives and daughters of strongly party men holding Home Rule views.

"The Rose—the woman of the flowers," as Leigh Hunt wrote, had her annual court at the Crystal Palace on July 7. The old favourites, including amongst crimson roses "A. K. Williams," "Duke of Edinburgh," "Marie Baumann," and "Ulrich Brunner"; and, amongst white roses, "Niphetos," "Mervoille de Lyon," and "La France," were there in profusion. The "York and Lancaster," a curious rose with white stripes on red petals, was plentifully shown; and, of course, "Maréchal Niel" was abundant. The silver medal for the best bloom in the show was taken by a splendid specimen of the notable pink rose "M. Etienne Leret," this particular blossom being as large as a tea-plate and perfectly formed; it was grown by Cranston, of Hereford. Amongst the "garden varieties" a cultivated wild rose, called "Hebe's Lip," was very pretty. "W. A. Richardson" is a perfectly orange rose; but, in getting the peculiar colour, the characteristic shape is lost, and the flower does not look a bit like a rose. "Ma Capucin" is another curiosity—quite a brick red. What a charming pursuit rose-growing must be!

FLORENCE FENWICK-MILLER.

SCULPTURE AT THE ROYAL ACADEMY EXHIBITION.

Two interesting groups of sculpture, in this year's Exhibition of the Royal Academy, are represented in our Illustrations. The one modelled by Mr. C. B. Lawes does not bear, in the Academy catalogue, a title of its precise subject, but the idea is taken from some lines in Byron's stirring narrative poem of "Mazeppa," describing the wild horse laden with the human victim of insolent cruelty:—

They bound me on, that menial throng,
Upon his back with many a thong;
Then loosed him, with a sudden lash—
Away! away! and on we dash;
Torrents less rapid and less rash;
* * * * *
They played me then a bitter prank,
When, with the wild horse for my guide,
They bound me to his foaming flank;
When launched, as on the lightning's flash,
They bade me to destruction dash;
The last of human sounds that rose,
As I was parted from my foes,
Was the wild shout of savage laughter
Which on the wind came roaring after.

But the sculptor, in borrowing this subject from the poet, has substituted a woman for the Polish hero of the original story, who is mentioned in Voltaire's "History of Charles XII., King

OPENING BUDS.—BY G. HALSE.
AT THE ROYAL ACADEMY EXHIBITION.

of Sweden." Mr. Lawes is eldest and only surviving son of Sir J. B. Lawes, Bart., F.R.S., of Rothamsted Park, St. Albans, the eminent agricultural chemist.

The very pleasing group called "Opening Buds," by Mr. George Halse, symbolical of motherhood and childhood, requires no explanation. It somewhat reminds us of the favourite motive of a design frequently adopted by Italian sculptors of the seventeenth century, to which they would give the title of "Una Carità," or "Una Pietà." Infancy and maternity, shown in these relations of protecting tenderness and dependent helplessness, can never fail to win the sympathy of mankind.

ART MAGAZINES.

The *Magazine of Art* for July contains a powerful attraction in a paper by Sir John E. Millais, R.A., entitled "Thoughts on our Art of To-day." Sir John Millais boldly contends that modern art, and, in particular, the art of England, is in no way behind that of mediæval Italy or ancient Greece, and asserts that the Elgin marbles, and the greatest treasures of the National Gallery, owe a great part of their charm to age and decay. Mr. Maurice Talmeyr continues his delightful reminiscences of a summer spent in the Forest of Fontainebleau, and Mr. W. H. Boot, of the Royal Society of British Artists, records the cruise of a painter's house-boat up the Thames. Mr. F. G. Kitton's article on "Charles Dickens and his Portraits" is continued from last month, and is illustrated by several most varying, though very interesting, representations of the great novelist. The frontispiece to this month's issue, an etching, by P. Le Rat, of Meissonier's picture "The Vedette," is particularly worthy of notice.

The frontispiece to the *Art Journal* for July is a capital etching, by Mr. Fred Slocombe, of Mr. Dendy Sadler's well-known picture, "Thursday." Two papers particularly worthy of note in this month's journal are Mr. Edwards Roberts's "American Wonderland," an account of the Yellowstone National Park, illustrated with drawings of the wonderful scenery of that wild country; and Mr. R. Phené Spiers' description of the palaces of the late King of Bavaria, also profusely illustrated. Besides the usual monthly issue, the *Art Journal* publishes a summer number on the Glasgow Exhibition; it contains drawings of most of the principal buildings and of many of the exhibits, reproductions of several pictures in the fine-art collection, and three splendid photogravures of the Exhibition and grounds.

HOLIDAY RAMBLES.

(By our Paris Correspondent.)

EN ROUTE FOR FRANKFORT.

Not one-third of the seats were occupied in the Paris-Frankfort express by which I left Paris a few nights ago. "It is on account of the new passport regulations," the guard explained in reply to my inquiries. "The traffic seems to diminish every day, and our company must be losing a heap of money. All the tourists now go by way of Delle and Bâle." On the other hand, during the month of June, since the day when the new Alsace-Lorraine frontier regulations came into force, the German Embassy in Paris has taken in no less than 40,000f. in fees for passport visas.

This fact I communicated to the purse-proud and polyglot German gentleman who was my neighbour in the sleeping-car, but, being also a patriot, he found this good round sum a source of joy. "It might," he thought, "ultimately help the new Kaiser to dimeenish the taxes." My German neighbour was too patriotic, and as I did not see why foreigners should be called upon to pay the taxes of the Vaterland, we agreed to disagree and try to sleep. So the beds were made up and we turned in. "Tackety-tackety, tack, tack, tackety!" went the wheels clattering along the rails; "Tack, tack, tackety, b-r-r-r!" Then comes a fearful jolt, and the car sways to and fro. If I could only get to sleep! What is the matter with this pillow? Is it too high or too low, too hard or too soft? The stupidest and most incongruous thoughts crowd into my head, driving away sleep. The wheels grind and grate, and then start again with their "tack, tack, tackety" sound that adapts it equally to imaginary drum-taps or to the movement of the popular air from the last operetta. Patience! I shall get used to it in another half-hour.

Horror of horrors! My German neighbour is beginning to snore!—a fine contralto snore! Is it possible?—he is snoring a tune! "Die Wacht am Rhein!" This is, indeed, a patriot!

At four in the morning we reached the frontier of Alsace-Lorraine, and under the watchful eyes of long-legged, blonde soldiers and gorgeously arrayed officials, we passed, we and our baggage, into the Zoll Revisions-Room. But what had I to fear with my British passport imperiously "requesting" and even "requiring in the name of her Majesty all those whom it may concern" to allow me "to pass freely, without let or hindrance"? This is the way to talk to people. There is no ambiguity about a Britisher's passport, and no words lost over useless suavity or formulæ of politeness. "Here! you big German official, allow me to pass freely, without let or hindrance! Her Majesty requests and requires you to do so! Be quick and let me go and get my coffee, and mind that the coffee is hot, and accompanied by the *Times* and the *Daily Telegraph!*" The big German officials, I am bound to say, were very prompt and polite, and their words contrasted strongly with those of my passport.

After this little incident our journey was resumed, and my German neighbour soon fell asleep, and snored "Die Wacht am Rhein" until we came within sight of the Niederwald Denkmal opposite Mayence, when he woke up with singular àpropos and a new attack of "patriotismus," which lasted until we steamed into Frankfort station, where he saluted me quite "famillionairly," and jumped into a fine two-horse barouche adorned with his coat-of-arms, and with the person of a blonde maiden whom he pointed out to me as his daughter—a sweet creature of archaic outlines, like one of Lucas Cranach's models dressed in modern style by a pupil of Worth. Alas! why did I not flatter this patriotic German? Why did I not agree with him and develop his propositions for him with cumulative arguments? I might, perhaps, have sketched out a romance with the Worth-Cranach maiden, and so steered clear of ennui in sleepy Frankfort.

But why come to Frankfort? To answer this question fully would require a historical dissertation on misunderstood genius. I have come to Frankfort to see half a dozen pictures in the Städel'sche Kunst-Institut; not the flat-tinted abominations of Overbeck, Schnorr, Cornelius, and the German school of the nineteenth century, which Baedeker considers to be so interesting, but the early German and Flemish masters, two Velasquez, the portrait of Lucrezia Tornabuoni by Sandro Botticelli, a Madonna by Carpaccio, and an anonymous work of the Florentine school of the fifteenth century. The sight of this last picture alone has repaid me for my journey, and impressed upon my mind a souvenir which I hope will be as indelible as possible. On a very sombre green background is painted a half-length figure of a girl just budding into womanhood, but still retaining something of that adolescent leanness which Donatello and the great Florentines loved to render. The body is loosely draped in white, over which is thrown an olive green mantle. On the brow is an azure band of transparent gauze; in the centre of the brow a jewel; while on the head is wound, turban-like, with crinkled folds, a white scarf which falls over the back of the neck and round over the shoulders; the turban is crowned with a wreath of box-tree sprigs, and from beneath it the golden hair hangs down over the shoulders in innumerable finely-waved wire curls, each distinct from the other, resembling literally golden rain, through which the light plays—a miracle of the coiffeur's art and also of the painter's—not, it is true, of the painter's art as Rembrandt understood it, but as it was practised by the primitive Florentines, who were so keenly sensitive to elegance and minute splendour of raiment and ornament. This enigmatic blonde maiden, with her dark eyes, her regular, tranquil features, her dazzling shower of golden ringlets so preciously displayed, her exquisitely delicate hand, whose slender-pointed fingers hold a bouquet of daisies and pansies—a dainty bouquet of five blossoms, and no more—is so fascinating, and, as the French would say, there is something so disturbing, so *troublant* in her slender and almost meagre form, that when once you have really seen and felt the charm of this picture you have stored up a souvenir for life, to be guarded jealously in the most select corner of your memory.

But I have, I perceive, wandered from the subject, and forgotten even to indicate the historical dissertation which would explain my journey to Frankfort. In two words here it is: If Europe had not misunderstood Napoleon I. we should have had most of the masterpieces of Western art commodiously displayed in the Louvre museum in the very centre of civilisation, and so we should not need to travel over the face of the earth in order to visit unpronounceable "städel'sche kunst-instituts" in out-of-the-way towns in the land of "patriotismus" and "leberwurst."

T. C.

The distribution of prizes, medals, and certificates to the students of the medical school in connection with St. Thomas's Hospital took place on July 5, Professor Stokes, M.P., in the chair. The prizes were distributed, and among those who had specially distinguished themselves may be mentioned Mr. J. E. Harris, who won the Entrance Science Scholarship (value 125 guineas) and certificate of honour; Mr. C. H. James, who received the Solly medal and prize; Mr. F. C. Abbott, Mr. W. B. Winston, and Mr. H. G. Turney.

SAVING FOR THE WEDDING.

FOR FAITH AND FREEDOM.

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER II.

THUS did my father, by his own act and deed, strip himself of all his worldly wealth. Yet, having nothing, he ceased not to put his trust in the Lord, and continued to sit among his books, never asking whence came the food provided for him. I think, indeed, so wrapped was he in thought, that he knew not. As for procuring the daily food, my mother it was who found out the way.

Those who live in other parts of this kingdom do not know what a busy and populous county is that of Somerset. Apart from the shipping and the great trade with Ireland, Spain, and the West Indies carried on from the Port of Bristol, we have our great manufactures of cloth, in which we are surpassed by no country in the world. The town of Taunton alone can boast of eleven hundred looms always at work making Sagathies and Des Roys; there are many looms at Bristol, where they make for the most part Druggets and Cantaloons; and there are great numbers at that rich and populous town of Frome Selwood, where they manufacture the Spanish Medleys. Besides the clothworkers, we have, in addition, our knitted-stocking trade, which is carried on mostly at Glastonbury and Shepton Mallet. Not only does this flourishing trade make the masters rich and prosperous (it is not uncommon to find a master with his twenty, say, and his forty—thousand pounds), but it fills all the country with work, so that the towns are frequent, populous, and full of everything that men can want; and the very villages are not like those which may be seen in other parts, poor and squalid, but well built and comfortable.

Every cottage has its spinning-wheel. The mother, when she is not doing the work of the house, sits at the wheel; the girls, when they have nothing else to do, are made to knit stockings. Every week the master-clothier sends round his men among the villages, their pack-horses laden with wool; every week they return, their packs laden with yarn, ready for the loom.

There is no part of England where the people are more prosperous and more contented. Nowhere are there more towns, and all thriving: nowhere are the villages better built: nor can one find anywhere else more beautiful churches. Because the people make good wages they are independent in their manners: they have learned things supposed to be above the station of the humble; most of them in the towns, and many in the villages, are able to read. This enables them to search the Scriptures, and examine into doctrine by the light of their own reason, guided by grace. And to me, the daughter of a Nonconforming preacher, it does not seem wonderful that so many of them should have become stiff and sturdy Nonconformists. This was seen in the year 1685, and, again, three years later, when a greater than Monmouth landed on the western shores.

My mother, then, seeing no hope that her husband would earn, by any work of his own, the daily bread of the household, bravely followed the example of the women in the village. That is to say, she set up her spinning-wheel, and spent all the time that she could spare spinning the wool into yarn; while she taught her little boy first and, afterwards, her daughter—as soon as I was old enough—to manage the needles, to knit stockings. What trade, indeed, could her husband follow save one—and that, by law, prohibited? He could not dig; he could not make anything; he knew not how to buy or sell; he could only study, write, and preach. Therefore, while he sat among his books in one room, she sat over her wheel in the other, working for the master-clothiers of Frome Selwood. It still makes my heart to swell with pity and with love when I think upon my mother, thus spending herself and being spent, working all day, huckstering with the rough pack-horsemen more accustomed to exchange rude jests with the rustics than to talk with gentlewomen. And this she continued to do year after year, cheerful and contented, so that her husband should never feel the pinch of poverty. Love makes us willing slaves.

My father, happily, was not a man whose mind was troubled about food. He paid no heed at all to what he ate, provided that it was sufficient for his needs: he would sup his broth of pork and turnips and bread, after thanks rendered, as if it were the finest dish in the world; and a piece of cold bacon with a hot cabbage would be a feast for him. The cider which he drank was brewed by my mother from her own apples; to him it was as good as if it had been Sherris or Rhenish. I say that he did not even know how his food was provided for him; his mind was at all times occupied with subjects so lofty that he knew not what was done under his very eyes. The hand of God, he said, doth still support His faithful. Doubtless we cannot look back upon those years without owning that we were so supported. But my mother was the Instrument; nay, my father sometimes even compared himself with satisfaction unto the Prophet Elijah, whom the ravens fed in the Brook Cherith, bringing him flesh and bread in the morning and flesh and bread in the evening. I suppose my father thought that his bacon and beans came to him in the same manner.

Yet we should sometimes have fared but poorly had it not been for the charity of our friends. Many a fat capon, green goose, side of bacon, and young grunter came to us from the Manor House, with tobacco, which my father loved, and wine to comfort his soul; yea, and clothes for us all, else had we gone barefoot and in rags. In this way was many an ejected Elijah at that time nourished and supported. Fresh meat we should never have tasted, any more than the humblest around us, had it not been for our good friends at the Manor House. Those who live in towns cannot understand how frugal and yet sufficient may be the fare of those who live in the country and have gardens and orchards. Cider was our drink, which we made ourselves; we had some sweet apple-trees, which gave us a stock of russets and pippins for winter use; we had bees (but we sold most of our honey at Sherborne Market); our garden grew sallets and onions, beans and the like; skim milk we could have from the Manor House for the fetching; for breakfast we had bread and milk, for dinner bread and soft cheese, with a lettuce or an apple; and bread or bread and butter for supper. For my father there was always kept a piece of bacon, or fat pork.

Our house was one of the cottages in the village: it is a stone house (often I sit down to look at it, and to remember those days of humility) with a thick thatch. It had two rooms below and two garrets above. One room was made into a study or library for my father, where also he slept upon a pallet. The other was kitchen, spinning-room, parlour, all in one. The door opened upon the garden, and the floor was of stone, so that it was cold. But when Barnaby began to find the use of his hands, he procured some boards, which he laid upon the stones, and so we had a wooden floor; and in winter across the door we hung a blanket or rug to keep off the wind.

The walls were whitewashed, and over all my mother had written texts of Scripture with charcoal, so that godly admonition was ever present to our eyes and minds. She also embroidered short texts upon our garments, and I have still the cradle in which I was laid, carved (but I do not know by whose hand) with a verse from the Word of God. My father used himself, and would have us employ, the words of the Bible even for the smaller occasions or daily use; nor would he allow that anything was lawful unless it was sanctioned by the Bible, holding that in the Word was everything necessary or lawful. Did Barnaby go shooting with Sir Christopher and bring home a rabbit?—Lo! David bade the children of Israel teach the use of the bow. Did my mother instruct and amuse me with riddles?—She had the warrant of Scripture for it in the example of Samson. Did she sing Psalms and spiritual songs to while away the time and make her work less irksome and please her little daughter?—In the congregation of Nehemiah there were two hundred forty-and-five singing men and singing women.

My father read and expounded the Bible to us twice a day—morning and evening. Besides the Bible we had few books which we could read. As for my mother, poor soul, she had no time to read. And as for me, when I grew older I borrowed books from the Manor House or Mr. Boscorel. And there were "Old Mr. Dod's Sayings," and "Plain Directions by Joseph Large" always on the shelf beside the Bible.

Now, while my father worked in his study and my brother Barnaby either sat over his lesson-book, his hands rammed into his hair, as if determined to lose nothing, not the least scrap of his portion (yet knowing full well that on the morrow there would be not a word left in his poor unlucky noddle, and once more the whip), my mother would sit at her wheel earning the daily bread. And, when I was little, she would tell me, speaking very softly, so as not to disturb the wrestling of her husband with a knotty argument, all the things which you have heard—how my father chose rather poverty than to worship at the altar of Baal; and how two thousand pious ministers, like-minded with himself, left their pulpits and went out into the cold for conscience' sake. So that I was easily led to think that there were no Christian martyrs and confessors more excellent and praiseworthy than these ejected ministers (which still I believe). Then would she tell me further of how they fared, and how the common people do still reverence them. There was the history of John Norman, of Bridgwater; Joseph Chadwick, of Wrenford; Felix Howe, of West Torrington; George Minton, and many others. She also instructed me very early in the history of the Protestant uprising over the best half of Europe, and showed me how, against fearful odds, and after burnings and tortures unspeakable, the good people of Germany, the Netherlands, and Great Britain won their freedom from the Pope, so that my heart glowed within me to think of the great goodness and mercy which caused me to be born in a Protestant country. And she instructed me, later, in the wickedness of King Charles, whom they now call a martyr, and in the plots of that King, and Laud his Archbishop, and how King and Archbishop were both overthrown and perished when the people arose and would bear no more. In fine, my mother made me, from the beginning, a Puritan. As I remember my mother always, she was pale of cheek and thin, her voice was gentle; yet with her very gentleness she would make the blood to run quick in the veins, and the heart to beat.

How have I seen the boys spring to their feet when she has talked with them of the great civil war and the Revolution! But always soft and gentle; her blue eyes never flashing; no wrath in her heart; but the truth, which often causeth righteous anger, always upon her tongue.

One day, I remember, when I was a little girl playing in the garden, Mr. Boscorel walked down the village in his great silken gown, which seemed always new, his lace ruffs, and his white bands, looking like a Bishop at least, and walking delicately, holding up his gown to keep it from the dust and mud. When he spoke it was in a soft voice and a mincing speech, not like our plain Somersetshire way. He stopped at our gate, and looked down the garden. It was a summer day, the doors and windows of the cottage were open; at our window sat my father bending over his books, in his rusty gown and black cap, thin and lank; at the door sat my mother at her wheel.

"Child," said the Rector, "take heed thou never forget in thine age the thing which thou seest daily in thy childhood."

I knew not what he meant.

"Read and mark," he said; "yea, little Alice, learn by heart what the Wise Man hath said of the good woman: 'She layeth her hand to the spindle . . . she maketh fine linen and selleth it . . . she eateth not the bread of idleness. . . . Let her works praise her in the gates.'"

CHAPTER III.

THE BOYS.

The family of Challis, of Bradford Orcas, is well known; here there has always been a Challis from time immemorial. They are said to have been on the land before the time of the Conqueror. But because they have never been a great family, like the Mohuns of Dunster, but only modest gentle-folk with some four or five hundred pounds a year, they have not suffered, like those great houses, from the civil wars, which, when they raged in the land, brought in their train so many attainders, sequestrations, beheadings, imprisonments, and fines. Whether the Barons fought, or whether Cavaliers and Roundheads, the Challises remained at Bradford Orcas.

Since the land is theirs and the village, it is reasonable that they should have done everything that has been done for the place. One of them built the church, but I know not when; another built the tower; another gave the peal of bells. He who reigned here in the time of Henry VII. built the Manor House; another built the mill; the monuments in the church are all put up to the memory of Challises dead and gone; there is one, a very stately tomb, which figures, to the life, Sir William Challis (who died in the time of Queen Elizabeth), carved in marble, and coloured, kneeling at a desk; opposite to him is his second wife, Grace, also kneeling. Behind the husband are three boys, on their knees, and behind the wife are three girls. Apart from this group is the effigy of Filipa, Sir Christopher's first wife, with four daughters kneeling behind her. I was always sorry for Filipa, thus separated and cut off from the society of her husband. There are brasses on the floor with figures of other Challises, and tablets in the wall, and the Challis' coat-of-arms is everywhere, cut in lozenges, and painted in wood, and shining in the east window. It seemed to me, in my young days, that it was the grandest thing in the world to be a Challis.

In this family there was a laudable practice with the younger sons, that they stayed not at home, as is too often their custom, leading indolent lives without ambition or fortune, but they sallied forth and sought fortune in trade, or in the Law, or in the Church, or in foreign service—wherever fortune is to be honourably won—so that, though I daresay some proved dead and dry branches, others have put forth shoots and fruit abundantly, forming new and vigorous trees sprung from the ancient root. Thus, some have become judges: some bishops: and some great merchants: some have crossed the ocean and are now settled in the Plantations: some have attained rank and estates in the service of the Low Countries. Thus, Sir Christopher's brother Humphrey went to London and became a Levant merchant and adventurer, rising to great honour and becoming alderman. I doubt not that he would have been made Lord Mayor but for his untimely death. And as for his wealth, which was rumoured to be so great—but you shall hear of this in due time.

That goodly following of his household which you have seen enter the church on Farewell Sunday, was shortly afterwards broken into by death. There fell upon the village (I think it was in the year 1665) the scourge of a putrid fever, of which there died, besides numbers of the village folk, Madam herself—the honoured wife of Sir Christopher—Humphrey his son, and Madam Patience Boscorel, his daughter. There were left to Sir Christopher, therefore, only his daughter-in-law and his grandsons Robin and Benjamin. And in that year his household was increased by the arrival of his grand-nephew Humphrey. This child was the grandson of Sir Christopher's brother, the Turkey or Levant merchant of whom I have spoken. He was rich and prosperous: his ships sailed out every year laden with I know not what, and returned with figs, dates, spices, guns, silks, and all kinds of precious commodities from Eastern parts. It is, I have been told, a profitable trade, but subject to terrible dangers from Moorish pirates, who must be bravely fought and beaten off, otherwise ship and cargo will be taken, and captain and crew driven into slavery. Mr. Challis dwelt in Thames-street, close to Tower-hill. It is said that he lived here in great splendour, as befits a rich merchant who is also an Alderman.

Now, in the year 1665, as is very well known, a great plague broke out in the city. There were living in the house of Thames-street the Alderman, his wife, his son, his son's wife, a daughter, and his grandson, little Humphrey. On the first outbreak of the pestilence they took counsel together and resolved that the child should be first sent away to be out of danger, and that they would follow if the plague spread.

This was done, and a sober man, one of their porters or warehousemen, carried the child with his nurse all the way from London to Bradford Orcas. Alas! Before the boy reached his great-uncle, the house in Thames-street was attacked by the plague, and everyone therein perished. Thus was poor little Humphrey deprived of his parents. I know not who were his guardians or trustees, or what steps, if any, were taken to inquire into the Alderman's estate; but when, next year, the Great Fire of London destroyed the house in Thames-street, with so many others, all the estate, whatever it had been, vanished, and could no more be traced. There must have been large moneys owing. It is certain that he had ventures in ships. It has been supposed that he owned many houses in the City, but they were destroyed and their very sites forgotten, and no deeds or papers, or any proof of ownership, were left. Moreover, there was nobody charged with inquiring into this orphan's affairs. Therefore, in the general confusion nothing at all was saved out of what had been a good property, and the child Humphrey was left without a guinea in the world. Thus unstable is Fortune.

I know not whether Humphrey received a fall in his infancy, or whether he was born with his deformity, but the poor lad grew up with a crooked figure, one shoulder being higher than the other, and his legs short, so that he looked as if his arms were too long for him. We, who saw him thus every day, paid no heed, nor did he suffer from any of those cruel gibes and taunts which are often passed upon lads thus afflicted. As he was by nature or misfortune debarred from the rough sports which pleased his cousins, the boy gave himself up to reading and study, and to music. His manner of speech was soft and gentle; his voice was always sweet, and afterwards became strong as well, so that I have never heard a better singer. His face—ah! my brother Humphrey, what a lovely face was thine! All goodness, surely was stamped upon that face. Never, never did an unworthy thought defile that candid soul, or a bad action cast a cloud upon that brow!

As for Robin, Sir Christopher's grandson, I think he was always what he is still, namely, one of a joyous heart and a cheerful countenance. As a boy he laughed continually, would sing more willingly than read, would play rather than work, loved to course and shoot and ride better than to learn Latin grammar, and would readily off coat and fight with any who invited him. Yet not a fool or a clown, but always a gentleman in manners, and one who read such things as behove a country gentleman, and scrupulous as to the point of honour. Such as he is still such he was always. And of a comely presence, with a rosy cheek and bright eyes, and the strength of a young David, as well as his ruddy and goodly countenance. The name of David, I am told, means "darling." Therefore, ought my Robin to have been named David. There were two other boys—Barnaby, my brother, who was six years older than myself, and, therefore, always to me a great boy; and Benjamin, the son of the Rev. Mr. Boscorel—the Rector. Barnaby grew up so broad and strong that at twelve he would have passed easily for seventeen; his square shoulders, deep chest, and big limbs made him like a bull for strength. Yet he was shorter than most, and looked shorter than he was by reason of his great breadth. He was always exercising his strength; he would toss the hay with the haymakers, and carry the corn for the reapers, and thresh with the flail, and guide the plough. He loved to climb great trees, and to fell them with an axe. Everybody in the village admired his wonderful strength. Unfortunately, he loved not books, and could never learn anything, so that when, by dint of great application and many repetitions, he had learned a little piece of a Latin verb, he straightway forgot it in the night, and so, next day, there was another flogging. But that he heeded little. He was five years older than Robin, and taught him all his woodcraft—where to find pheasants' eggs, how to catch squirrels, how to trap weasels and stoats, how to hunt the otter, how to make a goldfinch whistle and a raven talk—never was there such a master of that wisdom which doth not advance a man in the world.

Now, before Barnaby's birth, his mother, after the manner of Hannah, gave him solemnly unto the Lord all the days of his life, and after his birth, her husband, after the manner of Elkanah, said "Do what seemeth thee good; only the Lord establish his word." He was, therefore, to become a minister, like his father before him. Alas! poor Barnaby could not even learn the Latin verbs, and his heart, it was found, as he grew older, was wholly set upon the things of this world. Wherefore, my mother prayed for him daily while she sat at her work, that his heart might be turned, and that he might get understanding.

As for the fourth of the boys, Benjamin Boscorel, he was about two years younger than Barnaby, a boy who, for want of a mother, and because his father was careless of him, grew up rough and coarse in manners and in speech, and boastful of his powers. To hear Ben talk you would think that all the

Every morning Sir Christopher sat in his Justice's chair. . . . Sometimes gipsies would be brought before him charged with stealing poultry.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

boys of his school (the grammar school of Sherborne) were heroes: that the Latin taught was of a quality superior to that which Robin and Humphrey learnt of my father; and that when he himself went out into the world the superiority of his parts would be immediately perceived and acknowledged.

Those who watch boys at play together—girls more early learn to govern themselves and to conceal their thoughts, if not their tempers—may, after a manner, predict the future character of every one. There is the man who wants all for himself, and still wants more, and will take all and yield nothing, save on compulsion, and cares not a straw about his neighbour—such was Benjamin, as a boy. There is the man who gives all generously—such was Robin. There is, again, the man whose mind is raised above the petty cares of the multitude, and dwells apart, occupied with great thoughts—such was Humphrey. Lastly, there is the man who can act but cannot think; who is born to be led; who is full of courage and of strength, and leaves all to his commander, captain, or master—such was Barnaby.

As I think of these lads it seems as if the kind of man into which each would grow must have been stamped upon their foreheads. Perhaps to the elders this prognostic was easy to read.

They suffered me to play with them or to watch them at play. When the boys went off to the woods I went with them. I watched them set their traps—I ran when they ran. And then, as now, I loved Robin and Humphrey. But I could not endure—no; not even the touch of him—Benjamin, with the loud laugh and the braggart voice, who laughed at me because I was a girl and could not fight. The time came when he did not laugh at me because I was a girl. And oh! to think—only to think—of the time that came after that!

CHAPTER IV.

SIR CHRISTOPHER.

At the mere remembrance of Sir Christopher, I am fain to lay down my pen and to weep, as for one whose goodness was unsurpassed, and whose end was undeserved. Good works, I know, are rags, and men cannot deserve the mercy of God by any merits of their own; but a good man—a man whose heart is full of justice, mercy, virtue, and truth—is so rare a creature, that when there is found such a one his salvation seems assured. Is it not wonderful that there are among us so many good Christians, but so few good men? I am, indeed, in private duty bound to acknowledge Sir Christopher's goodness to me and to mine. He was, as I have said, the mainstay of our household. Had we depended wholly on my mother's work, we should sometimes have fared miserably indeed. Nay, he did more. Though a Justice of the Peace, he invited my father every Sunday evening to the Manor House for spiritual conversation, not only for his own profit, but knowing that to expound was to my father the breath of his nostrils, so that if he could not expound he must die. In person, Sir Christopher was tall; after the fashion (which I love) of the days when he was a young man he wore his own hair, which, being now white and long, became his venerable face much better than any wig—white, black, or brown. He was generally dressed, as became his station of simple country gentleman, in a plush coat with silver buttons, and for the most part he wore boots, being of an active habit and always walking about his fields or in his gardens among his flowers and his fruit-trees. He was so good a sportsman that with his rod, his gun, and his hawk he provided his table with everything except beef, mutton, and pork. In religion he inclined to Independency, being above all things an upholder of private judgment; in politics, he denied the Divine right, and openly said that a Challis might be a King as well as a Stuart; he abhorred the Pope and all his works; and though he was now for a Monarchy, he would have the King's own power limited by the Parliament. In his manners he was grave and dignified; not austere, but one who loved a cheerful companion. He rode once a week, on market day, to Sherborne, where he dined with his brother Justices, hearing and discussing the news, though news comes but slowly from London to these parts—it was fourteen days after the landing of the King in the year 1660 that the bells of Sherborne Minster rang for that event. Sometimes a copy of the *London Gazette* came down by the Exeter coach, or some of the company had lately passed a night where the coach stopped, and conversed with travellers from London and heard the news. For the rest of the week, his Honour was at home. For the most part he sat in the hall. In the middle stands the great oak table where all the household sit at meals together. There was little difference between the dishes served above and those below the salt, save that those above had each a glass of strong ale or of wine after dinner and supper. One side of the hall was hung with arras worked with representations of herbs, beasts, and birds. On the other side was the great chimney, where in the winter a noble fire was kept up all day long. On either side of it hung fox skins, otter skins, polecat skins, with fishing-rods, stags' heads, horns, and other trophies of the chase. At the end was a screen covered with old coats of mail, helmets, bucklers, lances, pikes, pistols, guns with match-locks, and a trophy of swords arranged in form of a star. Below the cornice hung a row of leathern jerkins, black and dusty, which had formerly been worn in place of armour by the common sort. In the oriel window was a sloping desk, having on one side the Bible and on the other Foxe's "Book of Martyrs." Below was a shelf with other books, such as Vincent Wing's Almanack, King Charles's "Golden Rules," "Glanville on Apparitions," the "Complete Justice," and the "Book of Farriery." There was also in the hall a great side-board, covered with Turkey work, pewter, brass, and fine linen. In the cupboard below was his Honour's plate, reported to be worth a great deal of money.

Sir Christopher sat in a high chair, curiously carved, with arms and a triangular seat. It had belonged to the family for many generations. Within reach of the chair was the tobacco-jar, his pipe, and his favourite book—namely, "The Gentleman's Academie: or the Book of St. Albans, being a Work on Hunting, Hawking, and Armorie," by Dame Juliana Berners, who wrote it two hundred and fifty years ago. Sir Christopher loved especially to read aloud that chapter in which it is proved that the distinction between gentleman and churl began soon after the Creation, when Cain proved himself a churl, and Seth was created Gentleman and Esquire or Armiger by Adam, his father. This distinction was renewed after the Flood by Noah himself, a gentleman by lineal descent from Seth. In the case of his sons, Ham was the churl, and the other two were the gentlemen. I have sometimes thought that, according to this author, all of us who are descended from Shem or Japhet should be gentlemen, in which case there would be no churl in Great Britain at all. But certainly there are many; so that, to my poor thinking, Dame Juliana Berners must be wrong.

There is, in addition to the great hall, the best parlour. But as this was never wanted, the door of it was never opened except at cleaning time. Then, to be sure, one saw a room furnished very grand, with chairs in Turkey work, and hung round with family portraits. The men were clad in armour, as if they had all been soldiers or commanders; the women were mostly dressed as shepherdesses, with crooks in their hands and flowing robes. In the garden was a long bowling green, where in summer Sir Christopher took great pleasure in that ancient game: below the garden was a broad fishpond, made by damming the stream: above and below the pond there were trout, and in the pond were carp and jack. A part of the garden was laid out for flowers, a part for the still-room, and a part for fruit. I have never seen anywhere a better ordered garden for the still-room. Everything grew therein that the housewife wants: sweet cicely, rosemary, burnet, sweet basil, chives, dill, clary, angelica, lipwort, tarragon, thyme, and mint; there were, as Lord Bacon, in his "Essay on Gardens," would have, "whole alleys of them to have the pleasure when you walk or tread." There were thick hedges to keep off the east wind in spring, so that one would enjoy the sun when that cold wind was blowing. But in Somerset that wind hath not the bitterness that it possesses along the eastern shores of the land.

Every morning Sir Christopher sat in his Justice's chair under the helmets and the coats of armour. Sometimes gipsies would be brought before him, charged with stealing poultry or poisoning pigs; or a rogue and vagabond would stray into the parish; these gentry were very speedily whipped out of it. As for our own people, there is nowhere a more quiet and orderly village; quarrels there are with the clothiers' men, who will still try to beat down the value of the women's work, and bickerings sometimes between the women themselves. Sir Christopher was judge for all. Truly he was a patriarch like unto Abraham, and a father to his people. Never was sick man suffered to want for medicines and succour; never was aged man suffered to lack food and fire; did any youth show leanings towards sloth, profligacy, or drunkenness, he was straightway admonished, and that right soundly, so that his back and shoulders would remind him for many days of his sin. By evildoers Sir Christopher was feared as much as he was beloved by all good men and true. This also is proper to one in high station and authority.

In the evening he amused himself in playing backgammon with the boys, or chess with his son-in-law, Mr. Boscorel: but the latter with less pleasure, because he was generally defeated in the game. He greatly delighted in the conversation and society of that learned and ingenious gentleman, though on matters of religion and of politics his son-in-law belonged to the opposite way of thinking.

I do not know why Mr. Boscorel took upon himself holy orders. God forbid that I should speak ill of any in authority, and especially of one who was kind and charitable to all, and refused to become a persecutor of those who desired freedom of conscience and of speech. But if the chief duty of a minister of the gospel is to preach, then was Mr. Boscorel little better than a dog who cannot bark. He did not preach; that is to say, he could not, like my father, mount the pulpit, Bible in hand, and teach, admonish, argue, and convince without a written word. He read every Sunday morning a brief discourse, which might, perhaps, have instructed Oxford scholars, but would not be understood by the common people. As for arguments on religion, spiritual conversation, or personal experience of grace, he would never suffer such talk in his presence, because it argued private judgment and caused, he said, the growth of spiritual pride. And of those hot Gospellers whose zeal brings them to prison and the pillory, he spoke with contempt. His conversation, I must acknowledge, was full of delight and instruction, if the things which one learned of him were not vanities. He had travelled in Italy and in France, and he loved to talk of poetry, architecture, statuary, medals and coins, antiquities and so forth—things harmless and, perhaps, laudable in themselves, but for a preacher of the gospel who ought to think of nothing but his sacred calling, they are surely superfluities. Or he would talk of the manners and customs of strange countries, and especially of the Pope. This person, whom I have been taught to look upon as from the very nature of his pretensions the most wicked of living men, Mr. Boscorel regarded with as much toleration as he bestowed upon an Independent. Then he would tell us of London and the manners of the great; of the King, whom he had seen, and the Court, seeming to wink at things which one ought to hold in abhorrence. He even told us of the playhouse, which, according to my father, is the most subtle engine ever invented by the Devil for the destruction of souls. Yet Mr. Boscorel sighed to think that he could no longer visit that place of amusement. He loved also music, and played movingly upon the violoncello; and he could make pictures with pen, pencil, or brush. I have some of his paintings still, especially a picture which he drew of Humphrey playing the fiddle, his great eyes looking upwards as if the music was drawing his soul to heaven. I know not why he painted a halo about his face. Mr. Boscorel also loved poetry, and quoted Shakspeare and Ben Jonson more readily than the Word of God.

In person he was of a goodly countenance, having clear-cut features; a straight nose, rather long; soft eyes, and a gentle voice. He was dainty in his apparel, loving fine clean linen and laced neckerchiefs, but was not a gross feeder; he drank but little wine, but would discourse upon fine wines, such as the Tokay of Hungary, Commandery wine from Cyprus, and the like, and he seemed better pleased to watch the colour of the wine in the glass, and to breathe its perfume, than to drink it. Above all things he hated coarse speech and rude manners. He spoke of men as if he stood on an eminence watching them, and always with pity, as if he belonged to a nobler creation. How could such a man have such a son?

WILLS AND BEQUESTS.

The Irish Probate, granted at Dublin, of the will (dated July 28, 1879), with two codicils (dated Dec. 5, 1879, and June 23, 1881), of the Right Hon. Mary Dowager Baroness Kilmaine, late of No. 10, Melbury-road, South Kensington, who died on April 22 last, granted to the Hon. Arthur Henry Browne, the son, the sole executor, was resealed in London on June 27, the value of the personal estate in England and Ireland being taken under a nominal sum. The testatrix makes various dispositions of policies of insurance and moneys in settlement in favour of members of her family; and there are numerous specific bequests. The residue of her property she gives to her said son.

The will (dated June 12, 1886) of Mr. William Henderson, late of No. 12, Porchester-square, Bayswater, who died on May 12 last, was proved on June 22 by John Paton Watson, Mrs. Mary Mackenzie, the daughter, and William Henderson Mackenzie, the grandson, three of the executors, the value of the personal estate amounting to upwards of £454,000. The testator bequeaths certain stocks, shares, and securities, of the nominal value of £60,985, upon trust, for his said daughter, Mrs. Mackenzie, for life, and then for her children; certain stocks, shares, and securities, of the nominal value of £19,800, to his grandson Samuel Kenneth Mackenzie; certain stocks, shares, and securities, of the nominal value of £20,000, to his grandson, Douglas Mackenzie; certain stocks, shares, and securities, of the nominal value of £30,000, to his three granddaughters, Alice Mary Mackenzie, Mabel Paten Mackenzie, and Christiana Jessie Mackenzie, in equal shares; £1000 each to his niece, Mrs. Helen Davidson Wallace, and his nephew, Robert Mackenzie; and £500 to his executor, Mr. Watson. All his real estate and the residue of his personal estate he gives to his said grandson William Henderson Mackenzie.

The will (dated March 28, 1878), with a codicil (dated Jan. 6, 1886), of the Rev. Charles Fox Chawner, Rector of Bletchingley, Surrey, who died on May 25 last, was proved on July 3 by Mrs. Frances Sarah Chawner, the widow, Charles Robert Rivington, and the Rev. John Hampton, the executors, the value of the personal estate amounting to upwards of £56,000. The testator bequeaths his plate to his wife, for life or widowhood, and then to his son, Lawrence Chaloner; his jewellery to his wife, for life or widowhood, and then to his daughters, Ethel Frances and Winifred Marion; his furniture and the rest of his effects and £200 to his wife; £300 to his granddaughter, Marion Charlotte Brooke Taylor; and £100 each to his executors, Mr. Rivington and Mr. Hampton. He appoints to his said son certain reversionary property in settlement. The residue of his real and personal estate he leaves, as to the income of four equal thirteenth parts thereof, to his wife, for life or widowhood, and, subject thereto, for his children.

The will (dated Nov. 16, 1886) of Mr. Henry Charles Jeffreys, formerly of No. 125, Piccadilly, and late of No. 12, Park-lane, Hyde Park, who died on May 31 last, was proved on June 30 by Edward William Jeffreys, the brother, one of the executors, the value of the personal estate amounting to over £54,000. The testator leaves all his real and personal estate equally between his nine nephews and nieces—viz., the two children of his brother Herbert Castleman Jeffreys, and the seven children of his brother Edward William Jeffreys.

The will (dated Feb. 10, 1883) of Mr. Barnard Fowler, of the firm of Messrs. John Fowler and Co., Steam-Plough Works, Leeds, who died on July 6, 1883, was proved on June 23 by Robert Henry Fowler, the nephew, and Robert Fowler, the brother, the executors, the value of the personal estate amounting to upwards of £46,000. The testator gives all his real and personal estate to his brother Robert for his own use and benefit.

The will (dated April 7, 1888) of Mr. Robert Clark, late of Devizes, Wilts, who died on April 27 last, was proved on June 21 by Miss Martha Clark, the daughter and sole executrix, the value of the personal estate amounting to over £35,000. The testator leaves all his real and personal estate to his daughters, Martha and Ellen, equally.

The will (dated June 17, 1879), with four codicils (dated Sept. 2, 1879; Aug. 30 and Sept. 15, 1880; and Aug. 18, 1883), of Major Robert Carmichael-Smyth, formerly of the 93rd Highlanders, and of No. 17, Norfolk-crescent, Bath, but late of Frome, Somersetshire, who died on May 13 last, was proved on June 29 by Sir James Morse Carmichael, Bart., the great-nephew, and Leonard Hopwood Hicks, the surviving executors, the value of the personal estate in the United Kingdom exceeding £33,000. The testator bequeaths £500 to his wife, Mrs. Dorothy Susan Carmichael-Smyth, who is otherwise amply provided for; £300 to Lady Louisa Charlotte, the widow of his late nephew, Sir James Robert Carmichael; his furniture, pictures, plate, papers, manuscripts, and effects to his said grand-nephew, Sir James Morse Carmichael; and legacies to his brother, nephews, nieces, and other relatives, and to old friends and servants. The residue of his estate and effects he leaves to his brother, nephews, nieces, and other relatives by blood or marriage, to whom he has given legacies, in proportion to the amount of their legacies.

The will (dated April 26, 1888) of Mr. Charles Franklin, late of No. 2, Eastern-terrace, Cambridge, who died on June 3, was proved on June 22 by Arthur Franklin, the brother, and Walter Newell Rook, the nephew, the executors, the value of the personal estate amounting to over £24,000. The testator bequeaths £6000 and the use of his household goods, for life, to his wife; £500 each to his three brothers and his six sisters; and a few other legacies. The residue of his real and personal estate he leaves, upon trust, for his wife, for life, and then equally to his nephews and nieces, share and share alike.

The will (dated Dec. 29, 1881) of the Venerable John Hannah, D.C.L., Archdeacon of Lewes, who died on June 1, at the Vicarage, Brighton, was proved on June 28 by the Rev. John Julius Hannah, the son, the sole executor, the value of the personal estate exceeding £7900. The testator leaves all his real and personal estate to his said son.

Prince Christian has been unanimously elected president of the Windsor and Eton Royal Infirmary, the office having been in abeyance since the time of the Prince Consort.

The Duchess of Albany on July 5 laid the foundation-stone of the new school buildings to be erected in connection with the church of St. Bartholomew the Great, West Smithfield.

On July 20 Mr. Clement Scott celebrates his "silver wedding" with the dramatic department of journalism, having been continuously employed as a reviewer of plays and a writer on dramatic subjects for twenty-five years, the last sixteen of which have been spent in the service of the *Daily Telegraph*. In order to commemorate this event, he was on July 5 privately entertained at the Arts Club by the representative managers of the London theatres. Mr. J. L. Toole was in the chair, as the senior London actor identified with the career of the guest; and he was supported by Messrs. Henry Irving, Augustus Harris, Wilson Barrett, Thomas Thorne, Beerbohm Tree, Charles Wyndham, John Hare, Edward Terry, Charles Hawtrey, Agostino and Stefano Gatti, and R. D'Oyly Carte.

THE DEFEAT OF THE ARMADA IN 1588.

BY CHARLES N. ROBINSON.

N invasion of this country, the actual landing of a foreign foe upon these shores, might well appear to the majority of the inhabitants of Great Britain to-day an event so unlikely, so improbable, as almost to pass belief. The memories of many glorious victories, the extension of civilisation, a happy exemption from the horrors of war, and the enjoyment of long years of peace and prosperity, have together contributed to make the mere notion of such a calamity overtaking us difficult indeed for the present generation of Englishmen to realise. Far otherwise was it with their ancestors towards the end of the sixteenth century. Our countrymen of that great epoch in Britain's history which is marked by the sovereignty of Elizabeth Tudor, although they had not actually experienced the iron grasp of an enemy, had yet but a short while been emancipated from a thraldom and tyranny not the less galling that it was mainly of home manufacture. Proud and jealous of their new-found civil and religious liberties, prouder still of their growing strength upon land and sea, and not unmindful of the destiny which seemed in store for their descendants, the people of that period had around them ample evidence of the facility with which nations, stronger, more numerous, and, apparently, enjoying far greater security than themselves, could pass under the yoke of the conquerors of Mexico and Peru. So when, at length, they knew that the vast strength and resources of the most powerful and the richest Monarch in Europe, supported, too, by the promises, the blessings, and the far-reaching machinery of the Pontiff of Rome, were about to be exerted to crush their country, they must have been less than Englishmen had they not sunk their discords and differences and stood forth as one man against the common enemy. How they equipped themselves to resist the danger, how they combatted the forces sent against them, and how, under Providence, they saved this land and, indirectly, all Northern Europe, from bondage, preserved their faith and liberties, both spiritual and temporal, and handed down, untarnished and unsullied, the honour and prestige of the nation, forms a story the recital of which cannot fail to stir even the coldest and most apathetic amongst us. To the happy termination of this momentous crisis in our history, the Commercial and Colonial Empire of which we are so justly proud mainly owes its being. And surely the wise statesmanship, glorious patriotism, indomitable valour, and stubborn courage of our forefathers are well worthy of grateful and reverent commemoration on this the 300th anniversary of the memorable events which called them forth.

With the causes which led to the setting forth of Spain's hostile demonstration, it is not our intention to deal at length. It is, however, a mistake to suppose that religious animosity or sectarian motives were chiefly, or even directly, connected with its inception. No stronger grounds for an appeal to arms could have been needed than the recognition and support given by Elizabeth to the deeds of Hawkins, Drake, and other seamen, who, from the Spanish point of view, were pirates and smugglers, fit only for the hands of the hangman or the inquisitor. The conquest of England was considered a just and desirable enterprise—and copious testimony exists that long prior to the actual attempt preparations were being made to assail and overwhelm the island and "its brood of vipers."

The Spanish preparations were most complete. The total number of craft of all kinds composing the Armada was, probably, 130; but a few of these never crossed the Bay. At least sixty were galleons of huge size and strength, ranging from 700 up to 1250 tons burden. They were not, however, primarily built for war-purposes, and the proportion of guns they carried was, as compared with their size, not large. But being intended for long voyages, their upper works were high out of the water, and their main timbers 3 ft. or 4 ft. thick. One hundred years before, the Portuguese galleons under Diaz had doubled the Cape of Good Hope, and, with the conquest of Portugal, some of the finest ships in the world passed into the Spanish King's hands. It was the Portuguese galleons that formed the van-squadron of the Armada; the largest of them mounting, perhaps, fifty guns, and many of these of small calibre. In the case of the hired ships, except the heaviest Levantine galleons, the proportion of guns to tonnage was still smaller. Usually sailing in smooth water they did not carry numerous crews, but now they were crammed with soldiers to an inconvenient degree. Of the second class of ships, called galliasses, there were four in the fleet. These were proper war-ships, and certainly did their share of the fighting. Like the galleons, they were three-masted vessels, but were also propelled by oars, to pull which they carried a large number of galley-slaves. Their prows and sterns were furnished with heavy cannon in high castles, and they carried smaller cannon on the broadside, in ports between the rowers. The two larger each carried nearly 300 soldiers, and over 100 sailors, with 350 slaves to row. There were also galleys with one or more tiers of oars a-side, many merchant and store-ships, caravels, and *ureas*.

The *personnel* of this flotilla consisted of over 30,000 persons, including 18,000 soldiers, 8000 sailors, 2000 galley-slaves, and a numerous hospital staff, assisted by 180 priests of various Orders. The armament was of 2000 guns; a few may have been 64 or 32 pounders (cannon or demi-cannon), but by far the greater number were 10, 6, or 4 pounders (demi-culverins, sakers, and minions). The whole force was victualled for six months, a large sum of money was taken in the fleet, and the orders for preserving discipline were

ROYAL, ENGAGING THE SHIP OF DON ALONZO DA LEYVA.

"A TALL SPANIARD."

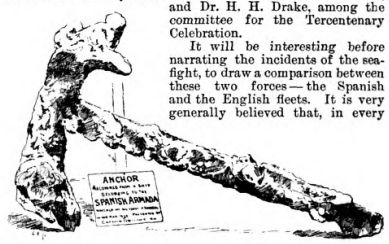
unusually strict. In the vicinity of Nieuport and Dunkirk, Farnese, the Prince of Parma, had assembled an army of 30,000 foot and 4000 horse, picked troops, ready to be embarked in scores of flat-bottomed boats and transports, and conveyed across to Margate and Deal so soon as the English and Dutch ships should have been swept from the narrow seas before the imposing array of the "Invincible" Armada.

Of the officers in charge of these vast and apparently overwhelming expeditions, Santa Cruz had seen more service than any naval commander out of England; while Parma was reckoned the first military leader of the time. But Parma never set foot on English soil and Santa Cruz died in February, before the Armada was quite prepared for starting; the Duke of Medina Sidonia, his successor, had little to recommend him for the post, save blue blood and personal courage. He had, however, some exceptionally able seamen and commanders as his advisers. Don Juan Martinez De Recalde, Vice-Admiral and Capitan of the Biscayan Armada, was both, and proved it during the whole of the unlucky cruise. He was fortunate, like his chief, in being able to return; but he died shortly after he landed. Don Diego Flores De Valdes, General of the Fleet of Castile, had already served with distinction afloat. He it was who recommended the burning of the English fleet at Plymouth; and he it was, also, who lost heart altogether after the great fight off Gravelines. Don Pedro De Valdes, Admiral of the Andalusian Armada, had commanded a fleet in northern waters, and it was hoped that his local knowledge would prove valuable; but his ship, Nuestra Señora del Rosario (commonly called the Capitana), was the first to be captured and himself taken prisoner. Other commanders of whose exploits we hear are Don Miguel De Oquendo, a dashing and chivalrous officer, in opposition to whose advice the retreat by the North Sea was made; Don Martin De Bertendona, whose flag-ship, the Ragazona, was always in the thickest of the fighting (he commanded the squadron of hired galleons, among them some of the finest ships in the Armada); and Don Hugo De Moncada, who had charge of the four galliasses, and who lost his life when his ship was taken off Calais. In command of the land-forces embarked was Don Alonzo Da Leyva, flying his standard in the Rata Coronada, a veteran General who as a youth had crossed sabres with the Moors, and had since seen service in many a land and sea battle. To his charge, we are told, were committed most of the high-born youth of Spain who sailed in the expedition. This gallant old soldier, after being thrice wrecked, was eventually drowned, with most of his companions, on the coast of Ireland.

In England a commission had been convened of noblemen and gentlemen, as well as the most experienced naval and military officers, "to sett doune such meanes as are fittest to putt the fforces of the Realme in order to withstand any Invasion." It is worthy of note that, in the opinion of the experts of those days, the only sure means of preventing invasion was in the maintenance of an invincible navy. At the same time precautions were to be taken on shore, in case the enemy should land at Milford, Plymouth, Portland, the Wight, Portsmouth, the Thames, or Harwich. Militia and volunteers in great numbers were embodied, and commenced training in the use of arms; camps were laid out and fortified; while on every high place beacons and bonfires were prepared for lighting to give information of the advent of the foe and summon the defenders of the State. These preparations were confined to no single part of the country or to any particular class or creed. Many places, like the City of London, came forward to do their duty by assisting, not only with land but with sea forces—raising loans, finding ships and men, victualling and arming them. Everywhere there was but one desire apparent; and Protestants and Catholics, the classes and the masses, vied with each other in displaying one mind—to take up arms and, if need be, to lay down their lives in the defence of their rights and privileges against the threatened tyranny of Spanish rule.

To give them their due, there were many among the gallant seamen and soldiers of the time who neither feared nor underestimated the Spanish power. While the patriotic spirit which was aroused is well exemplified by the conduct of the pirate who is said to have walked into the hands of justice that he might give timely notice of the coming of the hostile fleet, at the same time the remark, which Sir Francis Drake is reported to have made when interrupted in his game of bowls on Plymouth Hoe, "There 's time to win the game and thrash the Spaniards too," is an instance of the contemptuous feeling in which the invaders were held by those best acquainted with them. The bold merchant adventurers, buccaneers, or smugglers—call them what you will—who had fought and thrashed the Don afloat and ashore—not without getting hard knocks in return—saw in the huge armament then entering English waters, if not fresh opportunities for plunder and prize-money, at least a great chance to pay off old scores. They reckoned the slow, ponderous, badly-armed and overcrowded galleons at their real value, and never doubted for an instant the outcome of the maritime fray, so long as they could get a sufficient supply of stores and ammunition from the authorities.

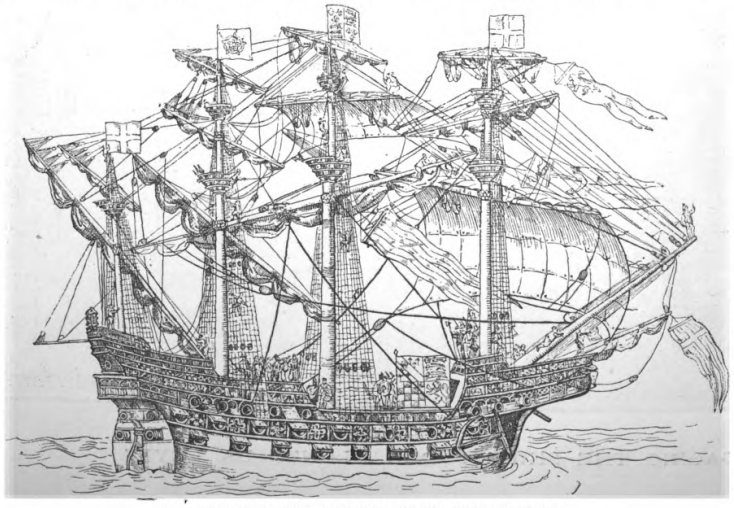
The total number of ships in the Navie Royal was thirty, big and little—the four largest being the Triumph, Elizabeth, White Bear, and Victory, all built from the designs of Sir John Hawkins, Treasurer of the Navy—seaman, shipbuilder, and navigator. A man, indeed, to whose fertility of resource and skill, as much as to the capacity of any other man of the time, must be attributed the victory which followed. Then, as for long afterward, there was no peace south of the Line, and every merchantman was forced to go about its business armed, while it was customary to call upon the seaports for their ships in war-time. So the numbers of the fleet were soon increased. Altogether, the English fleet consisted of 197 vessels, many of which were mere pinnaces and coasting craft. The force embarked was about 15,000 men; but the proportion of seamen to soldiers in each ship was much greater than in the invading force. Holland also sent a contingent of ships, under Justin of Nassau. These Dutch ships do not appear to have met with the vessels of the Armada, but they effectually did their work on the Netherland coast.



The English flag-ship was the Ark Royal, a vessel of 800-tons burden, carrying 425 men and an armament of which the following summary is probably correct:—4 cannon (60-pounders), 4 demi-cannon (32-pounders), 12 culverins (18-pounders), 6 sakers (6-pounders), and some smaller ordnance. These last-named were styled port-pieces and fowler-halls, small guns made in two parts, the chambers being ready-charged, and placed in the piece when needed. The largest guns were usually mounted as chase-pieces, in the stern; demi-cannon and culverins in the broadside ports, which were frequently circular in shape. Sakers, minions (4-pounders), or falcons (2-pounders) were mounted on the quarter and forecastles, on blocks of wood or as swivelpieces; while the smallest ordnance, sometimes called "murdering pieces," were placed on barricades inboard for use against boarders. From the tops also were used "fyrevorkes," of which the Spaniards were reported to stand in great dread.

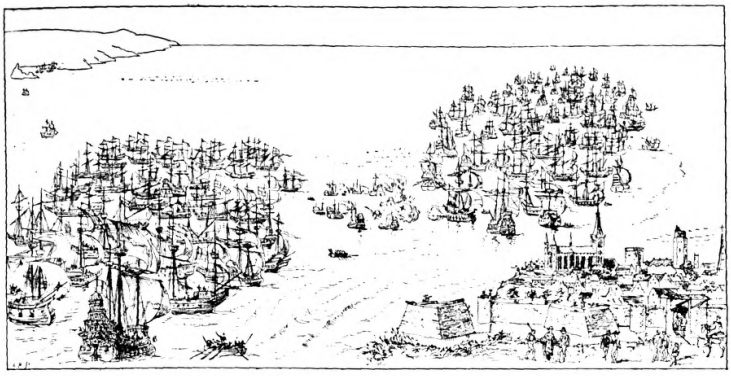
The ships were gaily ornamented with carvings on their woodwork, their sternposts and figureheads being often works of art, beautifully carved, moulded, painted, and gilded. Then, too, there were the great poop lanthorns, and from every conceivable point aloft hung the banners and "ancients" of the leaders and the national emblems. The length of these banners and pennons may be judged by that one which, in memory of this very event, was "set up in the great church of Leyden in Holland, and being fastened to the very roofe, it reached down to the ground." Some curious information about the cost of these flags is extant—as, for example, we read that Henry Holesworth, of London, May 21, 1588, supplied fourteen flags of St. George of "fine beaupres" for the use of her Majesty's ships and pinnaces at Chatham, one at £4, eleven at £3, and two at 20s. the flag. John Heath, of London, also supplied two ensigns of silk, one for H.M.S. Rainbow at £5 6s. 8d., and another for the galley Bonavolia at £8 6s. 8d. William Byford, of London, also provided forty-six streamers or pennants for the use of the Ark Royal, the Victory, the Mary Rose, and the Swallow at 20 pence apiece. Again, Lewis Lidyard, of London, had for 102 yards of calico, used for making two flags, stained in colours with her Majesty's arms, "to be worn at sea in the ship the Lord Admiral sailed in," at 9d. every yard, £3 16s. 6d.; and moreover for staining the said flags and bringing them from London to Queenborough, by Chatham, £6 16s. 8d.; total, £11 2s. 2d. The manning of the ships, whether of the navy or of hired or volunteer merchantmen, was most imperfect; pay was generally in arrears; and, sanitary arrangements being totally wanting, disease and sickness were rife.

The most illustrious and notable of the English sea-officers was Lord Charles Howard of Effingham, Lord Admiral, as his father had been before him, a man of considerable experience at sea at the time of the threatened invasion. To his caution, coolness, judgment, and, in particular, his ability as a naval tactician, the victory in 1588 was in no small degree due. To understand the difficulties with which he had to contend, his correspondence must be read. The constant burden of it is, that while he had the ships and the men—the latter as good as any in the world, and ready to spend their lives in her Majesty's service—money, stores, ammunition, and provisions were all lacking. And so it went on to the end of the campaign. So far as concerned a constant attention to the details of his office, a zealous care for his men, and a courteous consideration for the advice of his counsellors (some of whom were more noted for temper than tact), the Admiral did wisely; and when the moment arrived to try conclusions with the enemy, he proved himself amply endowed with true courage and valour. The four men whom Lord Howard chose as his advisers, and of whom he writes—"the worlde dothe judge to be men of the greatest experience that the realme hathe," were Sir Francis Drake, Captains John Hawkins, Martin Frobisher, and Thomas Fenner. Of these four, Sir Francis Drake has by some writers been made the central figure of the defeat of the Armada. His chief exploit was the taking of Our Lady of the Rosary, the Capitana of Pedro de Valdes. Drake's conduct on the Hoe at Plymouth, if the story is true, was hardly that of a zealous subordinate, wishful to give a good example to the men under him. Disobedience is generally charged to him also in the matter of carrying a light on the night of the fight off the Start. His conduct in the action off Gravelines was that of an impetuous, brave, and daring officer, and he was indisputably a capital seaman and an intrepid commander; but he appears, possibly from old associations, to have allowed his lust for dollars to detract from the duty he owed to his chief and his country. Captain John Hawkins came of a seafaring family. He was a Devonshire man, while Drake, also, was a native of Tavistock, and Frobisher hailed from the county of York; but all sections of the country may fairly claim to be represented among the sea-commanders on this eventful occasion. Hawkins's father was a famous shipbuilder of Plymouth, and well known as an expert navigator in the time of Henry VIII. Hawkins's son, too, Richard, who commanded the Swallow against the Armada, was noted as an able seaman; and, in his "Observations" has given us a most valuable record of the manners and customs of the Elizabethan sailors. Under Captain John Hawkins, Drake was trained; and many of the best sailors and navigators of the time had been in the forecastle or officers with him.



Among the first and foremost of the distinguished seamen of his day was Martin Frobisher. His indomitable bravery and bulldog courage in the fight off Portland was rightly recognised by the honour of knighthood conferred on the following day. Frobisher's true claims to the gratitude of all Englishmen have lately received attention at the hands of the Rev. Frank Jones, whose valuable and interesting account of the life of this gallant seaman and discoverer deserves to be widely known and read. Of the brothers Fenner, Thomas, Edward, and William, who, respectively, commanded the Nonpareil, Swiftsure, and Aid, little has been written and but little appears to be known. All these brothers did good and gallant work; and Thomas appears, from a letter of his which still exists, to have chased the flying Spaniards farther north than most of his brother commanders.

Lord Henry Seymour carried out his work with praiseworthy assiduity; particularly gallantly did he fight on the day of the battle off Gravelines. Sir W. Wynter, his Vice-Admiral, an old and able officer, did excellent work the same day. He was Master of the Ordnance, and, nearly thirty years before, had seen service in command of a squadron against the French in the Firth of Forth. He came of an old and distinguished Gloucestershire family; and Captain Wintour, of Ryde—the proper spelling of the family name—is associated with Major Martin Frobisher, Mr. Stuart Hawkins, and Dr. H. H. Drake, among the committee for the Tercentenary Celebration.



OLD ANCHOR IN WHITEHALL YARD, BELONGING TO A SHIP OF THE SPANISH ARMADA.

It will be interesting before narrating the incidents of the sea-fight, to draw a comparison between these two forces—the Spanish and the English fleets. It is very generally believed that, in every respect, the Spaniards were superior; but this is now known to be an erroneous idea altogether. In numbers, owing to the division of the English squadrons, the Armada was superior; and, coming down to the distinctly fighting-ships, the totals, as given by Professor Laughton, were of Spaniards, 62; of English, 49. But in manœuvring power, and in weight of metal, the advantage is shown to have been quite the other way. Charnock lays great stress on the superior handiness and speed of the English ships, and Laughton, who has probably given more study to the subject than anyone else, appears to have conclusively proved that in the matter of armament the Spaniards were also overmatched. Nor were these the only advantages possessed by the English, which, while they do not detract from the remarkable prowess and skill of the English commanders, bear out the naval historian's contention that no miracle or special intervention of Providence was required to insure victory to the English arms. Our seamen were the most skilful and dexterous in the world. They were rough-weather men, used to hard ships, and living great part of their time with

their lives in their hands. They knew their officers and were known to them. Each was proud of the other, and a comradeship existed between the quarter-deck and the forecastle, entirely unknown in the Spanish service. Then they not only knew their officers, but they knew their ships, and how to handle them in all weathers and under most circumstances. As Sir Walter Raleigh and Sir William Monson tell us, they had introduced many improvements in rig, which the Spaniards, who were principally "trade wind" sailors, had no knowledge of. The science of gunnery at this time was almost unknown, and archery formed a branch of it; but the Englishmen had made it a study, while the Spaniards despised it, regarding the sword as the more noble weapon. To this feeling and to the number of soldiers carried in the huge castles of their galleons may be ascribed their constant attempts to board. Altogether we shall not be going beyond the mark in saying that, so far as the seaman's skill and the gunner's art are concerned, the Spaniards were utterly and entirely beneath comparison. At the same time, it must not be forgotten that during the first week's fighting, the numerical superiority of the Spanish to their assailants was something like six to one.

May 29-30, 1588, "La Felicissima Armada" sailed from the Tagus. With great pomp and circumstance the mighty fleet left, in charge of the Duke of Medina Sidonia, and could it have then and there proceeded direct to these shores history might have had a different tale to relate. But, in those days, sailors had to reckon with the wind and the weather, and these proved so tempestuous that the squadrons of galleons and store-ships soon separated, and it became impossible to proceed. Some were dismasted, one or two totally lost in the Bay, and though a few of the ships are said to have gone on and sighted the Scillies, all of them had eventually to put back and seek shelter in the Groyne. The damage done, the time lost in getting the ships together again and rewictualling them, with other matters, were made reasons by a council of war at Corunna for urging a postponement of the expedition. Philip, however, was inexorable, and ordered immediate departure. And now a story reached Sidonia to the effect that Howard had laid up his ships for the season; it was, therefore, determined to stand boldly for Plymouth, and, if possible, surprise and burn the English fleet, and perhaps effect a landing.

July 12-22, a Friday, the Armada sailed with a fair breeze from Corunna. After a nasty passage, baffled by contrary winds and calms, and scarcely propitious of success, on Friday, July 19-29, they entered the Channel and sighted the Lizard, which they took to be Rame Head; so they stood off for the night. They had, however, been seen by Flemming and other scouts of Howard's, and the news was brought, as the story goes, to the Captains while they were playing at bowls on the Hoe. It is this scene which Lucas has depicted in oils and Kingsley has described in "Westward Ho!" The latter narrative, inimitable as it is, tempts us to believe that matters may have fallen out as he sets them forth; but it seems more likely that the story had its origin in a desire on the part of some contemporary writer to emphasise figuratively the unreadiness of the English when the Spaniards made their appearance. Stirring as that moment must have been to the inhabitants of Plymouth, the excitement with which the news was received throughout the length and breadth of England was even greater. From Land's-End to Cumberland the beacon fires blazed from hill-top and castle-battlements, the general call to arms sounded, and the troops marched to their allotted stations for the defence of the coast. "Myselfe can remember," writes an eye-witness, "when upon the fyreing of the beacons (whereby an alarum was given), the country-people forthwith ranne doune to the seaside, some with clubs, some with picked stones and pitchforkes, all unarmed, and they that were best appoynted were but with a bill, a bow and a sheafe of arrows; no captains or commander appoynted to direct, lead, or order them." The greatest enthusiasm was aroused, and everyone hurried to take his part in the defence of the country. Short work, probably, the veterans of Parma and Leyva would have made of these unarmed, undisciplined mobs; but their ardour was indubitable, and the feeling of the countryside has been eloquently expressed by Macaulay—

> Night sank upon the dusky beach, and on the purple sea,
> Such night in England ne'er had been, nor e'er again shall be.
> From Eddystone to Berwick bounds, from Lyme to Milford Bay,
> That time of slumber was as bright and busy as the day;
> For swift to east and swift to west the ghastly war-flame spread,
> High on St. Michael's Mount it shone—it shone on Beachy Head.
> Far on the deep the Spaniard saw, along each southern shire,
> Cape beyond cape, in endless range, those twinkling points of fire.

In the Cattewater, then the principal harbour of Plymouth port, the excitement and agitation all through that night was feverish indeed. The ships had to be warped out and got over to the sheltered anchorages under Mount Edgecumbe, ready to sail at daylight. Cawsand Bay was protected from the prevailing wind, and in this bight many of the vessels lay all night. These, however, were but a small proportion, for several of the galleons had been partially dismantled for refitting, stores were ashore, and men on liberty. So, amid much bustle and noise, the ships were got to sea, some of them considerably undermanned, for the sickness was terrible among the crews.

On Saturday morning Howard, having with him as many ships as were ready, stood away to the westward, hugging the coast, and found the enemy off Fowey, standing up Channel with a fair wind from the southward and westward. We may suppose that the Dons were somewhat disconcerted to find that they had been unable to take the English fleet at a disadvantage, which if they had only stood straight on the night before they certainly would have done. As it was, Medina Sidonia, in the drizzling rain which fell throughout the day, sent a boat towards the land to make inquiries, and from some captured fishermen learnt his position, and that the ships he saw looming in the mist were part of the English fleet under the Lord Admiral. Meanwhile, Howard, seeing that the Spaniards were rapidly conceding to him that which he so ardently desired—the weather-gauge—troubled not to interfere; but, keeping a wide berth, hugged the land and watched the enemy.

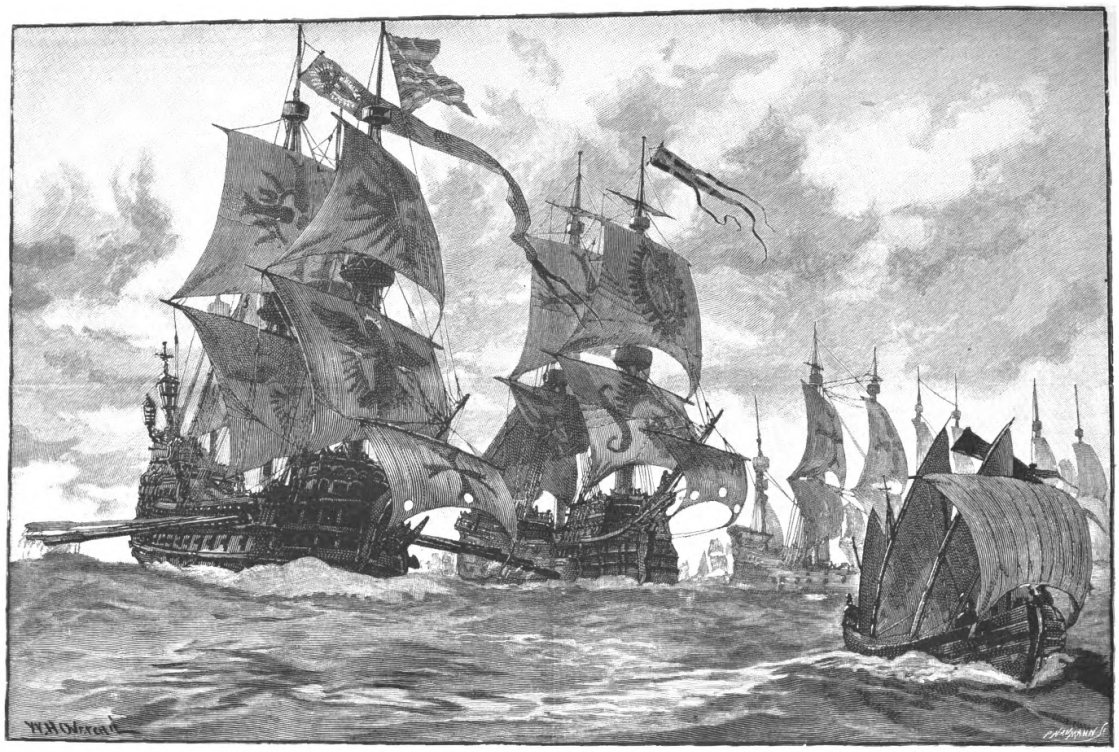
Sunday, July 21, was a typical English summer's day. The sun shone out, lighting up all the glory and the gilding of the castellated structures which came on slowly over the waves, brightening up the emblazonments of their sails, and making a big display of their many-coloured flags and pennons. It was an imposing spectacle, and, at this moment, many of the Spaniards might have thought themselves invincible; before evening they were to be further enlightened. At early morning the wind drew round to the W.N.W., a still more favourable quarter for the defending fleet, and Howard now opened the ball with a warning shot from one of his pinnaces to demand the honour due to the English flag. Naturally Sidonia paid no attention to this, and it was immediately followed by a general cannonade discharged by our fleet as they formed in line of battle. With their starboard tacks aboard they stood past the Spanish line, each ship pouring in a broadside as it neared an enemy. In the light breeze prevailing the English vessels probably went two knots to the Spaniard's one, and having given the van ships a taste of their metal, concentrated their efforts on the rear division, under Juan Martinez de Recalde. The sight of the "Invincible" Armada had not had that terrible effect which its godfathers promised themselves. The light and nimble English ships sailed to and fro, pouring in their shot with good effect, while the unwieldy galleons of the Armada hauled up to deliver their fire or ran before the wind, if such an operation can be called running which was of necessity very slow. Off Plymouth, where most of the vessels left behind now joined the Lord Admiral, several very smart actions occurred.

Howard, in the Ark Royal, gallantly bore down on the Rata, a vessel of nearly a thousand tons, flying the banner of Alonzo Da Leyva, which the Admiral probably mistook for Sidonia's. Personally directing the operation from his quarter-deck, Howard took his flag-ship into action. Sheering almost alongside of the mighty galleon, the English gunners poured a hailstorm of cannon-balls on the decks of the enemy, dealing havoc in the crowded ranks of the Spanish soldiers. Then, springing his luff, the Admiral stood under the stern of his antagonist, raking him fore and aft, fetching the gilding off his quarter badges and sending his spars rattling about his ears. The *jeunesse* of Spain's bluest blood had thus an early opportunity of receiving their baptism of fire, and remarkably hot they found it. The flag-ship of De Valdes and the Capitana of the Biscayan squadron were in their turn attacked by the Triumph and the Victory, and the superior gunnery of the English told at once. De Recalde had shortened sail to await the English attack; he got terribly mauled, every English shot telling in his hull or rigging, whilst those from the Spaniards either flew high or wide of their mark. But the Dons were not given to leaving a commander in the lurch, and to his help came the ship of his vice-admiral, the San Mateo of Don Diego of Pimental, and the San Juan of the division of San Flores, commanded by Don Diego Enriquez, a son of the Viceroy of the Indies. Now, too, Sidonia furled his sails and lay a-hull, to induce the English to close, and Lord Howard, who intended nothing of the kind, summoned his ships together that he might hold a council of war.

It was arranged at this council that Drake, in the Revenge, should act as the leader of the English van-squadron during the night, keeping touch with the rearguard of the Spaniards, while the main body, under Howard, should follow his lantern, and Captain Hawkins bring up the rear. Drake, however, either omitted to hang out his light, or, as appears more probable, seeing a chance for prize-money in what he supposed to be a few stragglers from the enemy drifting towards the French coast, "doused his glim" and stood after the possible plunder. The result of this dereliction of duty—which Drake seems to have been quite capable of conceiving and carrying out—was very nearly disastrous. The English ships stood on after the only light they saw, and, hugging it, found when day broke that the lantern was that of the San Martino, and not in the Revenge at all. Some of them were perilously near the Spanish fleet. The Ark Royal, the Bear, and the Rose were within culverin-shot of the enemy, while many of their consorts were hull down astern. The Spaniards, however, had not the promptitude to take advantage of the mistake thus made; and Howard, seeing the situation, hung out a signal to rejoin the flag, and, meantime, shortened sail to allow his scattered ships to close up.

The Dons had not passed an altogether happy Sunday night. During the fight, the Santa Catalina had been almost disabled, and towards evening she fell foul of the flag-ship of her division, Nuestra Señora del Rosario, and smashed the bowsprit of this vessel. Then, when a little later, Sidonia made sail, and ordered the fleet to tack, the Nuestra Señora's foremast went over the side, bringing down the mainyard with it and completely incapacitating her. Several attempts were made to take her in tow, but the wind and sea were too boisterous, and ultimately Sidonia found that he must leave her behind, with another disabled galleon, and several of the tenders or "pataches" under Don Agustin de Ojeda, to render such assistance as they were able. The other disabled ship was Oquendo's flag-ship, which had been partially blown up by an explosion of her powder magazine. The upper deck and stern-castle went overboard, and many of her crew perished. Hawkins put a prize crew on board, and this vessel was sent into Weymouth; curiously enough, in charge of the very Captain Flemming who some writers would have us believe was a pirate.

One of the first affairs on Monday morning was an engagement between the disabled Nuestra Señora del Rosario (or, as she is more generally called, the Capitana) and the Ark Royal; but Howard, after pouring in a broadside and driving off Don Ojeda and his pataches, passed on, seeking more worthy prey than a crippled ship. Frobisher, in the Triumph, next tackled her, and some merchant-ships, amongst them the Margaret and John of London; but Frobisher passed by, in accordance with the flag-ship's signal, and there was too much fight left in the wounded Don for the merchantmen to take her by themselves. About this time Drake came along, disgusted, we may conclude, with the result of his night's work; for his supposed prey had turned out to be Flemish merchant-ships, who had got among the Spaniards by mistake. The disabled galleon was too tempting a prize for the buccaneer leanings of the circumnavigator, and learning who his new assailant was, the Don quickly capitulated, and Our Lady of the Rosary was sent into Torbay. Treasure to the amount of 55,000 ducats, and a great quantity of gunpowder, were found in her; the latter was transshipped to the Roebuck, which had towed the prize into port, and dispatched for the use of the fleet. As for Pedro De Valdes, Drake took him on board the Revenge, perhaps thinking that the Don's ransom would help to line his pockets.



In consequence of the separation of the ships during the night by the Vice-Admiral's act, Monday was mainly spent by Howard in collecting his squadron and rearranging plans. Sidonia's feelings at this time must have been somewhat less hopeful: the fight of Sunday had been little more than a skirmish, yet two of his flag-ships were in the hands of the despised English, while considerable damage had been done to other of his vessels, and many dollars transferred from one side to the other. Recalde's flag-ship was no longer fit to act as chief of the rearguard, and Da Leyva, in the Rata, was now detailed for the duty with two divisions instead of one, including the galliasses, and, amongst the galleons, the San Mateo, the San Luis, the Santiago, and the Florence—all commanded by brave officers of the Admiral's own squadron.

Tuesday morning, off Portland Bill, the wind had got round to the north and north-east, giving Sidonia the weather-gauge, and an opportunity of offering or refusing battle, as he pleased. Some of the leeward ships of the English were offering what he considered a good opportunity for carrying out his tactics of boarding: he dispatched the rearguard, and especially

SIR JOHN HAWKINS.

the galliasses, to attack them. The English ships were those of Frobisher, Lord Thomas Howard, and others of the van. A smart assault was made upon them, the Spaniards using their oars in an endeavour to get near enough to board. But the seamanship and gunnery of the men in the Triumph and the Lyon was too good; they manœuvred their ships with wonderful smartness, and poured in their fire with such capital direction as to sweep the galley-slaves from their benches and so prevent the galliasses attaining their object. Had it not been for the handiness of the English craft, the Dons would undoubtedly have succeeded in their purpose. On both sides great valour was exhibited; but the Spanish firing was slow, their aim bad, and their small guns and light arms did nothing like the damage of the heavier English cannon.

The wind veering round to the southward, Sidonia himself was able to take part in the fight, and more English ships joined in the combat. Round the big Triumph the battle waged with varying success all the day, as the Spaniards, who imagined they were going to make a prisoner of the gallant Arctic explorer, found they had caught a Tartar instead. Frobisher was, indeed, the hero of this day's fight. Then, when Sidonia had called on his reserves, but without altering the aspect of the fight—and the wind now made it a necessity for him to continue his course up Channel — the merchantmen, the London ships, the privateers and smugglers came out of every port in every sort of craft that would take the sea and carry a weapon; and from every nook and harbour the seafaring population gathered to prey on the discomfited foe. Truly, as Howard said, he was plucking their feathers one by one!

Wednesday it was calm; both fleets drifting up Channel about six miles apart, the Spaniards careening their ships to stop the shot-holes; and Howard sending urgent requisitions to the shore for more powder and projectiles.

When day dawned on Thursday, it was still almost calm, with light catspaws stealing over the surface of the water from the direction of the Isle of Wight. Two of the Spanish galleons were astern of the main squadron. These were the Santa Anna, a store-ship, and a Portuguese galleon. Hawkins boldly attempted to cut them off, and, after some fighting, seems to have forced them to strike; but Da Leyva and Don Enriquez coming with the galliasses to their assistance, the Devonshire man was himself hard pressed. The Santa Anna, however, was so badly damaged that, as soon as she got out of the mêlée, her captain, Juan Saurez, took her over to the French coast, and there ran her ashore. The Ark and Lyon now towed down to the scene of action, and seeing that Sidonia's ship was somewhat separated from the rest, Howard, supported by Southwell, Sheffield, and others, made an attack upon her. The battle waxed hot, and the galleons and galliasses were fain to come to the rescue of their chief, when, as usual, the English played their tactics of drawing off and hammering at a distance. The Ark, however, appears to have been somewhat damaged in collision with a galleon which unshipped her rudder; anyway, she became separated from her friends, and, says a Spanish spectator, "our flag-ship made for her, with most of the ships of the Armada. The enemy's fleet stood to windward,

Sold Everywhere.

VALUABLE DISCOVERY for the HAIR. If your hair is turning grey, or white, or falling off, use "The Mexican Hair Renewer," for it will positively restore in every case Grey or White Hair to its original colour, without leaving the disagreeable smell of most "Restorers." It makes the hair charmingly beautiful, as well as promoting the growth of the hair on bald spots, where the glands are not decayed. "The Mexican Hair Renewer" is sold by Chemists and Perfumers everywhere, at 3s. 6d. per Bottle.

FLORILINE. For the Teeth and Breath. Is the best Liquid Dentifrice in the world: it thoroughly cleanses partially-decayed teeth from all impurities or living animalcule, leaving them pearly white, imparting a delightful fragrance to the breath. The Fragrant Floriline removes instantly all offensive arising from a foul stomach or tobacco smoke; being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly delicious to the taste, and as harmless as sherry. Sold by Chemists and Perfumers everywhere, at 2s. 6d. per Bottle.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of Mrs. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep, by relieving the child from pain; and the little cherub awakes "as bright as a button." Be sure and ask for Mrs. Winslow's Soothing Syrup, and see that "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

KEATING'S POWDER.—Kills bugs, moths, fleas, and all insects (perfectly unrivalled). Harmless to everything but insects. Tins, 6d. and 1s.
WORMS IN CHILDREN are easily, surely, and perfect safety got rid of by using KEATING'S WORM TABLETS. Tins, 1s. 1½d. each.

Time Bill, with Maps and Fares, free from the owner—DAVID MACBRAYNE, 119, Hope-street, Glasgow.

MONTE CARLO AS A SUMMER RESORT.
For a summer stay, Monte Carlo, adjacent to Monaco, is one of the most sunny, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea-breezes. The beach is covered with soft, fine sand. The Hotels are grand and numerous, with warm sea-baths, and there are comfortable villas and apartments to replete with every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Baths and Casinos in the banks of the Rhine.—THEATRE, Concerts, Venetian Fetes, &c.
There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo, or in its special fascinations and attractions—not only by the favoured climate and by the inviting scenery, but also by the means of every kind for relief in cases of illness or decease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it to-day the rendezvous of the aristocratic world, the most frequented by travellers in Europe; in short, Monaco and Monte Carlo enjoy a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY, SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the Gothard line. Through-going Sleeping-Cars from Ostend to Milan. Balcony Carriages. Safety Brakes. Tickets at all corresponding Railway Stations, and at Cooks' and Gaze's Offices.

STEAMERS to NORWAY, the BALTIC, the GOTHLAND, and SHETLAND ISLES. CHATTO and WINDUS'S NEW BOOKS.

THE MYSTERY OF MIRBRIDGE. By JAMES PAYN, Author of "By Proxy," &c. 3 vols., at all Libraries.
"As much dramatic interest as might suffice for half-a-dozen ordinary novels . . . Mr. Payn's plot is deeply interesting. It is difficult to imagine anything more so than this domestic drama."—Morning Post.

EVE: A Romance. By the Author of "John Herring," "Red Spider," &c. 2 vols., at all Libraries.
"The characters are drawn in this powerful author's best manner. There are many striking figures among them. The tale is well worthy of its author's reputation, and will doubtless find many readers."—Scotsman.

THE MYSTERY OF THE OCEAN STAR, &c. By W. CLARK RUSSELL, Author of "The Frozen Pirate," "A Book for the Hammock," &c. Crown 8vo, cloth extra, 6s.

CHILDREN OF GIBEON. By WALTER BESANT. Author of "All Sorts and Conditions of Men," and Joint Author of "The Golden Butterfly," &c., post 8vo, illustrated boards, 2s.; cloth limp, 2s. 6d.
"One gets genuine pleasure out of Mr. Besant's genial humour, his quick sympathy with human nature, his raillery, and his good-tempered sarcasm, all the more crushing because he is never angry; and the clever sense of the main contrivance of his story has that spontaneous charm which is the mark of originality. . . . Gratitude is due to Mr. Besant for preserving the best traditions of the older school of fiction."—Athenæum.

HERR PAULUS: His Rise, His Greatness, and His Fall. By WALTER BESANT, Author of "All Sorts and Conditions of Men." 3 vols., at every Library.
"One of the best things Mr. Besant has done. . . . It seems as if Mr. Besant must be either a propagandist or a satirist; and he is most enjoyable in satire, because he provides most scope for the display of his really delicious humour. 'Herr Paulus' is specially rich in it, and is, in spite of its faults, one of its author's best books."—Spectator.

A DREAM AND A FORGETTING. By JULIAN HAWTHORNE. Author of "Garth," "Sebastian Strome," "Dust," &c. Crown 8vo, picture cover, 1s.; cloth, 1s. 6d.

DAVID POINDEXTER'S DISAPPEARANCE, &c. By JULIAN HAWTHORNE. Crown 8vo, cloth extra, 3s. 6d.

MARK TWAIN'S LIBRARY OF HUMOUR. (Uniform with the Illustrated Edition of "A Tramp Abroad.") A thick volume of 700 pages, profusely Illustrated. Crown 8vo, cloth extra, 7s. 6d.
"As a collection of the best specimens of American humour the world be found, we believe, to have no rival. The illustrations number nearly 200, and are a real addition to the pleasure of reading, which is saying a good deal. Mr. Kemble must be a humourist himself, so aptly has he represented the scenes chosen for illustration. . . . The book is one that will be in large demand among elect humorists, as well as among all who enjoy humorous writings."—Literary World.

MARY JANE MARRIED. By GEORGE R. SIMS. Post 8vo, illustrated boards, 2s.; cloth limp, 2s. 6d.
"Mr. Sims, whether speaking with unveiled face or from behind a feminine mask, is a capital raconteur. He is pleasantly fertile in the kind of invention best suited to the purposes of the short tale; his hand, in dealing with a humorous or pathetic motive, is light and dextrous. . . . The stories provide very pleasant and entertaining reading."—Academy.

THE CITY OF DREAM. By ROBERT BUCHANAN. With Frontispiece and Vignette by P. Macnab. Second Edition, fcap.8vo, bound in buckram, 6s.
"It is a work of much interest, and will excite, we have little doubt, a good deal of discussion. . . . It is difficult in a few words to criticise so stupendous a work. At times it rises to the sublime, and raises our hopes to the highest point. It is, taken as a whole, a fine work, full of suggestive thought and poetic imagery."—Literary World.

NEW TWO-SHILLING NOVELS.
Post 8vo, illustrated boards.

HATHERCOURT RECTORY. By Mrs. Molesworth.
THE PRIMROSE PATH. By Mrs. Oliphant.
A SON OF HAGAR. By Hall Caine.

MISS BRADDON'S NEW NOVEL.
In 3 vols., at all Libraries,
THE FATAL THREE: A Novel. By the Author of "Lady Audley's Secret," &c.
"A really able romance, woven out of the lives of men and women such as we meet and know in the world around us."—Athenæum, June 16.
London: SIMPKIN, MARSHALL, and Co.

CHEAP EDITION OF MISS BRADDON'S NOVELS.
Post 8vo, picture cover, 2s. 6d.; cloth gilt, 3s. 6d.
LIKE AND UNLIKE: A Novel. By the Author of "Lady Audley's Secret," "Vixen," &c.
"Like and Unlike" will make many people late for dinner, and will keep a number of persons up at night when they ought to be soundly sleeping."—Punch.
"It is admirable. . . . Like and Unlike' is by far the most effective of Miss Braddon's stories."—The Times.
London: SIMPKIN, MARSHALL, and Co.

WILD FLOWERS at a Glance.—Messer's marvellous sight-system of distinguishing them. 300 dissections illustrated. "Simple, ingenious."—Academy. "A striking work."—Schoolmaster. "Invaluable."—Public Opinion. 10s. 6d.—DIPROSE and BATEMAN, Sheffield-st., W.C.

1s., post-free,

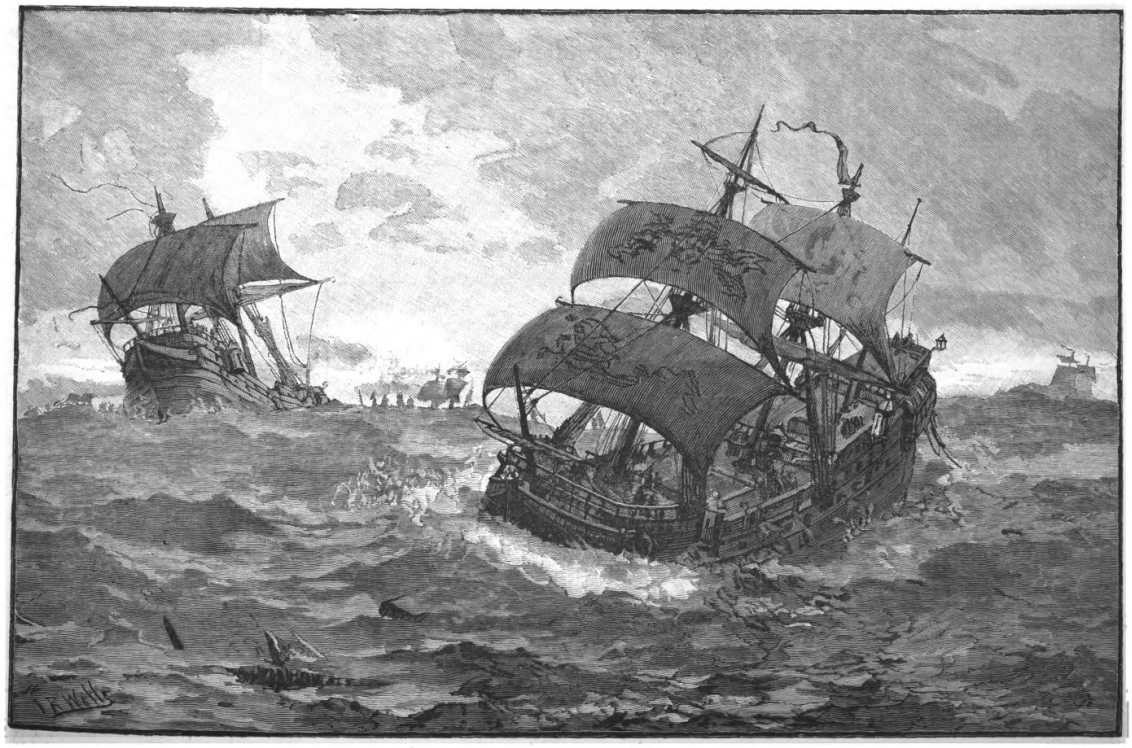
SIR MARTIN FROBISHER.



SIR FRANCIS DRAKE.

leaving their flag-ship astern, and in such danger that she was towed by eleven launches, striking her standard and firing guns as signals for assistance. Our flag-ship and the other ships were closing her so fast, that the rest of the enemy's fleet began to make a show of coming to her support, and we made certain of being this day able to board them, which was the only means of obtaining any decisive advantage. At this moment the wind freshened in her favour, which increased her distance from us, and she cast off the launches that were towing her; now, too, their fleet, which was falling to leeward of the Armada, recovered its position to windward." And so all day, from dusk till dark, the fighting went on, the English, with the dogged pertinacity of their race, towing their vessels into action, and, one after another, from the big Triumph down to the tiny Pippin, hammering away at the hated foe.

Friday, a lovely calm summer morning, Portsmouth in sight, and the fleets drifting along within view of each other. But while on board the one despondency and foreboding were making rapid headway; on the other, hopes ran high, and there was no longer a doubt as to the upshot of the adventure. Many of the young Spanish noblemen, having had enough of it—and perhaps luckily for themselves as it turned out—left the fleet; the disillusionment of the invaders had speedily arrived. The Duke was dispatching messages to the Prince of Parma, asking him to send him at least forty small ships to cope with the swift-sailing craft of the English, "the heaviness of our ships and the lightness of theirs rendering it impossible to bring them to close action."

Ever since daylight preparations had been in progress on board the Ark for a grand entertainment. Many of the great English nobles joined the fleet this morning, and the highest reward in his possession was to be conferred by the Lord Admiral upon those officers who had so well seconded him during the past week. Friday might be fast day for the Dons, the English would make it a feast. Lord Thomas Howard, Lord Sheffield, and Roger Townsend, with John Hawkins and Martin Frobisher, were to receive the honour of knighthood for their gallant behaviour and glorious deeds of bravery. Knighthood was a dignity only given in those days for distinguished service to the State, and was as much sought after by nobles as commoners. Never had the dignity been better earned than by its recipients on this occasion. It was decided not to fight again until the enemy had got into the Straits of Dover, but to wait for further supplies of powder and shot and the reinforcement of the squadron under Lord Henry Seymour and Sir William Wynter, and then "to make an end of it." To those who have read thus far of the doings of the English seamen, it must have become plainly apparent that it would be quite as absurd to ascribe the victory at Trafalgar to the weather as those which were won by the naval heroes of 1588. The fights which took place subsequently will only serve to strengthen this view.

Saturday was another fine day, with light airs, and at about five p.m. the Armada anchored in Calais Roads. The same evening Howard brought his ships to an anchor in the Downs and welcomed Seymour and Wynter with the "Squadron of the Narrow Seas." By this, the English fighting strength was brought up to close on fifty heavy ships, while the demoralised Spaniards could scarcely muster ten more at the most. Sidonia and Parma, too, had at last got into

RETREAT OF THE ARMADA.

correspondence, for a messenger came from the latter to say he was glad the Armada had at length arrived, but he did not hold out any prospect of being able to do much himself. Nor is it easy to see how he could while the English held command of the sea, and there were yet no signs of their having lost it. As it is now, so it was then: the invasion of the country, thanks to the silver streak, is an impossibility so long as England maintains a sufficient force in the Channel to beat the enemy.

In the English fleet on Sunday morning, at the council of war, it was decided to employ fire-ships for the enemy's discomfiture. So the barque Talbot and others were filled with combustibles, and made ready for the business. We may picture to some extent the situation from the accounts of the spectators. A dark and gloomy night, with the tide running up Channel; despair already the prevailing feeling in the Spanish fleet; most of the soldiers tired out with the fighting of the previous week; the mariners, whose proportions were less and whose business exposed them more, nearly all killed or wounded; those who were well trying to get a good night's rest while at anchor, to prepare themselves for the arduous work they knew lay before them. Suddenly the alarm was given, and, as they ran on deck and gazed out over the bulwarks towards the foe, there, coming down on the wind, were the flaming ships, with helms lashed, trains fired, tongues of fire darting from the rigging and flaring away from sail and spar, every now and again explosions taking place; the prospect to the Spanish soldiers must have been terrible. It is not to be wondered at that confusion and panic reigned in the disheartened squadrons. Some of the ships were burnt, some came into collision, smashing spars and bulwarks; others drifted down towards the shoals of Dunkirk, and the big Capitana of the galleons heading for the harbour of Calais, drove up on the bar. Though the great bulk of the fighting ships rallied at daylight to the flag, the Armada was never again in a position to act concertedly.

But now, on Monday, July 29, the Duke of Medina Sidonia, gathering round him the remnants of his Armada, prepared for the final fight. The wind was blowing strong from the north-west, right over on to the Flemish shoals, and any disabled vessel was almost bound to go on shore. So he formed his ships up in a half moon, of which the horns were away towards the North Sea, and, still struggling to windward with port tacks aboard, beat to quarters, resolved, if he could not win, yet to die like a gallant nobleman of Spain. Down came the Englishmen with wind and tide in their favour, no longer keeping at a distance, but coming within "shot of arquebuse," and pouring in their fire at close quarters as they broke through and through the Spanish line. Howard and Hawkins, Sheffield and Cumberland drove in the centre, whilst Drake and Frobisher crushed the southern, and Seymour and Wynter the northern horn of the crescent. Till 3 p.m. the battle raged, the Spaniards were terribly beaten, Philip's power shattered, and the foundation of Britain's naval Empire firmly established.

How many of the Spaniards' ships were destroyed in the fight is unknown. The Lord Admiral says three were sunk, four or five driven ashore; the Spanish account points out that the ships of Don Francisco de Toledo, Don Diego Pimental, and Don Diego Enriquez "were now quite disabled and unserviceable, with most of their crews killed or wounded." The San Felipe and San Mateo went ashore on the Netherlands coast, and the San Juan de Sicilia sank in sight of an English man-of-war, just as she was about to become a prize. As for the great galliass on the bar at Calais, she was taken by the small boats of the Ark, the Margaret and John, and other ships; her captain, Don Hugo de Moncada, losing his life in a vain attempt to resist the boarders, led by one Richard Tomson of Ramsgate. The English plundered her, but the hulk fell a prize to the Governor of Calais.

Tuesday, July 30, the English were in hot pursuit, and at early dawn came up with the shattered remnant of the Armada. The San Martin, Sidonia's flag-ship, had many shot-holes between wind and water, and nearly all the galleons he could rely on were in still worse plight. The pilots told the Duke it was impossible, if the north-west wind continued, to prevent the whole of the Armada going upon the shoals off the coast of Zealand, and, says the Spanish writer, "the English, seeing that the Armada was on the point of being wrecked, refrained from attack." As a matter of fact we know that it was want of powder and shot which prevented

IMPORTANT TO ALL LEAVING HOME FOR A CHANGE.

"Among the most useful medicines that have been introduced within the last century is **ENO'S 'FRUIT SALT.'** There is no doubt that where it has been taken in the earliest stage of a disease, it has, in many instances, prevented what would otherwise have been a severe illness. The effect of **ENO'S 'FRUIT SALT'** upon a disordered and feverish condition of the system is marvellous. As a nursery medicine the **'FRUIT SALT'** is invaluable; instead of children disliking it, they look upon it rather in the light of a luxury. As a gentle aperient and a corrective in cases of any sort of over-indulgence in eating or drinking, **ENO'S 'FRUIT SALT'** is all that is needful to restore freshness and vigour. In cases of Nervous Headache and Debility it is especially useful, and should be taken in all cases where persons suffer from a sluggish condition of the Liver."—*Young Lady's Journal.*

PREPARED ONLY AT ENO'S "FRUIT SALT" WORKS, LONDON, S.E., BY J. C. ENO'S PATENT.

THE MANUFACTURING

GOLDSMITHS' & SILVERSMITHS' COMPANY,

They beg to notify that their only London retail address is 112, REGENT-STREET, W.

"A SUCCESSFUL BUSINESS."

"We know of no enterprise of recent years which has been crowned with greater success than the Goldsmiths' and Silversmiths' Company, of 112, Regent-street, who, just seven years ago, opened their show-rooms to place the productions of their workshops direct before the public, thus saving purchasers the numerous intermediate profits which are obtained by 'middle-men' on high-class goods. Such has been the appreciation by the public that the Company have now the largest business in England, and are quite supplanting the old-fashioned houses that pride themselves upon having been established so many decades, but have utterly failed to keep pace with the times, and find it impossible to depart from their long credit system, entailing bad debts, for which cash buyers have to compensate."—Court Journal.

DIAMOND ORNAMENTS.—A magnificent assortment of Rings, Stars, Sprays, Flies, Necklaces, &c., composed of the finest White Diamonds, mounted in special and original designs, and sold direct to the public at merchants' cash prices.

SAPPHIRES from Ceylon, but with London cutting, mounted alone, or with Diamonds, in a great variety of ornaments.

NOVELTIES.—A succession of Novelties by the Company's own artists and designers is constantly being produced to anticipate the requirements of purchasers.

CASH PRICES.—**The Company,** conducting their business both in buying and selling for cash, are enabled to offer purchasers great advantages over the usual credit houses. All goods are marked in plain figures for cash without discount.

APPROBATION.—**Selected** parcels of goods forwarded to the country on approval when desired. Correspondents, not being customers, should send a London reference or deposit.

COUNTRY CUSTOMERS have, through this means, the advantage of being supplied *direct* from an immense London stock, containing all the latest novelties, and which are not obtainable in provincial towns.

COLONIAL AND FOREIGN Orders executed with the utmost care and faithfulness under the immediate supervision of a member of the Company. Where the selection is left to the firm, customers may rely upon good taste and discretion being used, and the prices being exactly the same as if a personal selection were made.

TESTIMONIALS.—**The numerous** recommendations with which the Goldsmiths' Company have been favoured by customers, is a pleasing testimony to the excellence and durability of their manufactures.

OLD JEWELLERY, Diamonds, and Plate taken in exchange or bought for cash.

MEDALS.—**Awarded Seven Gold** and Prize Medals and the Legion of Honour, a special distinction conferred on this Firm for the excellence of their manufactures.

CATALOGUE containing thousands of designs, beautifully illustrated, sent post-free to all parts of the world.

GOLDSMITHS' AND SILVERSMITHS' COMPANY, 112, REGENT-STREET. CATALOGUE POST-FREE.

them making the most of their victory. However, when the Spaniards had got into 6½ fathoms, "it pleased God to change the wind to W.S.W.," and the Dons clawed off without losing a ship. Then the Duke called upon his officers for advice as to what should be done, and all the members of the council agreed that "the Armada ought to put back into the Channel if the weather allowed of its doing so, but if not, that, yielding to the weather, they should return by the North Sea to Spain." With this sop to their consciences they stood away to the northward, and the English left them to the care of the elements.

The "Invincible" Armada came, saw, and fled, the remainder of the story of the ill-fated expedition being merely a record of the difficulties, dangers, and disasters which befel the remnant in attempting to clear the Scotch and Irish coasts on their journey home to Spain. Thomas Fenner, who followed them so far as the Firth of Forth, and left them on Aug. 4 with a couple of pinnaces to keep an eye on their future movements, records their utter demoralisation. The gale increased, none stopped to succour a comrade, many foundered in the North Sea or were wrecked on the Scotch coast, more came to grief on the rocks of Ireland, and of the vessels which left the Tagus barely half returned. Of the 30,000 men who sailed in the Armada scarce one-third got back home again; those that the bullets of the English did not reach fell victims to the winds and the waves, the rocks and the shoals, hunger and thirst, or the savages of Ireland.

This was a sufficiently tragical termination to the expedition which less than a twelvemonth before had menaced the country so terribly. Never since has the English nation been exposed to a danger seemingly so imminent and so overwhelming. The lessons of the occurrences sank deep into the hearts of the people of that time. Their importance is not lessened by the three centuries that have passed. The defeat of the Armada taught friend and foe alike that Britain's shores are inviolate so long as Britain's fleet is efficient. The peril was undoubtedly increased by the procrastinating imprudence and vacillating policy of the authorities. It is a sufficient commentary on the state of affairs on shore that the preparations for the protection of the Thames were not even completed at the date of the fight off Gravelines. At the time that Queen Elizabeth was reviewing her troops at Tilbury the Armada was a scattered and defeated host. It was no mere chance, too, as Professor Laughton points out, that made our ships more handy, more weatherly, and more heavily armed than those of the enemy. These advantages were due to the foresight and enterprise of the English naval commanders, and not to them was the shame that these memorable battles were fought and the discomfiture of the enemy assured by seamen whose wages were unpaid, who were half-starved, and lamentably ill-supplied with the munitions of war.

Well might the Queen in State attend a public thanksgiving at St. Paul's, well might prayer and praise go up in gratitude for the Divine mercy. England had been true to herself, and no differences of religion or of politics had been able to weaken the national unity. To the safe keeping of her sons had been confided the integrity of the island, and under Divine Providence they had nobly sustained the trust reposed in them. We may well take the advice which Thomas Delany, in a contemporary ballad, gave his countrymen:

O noble England
Fall downe upon thy knee
And praise thy God with thankfull hart
Which still maintaineth thee.
* * * * *
And you deare bretheren
Which beareth armes this day,
For safeguarde of your native solle,
Marke well what I shall say.
Regarde your duelies faithfullie,
Thinke on youre countrie's good
And feare not in defense thereof
To spend youre dearest bloud.

The old anchor, represented in one of our smaller engravings, lies, with several other naval trophies, outside the building of the Royal United Service Institution, in Whitehall Yard. It was found on the coast of Donegal, where, and on the coasts of the Bay of Sligo, of Mayo, Galway, Clare, and Kerry, many of the ships of the Spanish Armada were wrecked on their way homeward from the North Atlantic. This anchor was presented by Admiral Ommaney, R.N., to the United Service Institution.

Mr. H. C. Rothery, the Wreck Commissioner, has, owing to continued ill-health, resigned his office.

At a meeting in Birmingham on July 5 a scheme was approved for a ship-canal from Birmingham, viâ South Staffordshire, the Potteries, and Cheshire, to the Mersey above Liverpool.

Prince Alexander of Battenberg, while out driving on Sunday, July 8, lost control over the horse, which fell down a precipice, dragging the carriage with it. The Prince saved himself by clinging to a bush.

Among the numerous meetings of societies for benevolent purposes recently held are the following:—The anniversary festival of the Royal Caledonian Society, at which £850 was subscribed; that of the Newsvenders' Benevolent and Provident Institution, the subscriptions amounting to £456; that of the Gardeners' Royal Benevolent Institution, donation of 1000 guineas being announced, of which £200 came from gardeners in small sums; that of the Cabdrivers' Benevolent Association, the subscriptions reaching £662. The Duchess of Albany visited Caterham on July 7, and distributed the prizes gained during the last term by the children of the Warehousemen and Clerks' Schools. The Merchant Seamen's Orphan Asylum have received from Captain Goddard, of the ship Melbourne, the balance of his contribution of £1000 to the institution. Lord Meath presided at the midsummer festival of the British Orphan Asylum, at Slough, on July 7. The Countess of Meath and a number of clergy and ladies and gentlemen also attended the proceedings. The anniversary festival of the Metropolitan Hospital was held at the Hôtel Métropole on July 11. What was described as a "Silver Wedding Celebration" took place at the National Hospital for the Paralysed and Epileptic, in Queen-square, Bloomsbury, on July 5. The arrangements, which were very varied, included a flower-show and conversaziones in the afternoon and evening. The Lord Mayor presided in the Mansion House at a meeting in aid of the fund for building the new Hospital for Women. He said that £8000 had been subscribed out of £20,000 which was needed. Resolutions in support of the object were passed. Princess Beatrice, who was accompanied by Prince Henry of Battenberg, paid a visit to Greenwich on July 10 for the purpose of laying the foundation-stone of the new Jubilee almshouses, which are to cost £1800, of which sum £1200 has been already subscribed. On the same day the Duchess of Teck distributed the prizes to the boys of the All Saints' Orphanage at Lewisham, an institution in which members of the Royal family have always taken a great interest.

THE KENNEL CLUB DOG SHOW.

The thirty-first exhibition of sporting and other dogs, held by the Kennel Club, took place this year at the Ranelagh Club, Barn Elms, Barnes. The entries were 1300 in number. In the challenge class for dogs, the prize was awarded to Mr. Brough's Barnaby, and that for bitches to Mrs. A. J. Dangerfield's Jaff; in the open dog class, the first prize went to Dr. C. A. Longest's Alchemist. The mastiffs were a good collection; the first prize in the challenge class went to Mr. J. Sidney Turner's champion Beaufort; Mr. G. Willin's champion Cambrian Princess was first in the corresponding female class. In the open dog class, Mr. H. K. E. Van Doorne's Wodan was first. There was an excellent show of St. Bernards; in the challenge class for rough and smooth coated dogs, Mr. H. W. Roberts's Pout took the prize, Dr. Inman's Plevna taking that for females; in the open rough-coated dog class, Mr. W. Jones's Young Wallace was first. In the open class for smooth-coated dogs Mr. L. Oppenheim's Austin Friar was first, Mr. G. Porter's Her Majesty II. being first among the opposite sex. Mr. J. F. Smith's Red Cross was first in the class of St. Bernard dog puppies. Mr. G. Chapman's Lady Teazle, Mr. W. Game's Esher Charlie, and Mr. E. Nichol's Miss Jummy took prizes among the Newfoundlands. In the challenge class for Great Danes, Mr. Reginald Herbert took the prize by the aid of Vendette. The champion prize for the challenge class of Irish setter dogs was awarded to Mr. M. H. Mills's Kildare, and for females, to the Rev. R. O'Callaghan's Aveline. The retrievers were a good collection; the prize in the challenge class for smooth-coated retrievers was awarded to Mr. Shirley's Moonstone. Viscount Melville's Gloom took the prize in the challenge class for curly-coated retrievers. Our illustrations represent some of the prize-winners and other dogs.

MR. R. BRYAN'S GREAT DANE, ZOTA, 1ST PRIZE.

LONG TESTED. | By Her Majesty's Royal Letters Patent. | NEVER EQUALLED.

PAMPHLET AND ADVICE FREE.

HARNESS' ELECTROPATHIC BATTERY BELT.

PAMPHLET AND ADVICE FREE.

The only Guaranteed Genuine Galvanic Curative Appliance recommended by the highest Medical and Scientific Authorities.

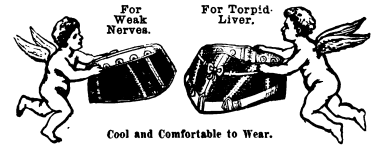
If you are suffering from any slight derangement, with the cause of which you are acquainted, you will find that HARNESS' ELECTROPATHIC BELT affords a perfect means for the self application of Curative Electricity. It is cool and comfortable to wear, produces no shock, and is absolutely certain to do good in every case. The thousands of testimonials in favour of HARNESS' ELECTROPATHIC BELT speak for themselves. A large number of them are published in "HARNESS' GUIDE TO HEALTH" (gratis and post-free); but sufferers are invited to call, if possible, at 52, OXFORD-STREET, London, W. (corner of Rathbone-place), and examine them personally, inspecting the originals. IF YOU HAVE ANY REASON to fear that your sufferings are serious or complicated, you are recommended to call; or, if you reside at a distance, to write for a private "Advice Form"; which will be sent you by post (with Pamphlet), free of charge.

HARD FACTS. Every advertised article is not a fraud and a delusion. Thousands of Patients gratefully remember the day they saw our advertisement, and gave the natural and rational system of ELECTROPATHY a trial.

HARD FACTS. The few Testimonials in favour of Electropathy published herewith are not written to order nor by a few personal friends—they are from utter strangers, and are taken indiscriminately from *thousands of unsolicited repots* received, which may be seen by anyone interested at Mr. C. B. HARNESS' Consulting Rooms, 52, OXFORD-STREET, London, W. (corner of Rathbone-place).

HARD FACTS. Electricity is not simply something to make the muscles contract and jump. The healing properties of Electricity, as exhibited under Harness' world-famed "Electropathic" Treatment, are multifarious.

Mr. HARNESS should be consulted at once, either personally or by letter, by all who suffer from



Nervous Exhaustion,	**Kidney Diseases,**	**Spinal Weakness,**
Sleeplessness,	**Epilepsy,**	**Liver Complaint,**
Brain Fag,	**Paralysis,**	**Consumption,**
Rheumatism,	**Indigestion,**	**Female Disorders,**
Lumbago,	**Constipation,**	**General & Local Debility.**
Sciatica, Gout,	**Neuralgia,**	**Functional Disorders, &c.**

HARNESS' ELECTROPATHIC APPLIANCES

Promptly, Absolutely, and Permanently CURE.

PREMATURE OLD AGE! LOSS of VITAL ENERGY, NERVOUSand GENERAL DEBILITY, and all ORGANIC DERANGEMENTS yield more readily to the healing influences of mild Electricity, as generated by wearing HARNESS' ELECTROPATHIC APPLIANCES, than to any Drug known to Science.

MR. C. B. HARNESS,
CONSULTING MEDICAL ELECTRICIAN
(President, British Association of Medical Electricians),
AND PIONEER OF THE
"ELECTROPATHIC" TREATMENT,
Gives Advice Free, personally or by letter.

Cool and Comfortable to Wear.

A Blessing to Men. A Boon to Women.

Special Free Pamphlets.
FOR LADIES, on "Diseases of Women."
FOR MEN, on "Nervous Disorders."
CALL OR WRITE TO-DAY.

Mr. C. B. HARNESS,
CONSULTING MEDICAL ELECTRICIAN
(President of the British Association of Medical Electricians), gives
ADVICE FREE,
Either personally or by letter, on all matters relating to **HEALTH,** or the application of Curative Electricity.

MEN AND WOMEN

Who wear HARNESS' world-famed ELECTROPATHIC BELT find that it promptly Restores **Impaired Vital Energy,** Invigorates the Debilitated Constitution, Stimulates the Organic Action, Promotes the Circulation, Assists Digestion, and Promptly Renews that Vital Energy, the loss of which is the first symptom of decay. Healing Properties are Multifarious; it Stimulates the Functions of Various Organs, increases their Secretions, Gives Tone to Muscles and Nerves, Relaxes Morbid Contractions, Improves Nutrition, and Renews Exhausted Nerve Force. Acting Directly on the System, it Sustains and Assists its Various Functions, and thus Promotes the Health and Vigour of the entire Frame.

THE FOLLOWING ARE A FEW EXTRACTS FROM THE thousands of unsolicited **TESTIMONIALS** *received by Mr. Harness. The public are invited to call and inspect the Originals at the Electropathic Consulting Rooms, 52, Oxford-street, W.:—*

NERVOUS EXHAUSTION.—Captain S. ESTALL, of 21, Chesterterrace, Sliderland, writes:—"Harness' Electropathic Belt has done me a power of good. I feel myself about twenty years younger since I have worn it."

INDIGESTION.—WILLIAM SHEETON, Lower Wyke, near Bradford, Yorks., writes:—"My general health is a great deal better since wearing your Electropathic Belt. It has done me more good than all the patent medicines I have ever taken."

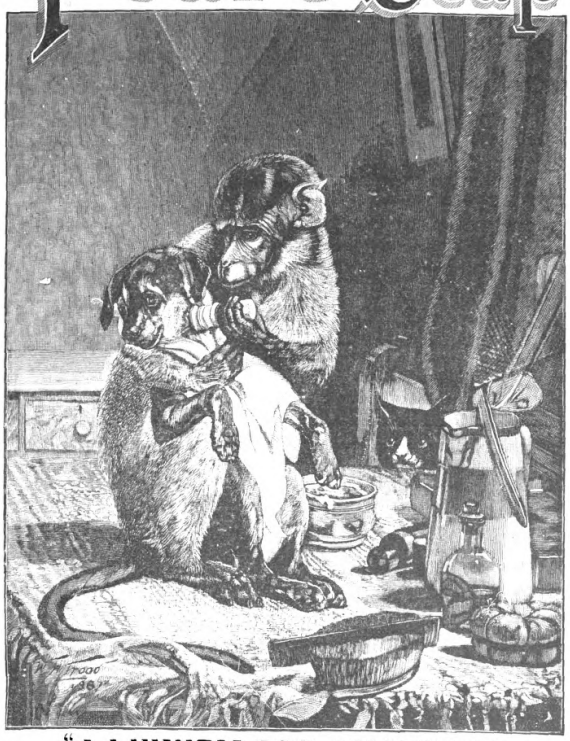
PARALYSIS.—ROBERT ROTHWELL, 9, Cooke-street, Hulme, Manchester, June 8, 1888, writes:—"The Electropathic Belt my father purchased for loss of nerve power and paralysis has made a new man of him, and it was only the other day that he told me he would have been in his grave long ago if it had not been for your valuable Electropathic treatment."

EPILEPSY.—ARTHUR HEWELL, Wood-road, Geddington, Kettering, June 4, 1888, writes:—"I cannot speak too highly of your Electropathic treatment, as I am sure it has been a great boon to me. I used to have the fits several times a day, but now I have none, and the peculiar sensations incidental to this distressing disease entirely left me after wearing your appliances."

PAINS IN THE BACK.—The Rev. R. ANTRIM, Vicar of Slapton, King's Bridge, South Devon, writes:—"The pain across the loins has quite left me. My nervous energy is greatly augmented since wearing Harness' Electropathic Belt."

CHRONIC LUMBAGO AND SCIATICA.—Captain GEORGE MORRIS, Royal Mail S.S. Alaska, Liverpool, June 16, 1888, writes:—"In reference to the Electropathic Belt I had from you some time ago—I was then a great sufferer from Chronic Lumbago and Sciatica, and wore your Belt for a short time next my skin—I have now left off the Belt and have never had any trouble with my back since. *Whenever I feel any fatigue* from exposure, I wear the Belt for a few days, and it has never failed yet to give me relief."

NERVOUS DEBILITY.—A. A. JAMES, Esq., F.R.H.S., Chapel-road, Lower Norwood, London, S.E., writes:—"I have obtained great benefit from wearing your Electropathic Appliances. The pains in my head have left me, and I feel stronger both generally and locally."



SLEEPLESSNESS.—The Right Hon. LORD BYRON says that "Harness's Electropathic Belt is invaluable for Sleeplessness."

RHEUMATIC GOUT.—Major PAKENHAM, Longstone House, Armagh, writes:—"Your Electropathic Belt has completely cured me of Rheumatic Gout."

SCIATICA.—Mr. R. J. WATSON, Proprietor "Harwich Free Press," 13, Market-street, Harwich, writes:—"Harness Electropathic Belt has completely cured me of Sciatica. After wearing it for a week I got relief, and have gradually been getting better, and am now quite free from pain. P.S.—You are at liberty to publish this."

OUR NOTE BOOK.

BY JAMES PAYN.

A suggestion has been recently made by a literary humourist that no work shall receive its "imprimatur" till fifty years after its author's death. The idea is meritorious; but what is more noteworthy is the false premises, though they meet with such general acceptance, on which it is founded. It seems generally argued that the merit, or the demerit, of every book is to be settled by the verdict of Posterity. Why? On what grounds is it supposed that our descendants shall be better judges of what is good or bad in literature than ourselves? So far as such a thing can be investigated, the evidence seems all the other way; for it is to be observed that the people who are always cackling about Posterity and prophesying with their goose-quills about this or that author's place in letters a hundred years hence, are, invariably, praisers of the Past at the expense of the Present. It is probable they have no genuine admiration for it, and only pretend to have, in order to be as uncivil as possible to their contemporaries: just as a twice-married woman will praise her first husband, though she didn't care twopence about him, in order to annoy her second; but one should be logical even in one's pretences. Now, if the last generation of writers and thinkers is so superior to our own, and the one before that to it, and so on and so on, it surely follows by analogy that the next generation to ours will be inferior to *it*, and the next—which is Posterity—of still less account. Every Spring, I notice, when the trees are putting on their leaves and the birds are beginning to sing, some jaundiced writer, as if disgusted with Nature being as fresh as ever, rates and prates in some antediluvian review or another about the degeneracy of literature, and of how inferior To-day is to Yesterday, and of how little even what seems to be good now will be thought of To-morrow. And so it has always been. Goldsmith complained of it; Dryden complained of it—though one wonders now why they thought it worth their while. It is only reasonable that the Past, in letters as in everything else, should "win a glory from its being far, and orb into the perfect star," unseen by those who moved therein: but how foolish, groundless, and unprofitable is all this envious cant about Posterity! The great master of humour perceived this, we may be sure, when he exclaimed, "I'll write for antiquity!"

Does anyone know who wrote "Young Mistley"? *I* don't. Whether it will be read by Posterity or not it is hard to say, and also not of much consequence; but in 1888 it is very pleasant reading. The idea of making one of our Foreign Office or Indian Office young gentlemen the hero (a real one) of a novel, and endowing him with all the patriotism and ten times the sense of a Russian Nihilist, is quite new. To those who understand such matters the conclusion of the book, I think, will show the true novelist, for it must have been provided for from the first. One ought to hear something more of "Young Mistley's" papa.

One is always afraid of "telling a story"—not a falsehood, which, unfortunately, has few terrors for us—but an amusing anecdote. There is always somebody who is ready to say he has heard it before (whether he has or not), and lots of people to believe him. Still, so far as I know, the following anecdote is new; the subject most certainly is, for it shows how a young gentleman made money by publishing a book of poems. He had his doubts himself whether it would pay, especially after it had appeared; and when good-natured friends (whose kindness, we may be sure, stopped on the wrong side of buying it) said, "You will be half ruined," he was rather inclined to agree with them. At last, in fear and trembling, he wrote to the publisher to know the worst (which he had calculated at £80). "Let me know how many of the edition have gone off," ran his humble epistle; "and what is the balance I owe you." The publisher wrote back: "Dear Sir,—Your whole edition has gone off, leaving a balance of £20 in your favour; cheque inclosed." The poet was in the seventh heaven, and yet not satisfied; he rushed to the publisher's to inquire who had bought the book—friends, enemies, Mudie, or who? "My dear Sir, I think you had much better not ask." "Not ask? Why not? You wrote to say the edition had been all sold: it must have been sold to somebody." "Pardon me, I wrote that it had 'gone off': so it had, the whole of it. There was a fire in the warehouse, and the contents were insured."

The institution of hospitals has hitherto been reckoned as the highest form of benevolence and civilisation; but the Asylum for the Ugly, which I read has been established in Massachusetts, seems to surpass it: for persons who subscribe to an hospital, though not ill at present, may do so from the apprehension that they may some day require its benefits; whereas handsome people (like the reader), though they may grow old, can never grow ugly. The idea of the founders of this charity is that beauty is a matter of comparison, and that if plain persons were restricted to the society of the plain, it would lead to matrimony. "Love is of the valley," says the poet, and the valley is in some sense the plain. On the other hand, another poet (your poets are so conflicting) tells us "Love is Truth; Truth, Beauty," which, by an application of Euclid, would seem to prove that Love is Beauty. Certainly, if the theory of heredity is to be trusted, this benevolent scheme will probably increase and perpetuate ugliness, which is hardly to be desired. I can only remember one instance of its being an advantage, and I need not say it did not occur to a female. The Duc de Roclore, the witty favourite of Louis XIV., was not only more than "ordinary looking," but what is called in Wiltshire "sinful ordinary"—a very plain man indeed; but his acquaintance, Count Tonson, was plainer. This gentleman, having no beauty to spoil, was a great duellist, and having killed some *persona grata* of the Court, was condemned to death for it. The Duke interceded for him, and with great difficulty obtained his pardon. "Why should you have taken all that trouble to save Tonson?" inquired the King: "he is not a friend of yours." "Not at all, Sire," replied the Duke, "but if he had suffered, I should then have been the ugliest man in France."

As to the particular rights of the matter in the case of the owners of Latrigg v. the Public Enjoyment, I know nothing; but I am glad, indeed, that it has turned out as it has done. The Lake country is now almost the only district in England where a country walk—that is, a walk not along a high road with walls or hedges on both sides of it—is practicable. The Footpath, which used to be the great attraction of our rural districts, is generally ornamented with a board with "Trepassers Beware!" on it. "Little think the proud ones, who in their coaches roll along the turnpike-road," what hard work it is to walk upon it on a dusty day. This year, of course, it does not signify; one could take a boat: but there will be dry summers some time or another, I suppose. The idea of not letting people climb a mountain because it is private property, is a little too monstrous. But for the good people and their like who have fought the good fight of Latrigg in the law court, we should no doubt lose the privilege of breathing in all open spaces. "Notice! The air here is the exclusive property of the Lord of the Manor, and those who inhale it will be prosecuted as the law directs."

It is one thing for a popular author to be courted, and quite another to be county courted. This has just happened to a lady who "for more than thirty years has been writing church books for children," which seems to make the position still more deplorable. The incident is noteworthy as illustrative of the science of begging-letter writing in connection with literature. The defendant was accused of issuing lithographical appeals, chiefly to clergymen, stating that she could not live very long, though it was probable that the disease from which she was suffering would not for two or three years assume a vital form. In the meantime it seems that not only white meat was necessary for her, but that her turkeys should be boned. The plaintiff, who had lent her £20 "to enable her to retain the copyright of a book," made as great a point of this as if the lady had herself "boned" the turkeys. I do not myself see why, having got possession of the bird, she should not have made the best of it, especially as it was for the entertainment of "a Knight and his wife." When persons of quality honour the likes of us poor literary folk with their company, we naturally wish to entertain them with the viands to which their position has accustomed them. There were, it is true, some other points in the case less in the defendant's favour; but who can find fault with her suggestion to her creditor the divine?—"Would a few of my books be of any service in your parish?" It is a question I should like to ask, myself, of any beneficed clergyman, if I thought it would be of any good (to *me*); for it is probable that she did not intend to send them gratuitously for circulation in the Free Library. For my part, I am very grateful to her that she seems to have confined her applications to the clergy and refrained from importuning those of her own cloth. She may, it is true, have had reason to know that they have very little to give; but I prefer to believe that the excellent principle of hawks not picking out hawks' een, or (less poetically) of dog not eating dog, forbade it.

It is strange, indeed, considering how numerous must be the failures in the calling of letters, how few of those who pursue it adopt this method of bettering their fortunes. When it does occur there is often nothing to be ashamed of; it seems natural enough that a poor fellow on the lowest of the steep steps that lead to literary success should say to his more fortunately placed brother, "Pray lend me a hand." At the same time, it must be confessed, I have known cases not altogether to the credit of the literary applicant. It is not right (and also very injudicious) to write on a Monday for assistance in a misfortune which the person appealed to has relieved on the previous Wednesday: of course, this is the result of a mistake—the inefficient keeping of a correspondent-book—and proves how just is the remark that literary persons are seldom good business men; but it is fatal. Moreover, I object to defray the expenses of a gentleman in London to his native land, "where literary genius is appreciated" (Ireland), more than twice during the same autumn. Finally, the lithographical form seems to me antagonistic to sympathy, especially when (as in a communication I received this very morning) it commences thus: "I am of gentle blood; born of an ancient, but not wealthy, family in the North. I little thought in my youth to be reduced to live by my pen." Of course, literature is not a lofty pursuit, but an antithesis of this kind does not recommend itself to me personally.

The "Old Times" coach, with its feat of going from London to Brighton and back in less than eight hours, has not only revived the old times, as the phrase goes, for speed, but surpassed them. It seems that anything can be done (with one exception—that of ballooning) in the way of locomotion, and also of athletics, quicker and better than it used to be, if only there is a little money upon it. But save in England there would hardly have been such a fuss about a coach journey. Fourteen miles an hour is certainly a wonderful rate for a road vehicle to travel for over a hundred miles, and the changing of four horses in forty-seven seconds—the time, it is said, that passengers by the "Old Times" were allowed to spend in Brighton before the new four-in-hand started with their heads turned the other way—is a rapid act. But this passion for coaching seems confined to us English. It blossomed late, however. The first coach was made in Hungary, and called a "kochy," from the place (Kottse) where it was made, so that our children's name for it ("coachy-poachy") is more accurate than is supposed by their elders. In France the first coach was manufactured for Jean De Lavel de Bois-Dauphin, because his enormous bulk prevented his riding on horseback. But long after that Queen Elizabeth had no coach, but was content to journey from London to Exeter on a pillion behind the Lord Chancellor—an historical picture which has yet got to be painted, I believe. In Germany coaches were prohibited in 1588, "because," says the Proclamation of the Duke of Brunswick, "manly virtue, sincerity, boldness, honesty, and resolution" were being lost to the aristocracy through its indolent habit of travelling on wheels. In Spain the coachmen were done away with, for a curious reason: the Duke d'Olivares found that a State secret he had communicated to a friend in his coach had been overheard and revealed by his driver; whereupon a Royal decree was issued by which the place of the driver was made similar to that of our postillion—namely, on the first horse to the left. It is strange, considering how our gilded youth pant to be coachmen, that none of them years to be postboys.

QUEEN NATALIE OF SERVIA.

The suit now pending for a matrimonial divorce, or a decree of separation, between King Milan of Servia and his Queen is referred to an ecclesiastical tribunal of three prelates of the Greek Church established in that kingdom. In the meantime, her Majesty has been deprived of the custody of her only child, the Crown Prince of Servia, who is nearly twelve years old. Milan Obrenovitch, who was elected reigning Prince of Servia in 1868, and obtained the title of King in 1882, married, on Oct. 17, 1875, Natalie, daughter of the Russian Colonel De Kechko and of Princess Pulcheria of Stourdza. The bridegroom was, at that time, twenty-one years of age, and the bride only sixteen. Their child, Prince Alexander, heir to the Crown of Servia, was born Aug. 4, 1876. The Queen has never been accused or suspected of any misbehaviour as a wife, but she entertains strong political sympathies with Russia, which she has persisted in manifesting by language and correspondence and acts tending to cause serious embarrassment to the Servian Government; and she has continually disobeyed and defied the King's authority in this respect. His Majesty has, therefore, demanded a legal separation on the alleged ground of "incompatibility of temper." The Queen was sojourning at Wiesbaden, in Germany, when King Milan requested that his son, the Crown Prince Alexander, might be given up to him; this demand was approved by the Emperor William II. of Germany, whose Government sent orders to enforce it, at the same time requiring the departure of the Queen from Germany. Her Majesty had attempted to make arrangements for flight with the Crown Prince; but on Thursday, July 12, the Chief Superintendent of Police called at her villa at Wiesbaden, to inform her that the boy would be taken away next day, and that she must go within a few hours after his departure. The Servian Minister of War, General Protics, sent by King Milan to fetch the young Prince, arrived in Germany; and, on Friday morning, received the boy, who seemed glad to return to his father. He was met by King Milan, next day, at a railway-station in Hungary, and was brought in the evening to Belgrade, the capital of Servia, amidst great official, military, and popular demonstrations of welcome. Queen Natalie, having left Wiesbaden, arrived on Saturday night at Vienna, where she was met by her sister and Prince Ghika, but no attention was paid to her by the Austrian Government; and the Russian Ambassador, Prince Lobanoff, was the only diplomatic or official personage who called on her, though many sympathising friends gathered around her on Sunday, when she attended service in the Russian chapel. Her Majesty left Vienna for Paris on Monday, and intends to go to Florence for some time.

THE NAVAL MANŒUVRES.

The series of manœuvres, in rehearsal of warlike operations, in St. George's Channel, and round the coasts of Ireland, to be commenced on Tuesday, July 24, by two opposed divisions of the British fleet, one performing the part of an enemy, has attracted considerable attention. The defending force, under command of Vice-Admiral Baird, consisting of two squadrons, the "A. 1." squadron and the "A. 2." squadron, the second of which is commanded by Rear-Admiral Rowley, left Spithead on Monday, July 16, for Milford Haven and the Firth of Clyde. The hostile force, composed of the "B. 1." squadron, under Rear-Admiral Sir George Tryon, commanding the whole of this B. fleet, and the "B. 2." squadron, under Rear-Admiral R. O'Brien Fitzroy, on the same day left Portland, the one squadron for Berehaven, on the south-west coast of Ireland, the other for Lough Swilly, on the north coast. The duty of Admiral Baird's force, the two "A." squadrons, is to prevent the two divisions of Sir George Tryon's force, the "B." squadrons, uniting anywhere on the Irish coasts, or, if they do join, to engage them with superior fighting power. Our Special Artist furnishes an Illustration of the united "B." squadrons as they lay at Portland, before going to occupy their posts on the northern and western shores of Ireland; consisting of the ironclads Hercules, Devastation, Ajax, Hero, and Black Prince, in the "B. 1." squadron; and the Rodney, Invincible, Rupert, Iris, Calypso, and Warspite, in the "B. 2." squadron; to which several cruisers and torpedo-boats are attached. The two "A." squadrons, of Admiral Baird's defending force, are stronger in their composition; the "A. 1." including the Northumberland, Benbow, Collingwood, Conqueror, Monarch, Hotspur, and Northampton; and the "A. 2." having the Agincourt, Inflexible, Neptune, Belleisle, Iron Duke, and Shannon; also with cruisers, gunboats, and torpedo-boats.

Admiral Hamilton and General Nicholson, accompanied by representatives of the War Office and Admiralty, visited Liverpool on July 16, and had a conference with representatives of public bodies as to the defence of the Mersey.

An afternoon concert was given at Stafford House, by permission of the Duke and Duchess of Sutherland, on July 18, in aid of the funds of the National Physical Recreation Society, established for promoting physical recreation, more especially among the working classes. Many distinguished artistes took part in a very interesting programme.

The Royal Agricultural Show at Nottingham closed on July 13, when 55,000 persons paid for admission. The total attendance during the week numbered 167,000. These figures have been exceeded only on two occasions in the history of the society—at Manchester in 1869, and at Kilburn in 1879. The receipts at the gate during the meeting were over £10,000.

Her Majesty's Government have awarded a gold shipwreck medal to Captain A. De Moor, of the Belgian pilot-cutter No. 7, in recognition of his kindness and humanity to the mate and four of the crew of the Albert, of Hull, whom he rescued from the disabled Norwegian brig Ruth, on March 19. They have also awarded a gold shipwreck medal to H. Ghys, pilot, and silver shipwreck medals and the sum of £2 each to P. Aspeslagh, assistant-pilot, and H. Nents, apprentice, who manned the rescuing boat.

THE SILENT MEMBER.

The Marquis of Salisbury, in entering the House of Lords on the Twelfth of July, appeared to be so surprised at the exceptionally large assemblage of Peers, and at the unusual gathering of Peeresses, that he dropped down on the woolsack, presumably to enjoy a genial chat on the matter with that personification of good-humour, Lord Halsbury. The Duke of Argyll had indubitably a distinguished audience. Conspicuous amid the galaxy of noblewomen in the gallery to the left of the throne was Lord Sherbrooke, still bearing his blushing honours thick upon him, and escorting Lady Sherbrooke with the devotion of a husband-lover in the first stages of the honeymoon. Mr. Phelps, the American Minister, sat close by his Lordship. The scene looked all the brighter from the fact that the diminished Court mourning was relieved by the light summer hues of many of the ladies' bonnets and dresses.

His Grace, in rising with some solemnity to move his resolution approving the action of the Government in protecting the loyal subjects of the Queen in Ireland, became the centre of interest. The noble Duke was listened to with attention by the occupants of the Ministerial and Opposition benches alike; Earl Granville, especially engrossed, now and again turning round to regard his eminent ex-colleague. As has been his custom of late years, the Duke of Argyll spoke with the gravity of an inspired prophet. But, alas! his speech was out of date. It sounded like a lament carefully prepared a couple of years ago in the event of Mr. Gladstone's anathematised Irish Home-Rule Bill reaching the Upper Chamber. It had been preceded by a whispered conference between Lord Knutsford and Lord Rosebery, who may or may not have agreed to raise no debate on the motion. Certainly, when the Duke of Argyll sat down after his prolonged lecture, and the Lord Chancellor's putting of the question met with no negative, there was an involuntary ripple of laughter at the collapse. It was as though his Grace had oracularly said, "In the name of the prophets," and the House had answered "Figs!"

The need of the new County Council for London was clearly exemplified on the Thirteenth of July, when the time of the House of Lords was actually taken up by the purely local subject of the nightly fair held on the disused burial-ground adjoining Whitfield's Tabernacle in the Tottenham-court-road. In response to the Earl of Meath, Lord Brownlow was driven to admit that, if the scandal could not be removed by the existing law, the Government would have to introduce a Bill to stop the nuisance. Other matters of minor importance have distracted attention from subjects of Imperial moment. There was a notable exception on the Sixteenth of July, when Lord Knutsford, as Secretary for the Colonies, concurred with the sentiments of deep regret expressed by the Earl of Carnarvon, Lord Kimberley, and the Earl of Derby at the death of Sir John Brand, President of the Orange Free State. Before the House adjourned, Lord Knutsford had the satisfaction of reading the following reassuring telegram from the British officer in command at Etshowe, in Zululand:—"I have relieved Pretorius by flying column under M'Kean, establishing post at official residence. Am taking energetic action against rebel chiefs in district of coast, restoring good order."

Mr. Parnell, on the Twelfth of July, had to hurry to his seat in the House of Commons to be in time to interrogate Mr. W. H. Smith regarding the desired Select Committee to inquire into the origin of the incriminatory letters the hon. member for Cork had previously declared to be forgeries. The anticipated discussion was nipped in the bud by Mr. Smith's announcement that the Government, whilst maintaining that the proposed tribunal would not be a suitable one, were willing to pass an Act appointing a Commission of Inquiry on the subject, composed wholly or mainly of Judges, with full powers to investigate the allegations made against Parnellite members in the trial of O'Donnell versus Walter.

The heat this grave subject of "Parnellism and Crime" engenders in social circles disturbed the ordinarily cool Irish Nationalist leader himself on the Sixteenth of July. Objecting to the late hour at which it was proposed to introduce the measure for a Commission of Inquiry, Mr. Parnell rose to move the adjournment of the House, in order to enter a lively protest against the course of the Ministry on this point. But the hon. member was called repeatedly to order by the Speaker, and had at length to resume his seat, and bide his time. The intervening business transacted, Mr. Smith brought in the Special Commission Bill without naming the Commissioners, and, indeed, without remark. Mr. Parnell, who had bottled up his anger till then, in a fit of virtuous indignation assailed the Government for their conduct. Quoting the words used by the Attorney-General in the recent trial respecting the facsimile letter in the *Times*, "that without doubt, if untrue, it was the worst libel ever published upon a public man," Mr. Parnell increased in warmth, and went on to accuse Mr. Smith and Sir Richard Webster of making "themselves accomplices of this foul and disgraceful libel," and claimed the right to fully discuss the terms of the measure at a future stage. Calmly refraining from noticing the personal attack, Mr. Smith said Mr. Parnell would have the opportunity he sought on the second reading (fixed for Monday, the Twenty-third of July), and added that the names of the Judges would be stated in Committee. In the paramount interests of Parliament itself, it is imperatively necessary that these terrible charges should be proved or disproved without further delay.

Mr. Ritchie has made so much progress with the Local Government Bill in Committee that it is on the cards that there may be no extra Autumn Session after all. Perhaps the mere mention of this rod in pickle by Mr. Smith caused debate to be abbreviated. At any rate, the clauses regulating the County Council for London (which is *not* to have the control of the Metropolitan Police) were passed in double-quick time. And though the great Ministerial measure of the Session has since then been encumbered with a superfluity of petty provisions, which should, in accordance with the vital spirit of the Bill, have been left to the new County Councils themselves to settle, the beginning of the end is nigh. We seem to be within a measurable distance of prorogation in August.

Miss Frances Allitsen gave a concert at Maida-vale, by permission of Mr. and Mrs. Binnie Smith, on July 19, when several new songs of her composition were introduced; and on the 20th Madame Dukas (Miss Louisa Van Noorden) gave a concert at Messrs. Collard's, Grosvenor-street.

Italian enthusiasm waxed high at a dinner given on July 16 to a numerous body of Italian exhibitors and visitors at the Italian Exhibition in London. The president of the reception committee, Colonel J. T. North, was in the chair, and warmly toasted the distinguished Italian statesman on his right, Signor Bonghi, who replied in an eloquent speech laudatory of the Italian Exhibition. In a resonant speech, delivered in Italian, Mr. J. R. Whitley dwelt on the good effects of the fine Exhibition he has organised, and called upon the company to drink to the health of the Prince of Naples, their honorary president, whose visit is postponed.

THE PLAYHOUSES.

It is an old axiom in theatrical matters that it is only necessary to abuse a play sufficiently to secure for it a long and lasting career. Faint praise is death to the drama. Sufficient laudation or sufficient execration is its life-blood. Seldom has a work been so roundly abused for its coarseness, brutality, and vulgarity as Sardou's "La Tosca"; and yet it has done better and drawn more money than any play ever produced by the enterprising M. Mayer. In fact, the "Tosca" or Sara Bernhardt, the bad play or the good acting, or both, are so successful that it has been necessary to postpone for a week the first performance of the new comedy, called "Francillon," by Alexandre Dumas. Only one last word about this wretched "Tosca." It is astonishing to find so many able writers commenting on Sardou's dialogue with special favour, and lauding the work to the skies as a piece of dramatic literature. Well; we can only trust our ears. The play is not printed, so there is no proof to enforce our argument; but, judging by the ear only, the dialogue of "La Tosca," both in its serious and comedy scenes, is about as cheap stuff as was ever turned out by an experienced playwright. It is exactly in this poverty of dialogue, in this literary depression and meanness of style, that the play strikes one as so intolerably vulgar. If ever subject required poetry, or even theatrical rhetoric, or something rich and grandiloquent in expression, in order to lift it out of the mire of commonplace, it is this one. It wants dignity of expression and poetic prose. But this is exactly what it does not get from Sardou. He has never yet sold to the public such shoddy. As to literature—why, ten times better exercises of literature can be found in the old British transpontine plays preserved in the invaluable stores of Mr. Samuel French, of the Strand.

The Lyceum Theatre is likely to open again, after Sarah Bernhardt's departure, far sooner than was expected. Mr. Richard Mansfield had made all his arrangements to start his autumn campaign with his version of Louis Stevenson's "Dr. Jekyll and Mr. Hyde" about Sept. 3; but much to his surprise, he discovers that Mr. Daniel Bandmann intends to forestall him with another version of the same story, for which purpose he has taken the Opéra Comique Theatre, and advertises that he intends to open it on Aug. 6 (Bank Holiday). Mr. Mansfield, having ascertained these facts, will by a desperate effort push on in order to anticipate Mr. Bandmann's venture, so that it is not at all improbable that we may have to welcome Mr. Mansfield very early in August instead of very early in September. Meanwhile, all our leading theatres are closing their doors. Mr. Beerbohm Tree, at the Haymarket, and Mr. Wilson Barrett, at the Princess's, have both said good-bye to their friends and promised to return as soon as possible, in good health and with new plays. This evening (July 21) we shall see the last of the celebrated Hare and Kendal management at the St. James's: the old friends will separate and go on their several ways rejoicing, amidst feelings of universal and cordial respect, only, we trust, to spring up again elsewhere—starting fresh enterprises with renewed energy. On the same evening Mrs. Bernard Beere will take her benefit at the Opéra Comique, and relinquish for the moment the many cares and anxieties of management.

As matters stand, new plays come out fitfully, and, such as they are, seem scarcely worth the trouble of producing. For instance, what good purpose is gained by exhibiting in public, even at a matinée, such a work as "Conscience," by Mr. Edward Litton, that wasted a recent afternoon at the Vaudeville? It did not require even the eye of an expert to prove that such a work, ambitious though it might be, was not good enough for public representation, and might well have been left in the author's desk. But these authors with their first children are irrepressible. They are like a hen with one chick. They firmly believe that the managerial protest against the definite claims of the "great unacted" is a just one; but, all the same, *they* have a play which is, perhaps, "the best thing of the kind ever seen, etc."! They want the managers to reject everyone else, but to accept them. In theatrical affairs, the ordinary laws of human nature are strained. There ought to be a word coined to represent the sublimation of human vanity.

The strike of match-girls employed by Messrs. Bryant and May has been settled.

Mr. Haden Corser, of the Oxford Circuit, has just been appointed Recorder of Much Wenlock, in succession to Mr. Plowden, recently appointed a Metropolitan Police Magistrate.

The Leeds Town Council have resolved to purchase the Coloured Cloth Hall estate, opposite the Wellington Railway Station, and the block of buildings called Quebec-buildings, for the purpose of widening and improving the streets—£66,000 to be offered for the Cloth Hall estate, and £38,000 for the Quebec estate.

The match between the Australians and the English Eleven at Stoke ended, July 13, in a victory for the Colonists by an innings and 35 runs. The match between Eton and Harrow ended at Lord's, on July 14, in a victory for the Harrovians by 156 runs; and at Kennington Oval the Players defeated the Gentlemen by an innings and 39 runs. In the ninth match between England and Australia, which was concluded at Lord's on July 17, victory rested with the Colonials, who defeated the home team by 61 runs. The score now stands—five matches won by England, two by Australia, and two drawn.

The annual meeting of the governors and friends of the Reedham Asylum for Fatherless Children was held in the Cannon-street Hotel on July 17. The chair was occupied by Mr. Richard Jolly. No regard is paid to the sex or creed of those elected, but the education is conducted on the general principles of Christianity. The total receipts have been £12,241, which, after defraying all expenses, leaves a balance in the bank of a little over £1000. Twenty children were elected, ten boys and ten girls, together with the officers for the ensuing year.

A large and fashionable congregation assembled on July 17 at St. George's, Hanover-square, to witness the marriage of Mr. Frederick Heygate, son of Sir F. Heygate, Bart., and Miss Flora Walter, daughter of Mr. John Walter, the proprietor of the *Times*. The ceremony, which was fully choral, was performed by the Bishop of Derry, assisted by the Rev. H. M. Walter. The bride was conducted to the altar by her father, and was followed by six bridesmaids—Miss Heygate, Miss Maud Heygate, Miss M'Neile, Miss Amy Erskine, Miss Farrar, and Miss Portal. They wore costumes of white China silk and Valenciennes lace, and white tulle hats trimmed with Maréchal Niel roses. Each wore a pearl brooch and carried a bouquet of yellow roses, the gift of the bridegroom. The bride's dress was of white crêpe-de-Chine, covered with a deep flounce of old Spanish point lace, the corsage and train being of white brocaded moire. Her ornaments were diamonds. Mr. R. P. Maxwell acted as best man.—On the same day the church of Quidenham, Norfolk, was crowded on the occasion of the marriages of Major Frederick St. Leger Tottenham and Mr. William Dunbar Blyth to two of the daughters of the late Very Rev. Thomas Garnier, Dean of Lincoln, and Lady Caroline Garnier.

AT THE FOOT OF BEN LEDI.

Sit here in the stern of the boat, and let her drift out on the glassy waters of the loch. After the long sultry heat of the day it is pleasant to let one's fingers trail in these cool waters and to watch the reflection of the hills above darkening in the crystal depths below. Happy just now must be the speckled trout that dwell in the loch's clear depths; and when the fiery-flowering sun is ablaze in the zenith there are few languishing mortals who will not envy the cool green domain of the salmon king. But, now that the sunset has died away upon the hills, like "the watch-fires of departing angels," a breath of air begins mysteriously to stir along the shore, and from the undergrowth about the streamlet that runs close by into the loch blackbird and water-ousel are sending forth more liquid pipings. The cuckoos, that all day long have been calling to each other across loch and strath, now with a more restful "chuck! chu-chu, chu, chuck!" are flitting, grey flakes, from coppice to coppice, preparatory to settling for the night. The blackcocks' challenge, "kibeck, kibeck, kibeck!" can still be heard from their tourney-ground on the *moraine* up yonder, at the moor's edge; and from the heath above still comes the silvery "whorl-whorl-whorl" of the grouse. For these sounds can be heard far off in the stillness of the dusk. But listen to this mighty beating of the waters, and look yonder! From the shadow of the hazels on the loch's margin comes the royal bird of Juno, pursuing his mate. In his eager haste, he has left the water, and with outstretched neck, beating air and loch into foam with his silver wings, he rushes after her. She, with the tantalising coyness of her sex, has also risen from the water, and, streaming across the loch, keeps undiminished the distance between herself and her pursuer. At this, finding his efforts vain, he gives up the chase, subsiding upon the surface with a force which sends the foam-waves curling high about his breast. Disdainfully he turns his back upon the fair, and without once inclining his proud black beak in her direction, makes steadily for the shore. This, however, does not please the lady. She turns, looks after her inconstant lover, and, meeting with no response, begins slowly to sail in his direction. Suddenly again at this, with snowy pinions erect, neck curved gallantly back, and the high waves curling from his breast, he surges after her, ploughing up the loch into shining furrows. Again the coy dame flees, and again and again ere nightfall the same amorous manœuvres will be gone through. No plebeian affair is the mating of these imperial denizens of the loch. Seldom do mortals witness even this wooing of the swans.

More commonplace, though not, perhaps, less happy, are the three brown ducks and their attentive drake, which having, one after another, splashed themselves methodically on the flat stone by the margin of the lake, now swim off in a string for home. Young trout are making silver circles in the water as they leap at flies under the grassy bank; and the keen-winged little swallows that skim the surface, sometimes tip the glassy wave with foot or wing.

Before the daylight fades there are beautiful colours to be seen on shore. The fresh young reeds that rise at hand like a green mist out of the water deepen to a purple tint nearer the margin. The march dyke that comes down to the shallows is covered with the red chain-mail of a small-leaved ivy; and the gean-tree beside it, that a week or two ago raised into the blue sky creamy coral-branches of blossom, retains still something of its fragile loveliness. On the stony meadow beyond, the golden whinflower is fading now, but is being replaced by the paler yellow splendour of the broom. The rich blush-purple of some heathy banks betrays the delicate blossom of the blaeberry, and patches of brown show where the young bracken are uncurling their rusty tips.

And silent and fair on the mountain descends the shadowy veil of night. Darkening high up there against the sapphire heaven, the dome-topped hill, keeping watch with the stars, has treasured for twenty centuries strange memories of an older world. Whether or not, in the earth's green spring, it served as a spot of offering for some primeval race, no man now can tell. But long before the infant Christ drew breath among the far-off Jewish hills, grave Druid priests ascended here to offer worship to their Unknown God. On the holy eve of the First of May the concourse gathered from near and far, and as the sun, the divine sign-manual set in the heavens, arose out of the east, they welcomed his rising with an offering of fire. From sea to sea, across dim Scotland, from the storm-cloven peaks of Arran to the sentinel dome of the Bass, could be seen this mountain summit; and from every side the awed inhabitants, as they looked up and beheld the clear fire-jewel glittering on Ben Ledi's brow, knew that Heaven had once more favoured them with the sacred gift of flame. For the light on the mountain-top was understood to be kindled by the hand of God, as were the altar fires of the Chaldean seers on the hills of the East of old: every hearth in the land had been quenched, and the people waited for the new Bal-tein, or Baal-fire from Heaven, for another year. Rude these people may have been—though that is by no means certain; but few races on earth have had a nobler place of worship than this altar-mountain, which they called the Hill of God.

The climber on Ben Ledi to-day passes, near the summit, the scene of a sad, more modern story. On the shoulder of the mountain lies a small, dark tarn. It is but a few yards in width, yet on it acted a part in a terrible tragedy. Amid the snows of winter, and under a leaden heaven, a funeral party was crossing the ridge, when there was a crash; the slow wail of the pipes changed into a shriek of terror; and a hundred mourners, with the dead they were carrying, sank in the icy waters to rise no more. That single moment sufficed to leave sixty women husbandless in Glen Finglas below. No tablet on that wind-swept moor records the half-forgotten disaster; only the eerie lapping of the lochlet's waves fill the discoverer with strange foreboding, and at dusk, it is said, the lonely ptarmigan may be seen, like souls of the departed, haunting the fatal spot.

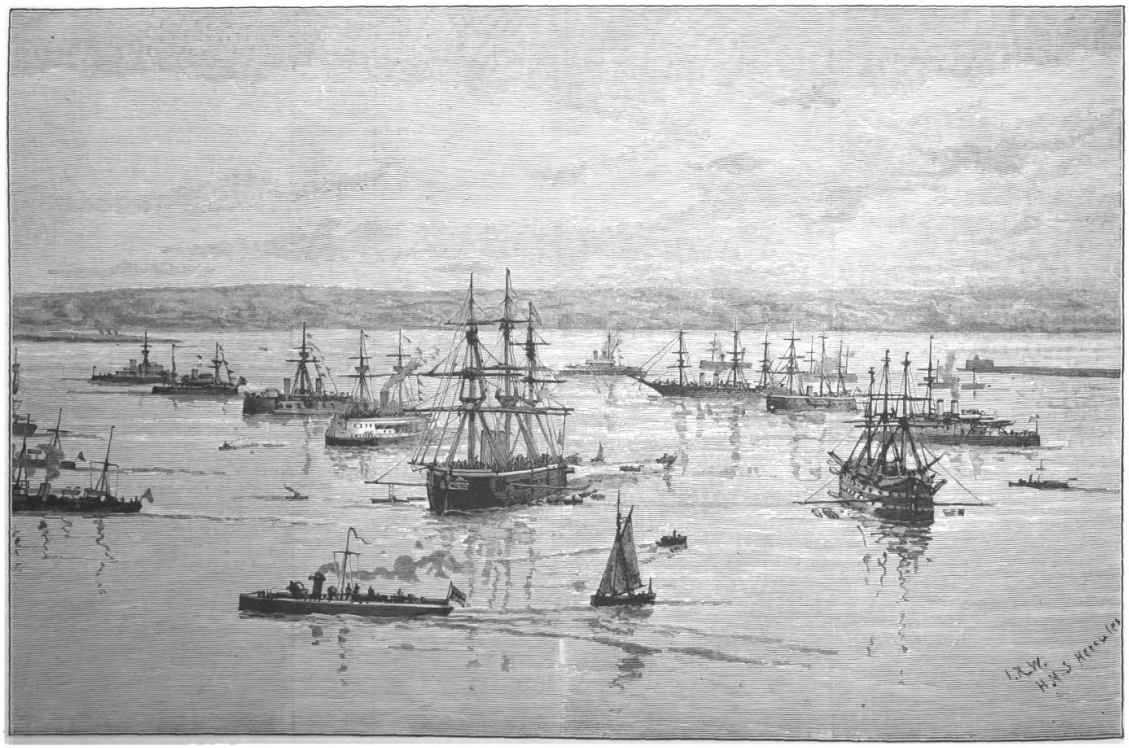
On a little knoll at the mountain foot, where the Leny leaves Loch Lubnaig, lies the little Highland burial-place to which the clansmen were bearing their dead comrade. Only a low stone wall now remains round the few quiet graves; but here once stood the chapel of St. Bride, and from the Gothic arch of its doorway Scott, in his "Lady of the Lake," describes the issuing of a blithesome rout, gay with pipe-music and laughter, when the dripping messenger of Roderick Dhu rushed up and thrust into the hand of the new-made groom the fiery cross of the Macgregors:—

> The muster-place is Lanrick mead;
> Speed forth the signal! Norman, speed!

Well did the poet paint the parting of bride and groom; and to-day on the mossy stones of the little burial-place are to be read the wistful words of many who have bid each other since then a last good-bye. Surely the arcana of earth's divinest happiness is only opened by the golden key of love. Sweet, indeed, must be that companionship which unclasps not with resignation even when sunset is fading upon the hills of life and the shadows are coming in regretful eyes; but would fain stretch forth its yearnings through the pathways of a Hereafter.

G. E.-T.

ARMADA TERCENTENARY MEMORIAL.



The committee formed at Plymouth last year, of which the Mayor of Plymouth is chairman, resolved on erecting an Armada memorial on Plymouth Hoe. Numerous drawings were sent in by architects, sculptors, and others. Opinion was at first divided between a column with figures, bas-reliefs, and medallions, or the adaptation of the present statue of Drake, inaugurated five years ago, as the central figure in an Armada memorial. It was felt, however, that whatever form might be adopted, it should be representative of the chief personages who figure in the history of that great conflict, and it should also place upon record the names of the cities and towns which contributed ships, men, and money for the defence of the country. After much deliberation and consideration of many suggestions, the committee decided that, with the sanction of the proper authorities, a permanent monument, to be called the Armada Memorial, to perpetuate the brave deeds of the men who nobly defended their country in a grave time of peril, should be erected on Plymouth Hoe. In response to public advertisements, the committee obtained designs for the proposed memorial. From amongst a large number of suitable and well-executed drawings, the design of Mr. Herbert A. Gribble, A.R.I.B.A., of South Kensington, architect of the Brompton Oratory, was selected. It is bold in its conception and treatment, symbolical in its character, eminently patriotic in spirit, and highly effective as a work of art. This design, as shown in the accompanying *Illustration*, consists of a granite pedestal, 35 ft. in height, surmounted by a figure of Britannia, with the shield of the three crosses, a banner and trident in her left hand, and in her right a sword. Below are twelve wreaths of laurel, and in the panels of the shaft, medallion portraits of Howard, Drake, Hawkins, Raleigh, Seymour, Wintour, Frobisher, and others, with their respective coats-of-arms. The south panel in the base has a bronze bas-relief, illustrating the destruction of the Spanish Fleet, with the inscription, "He blew with His wind and they were scattered." On each side of this bas-relief is a statue, one representing Valour, and the other Vigilance. The central ornament consists of the unveiled arms of England, as used at the period, with the crown of Queen Elizabeth. On the north side it is proposed to place the arms of England of the present day, with the crown of the Queen-Empress Victoria, thus connecting the two great eras in English history—the Elizabethan and Victorian—which idea is also symbolised by the shield of the three crosses, popularly known as the Union Jack, held by Britannia on the top of the pedestal. Running around the base will be a series of shields, bearing the arms of cities and towns which contributed to the defence of the country in 1588, together with those of the principal families whose ancestors served in the English fleet under Lord Howard of Effingham and the other Admirals Drake, Hawkins, and Seymour. The cities, towns, and families here represented are simply suggestive, and are by no means finally decided upon, being subject to any alteration that may hereafter be deemed necessary. There will also be an inscription recording the names of the principal vessels engaged, and their commanders, in order that the memorial may be thoroughly representative and instructive in its character. The total estimated cost of the completed memorial as here described will be about £3500. If, however, this amount is not forthcoming—a contingency which the committee do not regard as at all probable—only such portions will be proceeded with as may be warranted by the available funds. It is hoped that the cities, towns, and representatives of the families of the Elizabethan heroes will undertake to furnish any portions of the memorial (as the shields, medallions, and bas-reliefs) with which they may be more closely identified, or in which they may feel most interested. A record of all such independent aid will be duly noted. With this object in view, the committee have obtained separate estimates of the cost of the several portions, particulars of which may be obtained of the hon. secretary, Mr. W. H. K. Wright, Drake Chamber, Plymouth.

THE PROPOSED ARMADA MEMORIAL, PLYMOUTH.

The national and patriotic commemoration of the three-hundredth anniversary of the defeat of the Spanish Armada has been commenced at Plymouth. It was rightly and naturally first taken up in that town, the port in which the English fleet, under command of Lord Charles Howard, Lord Howard of Effingham, assembled for the defence of the country, and from which, the news of the approach of the enemy off the Cornish coast having arrived there on July 19, 1588, the fleet sailed early next morning to begin the ten days' fighting in the Channel. Plymouth was also the birthplace of Sir John Hawkins, the Rear-Admiral of this fleet and chief manager of the Navy, to whose administrative labours the construction and equipment of the most powerful ships engaged on this occasion were mainly due, and who, in personal command of the Victory, and of the squadron that followed her flag, bore a part second only to Lord Howard of Effingham in the actual conflicts of the first seven days. Sir Francis Drake, commanding the Revenge, though with the rank of Vice-Admiral, led a squadron composed of privateers from the western ports, whose armament was not capable of engaging with larger Spanish galleons; and Drake himself, by leaving the fleet while he went in chase of certain Flemish merchant-vessels, after the first encounter, lost the opportunity of sharing in the fights off Portland and the Isle of Wight. It was not till the evening of July 27, off Calais, Drake having meantime rejoined the fleet, that the whole English force was brought together: Lord Henry Seymour and Sir William Wintour, with the ships on guard between Dungeness and Dover, then crossed the Straits, and beset the enemy's fleet in Calais Roads. Admiral Sir William Wintour—the name has frequently been spelt Wynter—commanding the Vanguard, proposed the use of fire-ships, in the night, to drive the Spaniards from their moorings. In the great battle off Gravelines, on July 29, when the Armada was crushed and shattered by a fierce cannonade at close quarters from nine in the morning till six in the evening, Sir Francis Drake, in the Revenge, with Hawkins, in the Victory, and Martin Frobisher, in the Triumph, gave the first charge, followed by Lord Henry Seymour, in the Rainbow, Sir William Wynter (Wintour), in the Vanguard, and Sir Henry Palmer, in the Antelope, but every one of those above named took part in this final conflict. Sir Robert Southwell, Lord Thomas Howard, Edmund, Lord Sheffield, and the Earl of Cumberland, also performed brave feats of war on several occasions in that week.

It is interesting to know that, besides the noble families of Howard and Seymour, now represented by the Earl of Effingham, the Duke of Norfolk, and the Duke of Somerset, who are vice-presidents of the Tercentenary Commemoration, among the committee formed on this occasion are Dr. H. H. Drake, Major Martin Frobisher, and Captain T. F. Wintour, of Ryde, descendants of the families whose names were rendered illustrious by the brave seamen of the Elizabethan age. The chief representative of the Drakes is Sir Francis Fuller-Elliott-Drake, Bart., of Nutwell Court, Lympstone, near Exeter, who also claims descent from Admiral Elliott, Lord Heathfield, the hero of Gibraltar. The Wintour family, of which the present head is the Rev. G. Wintour, Rector of Ironbridge, Shropshire, is of very ancient British origin, being derived probably from the Castellan of the "Gwyn Tour," the White Tower, at Carnarvon; but knights and nobles of that name, perhaps of French extraction, are mentioned in the reigns of Henry I. and Edward II., and in the wars of Edward III. In the reign of Edward VI. Commodore Wintour gallantly defended Jersey against a French attack, which is related by Speed and other chroniclers of the time. Queen Elizabeth, on her accession in 1559, appointed this officer, Admiral Sir William Wintour, Master of the Naval Stores; and he commanded the fleet in the Firth of Forth to expel the French from Leith. He was

THE FLEET MANŒUVRES: THE B. SQUADRON AT PORTLAND, UNDER ADMIRAL SIR GEORGE TRYON.

FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

TO BRIGHTON AND BACK IN EIGHT HOURS BY THE "OLD TIMES" COACH: PASSING CUCKFIELD PARK.

associated with Sir John Hawkins, in 1562, in a scheme to open a new trade with Guinea, Hispaniola, and Porto Rico (not unconnected, we fear, with the slave trade). In 1567, Sir William Wintour and Sir Thomas Smith were the Commissioners sent to France to demand the restitution of Calais according to treaty. In the next year, Sir William intercepted a Genoese vessel bringing an immense sum of money from Spain to the Netherlands, to be used in putting down the Dutch revolt. He was in Parliament in 1575, taking an active part in financial, commercial, and political business, and especially in that concerning maritime affairs. Captain Wintour, who accompanied Sir Humphrey Gilbert's disastrous expedition to North America in 1583, and Sir Francis Drake's expedition to Portugal, may have been a son of Sir William. The Admiral's performances, as second in command to Lord Henry Seymour, in the great action of July 29, 1588, against the Spanish Armada, were the crowning glory of his career. On board his ship, the Vanguard, was Lieutenant John Wintour; and the scene of this ship going into action is the subject of Sir Oswald Brierly's well-known picture. Two of the most formidable Spanish galleons, the San Mattео of Don Diego de Pimentel, and the San Felipe of Don Francesco de Toledo, were crippled by the shot from the Vanguard, which lay "most times within speaking distance" of the enemy, and which discharged "five hundred shot of demi-cannon culverin and demi-culverin." When the remnant of the Armada fled into the North Sea, Lord Henry Seymour's division of our fleet was ordered to the mouth of the Thames, and thence to Harwich, to prevent either its return, if the wind had changed, or the Prince of Parma crossing from Flanders, if the sea became calm. Sir William Wintour was then appointed Vice-Admiral of England, and the Queen granted to him the manor of Lydney, in Gloucestershire, where he built a stately mansion, but died in 1589; he had sat in the House of Commons for Portsmouth, and afterwards for the county of Gloucester. He was succeeded by his son, Sir Edward Wintour, who was an important personage, and whose son, Sir John Wintour, figures conspicuously in the history of the Civil Wars of Charles I. as one of the most zealous and valiant Royalist commanders. Sir John Wintour's estates and mansion were confiscated by vote of the House of Commons in 1648. His personal achievements and adventures, both at the siege of Gloucester and in subsequent campaigns in the valleys of the Severn and the Wye, are related in local history, and are of a sufficiently romantic character. With regard to the descendants of Sir John Hawkins, there are some interesting particulars furnished by Miss Hawkins, in the valuable "Armada Commemoration Number" of the *Western Antiquary*, published at Plymouth, and edited by Mr. W. H. K. Wright, Borough Librarian. Richard Hawkins, only son of Sir John, also in the conflict with the Armada, in command of a vessel called the Swallow, behaved with extraordinary courage. Five years after that, he led an expedition through the Straits of Magellan to the South Seas, discovered new lands, and was captured, after three days' hard fighting, by a greatly superior force of Spaniards; he was taken to Seville, and was detained a prisoner nearly nine years; on his release, he became Mayor of Plymouth, M.P. for that borough, was knighted and made Vice-Admiral, and lived in State at his house of Poole, near Slapton, in South Devon. Mr. R. Stuart Hawkins is the present living representative of the family, which has for centuries been associated with the good town of Plymouth.

THE "OLD TIMES" BRIGHTON COACH.

In the "old times," of which all have read, if not in Queen's Jubilee histories of the beginning of Victoria's reign, at least in the early stories told by Charles Dickens—in the old times which some of us can personally remember—well-appointed mail-coaches performed the longest journeys at the rate, including all stoppages, of more than ten miles an hour, while special post-chaises could do more than eleven miles an hour; and it was very pleasant in fine weather. The distance by road from Piccadilly, the "White Horse Cellars," to the Old Ship Hotel, Brighton, is fifty-four miles; it was done in 1837, by the Quicksilver mail, carrying the Queen's first Speech at the opening of Parliament, in three hours and forty minutes. His Majesty George IV., when Prince Regent, once drove it in four hours and a half. The high art of coachmanship is not yet extinct, nor has the breed of good roadsters degenerated in England, though all serious journeys are now done by railway. From London to Brighton and back in eight hours is a speed worthy of the "Old Times" coach, and of Mr. James Selby, its veteran regular driver. At the late Ascot race-meeting, the proprietors of this coach accepted a sporting bet of £1000 to £500 that it could not be done. They handsomely resolved to give Mr. Selby the £1000 if he won the bet. On Friday, July 13, this feat was successfully accomplished. The coach started at ten o'clock from Hatchett's Hotel, carrying six passengers—namely, Mr. M'Adam and Mr. Beckett, the owners, Mr. Carleton Blyth, Mr. Waller Dickson, Mr. W. P. Cosier, and Mr. Alfred Broadwood, with the guard, Walter Godden. It went down Grosvenor-place and along Buckingham Palace-road, over the Chelsea Suspension-bridge, to Streatham, changed horses, then on to Croydon, Purley Bottom (change horses), Merstham, Redhill, Horley, Crawley, Cuckfield, Friars' Oak, and Patcham, changing teams at these and one or two other places. The run from Cuckfield to Friars' Oak was done at a gallop. The coach arrived at the Old Ship at three minutes to 2 p.m., having accomplished the journey just under four hours. The stay at Brighton was only momentary, the horses were merely turned round, and a few telegrams handed up. The coach started homeward amidst hearty cheers, came back by the same route, and Selby brought his party safe to town in splendid style, arriving at Piccadilly at 5.50, or ten minutes under the stipulated time to win the bet. Many members of the Coaching Club were present at its arrival in London.

The officers of the Exchequer and Audit Department have presented their old chief, Sir William Dunbar, with an illuminated address, as a token of their esteem and regard.

Mr. Lewis T. Dibdin, of Lincoln's Inn, has been appointed to the Chancellorship of Exeter diocese, vacant by the death of Archdeacon Phillpotts. Mr. Dibdin is Chancellor of the diocese of Rochester.

Lord Aberdare presided on July 14 at the sixty-fourth annual meeting of the Society for the Prevention of Cruelty to Animals, held at their offices, Jermyn-street. In the afternoon a meeting was held in St. James's Hall, where the Duchess of Albany presented the principal prizes gained in the past year's competition by pupils and teachers. Her Royal Highness was presented with numerous bouquets of flowers.

The fifteenth annual show, for working men and their families, was held on July 14 in the Board Schools, Oxford-gardens, Notting-hill. About £60 was awarded in prizes, £10 going to children, and the remainder to adults. The show was a very creditable one, and the exhibits were of a varied character, including flowers, needlework, and specimens of cookery. The prizes were distributed by Sir Philip Cunliffe-Owen.

ALEXANDER POPE.

Two hundred years ago Alexander Pope was born; and, as commemorations are the custom of the day, the poet's birth is being celebrated at Twickenham, a spot with which his name is as much associated as the name of Shakspeare with Stratford, or that of Scott with Abbotsford. There he lived for five-and-twenty years, cultivating his quincunx and his vines, adding daily to the glitter of his famous grotto, and enjoying, with the first men of the age, "the feast of reason and the flow of soul." Chiefs out of war and statesmen out of place sauntered on his lawns; and at his table the Prince of Wales talked about poetry till he sent the poet to sleep. There, too, came Swift, the most powerful intellect of the age; and there Voltaire's grass talk drove Pope's mother from the room. The villa at Twickenham was the scene of the poet's most brilliant triumphs as a satirist. That quiet retreat on the Thames did not soften his asperities, and many of his sharpest bits of satire must have been written under influences that would have soothed and reconciled a less irritable spirit. At Twickenham Pope died, after a lifelong battle with dunces and with disease; and if there is now nothing left to remind us of him beyond his grotto, or a piece of it, no lover of literature can visit the place without many a thought of the fiery little poet who sang and suffered there.

The fame of Pope has been assailed for more than a century, but without serious effect; and while critics have proved, or think they have conclusively proved, that he is no poet, there are still readers who find an exquisite enjoyment in his verse. We have had in the present century poets who are immeasurably superior to Pope in imagination and harmony; but he holds his own in spite of them, and Mr. Swinburne is, I think, right in saying that "matched on his own ground he never has been nor can be!"

Few men of letters ever fought against greater obstacles in the struggle of life or conquered them more gallantly. He was deformed and sickly, and, in his later years at least, so feeble that his body had to be supported in stays. He could not rise to dress himself without help. His legs were so slender that he wore three pairs of stockings, which he was unable to draw on and off without assistance, and his seat had to be raised to bring him to a level with common tables. Pope, moreover, was a Roman Catholic, at a time when those who held that faith suffered many privations; and, coming of a comparatively humble stock, had none of the advantages of birth. He was self-educated, too, and every step he advanced in life was due to his own energy and genius. Before he was thirty Pope had translated the "Iliad," and was regarded as the chief living poet of his country; and, from that time to his death, the first men and women of the age were either proud to be his friends or in mortal dread of his enmity. His compliments, it has been well said, are divine, and his revenge is deadly. By a word of discriminative praise he confers a poetical immortality; by a word uttered against a foe he makes that foe contemptible. Swift and Arbuthnot, Gay and Bethell, Atterbury and Bolingbroke, gain double honour by his rhymes; and in them, too, the poet's real or imaginary enemies, Lord Harvey, Colley Cibber, the famous "Lady Mary," Nahum Tate, Blackmore, and many others are held up to ridicule or execration. Like all satirists, Pope is sometimes grossly unjust; but a strong personal feeling, a white heat of passion, makes his satirical power irresistible. He does not shoot his arrows into the air, but aims them directly at the mark, and seldom misses it. To be "hitched" into Pope's rhyme in this way was an infliction which few men could bear with equanimity.

The personal feeling which inspired so much of Pope's verse gave it instant notoriety. Men don't always object to see even their best friends slashed at by a consummate wit, and in everything the poet wrote the Town found food for talk. This love of a little scandal, however, is not now, nor was it in his lifetime, the secret of Pope's power. He would have been forgotten as speedily as Churchill was forgotten if it were not for the art that lives in every line, for a style so exquisite that it confers a lasting beauty even upon common-place ideas. Nothing can surpass the dainty skill with which he sketches a character or catches a passing fancy and secures it to us for ever. He is the master of phrases and of couplets. There is no waste in his wit; every line tells, and, mingled with the scorn, the sarcasm, the allusions that made many a public man of the day wince, there is an occasional elevation of tone that forces us to forget the satirist in the poet. A satirist unequalled in England, unless it be by Dryden, he had, what "glorious John" had not, the most sportive and lively fancy; add to this, pathos, though not of the highest order, the finest wit and an ease of expression which conceals the subtlest sense of art, and we see why Pope is still so dear to the lover of literature. He is the poet for common moods; and, as men rarely rise into the higher regions of thought, he is the poet for every-day service. It is simply amazing to note how his phrases are employed in that service. If we except Shakspeare, no English author's words are so frequently on our lips, and so haunt our memories. People quote them without knowing whence they come. Is there one of my readers who is not familiar with such lines as the following:—

"The proper study of mankind is man."
"Order is heaven's first law."
"Who shall decide when doctors disagree?"
"A little learning is a dangerous thing."
"An honest man's the noblest work of God."
"To err is human; to forgive, divine."
"The last and greatest art—the art to blot."

Scores of lines equally familiar—and the reader, if he pleases, may say equally commonplace—may be quoted which have the singular merit of sticking to the memory. We may forget the lovely music of a Shelley or a Coleridge, but Pope's lines and couplets are at all times available. Bank-notes and gold are not always at hand when wanted; but most of us, it is to be hoped, have some silver in our pockets for daily use. And Pope has his gold too. His "Rape of the Lock" is the most exquisite thing of the kind in the language; the closing lines of the "Dunciad" are majestic; and sometimes there is a high moral tone, or an utterance of human sympathy, expressed so nobly that the reader feels he is in the presence of a poet as dignified as he is impressive. The two lines—

Never elate while one man's oppress'd,
Never dejected while another's blessed—

are, in Mr. Ruskin's judgment, "the most complete, the most concise, and the most lofty expression of moral temper existing in English words." This may be an exaggeration; but amidst much that is offensive—and, it is to be feared, insincere—in Pope, there is frequently a noble strain of poetry, which satisfies the heart as well as the intellect.

With all his defects, then—and his sins are many—Pope has a great name in English literature; and to recognise the genius of such a man publicly seems a reasonable thing to do. We have had greater poets, and many a better man; but Pope, too, belongs to the noble list of English worthies, and it is well for our sakes, if not for his, since a poet's poems are his best monument, that, in the spot he loved so well, some honour should be paid to his memory.

J. D.

THE WIMBLEDON MEETING.

In spite of wind and rain, the scores generally on July 11 were higher than in previous years, especially in the competition for the Queen's Prize. Private Lewis, 4th Devon, stood at the head of the list, with an aggregate of 68 out of a possible 70. Highest possible scores were also made for the Holford, Pernnet, and Windmill Prizes. After evening gunfire, a mass meeting of Volunteers was held in the Pell Tent, to consider the future locale of the association's annual gathering. The tent was densely packed. Lord Wantage presided; and among those on the platform were the Earl of Wemyss, Viscount Bury, the Lord Advocate of Scotland, Sir Henry Fletcher, and many members of the council. The proceedings, though not absolutely unanimous in favour of Richmond Park as the future site, were most enthusiastic, perhaps the only difference of opinion being that an effort might even yet be made to continue the meetings at Wimbledon.

The shooting was again remarkably good on the 12th, the scores for the Queen's 300 averaging quite two points higher than those of last year. The Bronze Medal was won by Lieutenant Barrett, of the Argyllshire and Sutherland Highlanders, with an aggregate of 96 points. Major McKerrell, Ayrshire, made a highest possible score at 600 yards. The Martin's Cup was won by Captain Timmins, 2nd Cheshire, who also made all bull's-eyes. Several highest possible scores were made in other competitions, the most noteworthy being ten successive bull's-eyes by Captain Thorburn, of Peebles, for the Curtis and Harvey prize, at 1000 yards.

Notwithstanding the improvement in the weather the scores were lower on the 13th than on any previous day of the meeting. In the contest for the *Daily Telegraph* Cup ten men attained the highest possible score of 35, and two of these—Lieutenant Brown, 3rd Lanark, and Captain Morrison, 1st Sutherland—again tied, each with three bull's-eyes.

The second stage of the Queen's Prize concluded on the 14th, with the result that four men completed aggregate scores of 201 each—Ingram, of Lanark; Noakes, of 1st Derby; Cooper, of Exeter; and Bates, of Warwick—and one of 200 came next. Lieutenant Barrett, the winner of the bronze medal, came out with only 193. Corporal Noakes won the tie on shooting off, and takes the silver medal. Colour-Sergeant Smith, 3rd West Surrey, won the first prize in the Prince of Wales's competition, the second being secured by Private Rodger, 1st Roxburgh and Selkirk. In the match between Lords and Commons, two a side, the latter were victors by 145 to 121. Captain Morrison, 1st Sutherland, won the *Daily Telegraph* Cup, after a most exciting contest; the Lancashire team the China Cup; and the 1st Renfrew the Belgian Cup for volley firing. The eleven men who made scores of 34 points each for the St. George's Prizes on Friday shot off the ties on Saturday, with the result that the Vase, Dragon Cup, Gold Jewel, and £30 were won by Colour-Sergeant Ford, 3rd South Staffordshire; the Silver Jewel, Silver Salver, and £25 fell to Sergeant-Major Harker, 2nd Sub-Division R.A.; and the Bronze Cross, Silver Cup, and £20 to Lieutenant Dalglish, 3rd Lanark.

Divine service was held on Sunday morning, July 15, at the Umbrella Tent, where contingents from the various Volunteer battalions in camp and a large number of visitors were assembled, although at the time rain was descending in torrents. The band of the London Rifle Brigade was in attendance, and the preliminary part of the service was conducted by the Rev. A. Gray. A short but appropriate sermon was preached by the Rev. W. M. Bottom.

On Monday, the 16th, the National Challenge Trophy, competed for by teams representing England, Ireland, Scotland, and Wales, was won by Scotland—England being second, Ireland third, and Wales fourth. The Mullens' Prize, shot for by teams from each battalion at unknown distances, was carried off by the 1st Liverpool; and the United Hospital Challenge Cup by the St. Thomas's men, who were the victors last year. The Wimbledon Cup was won by Mr. Whitehead, of Bury, Lancashire, with 70 points, at 1000 yards range. The Wilmot Prize, for aggregate scores at 500 and 600 yards, was won by Lieutenant More, 1st Northumberland; the gold medal for the Grand Aggregate by Lieutenant Barrett, 5th Argyle and Sutherland, 337 points; All-comers' Aggregate by Private W. Ward, 4th Devon, 186; the Nursery Aggregate by Private Laurie, 7th Royal Scots, 93; and the Hop Bitters Aggregate by Captain Arnell, 5th Hants, 157.

In dull and showery weather on July 17 the Queen's Prize was won by Private Fulton, Queen's Westminster, who made a total score of 280—six points above Lieutenant Warren's last year's record. The second place was taken by Lance-Corporal Noakes, 1st Berks, with 279 marks; Private Wattleworth, 2nd Liverpool, coming third, with 278. The principal prize given by the Secretary for War fell to Corporal Barrett, 1st Oxford, with 35 points, Lieutenant Fremantle, 1st Bucks, being second, with 34. Sergeant Prior, 4th Hants, won the first prize of the Armourers' Company with 32 points, there being two other scores of equal amount. The Atkinson Prize went to Major McKerrell, with a highest possible; and the Field Memorial Challenge Cup, contested by past and present members of the "Twenties," was taken by Private Kydd. The principal City Corporation prizes were taken by Sergeants Wilson, Short, and Duncan, and Lieutenant Chamberlain, all of Canada.

The chief items on July 18 were competitions for the United Service Cup, the Chancellor's Plate, and the Kolapore Cup.

The Princess of Wales presides at the distribution of prizes on the afternoon of July 21, at five o'clock.

The Queen has conferred the Silver Jubilee Medal upon Superintendent Hayes, chief of the Windsor Borough police.

Mr. Maunde Thompson has been appointed Chief Librarian at the British Museum.

The race for the Wingfield Sculls took place on July 16, from Putney to Mortlake, Guy Nickalls, of Magdalen College, Oxford, defeating J. C. Gardner, of Emmanuel College, Cambridge.

Among the donations that have recently been promised towards the funds of the South London Polytechnic Institutes, is one of £1000 from the firm of Messrs. Rothschild, and a similar sum from Messrs. Baring.

A complimentary banquet was given to Sir John Whittaker Ellis, M.P., on July 16, at the Star and Garter Hotel, Richmond-hill, by the inhabitants of Richmond and its neighbourhood, in recognition of his recent gift of the Castle-hill Hotel property to Richmond. A handsome service of plate, consisting of three Monteith bowls and a loving-cup, all in silver-gilt, was presented to Sir J. W. Ellis at the banquet. The chair was taken by the Duke of Cambridge.

A magnificent sturgeon was captured in the Dee on July 16. Two men were engaged in catching salmon, near Sandycroft, Hawarden, when they secured an enormous fish in their trammel-net. They landed it after a long struggle, and found it to be a sturgeon weighing 200 lb. It is over 5 ft. long, and as thick as a man's body. It is supposed to be the largest specimen ever caught in the Dee. A smaller fish, weighing 155 lb., was taken two years back.

OBITUARY.

SIR JOHN HARDY, BART.

Sir John Hardy, Bart., of Dunstall Hall, in the county of Stafford, died at his residence, 22, South-street, Park-lane, on July 9. He was born Feb. 23, 1809, the eldest son of Mr. John Hardy, of Dunstall Hall, Bencher of the Inner Temple, by Isabel, his wife, daughter of Mr. Richard Gathorne, of Kirkby Lonsdale, in Westmorland, and was brother of the first and present Viscount Cranbrook, P.C., G.C.S.I. He was educated at Oriel College, Oxford, where he graduated B.A. in 1831, and proceeded to M.A. in 1834; was a Justice of the Peace for Staffordshire and the West Riding of Yorkshire, High Sheriff for the former county in 1878; and represented Middlesex in Parliament in 1859; Dartmouth, 1860 to 1868; and South Warwick, 1868 to 1874. He married, Aug. 13, 1846, Laura, third daughter of Mr. William Holbech, of Farnborough, Warwickshire, by whom, who died Jan. 19, 1885, he leaves, with other issue, a son, now Sir Reginald Hardy, second Baronet, who married, in 1876, Lucy Marion, youngest daughter of Captain John Neilson Gladstone, R.N., M.P., of Bowden Park, Wilts, brother of the Right Hon. William Ewart Gladstone, M.P. The title was conferred on the late Baronet on Feb. 23, 1876.

SIR CHARLES JEPHSON-NORREYS, BART.

Sir Charles Denham Orlando Jephson-Norreys, first Baronet, of Mallow Castle, in the county of Cork, died suddenly at Queenstown on July 10. He was born in 1799, son of the late Lieutenant-Colonel William Jephson, by Louisa, his third wife, daughter of Mr. C. Kensington, of Blackheath; was educated at Brasenose College, Oxford, where he took his degree in 1820; and having assumed by Royal license the additional surname and arms of Norreys, he was created a Baronet in 1838. He was a Deputy-Lieutenant and Justice of the Peace for Cork, and represented Mallow in the Liberal interest from 1826 to 1859. He married in 1821, Catherine Cecilia Jane, daughter of the late Mr. William Franks, of Carrig, near Cork, which lady died in 1853, leaving, with two daughters, a son, Denham William, who was born in 1821, and died last May, consequently Sir Charles's baronetcy becomes extinct.

GENERAL PENNYCUICK.

General James Farrell Pennycuick, C.B., Royal Artillery, died on July 6, aged fifty-nine. He was the eldest son of the late Brigadier-General John Pennycuick, C.B., K.H., of Logie, who commanded a brigade in the Sikh War of 1849, and fell, with his youngest son, in the battle of Chillianwallah. He entered the Army in 1847, became Captain and Major in 1854, Lieutenant-Colonel in 1861, Colonel in 1869, Major-General in 1880, Lieutenant-General in 1885, and General in 1886. He served in the Crimean campaign, 1854, including the battle of Inkermann and the siege and fall of Sebastopol, for which he received a medal with two clasps, Sardinian and Turkish medals, and the fifth class of the Medjidieh. He next served in the Indian campaign of 1857-58, including the relief of Lucknow by Lord Clyde, the battle of Cawnpore, the actions of Seria Ghat, Chanda, Sultanpore, the siege and capture of Lucknow, and the action of Barree, for which services he was given a medal with two clasps. He next served with the expedition to China in 1860, and was present at Tangku, the capture of Taku Forts, and the surrender of Pekin. He was created a C.B. in 1859. He married, in 1861, Janie, eldest daughter of the late Mr. William Rutledge, of Farnham Park, Victoria, Australia, and leaves issue.

THE REV. G. R. GLEIG.

The Rev. George Robert Gleig, M.A., late Chaplain-General of the Forces, died at his residence, Bylands, near Winchfield, on July 9, in his ninety-third year. The late Mr. Gleig served in the Peninsular Campaign of 1813-14 as a subaltern in the 85th Foot. He was present at the siege of San Sebastian, the passage of the Bidassoa, the battle of the Nivelle, the battle of the Nive, and the investment of Bayonne. For his services in these campaigns he received the Peninsular War medal, with three clasps. Subsequently he was employed in the American War, at Bladensburg, Baltimore, New Orleans, and Fort Bowyer. After the conclusion of peace Mr. Gleig quitted the Army and proceeded to Oxford, and became a member of Balliol College. He graduated M.A. at that University in 1819, and was ordained priest by the Archbishop of Canterbury the following year, when he was appointed Rector of Ivychurch, Kent, and Perpetual Curate of Ash in 1822. He was appointed Chaplain of Chelsea Hospital in 1834, Principal Chaplain to the Forces in 1844, and Chaplain-General in 1846, which latter appointment he held till April, 1875, when he retired on account of his increasing years. He was Inspector-General of Military Schools from 1845 to 1858, and became a Prebendary of St Paul's in 1844. He was the author of numerous educational works.

We have also to record the deaths of—

The Rev. Charles Saltren Willett, M.A., Vicar of Monckleigh, Devon, on July 3, suddenly.

Admiral the Hon. Sir Edward Alfred John Harris, K.C.B., brother of the Earl of Malmesbury, at Sendling Park, his seat near Hythe, Kent, on July 17.

Lady Dyke (Elizabeth), widow of Sir Percyvall Hart Dyke, sixth Baronet, and youngest daughter of Mr. John Wells, of Bickley Park, Kent, at 34, Hill-street, on July 10.

Lady Briggs (Amelia), wife of Sir John Henry Briggs, late of the Admiralty, and eldest daughter of Mr. Charles Hopkinson, at 11, Tisbury-road, West Brighton, on July 10.

The Rev. Adolphus Augustus Turnour, for twenty-seven years Vicar of Ellenhall, Staffordshire, on July 7, aged sixty-five. He was the fourth son of the Hon. and Rev. Adolphus Augustus Turnour, third son of Edward, second Earl Winterton.

The Dowager Lady Sudeley, on July 14, at her house in Chesham-place, aged seventy-eight. She was the second daughter of the late Mr. George Hay Dawkins-Pennant, of Penrhyn Castle, and married Thomas Charles, second Lord Sudeley, in August, 1831, and was left a widow in 1863.

Mr. Richard Micklethwait, of Ardsley House, Barnsley, J.P. and D.L., on July 9, aged fifty-seven. He was the eldest son of Mr. John Micklethwait, of Ardsley House, and Thornville, in the county of York, Lord of the Manor of Ardsley, and was brother of Mr. John Pollard Micklethwait, of Penhein, in the county of Monmouth, J.P.

Major Alexander Crombie, late 72nd Highlanders, at 17, Hogarth-road, Earl's Court, on July 11. He served with his regiment in the Crimean Campaign, 1855, including the expedition to Kertch and the siege and fall of Sebastopol (medal with clasp and Turkish medal) and throughout the operations in Central India, 1858-59.

Lady Laura Grattan, at her house in Eaton-square, on July 12, aged eighty-one. She was the youngest of the large family of William, Lord Huntingtower, son of Louisa, Countess of Dysart, and sister of the Hon. F. J. Tollemache, who died on July 2. She married, in 1847, the Right Hon. James Grattan, of Tinnehinch, and was left a widow in 1854.

Major-General Robert Bennett, late of the 46th and 63rd Regiments, at The Poplars, Coleraine, in the county of Londonderry, on July 7, aged fifty-five. He served in the Eastern campaign of 1854, and was present at the battles of Alma, Balaclava, and Inkermann, and siege of Sebastopol (severely wounded). Medal with four clasps, and Turkish medal.

Colonel Richard Byrd Levett, of Milford Hall, in the county of Stafford, J.P. and D.L., late Lieutenant-Colonel commanding 4th Battalion North Staffordshire Regiment, formerly Lieutenant 60th Rifles, on July 7, aged seventy-seven. He was the eldest son of the late Rev. Richard Levett, of Milford Hall, by Louisa, his wife, daughter of the Rev. Walter Bagot, of Blithfield, Stafford.

"BEFORE THE BEAK."

In the slang of London vagabonds, which comic writers have made generally known, a police magistrate is called a "beak." The bird of wisdom, though proverbially as grave as any human Judge of inferior jurisdiction, is not invested by Act of Parliament to sentence a culprit to fine or imprisonment; but the owl has a formidable beak of his own, as well as power, by some stringent "clause of the Act," or claws of his own, to detain the hapless offender. It is unlikely that the Owls' Parliament, wherever its Sessions are held, would have passed a law for the protection of mice; but there may be a Game Law, reserving those little quadrupeds, in certain places, to afford sporting pastime and desirable prey to the privileged race of owls. That such unworthy creatures as cats should presume to catch a mouse, under the eyes of their grave feathered superior, will seem in his eyes an impudent transgression. In the barn or stable-loft, where this masterful owl has found a temporary abode, he is disposed to admit no poachers or trespassers on his exclusive rights of chase. Those three nimble Pussies, after starting the game and pursuing it to the steps, up which it has run, to be clutched by a stranger foe, are confounded by the forbidding anger of an unexpected opponent. "Before the Beak" they stand rebuked, and their temerity is appalled by such a fierce apparition, the like of which they never saw before. There is no knowing what this determined, strong-willed bird might do, for does not Shakspeare record the fact that, on one occasion,

An eagle, towering in his pride of place,
Was by a mousing owl hawk'd at, and killed?

FOREIGN NEWS.

Our Paris Correspondent, who is taking his yearly holiday just now, favours us with some Holiday Rambles, two of which appear in the present issue. In the French Chamber of Deputies on July 12 General Boulanger brought forward a motion for a Dissolution. He maintained that it was necessary, and that a general election should be held before the celebration of the Centenary of 1789. M. Floquet said the Government had the right to ask the President to dissolve the Chamber, but did not propose to do so. He reproached General Boulanger with relying upon the support of the Right, said he was always absent from the Chamber, and that it was not for him, therefore, to criticise its work. At the conclusion of M. Floquet's speech an exciting scene took place. General Boulanger declared that four times in the uproar which prevailed he had given the Premier the lie. The President announced that he must formally censure the speaker for this language. Thereupon the General protested, resigned his seat, and left the House, followed by his partisans. A formal vote of censure was passed upon the General. In consequence of this scene in the Chamber, a duel with swords took place next morning between M. Floquet and General Boulanger. The latter received a severe wound in the throat, and M. Floquet was slightly wounded in the hand and breast. Later in the day he assisted in unveiling the Gambetta monument in the Place du Carrousel, Paris. M. Floquet, who arrived with President Carnot, received an enthusiastic ovation. He delivered a warm eulogy upon the patriotism of Gambetta, and speeches were also made by M. De Freycinet, the Presidents of the Senate and Chamber of Deputies, and M. Spuller on behalf of the Subscription Committee. The Festival of the Fourteenth of July appears to have passed off fairly well, though the newspaper correspondents differ as to the degree of success attained. A review of the troops at Longchamps was followed by a dinner on the Champ de Mars to 2500 Mayors, after which there was a display of fireworks from the Eiffel Tower. The Bishop of Angers introduced a Bill in the Chamber on July 16 to put down duelling; but the motion was negatived by a show of hands. The question of the naval defences of France has been debated at some length; an amendment being accepted to open a credit of 67,000,000f., to be covered by annuities. The first reading of the Bill for the proposed defensive works at Brest, Cherbourg, and Toulon was passed on July 17. In the Senate, on the same day, the clauses in the Sugar Bill were discussed, and the Bill was passed in its entirety.

A State banquet was given by the Emperor William II. on July 12 to all the Ambassadors and foreign Ministers in the Marble Hall of the Potsdam Town Castle. His Majesty has issued a Rescript ordering that the project for providing the city of Berlin with a suitable cathedral shall be immediately carried out, in accordance with his father's wishes expressed on March 29. It is officially announced that, with the Emperor's sanction, the widowed Empress Victoria will henceforward bear the title of the Empress-Queen Frederick. Her Majesty visited Berlin on July 17 for the first time since the death of her husband. She was accompanied by her three daughters, Princesses Victoria, Sophie, and Margaret. After spending about three hours in the palace formerly occupied by the late Emperor when Crown Prince, her Majesty returned to Potsdam. The Emperor left Potsdam on July 13 for Kiel, on his visit to the Czar. He arrived at Kiel next morning, and drove through the town to the harbour, being received with much enthusiasm by the people. On alighting from his carriage he entered the man-of-war's boat and was conveyed to the Imperial yacht Hohenzollern, which shortly afterwards put to sea. The manœuvres of the fleet excited much admiration. It is officially announced in Berlin that the Emperor William will, on his return from St. Petersburg, pay a visit to Copenhagen.—On July 15 the Berlin Art Exhibition was opened in the Princes' Saloon of the Exhibition Palace by Ministerial Director Greif, who represented the Minister of Education, Herr Von Gossler.

A fearful hurricane has passed over Southern Hungary, causing enormous destruction of crops, while several persons were killed.

There have been great floods in the United States.

A telegram from Capetown announces the death of Sir J. H. Brand, President of the Orange Free State.

A fire broke out in the shaft of the De Beers mine at Kimberley, South Africa, on July 11. Eight hundred miners were entombed, and there has been great loss of life.

THE COURT.

Her Majesty paid an unexpected visit to London on July 12, in order to visit the Duchess of Cambridge at St. James's Palace. The Duchess is, we learn, in wonderful health, considering her advanced age and the fact that she has not been out of doors now for many years. After spending some time with the Duchess her Majesty left for the apartments of the Grand Duchess of Mecklenburg-Strelitz, where she took tea. At 6.30, having spent an hour at the palace, her Majesty returned to Windsor. The Queen, accompanied by Princess Louise of Schleswig-Holstein, drove, on the morning of July 13, to Frogmore, where Princess Louise (Marchioness of Lorne) and the Marquis of Lorne joined her Majesty. The Queen drove out in the afternoon with Princess Beatrice and Princess Margaret of Connaught. Princess Louise (Marchioness of Lorne) and the Marquis of Lorne took leave of her Majesty and left for London. Prince and Princess Henry of Battenberg returned to the castle from Claremont. The Duchess of Teck, the Duke of Teck, and Princess Mary of Teck arrived at the castle. The Marquis and Marchioness of Salisbury also arrived, and had the honour of dining with the Queen and the Royal family. The Marquis had an audience of her Majesty. On the 14th, the Hon. Lady Biddulph, Sir William Jenner, K.C.B., and Lieutenant A. V. Jenner (Rifle Brigade), had the honour of dining with her Majesty and the Royal family. Lieutenant A. V. Jenner had the honour of being presented to the Queen before dining, when her Majesty conferred upon him the decoration of the Distinguished Service Order for gallant conduct during the Burmese War. Sir Morell Mackenzie and Professor Corradi, of Rome, were received by the Queen. The Queen and the Royal family attended Divine service at the Royal Mausoleum at Frogmore on Sunday morning, July 15. The Very Rev. the Dean of Windsor officiated. Divine service was afterwards performed in the private chapel at the castle, the Dean of Windsor, assisted by the Rev. Canon Gee, D.D., officiating, and the Rev. Canon Gee preaching the sermon. Prince and Princess Christian of Schleswig-Holstein, Prince Christian Victor and Princess Victoria of Schleswig-Holstein, and Prince Pedro of Saxe-Coburg and Gotha dined with her Majesty. Baron De Estrella was presented to the Queen, and afterwards had the honour of dining with her Majesty and the Royal family. The Queen left Windsor Castle on July 18 for the Isle of Wight.

The Prince and Princess of Wales, accompanied by Princesses Louise, Victoria, and Maud of Wales, attended Divine service at the church of St. Mary Magdalene, in Sandringham Park, on Sunday, July 15. The Rev. F. Hervey, Rector of Sandringham, domestic chaplain to the Prince of Wales and chaplain to the Queen, officiated and preached. The Prince and Princess returned to town the next day; and on July 17 their Royal Highnesses, accompanied by their three daughters, opened the new buildings of the Great Northern Central Hospital, in Holloway-road, receiving an enthusiastic welcome from thousands of spectators as they passed through the decorated streets of Islington. After the Prince had performed the opening ceremony, the Princess received purses on behalf of the funds of the hospital, and in this way £1050 was subscribed. They afterwards went through the wards and conversed with several of the patients. Prince and Princess Christian visited the Prince and Princess and remained to luncheon. The Prince, attended by Major-General Ellis, visited Prince Pedro of Saxe-Coburg and Gotha at Claridge's Hotel.

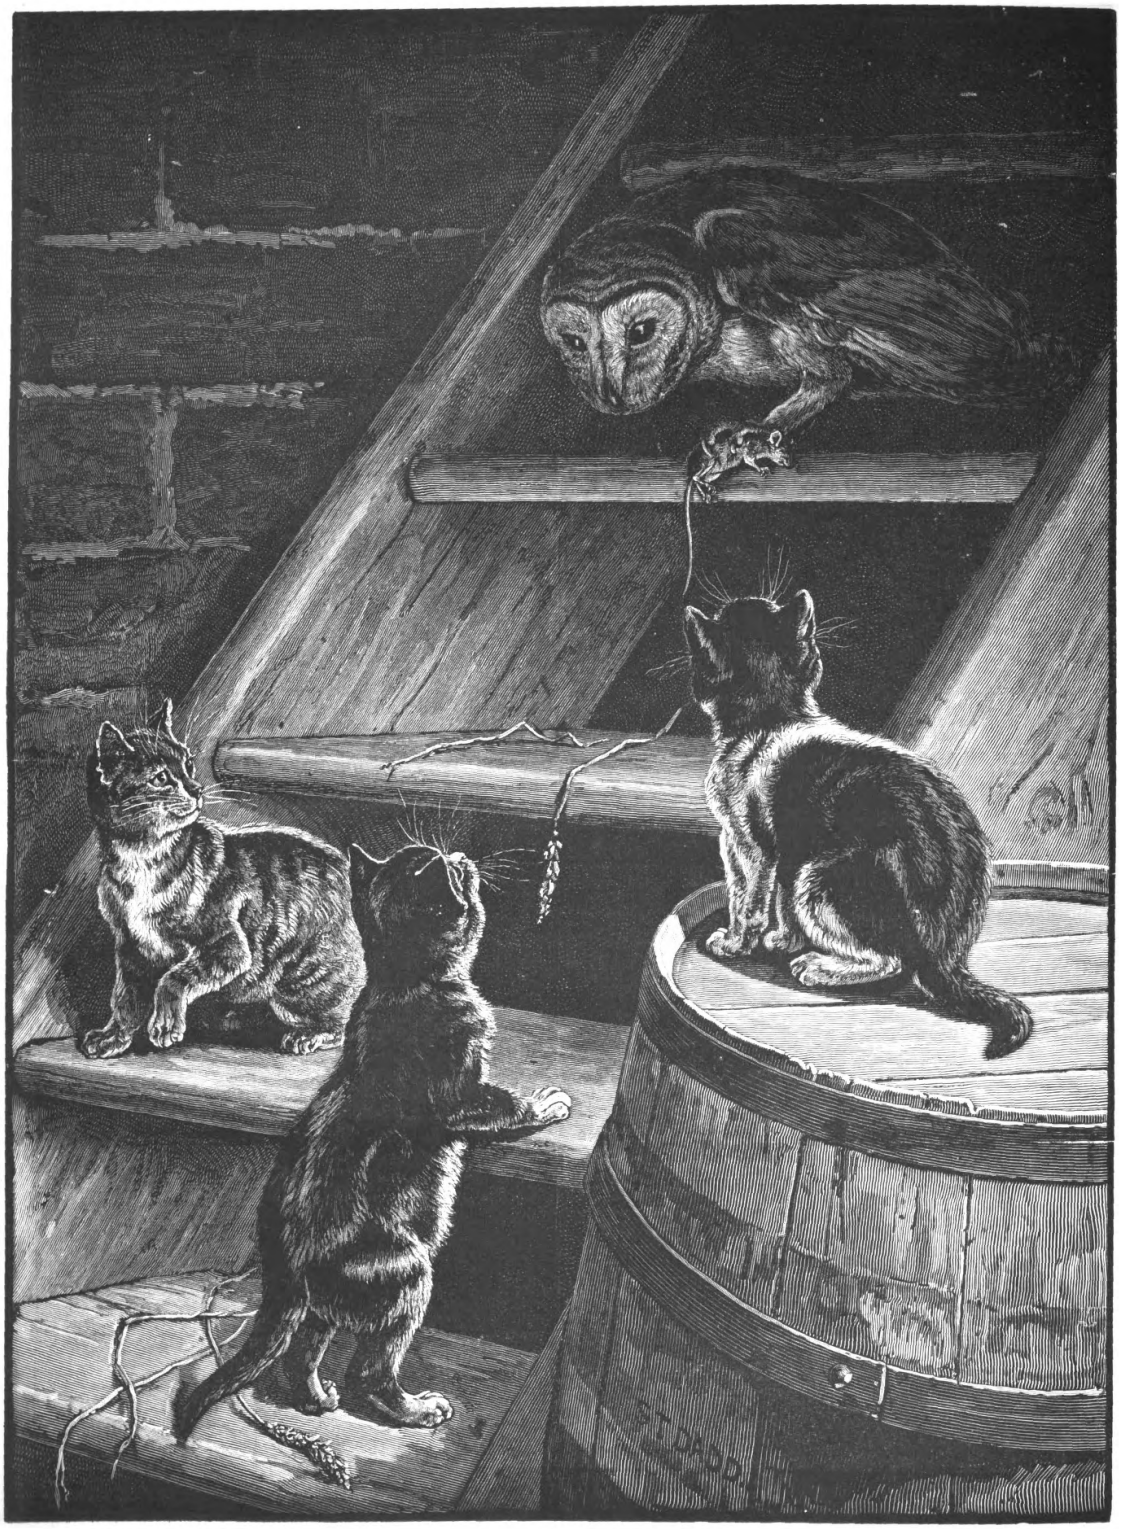
The Duchess of Albany on July 14 visited the Royal Hospital for Children and Women, Waterloo Bridge-road, and distributed flowers to each patient.

Princess Christian left Cumberland Lodge, Windsor Great Park, on July 17, for Germany. Her Royal Highness was accompanied to London by Prince Christian.

Princess Louise paid a visit to Stratford-on-Avon on July 16; and next day her Royal Highness attended a meeting at Goodrich-road Board Schools, East Dulwich, in aid of the Recreative Evening Schools Association.

The Lady Mayoress held her last reception at the Mansion House on July 17.

The Queen has been pleased, by letters patent under the Great Seal of the United Kingdom, bearing date July 11, 1888, to ordain and declare that the borough of Wakefield shall be a city, and shall be called "The City of Wakefield."



It is officially notified that the State Apartments of Windsor Castle will be open to the public on and after Monday, July 23, on Mondays, Tuesdays, Thursdays, and Fridays, under the usual regulations, until further orders.

The Lord Mayor has remitted to the British Ambassador at Berlin a sum of £63 16s., being the final instalment of the subscriptions received at the Mansion House for the sufferers by the floods in Germany. This makes a total remittance of £5563 16s. The fund is now closed.

The tender of Messrs. Mowlem and Co. for the erection of the Central, Eastern, and Western Towers of the Imperial Institute at £18,797 has been accepted, thus making the total value of the contract for the main buildings £161,597. The works connected with the Imperial Institute-road have been commenced, and will be sufficiently advanced for a public thoroughfare to be opened in September.

After disappointment through rain, the All-England Lawn-Tennis Association managed to bring their preliminary competition for the single championship to an end on July 14. Then Ernest Renshaw beat E. W. Lewis by three sets to one, and met the holder, H. F. Lawford, on July 16, when Mr. Lawford went down, after a very one-sided contest, before Mr. Renshaw, who thus succeeds to a position which his brother (Mr. W. Renshaw) held successfully against all comers. On Tuesday the "Doubles" and the Ladies' Championship,

We announced in this Journal, on April 14, the lamented death of Mr. Walter Ingram, youngest son of the late Mr. Herbert Ingram, M.P. for Boston, the founder and proprietor of *The Illustrated London News*. It will be remembered that the news was received by telegram, from Aden, that Mr. Walter Ingram, while accompanying a party who went to hunt elephants near Berbera, on the African coast opposite Aden, was killed by a wounded elephant. Mr. Morrison, the Resident Agent of the British Government at Berbera, who has recently arrived in England, has kindly communicated to Mr. Ingram's family an account of the removal of his body from the spot where it was buried, and of its reinterment in the Military Cemetery at Aden. This ceremony, which took place on June 26, at six in the evening, was attended by General Hogg, C.B., and all the Officers of Brigade in the Aden garrison who were off duty; the band of the 15th Regiment played "The Dead March in Saul," and a salute was fired over the grave by a firing party of the same regiment. Mr. Walter Ingram, who held a commission in the Middlesex Yeomanry Cavalry, had been associated with the army under the command of Lord Wolseley in the expedition to Khartoum, for which he received the medal, and was commended for his services in that campaign.

SOME LIVING BELGIAN PAINTERS.

SOME LIVING BELGIAN PAINTERS.

The opening of the Triennial Exhibition at Antwerp affords an opportunity for improving our acquaintance with one of the most brilliant schools in modern art. Whether the present chaos of ideas and rivalries means a new evolution or rapid decay is a question impossible to deal with here; we simply note the work of some of its more eminent living representatives, prefacing our notices by a few words on the history of modern Flemish art. The end of the last century found it at its lowest level. Louis David, the old *Conventionnel*, sought a refuge in Brussels at the restoration of the Bourbons, and became the centre of a new and upward movement in Art. Very great in portraiture, and almost unequalled as a painter of flesh, his style was entirely opposed to the old Flemish tradition. With the conquest of Belgian independence an art-movement began in a national direction. Rubens was studied, and patriotic subjects became all the vogue. Gustaf Wappers carried the standard, and was gallantly supported by L. Gallait, N. De Keyser, F. De Braekeleer, J. L. Dyckmans, E. De Biefve, E. Slingeneyer, and others. The last-named veteran has been for some time the representative of Art in the Belgian Chamber of Deputies. This great school, which in Wiertz attempted comparison with the giants of the Renaissance, ran its course, and made a new evolution, under Henri Leys. After 1848 realism succeeded to idealism. Historical painting still continued, but every effort was made to give it reality. Man himself, rather than events, was felt to be interesting. Alfred Stevens and C. De Groux, in two opposite fields, worked for the same ends and achieved the same kind of results. With these great painters ought to be named Hyppolite Boulenger, the landscapist. They were followed by a great number of painters of genius, some of whose careers we here notice. We regret the loss of so distinguished a name as that of Edouard Hamman, who recently passed away. But the utmost we can do here is to indicate how much there is to learn in tracing the evolutions in Belgian Art.

Jean Frederic Portaels is Director of the Academy at Brussels, and his services entitle him to universal respect. The great majority of the distinguished artists of the present generation in Belgium, and some even in France and Holland, have come out of the *atelier* which, in 1858, he opened freely, and without aid or support from the Government. Born at Vilvorde, in Brabant, in 1818, M. Portaels was the pupil of Navez and of Paul Delaroche. He obtained the Prix de Rome at Paris in 1842; and, after passing some years in Italy, travelled in the East, and in Morocco, Hungary, and a part of Europe. After his return from Rome, he was nominated Director of the Academy at Ghent. He exhibited there, in 1847, "The Shulammite"; at Brussels, in 1848, "Episode of the Simoom," "The Drought in Judea" (now in the Museum at Philadelphia); at Antwerp, in 1849, "Portrait of the Marquise de l'Anbépin," "Arrival of the Holy Family in Egypt," and "The Wise Men from the East." Among his earlier works may also be mentioned "Rebecca," "Ruth," and "Fatima the Gipsy." On his return to Brussels, he decorated a chapel of the Brothers of the Christian Doctrine with frescoes, now destroyed. At the Universal Exhibition at Paris, in 1855, his pictures were:—"Funeral Procession in the Desert of Suez" (Museum of Lyons), "Greek Woman Weaving," "Young Woman of the Neighbourhood of Trieste," "Young Jewess of Asia Minor," "Suicide of Judas," and "Story-teller in Cairo." Between that year and 1869 he exhibited at Ghent a picture entitled "The Intrigue," and in the last-mentioned year he painted "Box at the Pesth Theatre" (Museum of Brussels). At the Exhibition of Belgian Art, in 1880, his pictures were, "The Young Sorceress" and "The Daughter of Zion." M. Portaels has also painted some portraits, one of which was exhibited at the Paris Salon in 1880. His largest picture is entitled the "Two Calvaries," and is in the church of St. Jacques-sur-Caudenberg, at Brussels. On Aug. 25, 1883, a banquet was held to celebrate the twenty-fifth anniversary of the opening of his free *atelier*.

Paul Jean Clays, born at Bruges in 1819, passed much time during his boyhood on the shore in the neighbourhood of Ostend. After making some voyages he went to Paris, and studied under Gudin, the marine-painter. He has been a constant exhibitor at the Salon. His four pictures at the Universal Exhibition at Paris in 1867 made him remarked. His works are chiefly coast or river scenes, with shipping. The Scheldt and the Thames have afforded him many subjects; of the Scheldt he has made not less than twenty important paintings. He has also painted many views of ports, harbours, and roadsteads. The National Gallery contains two of his works, "Dutch Ships in a Calm near Dort" and "Dutch Ships Lying in the Roads near Flushing"; the Museum at Brussels has "The Roads near Ostend" (painted 1851), "A Calm on the Scheldt" (1863), "The Roadstead of Antwerp" (1869); the Museum of Antwerp contains his "Roadstead of Dordrecht"; the Museum of New York, "The Enfranchisement of the Scheldt at Antwerp"; the Museum at Liége, "View on the Scheldt"; the King of the Belgians owns "Arrival of Queen Victoria at Ostend" and "Squally Weather." In his long career M. Clays has painted quite 150 important subjects, nearly forty of which have gone to the United States, and between thirty and forty to other countries, chiefly England and France. He has painted the sea in many aspects, but he appears to prefer those in which harmony, peace, and sunshine prevail: tranquil scenes of Dutch canals or Flemish merchantmen slowly sailing along the Scheldt. At the same time, he loves the poetic, melancholy characteristic of river scenes. "Evening on the Thames," "Moonlight on the Thames," and the titles already given, suggest in a faint degree the work of this painter.

Charles Verlat is Director of the Academy of Art at Antwerp, in which post he succeeded the historical painter Nicaise De Keyser. This Academy, founded in 1663, has in recent times numbered several distinguished painters among its students—Alma Tadema, F. De Lamorinière, the Belgian landscape-painter Professor Pauwels of Dresden, Jan Verhas, Karl Ooms, and our countryman, W. Logsdail. Under its present Director it has received a new impetus; among other improvements an *atelier* for painting animals in the open air has been added. The arrangements are novel, and the result of practical experience. Already it is said to have remarkably facilitated the progress of the students. Michel Charles Verlat, born at Antwerp in 1824, commenced the study of painting very early; and after having been a pupil of De Keyser, became a student under the painter Gustaf Wappers. In 1851 he went to Paris, remaining there for the next twenty years. He then went to Saxe-Weimar, where he became Professor at the Kunstschule. Desiring to study the East, he spent three years at Jerusalem, being there at the same period as Holman Hunt. At Jerusalem he painted a series of pictures redolent with the spirit and atmosphere of the place. Among the principal may be mentioned "Barabbas preferred to Jesus," "The Tomb of Christ," "Vox Dei," and "The Flight into Egypt." M. Verlat is an artist of exceptional power. He has always taken a high position in historical and religious art; but, in addition, he paints landscapes, floral pieces, and portraits, and is, moreover, a distinguished animalist. Under the first head may be mentioned "Godfrey De Bouillon at the Assault of Jerusalem" (painted for the Government, and now in the Museum at Brussels), a "Virgin and Child," a "Mater Dolorosa," "Christ Dead at the Foot of the Cross," "The Mother of the Messiah." His other principal works are "Flock of Sheep Attacked by an Eagle" (Museum at Brussels), "Buffalo Surprised by a Tiger" (belonging to the Amsterdam Geological Society), "The End of the Tail and the Tip of the Ear," two scenes entitled "Hope" and "Deception," "Wolf!" belonging to the King of the Belgians, ten scenes illustrating dog or monkey life, "Horses Pulling," "Lion Attacked by a Herd of Buffaloes," "The First Snow—Sheep returning to the Farm," "Succour in Time," figures and animals combined: "Boreas and Love," "Flora and Pomona," and "Homage to the Queen of Flowers." The Museum at Weimar contains three of his portraits:—The Duchess of Saxe-Weimar, Franz Liszt, and the painter Preller. M. Verlat has, moreover, made decorative works, is a clever aquafortist, and a powerful panoramic painter. His "Battle of Waterloo," after having interested the people of Antwerp, is now being exhibited in Spain.

Florent Willems was born at Liége in 1824, and commenced his art studies under his father, completing his education at the Academy in the picturesque city of Mechlin. He had an extraordinary genius for restoring the old masters, and was, in consequence, much valued by the picture-dealers. The British Ambassador at Brussels, Sir Hamilton Seymour, discovered the young painter, and, after obtaining for him the patronage of Leopold I., tried to induce his protégé to follow him to England. But M. Willems decided for Paris, as the atmosphere in which his gift for elegance would most quickly ripen. He sent to the Salon of 1844 "Fête of the Crossbowmen" and "Visit of the Nurse." His first conspicuous success was in 1853, when he exhibited "Sale of Pictures in 1660," now belonging to M. Ravené, of Berlin; "The Widow," and "The Painter in his Studio." "The Widow," now in the Gallery Van Praet, is considered the painter's *chef d'œuvre*. The following is a list of the more important of his pictures:—with the names of the collections of which they form or have formed a part:—"Interior of a Silk-Mercer's in 1660" (Napoleon III.), "Coquetry" (ex-Empress Eugénie), "The Duel" (Achille Fould, Paris), "I was there" (Arthur Schickler), "To the King" (De Morny), "Visit to the Accouchée" (De Boisgelin, Paris). "The Fop" (Delloye, Brussels), "Coquetry" (Vassal, Paris), "Fidelity" (Swartzenberg, Vienna), "The Toilet" (Mayer, Vienna). "The Lily" (De Saxe, Vienna), "Visit of Marie De Medicis to Rubens, at Antwerp, in 1632" (Coutereux, Brussels), "The King's Mistress" (Sola, Milan), "Convalescence" (Perrot, Brussels), "Spring," "The Armourer" (Siltzer, London). "The Bravo" (Liedekerke, Brussels), "Maternal Instruction" (Reyntiens, Brussels), "The Shoemaker" (Waroquié), "The Marriage Ring" (Stewart, New York), "The Messenger" (Legrand, Paris), "Presentation of the Bridegroom" (De Cassin, Paris), "Toilet of the Bride" (T. Stewart, New York), "Music-Party" (King of the Belgians).

Jan Verhas belongs to a family of painters. Born at Termunde, in 1834, his artistic education, commenced by his father, Emmanuel Verhas, was completed under De Keyser, at the Academy of Antwerp. As Alfred Stevens seems to have done for the woman of society, in our day, what Leonardo did for his, in like manner Jan Verhas and his brother Franz have painted for all time the elegant children of our European capitals. Such painters are the most profound, as well as the most reliable, of chroniclers. The following is a list of the principal works M. Verhas has exhibited. At Antwerp, 1861, "Velleda"; at Brussels, 1862, "The Battle of Calloo." (This picture shows that the painter was, so far, following the historical school, which had so powerful an influence on Belgian art; a gap of several years intimates that he was feeling his way; and the titles of his pictures exhibited at Antwerp in 1877—"It is the Cat" and "After the Visit"—that he had found his genius was designed for a totally different field.) At Brussels, 1872, his picture was called "How One Becomes a Painter"; at Ghent, 1874, "Hide and Seek" (Cabinet of the King of the Belgians); at London, 1874, "The Inundation"; at Paris, 1875, "The Broken Pot," and "Choose!"—a child making up its mind between a carnation and a white pink (Museum of Termonde); at Brussels, 1875, "May I Come in?" and "The Mother's Portrait"; at Ghent, 1877, "The Master Painter;" exhibited again in 1880 among the treasures of Belgian Art (Museum of Ghent). At the same exhibition appeared "The Review of the Schools"; which was exhibited again at Paris in 1881 (Museum of Brussels). At Amsterdam, in 1883, he exhibited "Heyst-sur-Mer"; at Antwerp, 1885, "Walk on the Shore" (Museum of Antwerp); at Berlin, 1886, "Stockade at Blankenburghe"; at Budapest, 1887, "Alone"—a girl wandering by the sea (Museum at Budapest); and at Munich, 1888, "On the Breakwater."

Alfred Cluysenaar, born at Brussels in 1837, the son of an architect, was a fellow-student of Bonnat, Lefèbvre, J. P. Laurens, and Tony Robert-Fleury, under Léon Cogniet, in Paris, where he went after having been a pupil at the Academy of Brussels. His art-education was finished in Italy, where he passed several years, making his first appearance at the Paris Salon in 1867, with a vigorous picture representing the Four Horsemen described in the Apocalypse (Rev. vi.). In 1868 he exhibited a portrait of M. De Groot, which placed him among the best portrait-painters of the time. Between 1874 and 1881 he executed in fresco, for the University of Ghent, five great compositions, representing the various stages of the progress of civilisation. One, "The Renaissance and the Reformation," was exhibited at the Salon at Paris in 1875, and the Sketch at the Historical Exhibition of Fifty Years of Belgian Art, held in 1880. It contained thirty-five figures, including the most notable personages of the epoch represented. At the latter exhibition also appeared "Henry IV. of Germany at Canossa." This picture is now at the Museum of Brussels, as well as a portrait of his son, entitled "A Vocation," exhibited at the Exposition Universelle in 1878. Of late years, M. Cluysaneer has been more and more drawn into portraiture, painting the children of the Comte de Flanders, and several of the Belgian notabilities, political and scientific, besides his own portrait for the Uffizi at Florence. At the present time he is engaged on a picture for a chimneypiece in one of the halls of the Hôtel-de-Ville at Brussels.

Alfred Verwée, born at Brussels in 1838, is, as several of the painters in the present series, the son of an artist, Louis Pierre Verwée, from whom he received his education. When his career began, the second great change in the direction of Belgian art was in progress. Under the influence of its ideas, and by means of the conscientious and persistent study of Nature, and Nature alone, his distinguished genius as an animal-painter was developed. In 1863 he exhibited at Brussels, "Animals in the Meadows"; at Paris, in 1864, "Team of Oxen in a Farmyard"—winter effect (Museum of Courtrai); at Brussels, in 1863, "Harvest in Flanders"; at the Universal Exhibition, Paris, 1878, "Flemish Stallion," "Banks of the Scheldt," and "The Orchard"; at the Historical Exhibition of Belgian Art, 1880, the "Stallion" and the "Scheldt" reappeared, together with "Mouth of the Scheldt," "Meuse at Dordrecht," and "Zeeland Team"; at Paris, 1881, "Guild of St. Sebastian: Confraternity of Archers, West Flanders"; at Paris, 1882, "Corner of a Meadow in Flanders"; and again, 1883, "The Thistle" (Museum of Namur); at Brussels, 1884, "The Beautiful Land of Flanders" (Museum of Brussels); at Paris, 1884, "A Field of Eupatory" (Gallery Michiels, Tirlemont); and, in the same year, he painted "Combat of Young Bulls" (now belonging to the city of Ghent); at Paris and Brussels, 1887, "The Dyke"; at the Salon des Artistes Français, 1887, "Bull and Ox Playing"; at Vienna, 1888, "The Equinox" (Museum of Brussels).

Henri De Braekeleer is the son of Ferdinand De Braekeleer, one of the leaders in the first great movement in modern Belgian art, and nephew and pupil of Henri Leys, the celebrated leader of the second movement. As his brother-in-law and the earlier school, Leys devoted himself to the illustration of national history, but he sought a more perfect realism by taking his models from such offshoots of the shattered old Flemish trunk as still flourished near its roots among the poor of Antwerp. In the direction thus opened up by his uncle and master, Henri De Braekeleer persevered, but even more thoroughly, pursuing it for its own sake. With a concentrated enthusiasm, and a rare perfectness in art, he has devoted all the energies of his being to express the soul of old Antwerp. The dreamland of a grass-grown street; the tranquillity of the house-tops bathed in light with an horizon of small spires, turrets, and pinnacles; the decay of an old court invaded by the wall-pellitory; the sombre dreariness of an artisan home; the silent interior of a damp church—these scenes, with the human figures who share the decay, are the subjects of which M. De Braekeleer has been the sympathetic interpreter. Born at Antwerp in 1840, he was only eighteen years of age when he exhibited at Brussels, in 1858, "The Washer" and "The Haymaker." At Ghent, in 1859, he exhibited "The Tailor"; at Antwerp, in 1860, "The Bleaching-Ground" and "The Coppersmith"; at Brussels, in 1861, "The Match-Maker," "Interior of a Tailor's Shop," "A Potter," also scries of pictures for Gambard of London, and Courtereux of Brussels; at Ghent, in 1862, "A Shoemaker"; at Antwerp, in 1864, "A Flower-Garden"; at Brussels, in 1866, "Interior of a Church"; at Antwerp, in 1867, "Flemish Interior"; at Brussels, in 1869, "Woman Spinning" (the Museum of Brussels); at Antwerp, in 1872, "The Reader"; at Brussels, in 1872, "The Geographer" (the Museum of Brussels), "View of Antwerp" (the King of the Belgians), and "The Lesson." In 1875 he painted "The Pilot-House at Antwerp" (the Museum of Antwerp); in 1875, at the Universal Exhibition at Paris, appeared "The Carillon, a view of the Tower of Antwerp Cathedral." At Vienna, in the same year, he exhibited "The Painter's Studio," and, at Amsterdam, "The Grinder" and "Grandmother's Birthday"; at Brussels, in 1887, "The Rue du Sermet at Antwerp," "A Copper-plate Printer," and "The Sailor's Return," and at Paris, in 1878, "The Man at the Window." This interesting painter is, we regret to hear, very seriously ill.

Karl Ooms was born in 1840 at Desschel, a village of the Campine, a district in north-east Belgium. The Governor of the Province of Antwerp being on a visit in 1857 in the neighbourhood of Desschel saw some of the boy's drawings at the village school. Struck with their ability, and learning that his family were small cultivators, he introduced him to the Director of the Academy at Antwerp, who admitted him to the course of instruction, though only twelve years of age. In 1865 he obtained the prize of excellence in the upper school; and the same year exhibited at Brussels his first picture, "Mother of the Gracchi," now in the Belgian Senate-House. In 1870 he obtained the second prize at the Grand Concours de Rome. M. Ooms has evidently caught the mantle of his master, De Keyser, and maintains the tradition of the great historical school of 1830-60. The following is a list of his principal works:—1871, "Flemish Pirates Returning with their Booty"; 1872, "A Wedding Interrupted during the Spanish Fury at Antwerp"; 1875, "Philip II. of Spain Rendering the Last Honours to Don John of Austria" (Museum of Antwerp); 1876, "The Prohibited Reading" (Museum of Brussels); 1878, "Judicial Search in the Printing Establishment of Plantin, at Antwerp, in 1562"; 1880, "Duke of Alva"; 1882, "A Gipsy" (Museum of Pragne); 1886, "Scene from the Spanish Fury in 1576." At the present time, he is finishing a large and masterly picture for the Palais de Justice at Antwerp, entitled "Innocence Protected by the Law.' M. Ooms has also painted several large portraits.

Emile Wauters, born at Brussels in 1848, has been one of the most successful of the painters who have come out of the famous *atelier* of Portaels. Thence he went to study under Gérôme in Paris, and in 1868, he was sent to Italy and Germany to complete his art-education. His first important works were: "Principal Nave of St. Mark's," 1868, bought by the King of the Belgians; and "Edith finding the Body of Harold," 1869 (Collection Löwenstein). Invited by the Khedive to attend the opening of the Suez Canal, he was summoned back quickly by the fatal illness of his mother. In 1870, he exhibited "Mary of Burgundy Imploring the Forgiveness of her Councillors," "Hugonot and Imbercourt" (Museum of Liége): this picture was engraved, in 1872, in *The Illustrated London News*. In 1872 he exhibited, at the Paris Salon, "Madness of Hugo Van der Goes" (Brussels Museum). In 1873 he decorated the principal staircase of the Hôtel-de-Ville, at Brussels, with two works—"Mary of Burgundy Swearing to Respect the Communal Right, 1477," and "The Trade Corporations Demanding a Charter of John, Duke of Brabant." In 1876 he exhibited at the Salon a portrait of M. C. Somzee; and in 1879 he painted three important portraits. In 1880 he collected ninety of his works, and opened his studio to the public. In the same year he went to Egypt to make studies for his great panorama of Cairo and the banks of the Nile—a vast work, 380 ft. long and 49 ft. high. After being exhibited at Brussels, Vienna, and Munich, it is now at the Hague. In 1882 he painted another large work, "Sobieski and his Staff at Kahlenberg, near Vienna." While painting this picture he was appointed to a chair in the Brussels Academy. In 1883 he visited Spain and Morocco, and the results appeared in his "Morocco Fisherman," "The Great Mosque," and "The Serpent-Charmers of Sokko." After travelling for some time in Austria and Germany, he returned to Belgium, and sent to the Antwerp International Exhibition, in 1884, eight portraits and "Cairo from the Bridge of Kasr-el-Kil" (Antwerp Museum). The last-named picture was exhibited at the Royal Academy. This year, M. Wauters has held a second exhibition of his works, opened by the King of the Belgians. He has been commissioned by the Chamber of Deputies to decorate the staircase of the Palace of the Beaux Arts and to paint portraits of the King and Queen. A portrait by M. Wauters was also exhibited, this year, at the Royal Academy, about which a pleasant anecdote appeared in the newspapers, Mr. F. Holl, R.A., and M. Wauters being mutually disposed to give the palm to each other's work.

R. H.

Sir Frederick Leighton and the council of the Royal Academy held the society's usual annual reception at Burlington House, Piccadilly, on July 11.

THE REVOLUTION HOUSE.

East Derbyshire, for the most part a region of iron and coal, is, perhaps, not the most interesting corner of the county that is noted for the loveliness of its scenery; still, it is not without picturesque haunts, and is exceedingly rich in houses that remind one of Schiller's saying "What is grey with age becomes religion." It has within its borders the fine old Castle of Bolsover, with its associations of kingly revelry and the poetry of Ben Jonson's time; the stately Elizabethan mansion Hardwick Hall, with its treasures of tapestry, and memories of Bess of Hardwick, who feared no man, yet fell a prey to a gipsy's prophecy; the whimsically crooked steeple of Chesterfield church, inseparable from traditions, flesh-creeping and Satanic; and the Revolution House. The latter is the smallest, and at the same time, the most important relic of the past that East Derbyshire possesses. Just now its name is on many people's lips. Scarcely a day passes without some stranger's peering through the old-fashioned windows of the cottage as if he almost expected to see the conspirators sitting at the table, as they did two hundred years ago, plotting the overthrow of King James II.; or, at all events, wondering how a deliberation so momentous could have taken place in a habitation so little.

The tiny stone cottage, softened and mellowed by Time's touch, stands in the village of Old Whittington, on the road that was formerly used by the coaches plying from London to the North. It has a weather-worn door, and somewhat dilapidated diamond panes half hidden by foliage, and a thatched roof that had gone green and grey and brown with years—so musty, in fact, that the old thatch has just been replaced with new. In 1688, the house was an inviting country inn, having the swinging sign of "The Cock and Pynot," and retailing the Derbyshire ale, about the quality of which Izaak Walton was apt to become enthusiastic. The tavern, at that time, had not only a kitchen, house-place, and parlour—that subsequently received the name of "The plotting-parlour"—but a brewhouse and stables. It gave accommodation, as the old signboards have it, to "man and beast," and was a cosy, homely house of call to all the country-side, as well as to the pack-horse travellers of the Peak, and the merchants who went farther afield to buy and sell.

Of the visit to it by the fourth Earl of Devonshire, the Earl of Danby, and John D'Arcy, two centuries back, there is

THE REVOLUTION HOUSE, WHITTINGTON, NEAR CHESTERFIELD.

proof in a manuscript that has recently been printed in Derbyshire. The Earl of Danby, afterwards the Duke of Leeds, has left it on record that he was one of the plotters, for in the introduction to his letters, in 1710, he says:—"The Duke of Devonshire also, when we were partners in the Secret Trust about the Revolution, and who did meet me and Mr. John D'Arcy for that purpose at a town called Whittington, in Derbyshire, did, in the presence of the said Mr. D'Arcy, make a voluntary acknowledgment of the great mistakes he had been led into about me." It is difficult in these days of religious toleration to realise how perilous was the task these noblemen set themselves. Nevertheless, there was not much rust on the headsman's axe; and one is sharply reminded of the danger they ran by a letter recently received by the present writer from Lord Hartington's secretary, who writes:—"At Lord Hartington's request I have examined letters of the year 1688, but find none bearing on the politics of the time. In one or two letters allusion is made to the impossibility of safely writing on such subjects, which is the reason, I suppose, that no letters are in the collection." These words cast, as it were, a bridge over time. They take one in imagination to the country inn, to the wainscoted plotting-parlour, with its oak table and high-backed chairs; to the muscular, lithe forms of the English aristocrats, as with grave, serious faces, bent heads, and in whispered conference, they evolved the project that might plunge England into Civil War.

There are all sorts of traditions about the meeting. It is said that the Lord of Chatsworth and his trusty friends had arranged to meet on the wild stretch of moorland between Chesterfield and Lees Fen, but were driven to shelter in the tavern by a storm. It is also asserted—and this tradition is firmly believed in the locality—that the Earl rode from Chatsworth to follow the hounds, and broke away from the hunt with his co-plotters to divert suspicion. Anyhow, no one outside their own group had any idea of the gravity of their errand as they rode up to the inn door, and strode into the quaint parlour. What was really said when the tankards of home-brewed had been brought in, and the door barred, and D'Arcy placed sentinel against eavesdroppers, will never be known; but the success of the plan is conspicuous in English history. It was undoubtedly in this wayside inn that the conspirators resolved to give the country a Protestant King; and the means decided upon to carry out the daring project are disclosed in a further reference of Danby's to the Earl of Devonshire. "And he came," writes Danby, "to Sir Henry Goodrick's house in Yorkshire, purposely to meet me there, in order to concert the times and methods by which he should act at Nottingham, which was to be his post, and I at York, which was to be mine; and we agreed that I should first attempt to surprise York, because there was a small garrison with a Governor there; whereas Nottingham was but an open town, and might give an alarm to York, if he should appear in arms before I had made my attempt upon York—which was done accordingly, but is mistaken in divers relations of it." Every schoolboy knows what followed. The country simmered with excitement. The Protestants shouted "Down with the Pope!" The Roman Catholics cried "God save the King!" Thackeray hits off the situation vividly in his story of "Henry Esmond," where my Lord Castlewood, getting angry at the jeering crowd in the country town on the market day, threatens to send his rapier through "a psalm-singing cobbler for abusing the King's religion." And, in the midst of it all, Danby rode into York; Cavendish, backed by his neighbours and the Peak miners, appeared in Derby market-place, and pushed on to Nottingham; Norfolk, with his retinue of gentlemen, was ready for emergency at Norwich; Lovelace, notwithstanding the varsity motto, had a grand welcome from the gownsmen at Oxford; and William of Orange, marching unimpeded on Salisbury from his landing-place at Torbay, learnt that King James, discomfited, and deserted by his own children, had fled from his disordered army—that the Revolution was complete without bloodshed, and the crown of England practically in his own grasp.

It is not necessary here to enumerate the many benefits of that Revolution, except, perhaps, to say that they range from religious liberty to the freedom of the press. But it is interesting, now we have reached the bicentenary year of the event, to note what reminders remain to us of it. So long as Chatsworth House stands by the Derwent-side, in the green glory of the park, on the fringe of the Peak moorland, England will never be without one memory of the Revolution; for this home of the Cavendishes, so rich in art and literature, was built by the fourth Earl, and first Duke of Devonshire, and a tablet in the hall tells you that it was commenced in the year of English freedom, 1688. Still, the interest of the people concentrates rather in the cottage than the mansion. In 1788, there were great rejoicings at this rustic Revolution House. A procession of nobility, gentry, and yeomen went to the cottage, and viewed the historic "plotting-parlour," and the treasured chair, now at Hardwick Hall, in which Cavendish sat on the memorable day when it was determined to push King James from the throne. There were music and dancing and singing, and brave old toasts, both at Whittington and Chesterfield; and through the latter town, on a chair, was carried Cornelius Crich, a local centenarian, who was born just before the Revolution. This year, too, there is to be great festivity; but amid the rejoicing—the bi-centenary carnival—one thing should be remembered: that it would be grievous to put up some new-fangled monument to the Revolution on the site of this notable house. Whittington is not, as many imagine, the birthplace of Dick Whittington, thrice Lord Mayor of London; but it is the birthplace of the Revolution:—

> At Whittington, near Chesterfield,
> That was the very place, Sir,
> Where the first plot was laid, I'm told,
> To pull the tyrant down, Sir.

And Whittington thinks a great deal about the old house in which the plot was laid. The habitation, which long belonged to the Cavendish family, has passed out of the hands of the Duke of Devonshire, having been purchased by Mr. Mansfeldt Mills, of Tapton; but his Grace reserves the right, in the event of the cottage being demolished, to erect a suitable memorial in its place. Nevertheless, no stilted figure of Liberty, no obelisk, no modern monument, would be prized so much as the cottage itself. The dwelling, which is now untenanted, has been patched time after time, and its owner very properly feels that it should not be disturbed so long as one stone will stand upon another. Nay, even when it totters and collapses, it is suggested that the cottage should be rebuilt in the same shape, with some, at least, of the old stones; but the earnest desire of all who love their country, and take an interest in its struggles, must be that the Revolution House will survive the weather's freaks for years to come, standing venerable with age, one of the humblest, and yet one of the most noted, of English houses that have played an important part in the nation's history, and become indelibly touched with the romance and the energy of the past.

Mr. Charles Stretten, who has been for many years Deputy-Chief Constable, has been appointed Chief Constable of Cambridgeshire, in place of Major Calvert, deceased.

At a meeting of the London School-Board on July 12, Mr. Gover called upon Mr. Helby to substantiate a statement he made at a dinner, to the effect that things were as bad at that Board, or worse, than at the Metropolitan Board of Works. Mr. Helby demurred to Mr. Gover's right to interrogate him, but said at the proper time he should be prepared to take the course which the circumstances demanded. The Board appointed a Special Committee to consider any allegations of corruption affecting any members or officers of the Board.

Judge Eddis has given an important decision at the Clerkenwell County Court. Sydney Simmons, aged seven years, suing by his father, has obtained a judgment for £50 and costs against Mr. John Molloy for injuries and expenses occasioned by the bite of a dog belonging to defendant's stableman, which defendant harboured on his premises. In deciding the case, the Judge said it was not necessary to prove the ownership of the dog. If a man harboured a dog about his premises, and the animal injured anybody, he was responsible. The animal in question was the property of defendant's stableman, but defendant allowed it to be on his premises. It was not necessary to prove that the dog had actually bitten anyone previously for the maintenance of an action. It was enough that its vicious propensities had been brought to the knowledge of the defendant.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

JULY 21, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates:—To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny*; THIN EDITION, *One Penny*. To Australia, Brazil, Cape of Good Hope, China (viâ United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence*; THIN EDITION, *One Penny*. To China (viâ Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny*; THIN EDITION, *Three-halfpence*.

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

MUSICAL PUBLICATIONS.

"Four Vocal Duets for Soprano and Tenor." By F. H. Cowen. These pieces (just published by Mr. Joseph Williams) should be widely welcomed in drawing-room circles. They are very graceful productions, in which flowing melody is associated with rich harmonic treatment in the accompaniment, that, without obscuring the voice parts, affords a good support thereto, and contrasts admirably therewith. No. 1, "Edenland" (a setting of lines by the author of "John Halifax"), displays the two voices very effectively, both singly and in association. In No. 2, "The Boy and the Brook," the text is by Longfellow. The music opens with solo phrases for the tenor, somewhat in the style of a Volkslied; the soprano replying, with a light and fanciful accompaniment; the voices being alternated, and then, towards the close, associated with good effect. "On her lover's arm" (No. 3) is to words by Lord Tennyson. A prevalence of arpeggio passages in the accompaniment contrasts very effectively with the sostenuto of the voices. The last duet of the series, "The fountains mingle with the river," is associated with lines by Shelley. The pervading feature of triplets in the accompaniment (which is in nine-eight time) gives a good effect of the rippling of water, and sets off well the flowing nature of the melody assigned to the two voices, which are heard almost entirely in association in this piece.

Messrs. Boosey and Co. have issued a new edition of Wallace's most popular work, "Maritana," as one of the volumes of their series of operas entitled "The Royal Edition." The work is brought out in the same handy form as previous issues of the same series, and also at a moderate cost. The editing has been carefully done by Mr. M. B. Foster.

"The Bells o' Dee" and "Golden Dreams" are two songs, the words of which are by that prolific and successful writer of verse for musical purposes, Mr. Edward Oxenford, whose lines are pleasant in their suggestiveness, and lend themselves readily to the composer's art. The first-named song has been tunefully set by A. Briscoe, whose music lies well for any voice of moderate compass. The other song, by A. Bishop, is also melodious, and has a good contrast between the expressive opening "Andante" and the intermediate "Allegretto Grazioso." Messrs. Duff and Stewart are the publishers of both songs.

THE SANITARY INSTITUTE.

The twelfth annual meeting of the members of this institute was held on July 12 in the lecture-hall of the Royal Institution, Albemarle-street, and was well attended. Mr. E. Chadwick, C.B., occupied the chair. He said by means of sanitary work the death-rate in the metropolis had been brought down to 14 in the thousand, while in other places where there had been no such work it remained at its old high rate. In Paris it was 27, and in St. Petersburg 40, in the thousand. The medals and special certificates and certificates of merit awarded to exhibitors at the Exhibition of Sanitary Appliances in Bolton in 1887 were then distributed; after which Mr. B. W. Richardson, M.D., read a paper on "Storage of Life as a Sanitary Study." After referring to instances of long life in lower animals and in man, he said these animals and these persons, by some peculiar process as yet but little investigated, held life as a long possession, and to this faculty he applied the term "storage of life." The conditions which favoured such storage he held to be (1) hereditary qualification, (2) the virtue of continency, (3) maintenance of balance of bodily functions, (4) perfect temperance, (5) purity from implanted or acquired diseases. On the motion of the chairman, seconded by Major Flower, a vote of thanks was given to Dr. Richardson for his paper, and on the motion of Mr. Field, a vote of thanks was also given to Mr. Chadwick for presiding.

METROPOLITAN WATER SUPPLY.

Dr. Frankland reports to the Registrar-General the results of the chemical analyses of the waters supplied to the inner, and portions of the outer, circle of the metropolis during the month of June. Taking the average amount of organic impurity contained in a given volume of the Kent Company's water during the nine years ending December, 1876, as unity, he finds that the proportional amount contained in an equal volume of water supplied by each of the metropolitan water companies and by the Tottenham Local Board of Health was:—Kent, 0·6; New River, 1·2; Tottenham, 1·3; Grand Junction, 1·4; Southwark, 1·7; West Middlesex, 1·8; Chelsea, 1·8; Lambeth, 2·0; Colne Valley, 2·2; East London, 2·4. The Thames water sent out by the Chelsea, West Middlesex, Southwark, Grand Junction, and Lambeth companies again exhibited a further reduction in the proportion of contained organic matter, which was unusually small in all the samples examined. All the samples were clear and bright. Of the water principally drawn from the Lea, that distributed by the New River Company contained less, and that by the East London Company slightly more, organic matter than the Thames supplies. Both samples were clear and bright. The deep-well water pumped by the Kent Company and by the Tottenham Local Board of Health contained, as usual, only a very small proportion of organic matter; while in the sample of the Colne Valley Company's supply the organic matter was distinctly in excess of the average for this water. The Colne Valley Company's water was softened, as usual, before delivery. Seen through a stratum of 2 ft. deep, the waters presented the following appearances: Kent and Tottenham, clear and colourless; Colne Valley and New River, clear and nearly colourless; Chelsea, West Middlesex, Southwark, Grand Junction, Lambeth, and East London, clear and very pale yellow.

A meeting of the Scotch Episcopal Diocese of Glasgow and Galloway was held in St. Mary's Cathedral, Glasgow, on July 12, to elect a Bishop in the room of the late Bishop Wilson. The Rev. Canon Harrison, Vicar of Bury St. Edmunds, and Bishop Sandford, of Tasmania, were nominated. The former had a majority in the lay and clerical chambers. The minority acquiesced, and Canon Harrison was elected.

On July 11 the Lord Mayor and Lady Mayoress, attended by the Sheriffs, visited the People's Palace in State, in order to open the Cooperage Exhibition, which has been organised by the Cooper's Company, in conjunction with the trustees of the palace. The Lord Mayor, in acknowledging an address presented to him, said that the exhibition had found an appropriate location at the People's Palace, which was so peculiarly devoted to the interests of the working classes. The company, in promoting the exhibition, would have done something to encourage the best qualities, and he was sure that the working people would be grateful for their interest. The master then presented to the Lord Mayor, as a memorial of his visit, a miniature cask, bound in silver, the work of Mr. Charvet, a foreman cooper. The exhibition contains casks of every size and shape, from the 500-gallon bouge vat down to the model in the glass case. All kinds of coopers' work are represented: and the entries, especially in the workmen's classes, have been very numerous. About £200 altogether is given in prizes.—In the evening, the Lord Mayor and Lady Mayoress entertained a large and distinguished company at the Mansion House, in celebration of the coronation of her Majesty the Queen.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER V.

THE RUNAWAY.

Everybody HATH heard, and old people still remember, how one Act after the other was passed for the suppression of the Nonconformists, whom the Church of England tried to extirpate, but could not. Had these laws been truly carried into effect, there would have been great suffering among the Dissenters; but, in order to enforce them, every man's hand would have been turned against his neighbour, and this—thank God!—is not possible in Somerset. For example, the Act of Uniformity provided not only for the ejectment of the Nonconforming ministers (which was duly carried out), but also enacted that none of them should take scholars without the license of the Bishop. Yet many of the ejected ministers maintained themselves in this way, openly, without the Bishop's license. They were not molested, though they might be threatened by some hot Episcopalian; nor were the Bishops anxious to set the country afire by attempting to enforce this law. One must not take from an honest neighbour, whatever an unjust law may command, his only way of living.

Again, the Act passed two years later punished all persons with fine and imprisonment who attended conventicles. Yet the conventicles continued to be held over the whole country, because it was impossible for the Justices to fine and imprison men with whom they sat at dinner every market-day, with whom they took their punch and tobacco, and whom they knew to be honest and God-fearing folk. Again, how could they fine and imprison their own flesh and blood? Why, in every family there were some who loved the meeting-house better than the steeple-house. Laws have little power when they are against the conscience of the people.

Thirdly, there was an Act prohibiting ministers from residing within five miles of the village or town where they had preached. This was a most cruel and barbarous Act, because it sent the poor ministers away from the help of their friends. Yet how was it regarded? My father, for his part, continued to live at Bradford Orcas without let or hindrance, and so, no doubt, did many more.

Again, another Act was passed giving authority to Justices of the Peace to break open doors and to take in custody persons found assembling for worship. I have heard of disturbances at Taunton, where the Magistrates carried things with a high hand; but I think the people who met to worship after their own fashion were little disturbed. Among the Churchmen were some, no doubt, who remembered the snubs and rubs they had themselves experienced, and the memory may have made them revengeful. All the persecution, it is certain, was not on the side of the Church. There was, for instance, the case of Dr. Walter Raleigh, Dean of Wells, who was clapped into a noisome prison where the plague had broken out. He did not die of that disease, but was done to death in the jail, barbarously, by one David Barrett, shoemaker, who was never punished for the murder, but was afterwards made Constable of the City. There was also the case of the Rev. Dr. Piers, whom I have myself seen, for he lived to a good old age. He was a Prebendary of Wells, and, being driven forth, was compelled to turn farmer, and to work with his own hands—digging, hoeing, ploughing, reaping, and threshing—when he should have been in his study. Every week this reverend and learned Doctor of Divinity was to be seen at Ilminster Market, standing beside the pillars with his cart, among the farmers and their wives, selling his apples, cheese, and cabbages.

I say that no doubt many remembered these things. Yet the affection of the people went forth to the Nonconformists and the ejected ministers, as was afterwards but too well proved. I have been speaking of things which happened before my recollection. It was in the year 1665, four years after the Ejection, that I was born. My father would have named me Grace Abounding, but my mother called me Alice, after her own name. I was thus six years younger than my brother Barnaby, and two years younger than Robin and Humphrey.

The first thing that I can recollect is a kind of picture, preserved, so to speak, in my head. At the open door is a woman spinning at the wheel. She is a woman with a pale, grave face; she works diligently, and for the most part in silence; if she speaks, it is to encourage or to admonish a little girl who plays in the garden outside. Her lips move as she works, because she communes with her thoughts all day long. From time to time she turns her head and looks with anxiety into the other room, where sits her husband at his table.

Before him stand three boys. They are Barnaby, Robin, and Humphrey. They are learning Latin. The room is piled with books on shelves and books on the floor. In the corner is a pallet, which is the master's bed by night. I hear the voices of the boys who repeat their lessons, and the admonishing of their master. I can see through the open door the boys themselves. One, a stout and broad lad, is my brother Barnaby: he hangs his head and forgets his lesson, and causes his father to punish him every day. He receives admonition with patience; yet profiteth nothing. The next is Humphrey; he is already a lad of grave and modest carriage, who loves his book and learns diligently. The third is Robin, whose parts are good, were his application equal to his intelligence. He is impatient, and longs for the time when he may close his book and go to play again.

Poor Barnaby! at the sight of a Latin Grammar he would feel sick. He would willingly have taken a flogging every day—to be sure, that generally happened to him—in order to escape his lessons and be off to the fields and woods.

It was the sight of his rueful face—yet never sad except at lessons—which made my mother sigh when she saw him dull but patient over his book. Had he stayed at home I know not what could have been done with him, seeing that to become a Preacher of the Gospel was beyond even the power of prayer (the Lord having clearly expressed His will in this matter). He would have had to clap on a leathern apron, and become a wheelwright or blacksmith; nothing better than an honest trade was possible for him.

But (whether happily or not) a strange whim seized the boy when he was fourteen years of age. He would go to sea. How he came to think of the sea I know not; he had never seen the sea; there were no sailors in the village; there was no talk of the sea. Perhaps Humphrey, who read many books, told him of the great doings of our sailors on the Spanish main and elsewhere. Perhaps some of the clothiers' men, who are a roving and unsettled crew, had been sailors—some, I know, had been soldiers under Oliver. However, this matters not, Barnaby must needs become a sailor.

When first he broke this resolution, which he did secretly, to my mother, she began to weep and lament, because everybody knows how dreadful is the life of a sailor, and how full of dangers. She begged him to put the thought out of his head, and to apply himself again to his books.

"Mother," he said, "it is no use. What comes in at one ear goes out at the other. Nothing sticks: I shall never be a scholar."

"Then, my son, learn an honest trade."

"What? Become the village cobbler—or the blacksmith? Go hat in hand to his Honour, when my father should have been a Bishop, and my mother is a gentlewoman? That will I not. I will go and be a sailor. All sailors are gentlemen. I shall rise and become first mate, and then second captain, and lastly, captain in command. Who knows? I may go and fight the Spaniard, if I am lucky."

"Oh, my son, canst thou not stay at home and go to church, and consider the condition of thine immortal soul? Of sailors it is well known that their language is made up of profane oaths, and that they are all profligates and drunkards. Consider, my son"—my mother laid her hand upon his arm—"what were heaven to me, if I have not my dear children with me as well as my husband? How could I praise the Lord if I were thinking of my son who was not with me, but—ah! Heaven forbid the thought!"

Barnaby made no reply. What could he say in answer to my mother's tears? Yet I think she must have understood very well that her son, having got this resolution into his head, would never give it up.

"Oh!" she said, "when thou wast a little baby in my arms, Barnaby—who art now so big and strong"—she looked at him with the wonder and admiration that women feel when their sons grow big and stout—"I prayed that God would accept thee as an offering for His service. Thou art vowed unto the Lord, my son, as much as Samuel. Do you think he complained of his lessons? What would have happened, think you, to Samuel if he had taken off his ephod and declared that he would serve no longer at the altar, but must take spear and shield, and go to fight the Amalekite?"

Said Barnaby, in reply, speaking from an unregenerate heart, "Mother, had I been Samuel, to wear an ephod and to learn the Latin syntax every day, I should have done that. Ay! I would have done it, even if I knew that at the first skirmish an arrow would pierce my heart."

It was after a great flogging, on account of the passive voice or some wrestling with the syntax, that Barnaby plucked up courage to tell his father what he wished to do.

"With my consent," said my father, sternly, "thou shalt never become a sailor. As soon would I send thee to become a buffoon in a playhouse. Never dare to speak of it again."

Barnaby hung his head and said nothing.

Then my mother, who knew his obstinate disposition, took him to Sir Christopher, who chid him roundly, telling him that there was work for him on land, else he would have been born beside the coast, where the lads take naturally to the sea: that being, as he was, only an ignorant boy, and landborn, he could not know the dangers which he would encounter: that some ships are cast away on desert islands, where the survivors remain in misery until they die, and some on lands where savages devour them, and some are dragged down by calamaries and other dreadful monsters, and some are burned at sea, their crews having to choose miserably between burning and drowning, and some are taken by the enemy, and the sailors clapped into dungeons and tortured by the Accursed Inquisition.

Many more things did Sir Christopher set forth, showing the miserable life and the wretched end of the sailor. But Barnaby never changed countenance, and though my mother bade him note this and mark that, and take heed unto his Honour's words, his face showed no melting. 'Twas always an obstinate lad; nay, it was his obstinacy alone which kept him from his learning. Otherwise, he might perhaps have become as great a scholar as Humphrey.

"Sir," he said, when Sir Christopher had no other word to say, "with submission, I would still choose to be a sailor, if I could."

In the end he obtained his wish. That is to say, since no one would help him towards it, he helped himself. And this, I think, is the only way in which men do ever get what they want.

It happened one evening that there passed through the village a man with a pipe and tabor, on which he played so movingly that all the people turned out to listen. For my own part I was with my mother, yet I ran to the garden-gate and leaned my head over, drawn by the sound of the music. Presently the boys and girls began to take hands together and to dance. I dare not say that to dance is sinful, because David danced. But it was so regarded by my father, so that when he passed by them, on his way home from taking the air, and actually saw his own son Barnaby in the middle of the dancers, footing it merrily with them all, joyfully leading one girl up and the other down at *John come and kiss me now*, he was seized with a mighty wrath, and, catching his son sharply by the ear, led him out of the throng and so home. For that evening Barnaby went supperless to bed, with the promise of such a flogging in the morning as would cause him to remember for the rest of his life the sinfulness of dancing. Never had I seen my father so angry. I trembled before his wrathful eyes. But Barnaby faced him with steady looks, making answer none, yet not showing the least repentance or fear. I thought it was because a flogging had no terrors for him. The event proved that I was wrong; that was not the reason, he had resolved to run away, and when we awoke in the morning he was gone. He had crept down-stairs in the night; he had taken half a loaf of bread and a great cantle of soft cheese, and had gone away. He had not gone for fear of the rod: he had run away with design to go to sea. Perhaps he had gone to Bristol; perhaps to Plymouth; perhaps to Lyme. My mother wept, and my father sighed; and for ten years more we neither saw nor heard anything of Barnaby, not even whether he was dead or living.

CHAPTER VI.

BENJAMIN, LORD CHANCELLOR.

Summer follows winter, and winter summer, in due course, turning children into young men and maidens, changing school into work, and play into love, and love into marriage, and so onwards to the churchyard, where we all presently lie, hopeful of Heaven's mercy, whether Mr. Boscorel did stand beside our open grave in his white surplice, or my father in his black gown.

Barnaby was gone; the other three grew tall, and would still be talking of the lives before them. Girls do never look forward to the future with the eagerness and joy of boys. To the dullest boy it seems a fine thing to be master of his own actions, even if that liberty lead to whipping-post, pillory, or gallows. To boys of ambition and imagination the gifts of Fortune show like the splendid visions of a prophet. They think that earthly fame will satisfy the soul. Perhaps women see these glories and their true worth with clearer eye as not desiring them. And truly it seems a small thing, after a life spent in arduous toil, and with one foot already in the grave, to obtain fortune, rank, or title.

Benjamin and Humphrey were lads of ambition. To both, but in fields which lay far apart, the best life seemed to be that which is spent among men on the ant-hill where all are driving or being driven, loading each other with burdens intolerable, or with wealth or with honours, and then dying and being forgotten in a moment—which we call London. In the kindly country one stands apart and sees the vanity of human wishes. Yet the ambition of Humphrey, it must be confessed, was noble, because it was not for his own advancement, but for the good of mankind.

"I shall stay at home," said Robin. "You two may go if you please. Perhaps you will like the noise of London, where a man cannot hear himself speak, they say, for the roaring of the crowd, the ringing of the bells, and the rumbling of the carts. As for me, what is good enough for my grandfather will be surely good enough for me."

It should, indeed, be good enough for anybody to spend his days after the manner of Sir Christopher, administering justice for the villagers, with the weekly ordinary at Sherborne for company, the green fields and his garden for pleasure and for exercise, and the welfare of his soul for prayer. Robin, besides, loved to go forth with hawk and gun; to snare the wild creatures; to hunt the otter and the fox; to bait the badger, and trap the stoat and weasel; to course the hares. But cities and crowds, even if they should be shouting in his honour, did never draw him, even after he had seen them. Nor was he ever tempted to believe any manner of life more full of delight and more consistent with the end of man's creation than the rural life, the air of the fields, the following of the plough for the men, and the spinning-wheel for the women.

"I shall be a lawyer," said Benjamin, puffing out his cheeks and squaring his shoulders. "Very well, then, I say I shall be a great lawyer. What? None of your pettifogging tribe for me: I shall step to the front, and stay there. What? Someone must have the prizes and the promotion. There are always places falling vacant and honours to be given away: they shall be given to me. Why not to me as well as another?"

"Well," said Robin, "you are strong enough to take them, willy-nilly."

"I am strong enough," he replied, with conviction. "First, I shall be called to the Outer Bar, where I shall plead in stuff—I saw them at Exeter last 'Sizes. Next, I shall be summoned to become King's Counsel, when I shall flaunt it in silk. Who but I?" Then he seemed to grow actually three inches taller, so great is the power of imagination. He was already six feet in height, his shoulders broad, and his face red and fiery, so that now he looked very big and tall. "Then my Inn will make me a Bencher, and I shall sit at the high table in term-time. And the attorneys shall run after me and fight with each other for my services in Court, so that in every great case I shall be heard thundering before the jury, and making the witnesses perjure themselves with terror—for which they will be afterwards flogged. I shall belong to the King's party—none of your canting Whigs for me. When the high treason cases come on, I shall be the counsel for the Crown. That is the high road to advancement."

"This is very well, so far," said Robin, laughing. "Ben is too modest, however. He does not get on fast enough."

"All in good time," Ben replied. "I mean to get on as fast as anybody. But I shall follow the beaten road. First, favour with attorneys and those who have suits in the Courts; then the ear of the Judge. I know not how one gets the ear of the Judge"—he looked despondent for a moment, then he held up his head again—"but I shall find out. Others have found out—why not I? What? I am no fool, am I?"

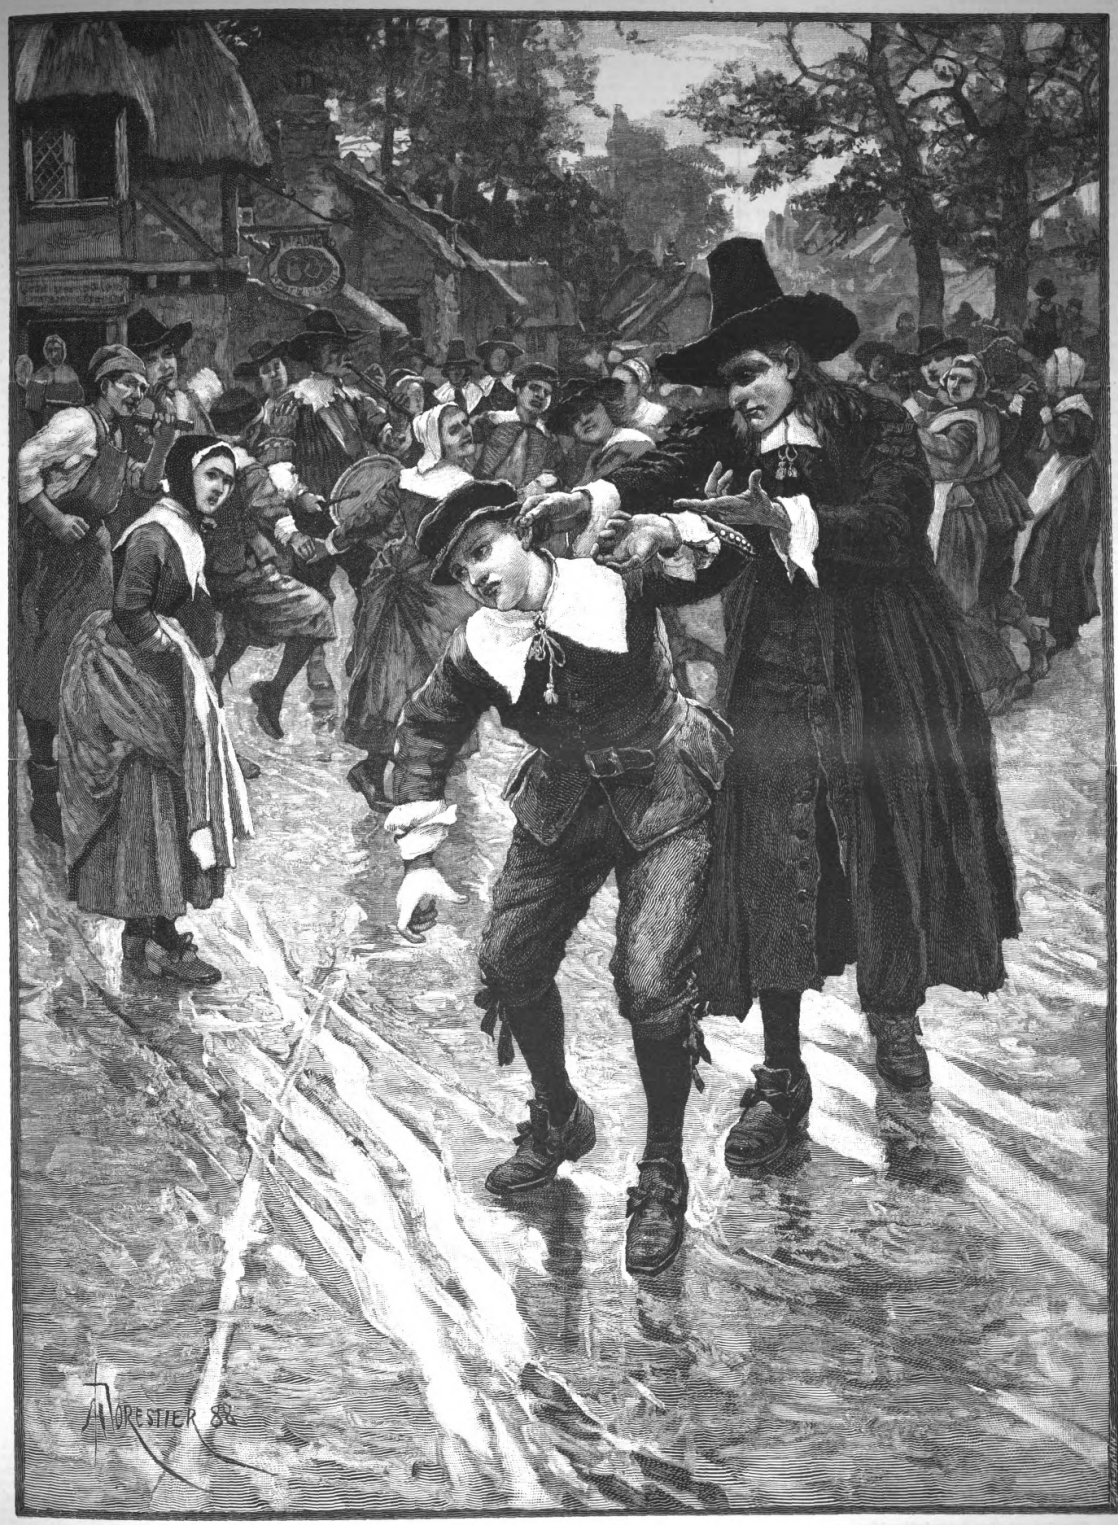
"Certainly not, Ben. But as yet we stick at King's Counsel."

"After the ear of the Judge, the favour of the Crown. What do I care who is King? It is the King who hath preferment and place and honours in his gift. Where these are given away, there shall I be found. Next am I made Serjeant-at-Law. Then I am saluted as 'Brother' by the Judges on the Bench, while all the others burst with envy. After that I shall myself be called to the Bench. I am already 'my Lord'—why do you laugh, Robin?—and a Knight: Sir Benjamin Boscorel—Sir Benjamin." Here he puffed out his cheeks again and swung his shoulders like a very great person indeed.

"Proceed, Sir Benjamin," said Humphrey, gravely, while Robin laughed.

"When I am a Judge I promise you I will rate the barristers and storm at the witnesses and admonish the jury until there shall be no other question in their minds but to find out first what is my will in the case, and then to govern themselves accordingly. I will be myself Judge and jury and all. Oh! I have seen the Judge at last Exeter 'Sizes. He made all to shake in their shoes. I shall not stop there. Chief Baron I shall be, perhaps—but on that point I have not yet made up my mind—and then Lord Chancellor." He paused to take breath, and looked around him, grandeur and authority upon his brow. "Lord Chancellor," he repeated, "on the woolsack!"

"You will then," said Robin, "be raised to the Peerage—first Lord Boscorel; or perhaps, if your Lordship will so honour this poor village, Lord Bradford Orcas"——



"Earl of Sherborne I have chosen for title," said Benjamin. "And while I am climbing up the ladder, where wilt thou be, Humphrey? Grovelling in the mud with the poor devils who cannot rise?"

"Nay, I shall have a small ladder of my own, Ben. I find great comfort in the thought that when your Lordship is roaring and bawling with the gout—your noble toe being like a ball of fire and your illustrious foot swathed in flannel—I shall be called upon to drive away the pain, and you will honour me with the title not only of humble cousin, but also of rescuer and preserver. Will it not be honour enough to cure the Right Honourable the Earl of Sherborne (first of the name), the Lord Chancellor, of his gout and to restore him to the duties of his great office, so that once more he shall be the dread of evildoers and of all who have to appear before him? As yet, my Lord, your extremities, I perceive, are free from that disease—the result, too often, of that excess in wine which besets the great."

Here Robin laughed again, and so did Benjamin. Nobody could use finer language than Humphrey, if he pleased.

"A fine ambition!" said Ben. "To wear a black velvet coat and a great wig; to carry a gold-headed cane; all day

* *All Rights Reserved.*

DRAWN BY A. FORESTIER.

He was seized with a mighty wrath, and, catching his son sharply by the ear, led him out of the throng and so home.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

long to listen while the patient tells of his gripes and pains; to mix boluses and to compound nauseous draughts!"

"Well," Humphrey laughed, "if you are Lord Chancellor, Ben, you will, I hope, give us good laws, and so make the nation happy and prosperous. While you are doing this, I will be keeping you in health for the good of the country. I say that this is a fine ambition."

"And Robin, here, will sit in the great chair, and have the rogues hauled before him, and order the Head-borough to bring out his cat-o'-nine-tails. In the winter evenings, he will play backgammon, and in the summer, bowls. Then a posset, and to bed. And never any change from year to year. A fine life, truly!"

"Truly, I think it is a very fine life," said Robin; "while you make the laws, I will take care that they are obeyed. What better service is there than to cause good laws to be obeyed? Make good laws, my Lord Chancellor, and be thankful that you will have faithful, law-abiding men to carry them out."

Thus they talked. Presently the time came when the lads must leave the village and go forth to prepare for such course as should be allotted to them, whether it led to greatness or to obscurity.

Benjamin went first, being sixteen years of age and a great fellow, as I have said, broad-shouldered and lusty, with a red face, a strong voice, and a loud laugh. In no respect did he resemble his father, who was delicate in manner and in speech. He was to be entered at Gray's Inn, where, under some counsel learned in the law, he was to read until such time as he should be called.

He came to bid me farewell, which at first, until he frightened me with the things he said, I took kindly of him.

"Child," he said, "I am going to London, and, I suppose, I shall not come back to this village for a long time. Nay, were it not for thee, I should not wish to come back at all."

"Why for me, Ben?"

"Because"—here his red face became redder, and he stammered a little; but not much, for he was ever a lad of confidence—"because, child, thou art not yet turned twelve, which is young to be hearing of such a thing. Yet a body may as well make things safe. And as for Humphrey or Robin interfering, I will break their heads with my cudgel if they do. Remember that, then." He shook his finger at me, threatening.

"In what business should they interfere?" I asked.

"Kiss me, Alice"—here he tried to lay his arm round my neck, but I ran away. "Oh! if thou art skittish, I care not: all in good time. Very well, then; let us make things safe. Alice, when I come back thou wilt be seventeen or eighteen, which is an age when girls should marry"——

"I have nothing to do with marrying, Ben."

"Not yet. If I mistake not, child, thou wilt then be as beautiful as a rose in June."

"I want no foolish talk, Ben. Let me go."

"Then I shall be twenty-one years of age, practising in the courts. I shall go the Western Circuit, in order to see thee often—partly to keep an eye upon thee and partly to warn off other men. Because, child, it is my purpose to marry thee myself. Think upon that, now."

At this I laughed.

"Laugh if you please, my dear; I shall marry thee as soon as the way is open to the Bench and the Woolsack. What? I can see a long way ahead. I will tell thee what I see. There is a monstrous great crowd of people in the street staring at a glass coach. 'Who is the lovely lady?' they ask. 'The lovely lady'—that is you, Alice; none other—' with the diamonds at her neck and the gold chain, in the glass coach?' says one who knows her liveries: 'tis the lady of the great Lord Chancellor, the Earl of Sherborne.' And the women fall green with envy of her happiness and great good fortune and her splendour. Courage, child; I go to prepare the way. Oh! thou knowest not the grand things that I shall pour into thy lap when I am a Judge."

This was the first time that any man spoke to me of love. But Benjamin was always masterful, and had no respect for such a nice point as the wooing of a maiden—which, methinks, should be gentle and respectful, not as if a woman was like a savage to be tempted by a string of beads, or so foolish as to desire with her husband such gauds as diamonds, or gold chains, or a glass coach. Nor doth a woman like to be treated as if she was to be carried off by force like the Sabine women of old.

The Rector rode to London with his son. It is a long journey, over rough ways; but it pleased him once more to see that great city, where there are pictures and statues and books to gladden the hearts of such as love these things. And on the way home he sojourned for a few days at his old college of All Souls, where were still left one or two of his old friends. Then he rode back to his village. "There are but two places in this country," he said, "or perhaps three, at most, where a gentleman and a scholar, or one who loveth the fine arts, would choose to live. These are London and Oxford, and perhaps the Sister University upon the Granta. Well, I have once more been privileged to witness the humours of the Court and the town: I have once more been permitted to sniff the air of a great library. Let us be thankful." He showed his thankfulness with a sigh which was almost a groan.

It was three years before we saw Benjamin again. Then he returned, but not for long. Like his father, he loved London better than the country, but for other reasons. Certainly, he cared nothing for those arts which so much delighted the Rector, and the air of a coffee-house pleased him more than the perfume of books in a library. When he left us he was a rustic; when he came back he was already what they call a fopling: that is to say, when he went to pay his respects to Sir Christopher, his grandfather, he wore a very fine cravat of Flanders lace, with silken hose, and lace and ribbons at his wrist. He was also scented with bergamot, and wore a peruke, which, while he talked, he combed and curled, to keep the curls of this monstrous head-dress in place. Gentlemen must, I suppose, wear this invention, and one of the learned professions must show the extent of the learning by the splendours of his full-bottomed wig. Yet I think that a young man looks most comely while he wears his own hair. He had cocked his hat, on which were bows of riband, and he wore a sword. He spoke also in a mincing London manner, having now forsworn the honest broad speech of Somerset; and (but not in the presence of his elders) he used strange oaths and ejaculations.

"Behold him!" said his father, by no means displeased at his son's foppery, because he ever loved the city fashions, and thought that a young man did well to dress and to comport himself after the way of the world. "Behold him! Thus he sits in the coffee-house; thus he shows himself in the pit. Youth is the time for finery and for folly. Alas! would that we could bring back that time! What saith John Dryden—glorious John—of Sir Fopling?—

> His various modes from various fashions follow:
> One taught the toss, and one the new French wallow;
> His sword-knot this, his cravat that, designed,
> And this the yard-long snake he twirls behind.
> From one the sacred periwig he gained,
> Which wind na'er blew, nor touch of hat profaned."

"Well, Ben," said Sir Christopher, "if the mode can help thee to the Bench why not follow the mode?"

"It will not hinder, Sir," Ben replied. "A man who hath his fortune to make does well to be seen everywhere, and to be dressed like other men of his time."

One must do Benjamin the justice to acknowledge that though, like the young gentlemen his friends and companions his dress was foppish, and his talk was of the pleasures of the town, he suffered nothing to stand in the way of his advancement. He was resolved upon being a great lawyer, and, therefore, if he spent the evening in drinking, singing, and making merry, he was reading in chambers or else attending the Courts all the day, and neglected nothing that would make him master of his profession. And, though of learning he had little, his natural parts were so good, and his resolution was so strong, that I doubt not he would have achieved his ambition had it not been for the circumstances which afterwards cut short his career. His course of life, by his own boastful confession, was profligate; his friends were drinkers and gamesters; his favourite haunt was the tavern, where they all drank punch and sang ungodly songs, and smoked tobacco; and of religion he seemed to have no care whatever.

I was afraid that he would return to the nauseous subject which he had opened three years before. Therefore, I continued with my mother, and would give him no chance to speak with me. But he found me, and caught me returning home one evening.

"Alice," he said, "I feared that I might have to go away without a word alone with thee."

"I want no words alone, Benjamin. Let me pass!" For he stood before me in the way.

"Not so fast, pretty!"—he caught me by the wrist, and, being a young man so strong and determined, he held me as by a vice. "Not so fast, Mistress Alice. First, my dear, let me tell thee that my purpose still holds—nay"—here he swore a most dreadful, impious oath—"I am more resolved than ever. There is not a woman, even in London, that is to be compared with thee, child. What? Compared with thee? Why, they are like the twinkling stars compared with the glorious Queen of Night. What did I say?—that at nineteen thou wouldst be a miracle of beauty? Nay, that time hath come already! I love thee, child! I love thee, I say, ten times as much as ever I loved thee before!"

He gasped, and then breathed hard; but still he held me fast.

"Idle compliments cost a man nothing, Benjamin. Say what you meant to say and let me go. If you hold me any longer I will cry out and bring your father to learn the reason."

"Well," he said, "I will not keep thee. I have said what I wanted to say. My time hath not yet arrived. I am shortly to be called, and shall then begin to practise. When I come back here again, 'twill be with a ring in one hand, and in the other the prospect of the Woolsack. Think upon that while I am gone. 'Your Ladyship' is finer than plain 'Madame,' and the Court is more delightful than a village green among the pigs and ducks. Think upon it well: thou art a lucky girl: a plain village girl to be promoted to a coronet! However, I have no fears for thee: thou wilt adorn the highest fortune. Thou wilt be worthy of the great place whither I shall lead thee. What? Is Sir George Jeffreys a better man than I? Is he of better family? Had he better interest? Is he a bolder man? Not so. Yet was Sir George a Common Serjeant at twenty-three, and Recorder at thirty; Chief Justice of Chester at thirty-two. What he hath done I can do. Moreover, Sir George hath done me the honour to admit me to his company, and will advance me. This he hath promised, both in his cups and when he is sober. Think it over, child: a ring in one hand and a title in the other!"

So Benjamin went away again. I was afraid when I thought of him and his promise, because I knew him of old; and his eyes were as full of determination as when he would fight a lad of his own age and go on fighting till the other had had enough. Yet he could not marry me against my will. His own father would protect me, to say nothing of mine.

I should have told him then—as I had told him before—that I would never marry him. Then, perhaps, he would have been shaken in his purpose. The very thought of marrying him filled me with terror unspeakable. I was afraid of him not only because he was so masterful—nay, women like a man to be strong of will—but because he had no religion in him and lived like an Atheist, if such a wretch there be: at all events, with unconcern about his soul; and because his life was profligate, his tastes were gross, and he was a drinker of much wine. Even at the Manor House I had seen him at supper drinking until his cheeks were puffed out and his voice grew thick. What kind of happiness would there be for a wife whose husband has to be carried home by his varlets too heavy with drink to stand or to speak?

Alas! there is one thing which girls, happily, do never apprehend. They cannot understand how it is possible for a man to become so possessed with the idea of their charms (which they hold themselves as of small account, knowing how fleeting they are, and of what small value) that he will go through fire and water for that woman; yea, and break all the commandments, heedless of his immortal soul, rather than suffer another man to take her—and that, even though he knows that the poor creature loves him not, or loves another man. If maidens knew this, I think that they would go in fear and trembling lest they should be coveted by some wild beast in human shape, and prove the death of the gallant gentleman whom they would choose for their lover. Or they would make for themselves convents and hide in them, so great would be their fear. But it is idle to speak of this, because, say what one will, girls can never understand the power and the vehemence of love, when once it hath seized and doth thoroughly possess a man.

MUSIC.

ROYAL ITALIAN OPERA.

Mr. Harris's season—which began on May 14—will conclude on Saturday evening, July 21, having been prolonged for a fortnight beyond the original intention, in consequence of the great success obtained. An event remains now to be recorded—the production of "Aïda," on July 14. This opera was one of the specialties of Mr. Augustus Harris's Italian opera season at Drury-Lane Theatre last year. The work has an interest as manifesting a change of style (indicated in previous productions) from that which characterises the earlier operas by which Verdi's world-wide popularity was gained. There is no question that in "Don Carlos" (1867), and particularly in "Aïda" (1871), Verdi has been largely swayed by that influence which Wagner has so powerfully exercised. The prevalence of emphatic declamation is especially notable in "Aïda," and this tendency naturally limits its attractiveness to its stage representation. In its recent performance, on July 14, the title-character was sustained by Madame Nordica, as in last year's Drury-Lane season. Again the lady sang with good effect in several instances, perhaps with more in passages of pathos than in those of tragic passion. M. J. De Reszké's performance as Radames was a repetition of vocal and dramatic excellence that was manifested in the same character last year; another important feature in the recent cast, now alluded to, having been the fine singing of Madame Scalchi as Amneris—a character scarcely less important, vocally and dramatically, than that of Aïda. Signor D'Andrade gave full dramatic significance to the part of Amonasro, in its intensity of passion and barbaric dignity, and sang the music well. Signor Navarrini was impressive as the high priest, Ramphis, and the characters of the King and a messenger were sufficiently well sustained, respectively, by Signor Miranda and Signor Rinaldini. Signor Mancinelli conducted. The stage effects were worthy of the reputation of the management.

Recent performances have included repetitions of operas previously given during the season; among them having been "Il Trovatore," with the substitution of Madame Fürsch-Madi in the character of Leonora, in lieu of its former representative. The lady just named sang and acted with genuine dramatic earnestness. The cast was otherwise the same as before. Mr. Randegger conducted in this instance.

The performance of Otto Nicolai's opera "The Merry Wives of Windsor," recently given by students of the Royal College of Music at the Savoy Theatre, gave good evidence of the efficient training that is pursued at the Kensington establishment in preparing pupils for an operatic career. Of course, the performance referred to is to be regarded rather as one of promise than of absolute fulfilment; but it was sufficiently good, in most of its features, to hold out a prospect of welcome and serviceable additions to the number of dramatic vocalists fitted to sustain, with efficiency, performances of English opera, or operas in English. The characters of Mrs. Ford, Mrs. Page, and Ann were very effectively filled, respectively, by Misses A. Roberts, E. Squire, and M. Davies. Mr. W. C. Milward evinced good dramatic perceptions of the humour of Falstaff, which he will doubtless realise still more effectively with the advantage of further stage experience and less nervousness. Mr. A. C. Peach as Slender, Mr. Adams-Owen as Page, and Mr. D. Price as Ford, showed unmistakable fitness for their various parts. Mr. L. M. Kilby was an acceptable Fenton. The orchestra and chorus (chiefly consisting of College pupils) were fairly good, and the performance was conducted by Professor Villiers Stanford. The fairy business in the last scene was well represented by the clever children trained by Madame Katti Lanner.

The Chester Triennial Musical Festival will be inaugurated by special services in the cathedral on Sunday, July 22; that in the evening including a performance of Mendelssohn's "Hymn of Praise." On Wednesday morning, "Elijah" will be given, the following morning's performances comprising Beethoven's Symphony in C minor, and a symphonic cantata, "Oh, sing unto the Lord," composed for the festival by Mr. Oliver King; Verdi's "Requiem," closing the day's programme. On the Friday morning Beethoven's "Engedi" (an adaptation of his "Mount of Olives"), and Mendelssohn's "Hymn of Praise" will be given; Gounod's oratorio, "The Redemption," closing the festival on Friday evening, July 27. Miscellaneous concerts will be given in the Music Hall on the Wednesday and Thursday evenings. Sir Arthur Sullivan's dramatic cantata, "The Golden Legend" (probably conducted by himself), being selected for the first, the other programme being miscellaneous. An efficient orchestra, led by Herr Straus, and a chorus of proportionate power are engaged; the conductor of the performances being Dr. J. C. Bridge, organist of Chester Cathedral. With these arrangements, and a list of solo vocalists comprising the names of Madame Nordica, Misses Anna Williams and Damian, Madame Belle Cole, Mr. E. Lloyd, Mr. Nicholl, Mr. Brereton, Mr. Grice, and Mr. Santley, the performances can scarcely fail to be worthy of the locality and the occasion.

GIRLS' FRIENDLY SOCIETY.

Ossington House, 317, City-road, E.C., is the "City Lodge" of this society, and a meeting was held there on July 12 for the purpose of drawing local attention to the function it is intended to fill. Lady Grey presided, and said the house had been fitted up for the accommodation of young girls who were in need of a comfortable and cheap home. Unfortunately it required to be better known by the class for whose benefit it was intended. Lady Ossington and other friends had supplied funds that had enabled the society to purchase the premises, put them in a thoroughly sanitary condition, and furnish them. The committee were in great need of personal help, and she trusted that as the result of that meeting some lady in the neighbourhood would come forward and make the home her special charge, and that other ladies would give their services as periodical or occasional visitors. The Earl of Meath said that the society, which was formed to promote purity among women, had established sixty such homes or lodges throughout the United Kingdom and seventy-four throughout the world. It was doing a great work, and numbered over 150,000 members. A girl was lodged for from 2s. to 4s. 6d. per week, the latter payment carrying with it the accommodation of a private room. If the conveniences of the home could only be made known in the shops and factories it would rapidly fill, as similar institutions filled elsewhere. The Countess of Shrewsbury gave an account of her experiences in connection with such homes at Birmingham and Stafford, and dwelt upon the good influence exercised by the recreation-rooms, which were one of their most important features. Lady Helen Stewart and the Rev. Canon Elwyn afterwards addressed the meeting, at the conclusion of which the company inspected the premises.

Dom Pedro of Brazil, grandson of the Emperor, arrived at Claridge's Hotel on July 12 from Paris.

On July 11, the Duchess of Buckingham and Chandos held a reception at Chandos House, at which a large number of distinguished guests were present.

NEW BOOKS.

Tropical Africa. By Henry Drummond, F.R.S.E., F.G.S. (Hodder and Stoughton).—A subject of urgent and painful interest was brought before the House of Lords on Friday, July 6, by the Earl of Harrowby, to whom the Prime Minister replied, with regard to the danger now besetting our missionary efforts and our commercial prospects on the eastern side of Central Africa. It has also been treated in the magazines for July by several well-informed writers; by Mr. J. Scott Keltie, in the *Contemporary Review*, with a general survey of British territorial and political influence in Africa, and by others who have recently visited the Portuguese dominions on the east coast. This is a suitable opportunity for recommending to perusal one of the most interesting brief narratives of travel, and one of the most instructive essays in geography and natural history, that have lately been published. The scientific and literary reputation of Professor Drummond has been greatly enhanced by the wide popularity of his remarkable treatise of natural philosophy and religious philosophy, which has passed through twenty-two editions, and which the disciples of the late Mr. Darwin and of Mr. Huxley must allow to be worthy of their attention. Apart from controversial arguments, and without reference to any theory of design, or of evolution, in the modification of physical organisms, Professor Drummond's minute and accurate observations, as a naturalist, present a delightful study in two chapters of this modest volume: the one devoted to "the white ant"; the other, to the wonderful mimicry of inanimate forms in the appearance and demeanour of some African insects. But the immediate practical importance of his new book, which does not much exceed two hundred pages, with three or four special maps illustrating the position of the different territories and European protectorates in East Central Africa, relates to the questions discussed between Lord Harrowby and Lord Salisbury in Parliament a few days ago. It is high time that these questions should be settled by resolute diplomatic action, while we entirely approve of the resolution of our Government to avoid, in any case, undertaking to protect British enterprises, whether mercantile or evangelical and philanthropic, by sending even the smallest military force to the shores of Lake Nyassa. That region, indeed, situated four or five hundred miles inland from the seacoast either of the Portuguese dominions or of those belonging to the Sultan of Zanzibar, and more than a thousand miles to north-east of the frontier of Bechuanaland across the width of the Continent, is manifestly out of reach of a British military expedition. International jealousies, among which, besides the legitimate rights of Portugal, we should have to reckon with the peremptory opposition both of France and of Germany, forbid the very idea of such an exercise of power. At the same time, we cannot be indifferent to the labours and perils of our countrymen, to the large sacrifices which have been made by the Oxford and Cambridge Universities' Mission at Zanzibar, the Church of Scotland Mission, and the Scottish Free Church Mission, at a cost already incurred of nearly £150,000, for most beneficent purposes, and to the operations of the African Lakes Company of Glasgow, promising salutary results from the establishment of useful trade with the natives. The real enemy to all civilising agencies in the eastern parts of tropical Africa is the ubiquitous Arab slave-trader, whom the Governments of Zanzibar and of the Portuguese stations on the coast southward fail to exclude; they may be sincerely willing to do so, but cannot help the weakness, and probably the corruption, of their local administration. So far as concerns Lake Nyassa, with the tract of highland country up the Shiré river, between the Zambesi and the southern end of that lake, where the Scottish Church Missions are stationed, all that we can demand of Portugal is free and unrestrained access to this region by the mouth of the Zambesi. The Portuguese sovereignty over the whole seacoast from Delagoa Bay, inclusive of that fine harbour with the railway to the Transvaal, and the Mozambique shore as far north as Cape Delgado, near the outlet of the Rovuma, cannot be disputed. But Great Britain and other European nations will not easily admit that Portugal is entitled to control the navigation of the Zambesi, a great continental river which ranks next in length to the Congo and the Niger, though it is only navigable for stretches of one or two hundred miles, between the rapids or cataracts. Its important tributary, the Shiré, which was first explored by Dr. Livingstone, gives access to the missionary station of Blantyre, to Lake Shirwa, and beyond the Murchison Falls to the southern shores of Lake Nyassa. These places, with Bandawé, far up along the western shore of that great lake, and some part of the healthy region of upland country between the north-west extremity of Nyassa and Lake Tanganyika, were visited by Professor Drummond, his inland journeys and voyages extending seven or eight hundred miles. Their geography and topography have been minutely described by other travellers, and he therefore contents himself, in this respect, with giving us accurate maps, and with a rather sketchy commentary on the general aspects of what he calls "one of the great lobes of the heart of Africa." In the opinion of this author, the route which has thus been indicated should be made available for the best approach to the Equatorial Lakes region, that of the Victoria Nyanza and the Albert Nyanza, and to the upper streams of the Congo. We cannot, however, agree with him in recommending that an armed force, either of "Sikhs or Pathans from India," or of drilled native African soldiers, ought to be placed on guard, with the sanction of the British Government, though at the expense of the commercial or the missionary societies, along this natural highway to Central Africa. Its cost would probably exceed half a million sterling annually, with great loss of life from the climate; the expenditure could never be remunerative, and we should not get the consent of foreign Powers, which have a right to be consulted. Plainly speaking, it is not the business or the duty of England to invade and rule the interior of Africa for the sake of putting down the Arab slave trade. This author's pathetic chapter on "the Heart Disease of Africa" touches, indeed, our feelings of compassion and indignation, but not our national conscience. Germany, in fact, has lately undertaken a much more distinct responsibility, by annexing the vast territory between the Zanzibar coast and Lake Tanganyika, for the suppression of that inhuman traffic, than Great Britain has ever thought fit to do. The ancient dominion of Portugal, founded on the discovery of the south-eastern coast by Vasco Da Gama, involves an abiding responsibility for the exclusion of the same evil; but our own nation has no special authority to enforce the discharge of these duties. Freedom of intercourse with the interior must not be denied, and the rest must be left to voluntary and spontaneous action. Many readers will turn again with greater pleasure to Professor Drummond's studies of Tropical African entomology. The most novel and original topic is that of the invaluable services rendered by the termite, incorrectly called "the white ant," in breaking up the hard sun-dried crust of the earth, and in pulverising its substance, by swallowing and afterwards disgorging every minute grain, thereby converting it into fertile soil. This is just the same work that Darwin has shown to be performed by earthworms in our own country, and in other lands under a temperate, soft, and moist climate.

The Chameleon: Fugitive Fancies on Many-coloured Matters. By Charles J. Dunphie, author of "Wildfire," "Sweet Sleep," &c. (Ward and Downey).—These humorous essays on social manners and minor morals, with an agreeable flavour of literary scholarship and a happy mixture of diverting anecdotes, may be recommended as pleasant reading to those who have an intelligent perception of irony, and who can understand that the lively author sometimes affects to contend for propositions directly opposite to his real sentiments and convictions. Beyond the sportive exercise of wit and ingenuity in support of a paradox which nobody will seriously accept, and the refreshing sense of liberation from orthodox constraint of thought and feeling, it is often useful to show up, in this manner, the flimsy and capricious false arguments, or rather the sophistical tacit assumptions, that lurk in the mind disposed to wrong views of life and duty. Comedy, when finely and discreetly administered—in which art, practised not in the dramatic form, but in the mock didactic, we find Mr. Dunphie a skilful master—is not less instructive than the most solemn preaching of sermons; and his whimsical discourses in praise of egotism and personal vanity, in glorification of obstinacy, and in exultation over "the delight of being in debt," are calculated to suggest very good reasons for avoiding those particular faults of temper and conduct. Besides seeking thus to "purge the mind" of unconscious erring tendencies, as Greek tragedy was deemed to purge it of feeble pity and base terror, by a homœopathic kind of medicine, he succeeds in provoking many an innocent laugh at his odd fancies and quaint conceits, in a vein reminding us now and then of Leigh Hunt, or of Charles Lamb, or some other of the elder writers of free-spirited essays. Mr. Dunphie, however, is not always at his best; and there are jokes of his which drop flat and look small, or which miss their effect of point by a failure in the handling; there is also too much harping on the same string, as in the frequent repetition of an extravagant eulogy of women, compared with men. It is no great fun, either, constantly to speak of Shakespeare as "William," or to talk of "friends and friendesses," or to employ the stale old interjections, "Zounds," "Oddsbodikins," and "Marry come up!" Except for such freaks and tricks, the style of these writings is good, and so is a great portion of their matter. With the prose essays are intermingled a few pieces of English and of Latin verse, both of tolerable quality.

Austrian Health Resorts. By W. Fraser Rae (Chapman and Hall).—Although we may not be prepared to admit that a man who discovers a new health resort deserves as much honour as one who invents a new sauce, we should be ungrateful to Mr. Fraser Rae if we failed to welcome the timely appearance of his pleasantly-written volume. Mr. Fraser has travelled much and observed many things in countries far and near—and his quickness in seizing the characteristics of places and individuals is accompanied by a happy way of recounting his impressions. In the present volume he deals with places with which we are, most of us, well acquainted, to our pleasure or regret. Amongst such are Carlsbad, Marienbad, Teplitz, Ischl and Meran; and of all these he has something new to tell us about the treatment prescribed (from a layman's point of view), the hardships to be endured, and the benefits to be obtained. He has, however, gone far deeper into the history, associations, and resources of each of these spots, about which one might think little remains unsaid. He shows, too, what pleasant halting-places these "baths" can be made for those who do not care to submit to the severer ordeal prescribed by the doctors, but are glad to take advantage of the "resources of civilisation" which the yearly influx of visitors has created. For example, he expatiates at some length on the attractions of Giessbübl-Puchstein, of which visitors to Carlsbad hear so much, and with which they acquaint themselves only by an occasional day's excursion. About Teplitz, Mr. Fraser Rae tells us a story which, if not merely a local myth, might deserve some investigation. He says that on Nov. 1, 1755, the day on which the Lisbon earthquake occurred, the principal spring of Teplitz ceased to flow for seven minutes, and then for a time poured forth blood red water. The close proximity of lignite in large quantities may explain this change of colour, but throws no light on the wide extension of the subterranean disturbance. Not the least interesting portion of Mr. Fraser Rae's book is that which he devotes to the less known health-resorts of the Austrian Tyrol Roncegno—about three hours to the east of Trent, in the valley of the Brenta; Levico, at the entrance of the Val Sugana, at an elevation of 4500 ft.; and Arco, which may possibly be known to those who have spent a few days at Riva, at the Lago di Garda. Each of these places is absolutely unhackneyed, and almost untrodden by British or American feet; but the accommodation each offers would suffice to make far less attractive spots supportable. At Roncegno the additional attraction of a "mud-bath" or "mud-poultice," to speak more accurately, is offered to such as suffer from muscular rheumatism, and apparently with useful results. The special feature, however, of the water drunk by the patients here is its strong impregnation with arsenic, resembling in this particular the better known springs of La Bonrboule in Auvergne. The chapters on the bitter waters of Hungary introduces us to scarcely more than the names of Margaret Island, St. Agnes' Water, which lies within half an hour of Buda-Pesth; but, as we can hardly imagine persons in the mild pursuit of health resorting to such beverages as those of the Hunjadi János or Rákoczy springs, we do not quarrel with Mr. Fraser Rae for dismissing them so briefly. The value of his book for general readers, for travellers—rheumatic, dyspeptic, and the like—is to be found in the other chapters; but however attractive may be the spots the author describes, however efficacious the waters he recommends, the invalid—real or imaginary—should bear in his mind the time-honoured Roman inscription on a bath:—"Cujurum vacuus hunc adeas locum, ut morbum vacuus abire queas, non curatur qui curat."—Leave care behind if you seek a cure.

That Sister-in-Law of Mine. by Harry Parkes (Frederick Warne and Co.) is not a contribution to the Deceased Wife's Sister's question, but the humorous account of the domestic troubles springing from a too lively young lady. The illustrations, to which the text is altogether subsidiary, are drawn with considerable spirit and correctness of outline, but at times the fun seems somewhat forced and second-hand. It is essentially a hot weather volume, and one to turn over whilst lying on the sand or heather, too lazy even to think, and the author has bestowed so much pains upon it that we can only hope that its success will not be marred by the inclemency of the season.

The Clothworkers' Company have given £50 towards the educational work of the Bow and Bromley Institute, the committee of which are appealing for £500 to enable them to continue the work which has been carried on with such success during the past eighteen years, also to provide a gymnasium for the recreation of the students, who last year numbered upwards of 1500.

"WORLD-ENGLISH."

Mr. Alexander Melville Bell, the well-known author of "Visible Speech" and other cognate works, has turned his attention to the forming of a universal language. His views on the subject are set forth in a small book, entitled "World-English," which is published by Trübner and Co. To English-speaking people, this treatise must needs be of great interest, hastening the universal knowledge of the English tongue; and to other nations it has this great recommendation over Volapük and like systems, that in learning it one acquires another living language that is fast becoming the language of the civilised world. Mr. Bell goes so far as to say no language could be invented for international use that would surpass English in grammatical simplicity, and in general fitness to become the tongue of the world. Its only drawback, in his opinion, is its difficult and unsystematic spelling, and this he sets about amending for World-English purposes as follows. He uses seventeen of the consonants of the English alphabet, retaining their customary sounds; and excludes *c*, *q*, and *x*—the first having the k or s sound, the second because it has the sound of k, and the third because of its having the sound of ks or gz. The letter *g* is always to have its hard sound, as in go; the letter *j* indicating the soft sound. There are nine new consonant letters added for sounds unrepresented in our alphabet. The five vowels are associated with fixed, instead of fluctuating, sounds, and have marks to show certain specific sounds. These changes, with a few other modifications, are all that Mr. Bell thinks necessary to fit English for a universal language. The system, it will be seen, is simple enough; but its simplicity is its chief excellence, and bids fair to ensure its general adoption.

LORD SALISBURY ON COLONISATION.

A deputation from the Parliamentary Colonisation Committee, headed by Sir W. Houldsworth, M.P., waited on Lord Salisbury at the Foreign Office on July 11. Sir W. Houldsworth, in introducing the deputation, said their object was to ask the Government with the consent of Parliament to establish a colonisation board, and to guarantee interest at 3 per cent per annum for a term of thirty years on any amount the public might subscribe towards a colonisation landrent charge stock. The greatest amount which the Government would be called upon to advance by way of interest would be £15,000, and this amount would be repaid to the Treasury out of the proceeds received from settlers in five years. They believed that the land, when settled upon, and after the capital which they proposed had been expended upon it, would in itself be ample security for both principal and interest.

Lord Salisbury said this was a very difficult question. He considered it, as he had considered it last year, one of the most difficult questions modern statesmen might give their attention to. The difficulties were twofold. The first was—would the colonists receive them? It used to be thought, where a certain number of Englishmen settled on the border of a newly-discovered land, that to hand over the remainder was the mode most likely to command its settlement, but experience has shown that anticipation had been mistaken, as he thought a little foresight would have taught people. It might easily have been foreseen that when the working classes in the Colonies came to have power they would look at the fact that emigrants were likely to flood the country and have the effect of reducing the rate of wages. They had already had indications of that shown in many of our colonies. It was doubtful, also, whether Englishmen, with their breeding and blood, could work exposed to the heat of the sun in our Crown colonies. A more serious difficulty was that of finance. Sir W. Houldsworth had been trying to steer between a narrow zone which separated the gift from an investment. He (Lord Salisbury) would bring the proposals of the deputation under the consideration of his colleagues, but he thought those present must be conscious that that was not the time for the Chancellor of the Exchequer to dispose of gifts of that kind. Almost all the time the Government could afford was claimed for objects even more imperative than the high and beneficent object which the deputation were aiming at.

THE TWELFTH OF JULY.

The Orange celebrations in the north of Ireland passed off, in nearly every instance, without serious disturbance.

The meeting at Lambeg, near Belfast, was attended by over 40,000 people, and addresses were delivered by the Rev. Dr. Kane (Grand Master of Belfast), Mr. J. H. Trymble (Grand Master of Queensland), Mr. Fitzgerald (Grand Master of Ontario), and Mr. Clarke (member of the Canadian Parliament and Grand Master of British North America).

The demonstration at Portadown was attended by nearly 15,000 Orangemen. Colonel Saunderson, M.P., said the meaning of their assembling in their thousands that day was to show that, while they were law-abiding and loyal, they had strong arms, which they intended, if necessary, to use, sooner than submit to hostile rule. The other speakers were Mr. J. W. Maclean, M.P., and Mr. Smith Barry, M.P.

At the Castlewellan meeting, which was held in Lord Annesley's demesne, several thousand Orangemen attended, and were addressed by Mr. Johnston, M.P., of Ballykilbeg, and other prominent members of the order. On the return-journey, a lively scene took place in Downpatrick. Orangemen wanted to march through a Nationalist district, but were prevented by the police, who had to use their batons freely.

The Liverpool Orangemen celebrated the Twelfth of July at Halton Castle, near Runcorn. Members of the order and friends, to the number of nearly 3000, left in a special train, at an early hour in the morning, accompanied by several bands of music and a large number of banners. Arrived at Runcorn, a procession was formed, and the Orangemen marched to the castle.

The north-western province of the Loyal Orange Institution of England held a demonstration at Maryport, when Orangemen wearing their regalia attended from all parts of Cumberland. Although the bands played party tunes and their progress through the streets was watched by the Roman Catholic party, no disturbance occurred. The Rev. Edward Sampson, Vicar of Maryport, addressed the Orangemen.

The Glasgow Orangemen celebrated the Twelfth of July. The weather was splendid. They met in their thousands on Glasgow-green, and with bands playing and banners flying marched to Thornlie-bank, where in a field they passed resolutions declaring their unabated confidence in the Unionist policy of her Majesty's Government, and determining to support them in refusing a separate Parliament to the Irish Nationalists.

The shareholders of the Westminster Aquarium Company have resolved to accept an offer to purchase the undertaking for £330,000.

The First Lord of the Admiralty and Lady George Hamilton visited, on July 11, the Royal Victoria Patriotic Asylum for Fatherless Daughters of Sailors, Soldiers, and Marines, which is situated on Wandsworth-common; and distributed prizes to the children, of whom there are now 296 maintained in the institution.

THE LADIES' COLUMN.

The celebration of the tercentenary of the Armada has been curiously managed. The statement widely circulated, and left uncontradicted for months, that the chief Catholic Peer of England, who was so strangely chosen for the chairman of so essentially Protestant a celebration, had accepted that office on condition that Queen Elizabeth should not be mentioned in connection with the celebration, was alone calculated to deaden public interest. A memorial of the Armada without mention of Elizabeth would indeed be "Hamlet" with the title-rôle removed. The Armada was the last stroke in the long duel between Elizabeth and her natural heiress, Mary, Queen of Scots. Mary, reaching from the grave to strike this blow, bequeathed the realms of Britain to Philip of Spain, in the event of her own son remaining Protestant; in Babington's conspiracy, which immediately led to Mary's murder, the moving spirit was a Catholic priest who came to England as an emissary from Philip of Spain to promise aid to Mary's friends in making an effort for her; and the Armada was at once Philip's performance of his promises to the English Catholics and his attempt to secure the throne bequeathed to him by her whom Catholics necessarily considered as not merely the heiress to the Crown of England, but as the rightful owner in present fact of that crown, which Elizabeth had illegally usurped. It is appalling to read of the ill-preparation of England to meet the invasion; of how the Admiral had few war-ships, and no wages and but scanty rations for his men; of how Cecil simply gave it up, and went to bed sick with despair; and of how military commands were misbestowed. But with all the troubles and terrors of that great week just three hundred years ago, there was at the bottom the solid ground of safety of the popular love for and trust in the "admired Empress." False and faulty as she was, Elizabeth had great qualities, and the great heart of her England responded to them, and rallied round her at her appeal. An Armada celebration and Elizabeth ignored—preposterous!

Royal Commissions and strikes continue to claim attention for the sad problem of the overstocked female labour-market. It must have been a new experience for the Royal Commissioners on "sweating," when a quiet young woman sat down before them to demonstrate the untruth of an assertion that no more than four shillings per week could be earned by the most expert buttonhole makers. This worker executed her first buttonhole in a cloth coat in 4 minutes, the two next in 3½ minutes each, and the last in 3¼ minutes. By working at this rate for eleven hours daily she would earn twenty-six shillings per week. Yet it was admitted by the so-called "sweater," or middle-man employer, who brought her before the Commission, that the average earnings of a hand only amounted to about fifteen shillings; and, of course, this statement means that while some earn considerably more, many earn a great deal less than that—which may be taken, as far as I can judge, as the lowest sum on which a girl can live tolerably comfortably.

But in these variations in the wages in one employment may be perceived a turning point of the whole problem of wages. It is because the lower class of workers are so unskilled—because that either their form of labour is easily acquired and gives no scope for skill, or else that the individual has not enough skill in the labour—that the lowest workers are so very badly paid. The poor match-girls' business, for instance, is one in which the very slightest degree of natural ability suffices, and in which the highest skill possible is quickly attained. They do their work, certainly, with marvellous rapidity; but the skill implied in attaining to that rapidity is very small—any girl can do likewise after a few months' practice. Buttonholing is much more of an art. There are some people who can never learn to put their stitches rapidly with the accuracy and draw them with the precision of force that make good buttonholes. The really skilful women can, as that one showed the Royal Commission, earn good wages, such as not the quickest and cleverest match-girl can approach. This is clearly, then, not an arbitrary arrangement. Match-making is one of the least difficult forms of labour; it is practically unskilled labour, indeed; and the supply of such labour is so large compared with the amount of work that it can do that necessarily the wages of it are pushed down. It is so with male labour; it is yet more so with regard to female labour, because of the fewer employments for which women are eligible and their greater abundance, and hence the heavier competition amongst them for employment.

Such competition for the work inevitably brings down the wages. On what other principle can an employer fix his wages except on that of paying the lowest wages which will procure the labour he requires? And the greater the competition for work amongst the unskilled labourers the lower the wages which each of them will be thankful to accept for his work, down to just above starvation point. And the greater the numbers of the unskilled labourers seeking work the more severe must be such competition amongst them for employment. And so we arrive at last—surely by no dark or doubtful observations?—at the crux of the whole matter—the superabundance of population as compared with the capital available for its maintenance. The population of this kingdom continues to increase at nearly the rate of a thousand a day; a thousand more beings with all the human needs, to be satisfied only by human exertion, are born into our midst day by day, in excess of those who die. Neither the produce of our own soil nor the demand of other countries for our manufactured goods in return for their food products, increases in like proportion; and this pressure of population on the means of subsistence is the root cause of poverty, of low wages, and of the seething struggle of unskilled labourers—so sad to see, so cruel to be engaged in. Women, as the weaker sex—speaking from the industrial point of view—necessarily suffer most in that cruel struggle. But, sad and painful though the thought must be, it is impossible to avoid the conviction, if one sees the truth about the root of the evil, that no Royal Commissions or Inquiry Committees, or strikes or charitable funds or other temporary devices, can by any possibility really help those who suffer most. The only remedies are, alas! slow: they are those which increase individual intelligence and skill, as all educational efforts must do; which make parents more alive to their duties towards their offspring, so that men and women may be ashamed to look in the faces of children whom they cannot properly feed, warm, and educate in childhood, and train to skilful labour in youth; and which encourage the young swarms from the parent hive to take flight and settle in less crowded regions, where Nature's unexhausted fertility only awaits the appealing touch of her children to pour forth her riches into their hands.

Is all this dull? It is not so to me, and I would fain hope it is not so either to other women, whose sympathies can reach beyond the narrow range of their own attire and pretty surroundings. The world needs thought and effort from women, and it is of consequence that they should not be wasted. For those who can give money and believe that they can give nothing else, the support of a hospital may be commended as a simple good work. The provision of medical skill and comforts for the poor, disabled by sickness, often saves lives in their most valuable period when the support of a family depends on the parent's exertions, often averts years of hopeless illness, often prevents the extremity of hopeless physical pain. The New Hospital for Women, which has put forth an appeal for funds for a new building, is officered entirely by women physicians. Last year, in the small and inconvenient house in Marylebone-road where the hospital is now carried on, no fewer than 263 in-patients and 5163 out-patients, sought relief by means of the skill of doctors and surgeons of their own sex. Important operations are undertaken in the hospital, yet in the year there were only four deaths.

FLORENCE FENWICK-MILLER.

CONVERSAZIONE AT KING'S COLLEGE.

In connection with the Lambeth Conference, the Society for Promoting Christian Knowledge received, on July 12, the dignitaries of the Church now assembled in London, at King's College. The Archbishop of Canterbury received the guests in the hall from eight to nine, and then followed a series of interesting addresses touching on the work done in their various districts, by the Bishops of Iowa, Calcutta, Sydney, and Rupert's Land. These addresses chiefly dwelt on the systematic method of promulgating truth, with due regard to the conditions and habits of the various nations and peoples, to whom the truth should be brought. In the intervals, the Rev. J. Bridger, with the artistic assistance of the magic lantern, lectured on "Work among Emigrants," and in the Natural History Museum, such interesting objects as the "Development of the Frog;" the "Third Eye of Vertebrates," and "Fresh Water Medusa" (*Limnocodium Sowerbii*) were exhibited. The Royal Artillery band performed a selection of secular music, the organ pealed occasionally in the chapel in deeper religious tones, in the Wheatstone Laboratory electric phenomena were shown by familiar experiments, mechanical and metallurgical works were in full operation in the lower basement; and every form of vital activity, from microscopic specimens to Handel's "Angels, ever bright and fair," sung by Miss Florence Monk, was placed before the eminent theologians and their friends for inspection or criticism. Among the various exhibits, special mention should be made of the models shown by the King's College School Mission, Lower Homerton, conducted by the Rev. E. L. G. Houndle—founder of many good clubs and classes—and the ecclesiastical needlework and panel pictures, the work of the Art College for Ladies, superintended by Miss Bennett, in South Wimbledon. The hangings of flax cloth, or "stayned linen," were of special excellence. The evening was one of pleasing memory, undisturbed by any conflict of dogmas.

A JOURNEY IN MONTENEGRO.

A report from Mr. Baring, British Agent at Cettinje, describing a tour which he recently made in Montenegro, has been laid before Parliament. At present, travelling in that country is perfectly safe and an escort is unnecessary; the people are civil and easy to get on with, but the roads in most cases are bad even for those on horseback. At the famous monastery of Ostrog, about twelve hours' journey from Cettinje, Mr. Baring saw the Montenegrin dance on the terrace at night. It is curious, but not graceful, the dancers displaying wonderful activity and suppleness of limb. "A ring is formed, and a man and woman begin the dance by springing as high as they can into the air with the arms raised above the head. After a few bounds they change sides with a prodigious spring, twisting round in the air as they pass. A couple will dance for a minute or so, and, when exhausted, will be succeeded by another couple, and so on." There is no musical accompaniment. Although everyone carries arms the people are orderly and well-behaved, and no quarrelling was observed. There is only a single road in the whole country—that from Cattaro to Rieka—fit for wheeled traffic, and there is practically no industry, for the pure Montenegrin has "an almost insuperable aversion" to industrial occupations. This is probably due to the old feeling that the trade of war is the only one in which a man can worthily engage. In Cettinje one must have recourse to a foreigner to have the simplest piece of work done; the tailors are from Scutari, the carpenters and painters from Trieste, the masons from Bosnia. The country is purely pastoral and agricultural; sheep and cattle are reared in considerable numbers in the districts annexed to Montenegro by the Berlin Treaty; but there is no market, and the oxen are poor and undersized. Little provision is made to feed the animals in winter, and many of them die of starvation. The forests cannot be used until the communication is improved. In reference to numerous applications from British mercantile houses, Mr. Baring says the import trade is extremely small, and is almost entirely in the hands of Trieste dealers, who give long credits. The imports are mainly groceries, cloth, cotton goods, hardware, glass, crockery—all of the commonest description, except the green and white cloth used for men's coats. If commercial travellers are sent a knowledge of Italian is absolutely indispensable. It has been suggested that a depôt or store of British goods at Antivari, from which retail dealers could draw supplies, would be advantageous. The manager of such a store, however, would have to know the language, character, and requirements of the people well.

A meeting was held on July 11, at the residence of the Earl and Countess of Aberdeen, for the purpose of hearing addresses on the present position of the co-operative movement among the labouring classes. Lord Brassey, who presided, said it was satisfactory to know that they had been successful in certain cases in establishing industries upon the co-operative method. In 1886 there were sixty-six productive societies, and the returns of sixty-one of them showed a share capital of £552,814, with a membership of 22,701. In connection with the meeting an exhibition of work produced by the co-operative system was held, in which some twenty-four different societies took part.

SUBSCRIPTION TO THE ILLUSTRATED LONDON NEWS.

AT HOME.

Twelve months (including Christmas Number), £1 9s. 3d.
Six months, 14s. Christmas Half-Year, 15s. 3d.
Three months, 7s. Christmas Quarter, 8s. 3d.

Copies will be supplied direct from the Office to any part of the United Kingdom and the Channel Islands, for any period, at the rate of 6½d. for each Number, paid in advance.

ABROAD.

The yearly subscription abroad, including the Christmas Number, is £1 16s. 4d. (on thin paper, £1 12s.), with the following exceptions:—

To Abyssinia, Aden, Bechuanaland, Borneo, Ceylon, India, Java, Labuan, Penang, Philippine Islands, Sarawak, Siam, Singapore, and Zanzibar, £2 1s. (on thin paper, 24s.)

To Diego Garcia and Madagascar (except St. Mary and Tamatave), £2 5s. (on thin paper, £1 16s. 4d.)

Subscribers are specially advised to order the thick paper edition, the appearance of the engravings on the thin paper copies being greatly injured by the print at the back showing through.

Newspapers for foreign parts must be *posted* within eight days of the date of publication, irrespective of the *departure* of the mails.

Subscriptions must be paid in advance, direct to the Publishing Office, 198, Strand, in English money; by cheque, crossed "The Union Bank of London"; or by Post-Office Order, payable at the East Strand Post Office, to INGRAM BROTHERS, of 198, Strand, London.

THE LONDON HOSPITAL.

There are about eighty institutions described as "hospitals" within the metropolitan area; but twelve of these are large "general" hospitals, with schools of medicine attached to them. The others are mostly, in some sense or other, "special"—that is to say, they receive only patients of a particular description, as women or children, or patients of a single nationality, or patients suffering from a disease either of some single kind or of some single organ. An hospital for paralysis will serve as an illustration of the former class, and an hospital for diseases of the throat of the latter.

The twelve general hospitals, to which medical schools are attached, had, collectively, during the year 1887, a daily average of 3562 occupied beds; and in the course of the year they received 43,970 in-patients and 511,914 out-patients. The remaining sixty-nine had an average of 2115 occupied beds, and they received 24,648 in-patients and 493,337 out-patients.

Two of the great hospitals, St. Bartholomew's and St. Thomas's, are sufficiently endowed to be independent of contributions from the public; and Guy's, until quite recently, was in the same position. In consequence, however, of the lessened annual value of its estates, Guy's has now been compelled to seek for aid.

All the remaining institutions are at least partially dependent upon subscriptions and donations, and, failing these, are compelled either to refuse patients or to sacrifice investments. The actual total expenditure of the year 1887 is said to have exceeded the total income by nearly £100,000, and the deficiency must, of course, either remain as a debt or be supplied by the aid of such collections as those made on "Hospital Sunday" and "Hospital Saturday."

If we regard the great general hospitals, with their medical schools, it would be difficult to find any other human institutions which do so much good and so little harm. The medical and surgical officers of such hospitals are invariably the fittest men, who have passed satisfactorily through the ordeal of student life under the observation of those by whom they are ultimately selected as colleagues, and who have given proofs of the necessary ability and of the necessary industry at each successive step of their career. The best physicians and surgeons in general practice are often those who have derived their knowledge from what they have been taught at one of the general hospitals, and who bring that knowledge to the relief of numbers whom the hospitals may not directly benefit. Without the hospitals there would be no doctors, either for the rich or for the poor; and the great results, in the way of diminished mortality and of diminished suffering, which the last half century has witnessed, would not have been brought about. Every patient who is cured in a general hospital is a means by which the students and future practitioners of medicine add to their knowledge of the way in which diseases such as his should be controlled; and the indirect benefit to the community is manifestly very great in addition to the good of the immediate cure. For this reason the hospitals which possess medical schools are truly national institutions, not only charities for the benefit of the poor, but of equal value to all classes, and which should, therefore, be supported by all. It would be impossible, in the interests of the State, for any Government to allow them to languish, if a time ever came at which sufficient voluntary support were no longer supplied.

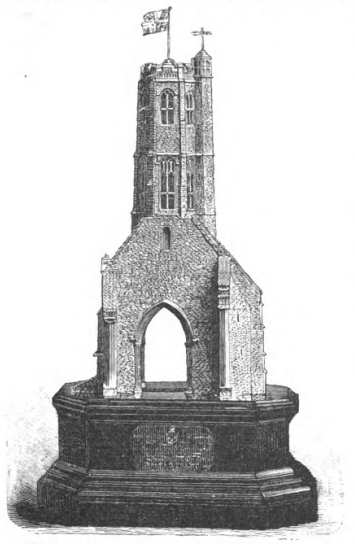
The London Hospital, in Whitechapel, is situated, where it is most needed, in the heart of the vast East-End population, roughly estimated at upwards of a million and a quarter, consisting mostly of artisans, workpeople, dock and railway labourers, sailors, and others, to whom it is the only refuge in cases of accident or serious illness. But this situation, which makes it so useful, renders it at the same time unlikely to attract the notice of the wealthier classes in London.

During the year 1887 there were 8863 in-patients treated within its walls. Of these 2381 were accidents, 3638 were extra urgent cases. There can be no doubt that the necessary closing of the wards of other large general hospitals has pushed a greater number than ever to the London Hospital, where, though the assured income is small and dependence is chiefly resting on voluntary contributions, the generosity of the public in past years has hitherto kept all the wards open. It is only once every five years that an appeal for maintenance is made, and it is earnestly to be hoped that the response to the present appeal may be as sufficient as those to the appeals of 1878 and 1883.

The average stay of an in-patient is nearly a month, at an average total cost of about five guineas, which, for the 8260 newly-admitted patients, makes a necessary expenditure of £43,365; the out-patients costing the comparatively small sum of £7500. No effort is spared to confine the benefits of the hospital to the poor, for whom it is intended—excluding both those who ought to pay for private medical attendance and those who should be dealt with by the parish authorities, except in cases of accident or urgency.

The assured income is little over £16,000, and the Hospital Sunday and Saturday Funds together go but two-fifths of the way to make up the required amount. The London Hospital has during the last few years suffered the loss of some of its most generous supporters by death, and it is to be hoped that others will come forward to supply their place, and that many will send in their names to the secretary promising to subscribe something for the next five years.

It may be mentioned that during the last period, 1883-88, it was found necessary to provide better accommodation for the nursing staff. This has been done, and now every nurse and probationer has her own separate bed-room; but now no enlargement of the hospital is either contemplated or would be desirable, and the pressing need for liberal help at the present time is merely to maintain this great hospital in working efficiency.



The foregoing statements are taken from the circular issued by the committee of management, and signed by the Duke of Cambridge, President; the Bishop of London, Cardinal Manning, Baron Leopold de Rothschild, Vice-Presidents; Mr. J. H. Buxton, Treasurer; and Mr. F. C. Carr-Gomm, Chairman of the house committee.

The first annual dinner of the Liberty and Property Defence League was given on July 12, at the Freemasons' Tavern, the Earl of Wemyss in the chair. Sir Massey Lopes proposed "The Houses of Parliament," and in doing so deprecated over-legislation. The Earl of Wemyss said the object of the League was to uphold liberty, and object to State interference, which they held to be injurious to the prosperity of the country.

In the presence of a large gathering, Mr. MacAndrew, of Westwood House, Little Horkesley, Essex, a native of Elgin, recently handed over the Muckle Cross of Elgin, which he has restored, to the custody of the Town Council. At a public banquet held in the Townhall, afterwards, Mr. MacAndrew was presented with the freedom of the city, in reply to which he said it was his early and pleasurable associations with Elgin that had made him present the restored Muckle Cross to the city. The cross, which is built somewhat on the lines of the Edinburgh Cross, was designed by Mr. Sydney Mitchell, Edinburgh.

THE LATE MR. W. E. FORSTER.

Life of the Right Hon. William Edward Forster. By T. Wemyss Reid. Two vols. (Chapman and Hall).—Political biography, in some instances, has seemed to be overlaid with extracts from debates, and with detailed records of Parliamentary or official business, amidst which the man himself is scarcely visible as a constant individual presence. But there is no lack of personal interest, as the reader will soon find, in this truthful and temperate account, by an able Liberal public writer, of the "Life" of one of the most honest and useful of contemporary English statesmen. Mr. Forster, who died on April 5, 1886, in his sixty-eighth year, was indeed a man of so unconventional a character, his thoughts and sentiments and manners were so little moulded by the more customary fashions of professional politicians, that an appreciative memoir of him could not fail to be engaging by the originality and independence of its subject. Mr. Wemyss Reid has treated the subject well, by allowing it to show itself in the man's public and private actions and expressions, rather than depicting or critically estimating their merits in a lengthened commentary. This book is fair and impartial history, as it appears to those who have a precise recollection of events, and it is not more laudatory than must be approved by the majority of Englishmen, Conservatives and Liberals, old enough to have watched every step of Mr. Forster's career. The significance of that career, in one respect, may be viewed together with those of Mr. Cobden and Mr. John Bright, men with whom Mr. Forster was not very intimately associated. They are eminent examples of the public virtues characteristic of the English commercial middle class, those members of it who have in this age been called by a spirit of duty to take a great part in affairs of State. Mr. Forster was not, indeed, one of those who owed their entrance into politics to the memorable efforts of the Anti-Corn-Law League; nor was he specially addicted to the advocacy of the Free Trade and Economy doctrines of "the Manchester School." Being from his early youth strongly imbued with the principles of Democracy, he differed from many other Radicals of that time in his higher idea of the functions of National Government, and of the rightful powers and responsibilities of the State, which he sought to apply more immediately to the education and protection of the people. He entertained, also, wider aspirations for the exercise of British Imperial power in distant colonies and dependencies, to prevent the oppression of

SILVER WEDDING GIFT OF THE TOWN OF KING'S LYNN: THE OLD GREY FRIARS' TOWER.

uncivilised races of mankind. These sentiments were inherent in his mind from the beginning of his manhood; and it is evident that in him they were genuine moral convictions. His latest idea, that of Confederation of the British dominions, was not inspired by the high-flown "Imperialism" of the Beaconsfield period. If he sometimes departed from the teaching of the excellent Quakers who had trained his boyhood, in asserting his readiness to go to war, in South Africa or in the Soudan, for the suppression of inhumanity, while he was a zealous supporter of our military defences, he was, nevertheless, a true friend of peace with all the nations of Europe. The intoxicating pride of Empire and the glitter of martial glory were abhorrent to his disposition. What lay at the bottom of his heart was the duty of the State to its own subjects and dependents. This noble motive, which arises essentially from true democratic views of politics, has never animated an English mind with greater force and constancy than it did that of Mr. Forster. It prompted him to pass the Education Act of 1870; and it sustained him, during the two years from May, 1880, to May, 1882, in his stern conflict with Irish agrarian outrages, simultaneously with relieving and protecting a distressed peasantry by the Irish Land Act. Equality of civil, social, and political rights was a principle deeply engraved in his understanding of national policy; this was his idea of justice, and he preferred it to the indulgence of a vague sentiment of "liberty." The biography, of course, discloses many personal and domestic incidents, which will attract readers who do not stand in need of fresh information concerning Mr. Forster's doings as a politician. His father, William Forster, of Tottenham and Bridport, a most zealous and devoted religious preacher and missionary of the Society of Friends, is known for his charitable labours during the Irish famine of 1847, and among the negro slaves in the United States, where he died. The mother of William Edward Forster was Anna Buxton, sister of Sir Thomas Fowell Buxton, the eminent champion of the anti-slavery cause, herself likewise an active preacher among the "Friends." As his parents were by no means rich, William Edward Forster, after plain schooling up to the age of seventeen, was placed in a camlet factory at Norwich, to learn the management of the business; and subsequently, in the woollen

SILVER WEDDING GIFT FROM OFFICERS OF HOUSEHOLD CAVALRY: LAMP AND CIGAR CASE, IN FORM OF CUIRASSES AND KETTLEDRUMS.

factory of the Peases, at Darlington. He spent some time in London, and assisted his uncle, Sir T. F. Buxton, in correspondence, statistics, and literary work for the anti-slavery crusade. In 1841, he joined Mr. T. S. Fison as a wool-stapler, at Bradford; where, a few years later, with Mr. William Fison, he set up as a woollen manufacturer; and their factory was ultimately removed to Burley, near Otley, in Wharfedale. Mr. Foster seems, like Cobden, to have prospered quickly in business; he resided some time at Rawdon, Apperley Bridge, but, soon after his marriage, built a new house at Wharfeside. In the town of Bradford, among the robust, blunt, hard-headed Yorkshiremen of the working-class, he won great popularity, sympathising openly with the Chartists in their political aims, while he forbade all idea of resorting to violence. He accompanied his father's benevolent mission to Ireland during the famine, visited Paris in the Revolutionary year 1848, made the acquaintance of Carlyle, Emerson, the Rev. F. D. Maurice, and other persons of literary note, and contributed articles to the *Westminster Review*. In 1850, he married Miss Jane Arnold, daughter of the deceased Rev. Dr. Arnold, the eminent head-master of Rugby School. Mr. Forster then left the religious community of "Friends," called by the world "Quakers," but always kept up affectionate relations with its members whom he had before known. It was in 1857 that he was first proposed as a candidate for a seat in Parliament, and in February, 1861, he was elected for Bradford. In a cursory review of this book, little more need be said of his political career, which continued a quarter of a century without interruption. He was Under-Secretary for the Colonies at the end of 1865, and Vice-President of the Council, really Minister of Education, in 1868, holding office in the Cabinet in Mr. Gladstone's first Administration; and he passed the Ballot Act, in 1872. He was regarded as a fitting successor to Mr. Gladstone as leader of the Liberal Party in 1875, and bore an important part in opposing Lord Beaconsfield's foreign policy, having visited Bulgaria and Turkey to obtain information. He was the first Chief Secretary to the Government of Ireland in Mr. Gladstone's second Ministry, directing the prosecution of Mr. Parnell and others, and afterwards ordering the suppression of the Land League, with the arrest, under a special Act, of hundreds of persons suspected of treasonable or seditious practices. Nearly 240 pages of the second volume are filled with the events of Mr. Forster's Irish Secretaryship, including private correspondence between him and Mr. Gladstone, which will be perused with much interest. Mr. Forster had more than one narrow escape from assassination at Dublin. In looking back over twenty-five years of such an active Parliamentary life, besides the subjects already noticed, we have to consider his attitude and sentiments with regard to various other questions: the American Civil War, the Alabama Claims, and the Geneva Arbitration; the Russo-Turkish War and its results in 1878; the Afghan War, the Zulu War, the Transvaal and Bechuanaland, the intervention in Egypt, the Soudan, Gordon, and the Khartoum Expedition. Mr. Forster always formed his own opinions, and maintained them with conscientious sincerity; he had the courage to displease some of his party by openly differing with them on several occasions. His integrity was never doubted, for his professions were never belied by his acts; but he gave temporary offence to the educational Secularists, and to some Nonconformists, by preserving the interests of schools founded with a view to religious instruction. On the question of Parliamentary Reform, no Radical was a more steadfast advocate of uniform household suffrage and the equitable allotment of constituencies; indeed, he helped to carry into effect the main principles of the original "People's Charter." His estimable and amiable private life, and the genial warmth of his family affections and social friendships, are shown by various pleasing anecdotes in this biography, which is a sufficiently copious memorial of a true Englishman, a faithful Christian, and a diligent servant of his country. We may call him "justum et tenacem propositi virum," among the men of our time.

The Bishop of Southwark distributed the prizes to the students of St. Joseph's College, Clapham, on July 12. The principal winners were the five successful matriculation candidates: Gilbert, Hare, Moore, Bonnevialle, and Watson.

According to the B Bill of Entry, the number of oxen and bulls imported during June was 32,227, against 37,260; 10,240 being received from Canada, against 16,441; and 14,629 from the Atlantic ports of the United States, against 11,745. The number of sheep imported was 85,686, against 93,371—including 56,366 from Germany, against 31,718; and 23,315 from Holland, against 58,594. The number of cows received was 5432, against 5463; calves, 5649, against 5806; and swine, 4293, against 3234.

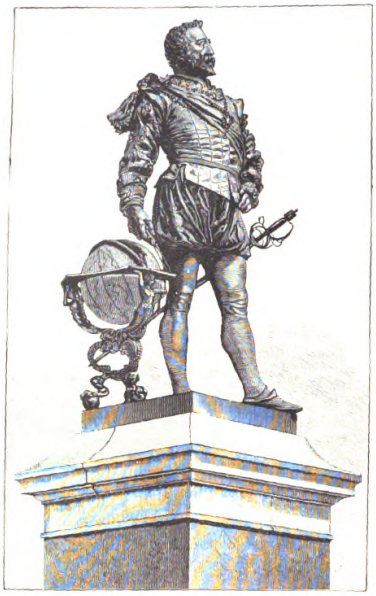
A number of gentlemen, now on a visit to this country, on July 12 celebrated the twenty-first anniversary of the Canadian Federation by a banquet in the Whitehall Rooms of the Hôtel Métropole. Mr. M'Leod Stewart (Mayor of Ottawa) presided; and amongst those present were Lord Lansdowne, Lord Knutsford, Sir Charles Tupper (High Commissioner for Canada), the Hon. Oliver Mowat (Premier of Ontario), Sir Adam Wilson (Chief Justice), the Hon. W. E. Sanford, Mr. Dalton M'Carthy, Q.C., Mr. D. Macmaster, Q.C., Mr. A. F. M'Intyre, Mr. Peter Redpath, Sir Francis De Winton, Colonel Bond (commanding the Wimbledon team), Mr. A. Staveley Hill, Q.C., M.P., Mr. J. H. Dodgson, Mr. J. J. Fellows, Mr. H. C. Boeton, Mr. J. E. Colmer, and others.

ROYAL SILVER WEDDING GIFTS.

His Royal Highness the Prince of Wales has been graciously pleased to accept a very handsome and useful present from the officers of the three regiments of Household Cavalry, in commemoration of his "Silver Wedding." It consists of a silver parcel-gilt and enamelled spirit-lamp and cigar-lighter, composed of three cuirasses, with strap and cartouche, surmounted by a guardsman's helmet, the plume of which furnishes the flame; on each side is a kettledrum, with crossed drumsticks for lighters; the whole resting on a moulded ebony plinth, embellished with a chased silver regimental trophy shield, bearing the following inscription:—"To H.R.H. the Colonel-in-Chief, from the officers of the Household Cavalry, March 10th, 1888." We give an Illustration of this unique and beautifully wrought piece of plate, which has been manufactured by Messrs. London and Ryder, 17, New Bond-street.

The casket, containing an address of congratulation to their Royal Highnesses the Prince and Princess of Wales from the Corporation of Nottingham, was made out of some oaken piles, which about the year 1100 were driven into the bed of the river Trent at Nottingham to form the foundations of the old Trent Bridge, and were taken out in 1878 for the erection of the present new bridge. The carving is late Gothic in character, the lid and ends being conventionally treated with the oak-leaf. The front panels bear shields emblazoned with the Prince of Wales's feathers and the Nottingham borough arms. On the margin of the lid the names "Albert Edward," "Alexandra," and the dates "1863," "1888," are carved in fourteenth-century characters; and in the panel there is a silver plate, engraved with the following inscription, viz.:—"Address from the Mayor, Aldermen, and Burgesses of the Borough of Nottingham to their Royal Highnesses the Prince and Princess of Wales on the occasion of the celebration of their Silver Wedding." The back is ornamented with two elaborate silver hinge-plates and shields bearing an account of the origin of the oak and the names of designer and carver. All the mountings throughout and the key are of solid silver, the latter bearing the borough arms in coloured enamel. The address is an elaborate work of inscription on a vellum scroll, mounted on a blue-grey moiré silk, and edged with silver fringe. The casket and address were designed and illuminated by Mr. Arthur Marshall, A.R.I.B.A., architect; the carving was executed by Alfred Middlebrook, a student of the Recreation Evening Classes; and the silver fittings are the work of Mr. J. Till; all of Nottingham.

The Silver Wedding gift presented to their Royal Highnesses by the Corporation of King's Lynn is a model of the "Old Tower," which is regarded with pride and affection by the people of that town. This is the central tower of the church of the Grey Friars; it stood between the nave and the chancel of the church. A piece of the cloisters of the monastery stands southward, and this and the tower are now the only remains of the house of the Franciscans in Lynn. The model is of silver. The form of the roofs of the church is shown by the sloping lines on either side; above these in its elegance and strength rose the tower, perhaps unequalled for graceful beauty. It is in two storeys; the lower one opened into the church, and its beautifully groined roof can still be seen. The tower is hexagonal in form, the northern face being the staircase, which rises above the parapet. The whole building is of brick quoined with stone. The friars built it in the middle of the first half of the fifteenth century; but their monastery was founded in the thirteenth century. It was surrendered to the King on Oct. 1, 1539. Of its history little is known; but scholars of eminence were among its inmates, whose names and works are extant. The



SILVER WEDDING GIFT FROM THE TOWN OF NOTTINGHAM: CASKET FROM WOOD OF PILES OF OLD TRENT BRIDGE.

model is mounted on a black ebony pedestal, with a silver plate bearing this inscription:—"The Grey Friars' Tower, King's Lynn. Presented to their Royal Highnesses the Prince and Princess of Wales, in commemoration of their Silver Wedding, March 10, 1888, by the town of Lynn. G. S. Woodwark, Mayor; T. G. Archer, Town Clerk."

At the present moment, when various schemes of emigration are being discussed, the *St. James's Gazette* calls attention to the plans of the Canadian Pacific Colonisation Corporation, which has recently been registered. The scope of the operations of the corporation are of a novel character, and may be classed mainly under three heads:—(1) The establishment of an agricultural college for the North-West, in which young men can go through a course of agricultural training calculated to fit them for profitably carrying on general farm operations. (2) The development of colonies in desirable centres in which a town will be established provided with clubs, library, reading-rooms, and all other conveniences necessary in a new country to prevent well-educated men degenerating in their leisure hours. (3) The starting and working of supply farms, cheese factories, creameries, and other industries suitable to the locality for the purpose of providing a market for products which must otherwise go to waste or be parted with at unremunerative prices. The work of the corporation will, we understand, be commenced by the acquirement of two properties, the first consisting of a rich tract of land in Manitoba within a short distance of Winnipeg, at present profitably worked for mixed farming, and on which there is a cheese factory in operation. The second property consists of about a hundred square miles of the most fertile country of Alberta district in the North-West, situated about sixty miles east of Calgary, well protected by the shelter of the Rocky Mountains, where cattle can graze all the year round owing to the favourable climate. The site of the first town to be established by the corporation has been selected adjoining the Alberta property, and is to be called Queenstown, and the necessary surveys are being made with a view to selling plots to the numerous persons who are eager to establish stores in the new town, which will be situated about twelve miles from Cluny, on the Canadian Pacific Railway.

THE PLYMOUTH STATUE OF DRAKE.

The tercentenary celebration of the defeat of the Spanish Armada, to which we devoted last week a series of Illustrations, with an historical narrative of that famous action, is commemorated especially at Plymouth, the port from which the English fleet sailed forth, under command of Lord Howard of Effingham, the Lord Admiral, on Saturday, July 20, 1588, to meet the enemy, who had been seen the day before off the coast of Cornwall. The Committee formed at Plymouth to arrange this celebration has not merely a local but a national character, including members resident in various parts of England; but it is intended to erect on Plymouth Hoe, at the sea-front of the town, which is a commanding situation adjacent to the old citadel, between Sutton Pool and Millbay, overlooking the Sound, a Memorial of the Defeat of the Armada, from the design of Mr. Herbert Gribble, architect, which will fitly stand in that place. It will consist of a granite column, with a figure of Britannia on the summit, and with other statuary, bronze portrait medallions, and inscribed tablets. The statue of Sir Francis Drake, on the Hoe, was uncovered about four years ago, not long after another statue of that bold and skilful sailor and valiant fighter had been unveiled in his native town of Tavistock, which is fifteen miles from Plymouth. It may be questioned, indeed, whether the town of Plymouth should not have preferred, as the first object of its local honours, in connection with the defeat of the Armada, to erect a statue of Sir John Hawkins, a Plymouth man, whose part in the series of conflicts that took place during ten days in the English Channel was actually more important than that of Drake, and by whose skill and industry, in his office as chief administrator of the Queen's Navy, the most powerful ships engaged on this occasion had been constructed and fitted out. Drake's fame as a naval warrior truly rests on his exploits of the preceding year, 1587, when he burnt all the Spanish store-ships in the harbour of Cadiz and defied the Spanish fleet at Lisbon, as well as on his frequent successful expeditions to the Canaries and the Azores, to the West Indies and the Spanish Main, from 1572 to 1585. His voyage of circumnavigation, which occupied nearly three years, from December, 1577, to November, 1580, was not undertaken in the interests of geographical science, or of commercial enterprise; nor were his acts of plunder, on that occasion, rendered legitimate by a state of avowed hostility between England and Spain. They were, however, condoned by Queen Elizabeth, who condescended to dine on board his ship at Deptford, and conferred on him the rank of knighthood. His legitimate services in 1587, under a regular commission from her Majesty's Government—of which the Queen repented a few days later, sending a messenger to bid him refrain from injuring the Spanish ports and fleets; happily for England, Sir Francis did not get this message, having already sailed—were of immense value to his country; for the Armada was then in preparation, and it might have arrived some months earlier than it did, and in greater force, had not Drake beforehand wrought such havoc on the coasts of Spain. Nevertheless, it must be admitted that for the special actions of July, 1588, the main credit is due to Lord Charles Howard and Sir John Hawkins, while Frobisher, Lord Henry Seymour, Sir William Wynter (Wintour), Lord Thomas Howard, Lords Sheffield and Cumberland, contributed, equally with Drake, to the victorious result; those last named being chiefly engaged in the final great battle off Gravelines, on July 29, after which Captain Fenner and others pursued the enemy into the North Sea. These remarks are made not in disparagement of Sir Francis Drake, who was one of the bravest and readiest of English fighting seamen that ever lived; but he became the hero of popular anecdotes which have somewhat exaggerated his share in the actual repulse of the Spanish Armada. We hope that Sir John Hawkins will likewise have a statue erected to his memory at Plymouth.

STATUE OF SIR FRANCIS DRAKE, ON THE HOE, AT PLYMOUTH.

NEW ENGLISH CHURCH AT BELLAGIO.

The new church just completed at Bellagio, on the Lake of Como, North Italy, was formally dedicated, on Whit Sunday, by Bishop Marsden, acting by commission from the Bishop of Gibraltar. Among the congregation was the Bishop of Truro. This church, which has been erected under the auspices of the Colonial and Continental Church Society, is beautifully situated at the south end of the town, and well above the lake. Its style is Early English, and it stands out in pleasing contrast with the Italian buildings of the town. The plinths and cappings of the buttresses are of granite from Erba, which lies between Como and Lecco; the walls are of dark blue limestone from Maltrasio, near the well-known Villa d'Este; and the mouldings of the doorways and rose windows are of light cream-coloured limestone from Saltrio. The site was selected, and the general design and arrangements of the church were determined, by Sir John Coode, chairman of the building-fund committee. The architect was Signor Casartelli, of Como, and the contractor was Signor Arighi, of Casnate.

ROYAL NATIONAL LIFE-BOAT INSTITUTION.

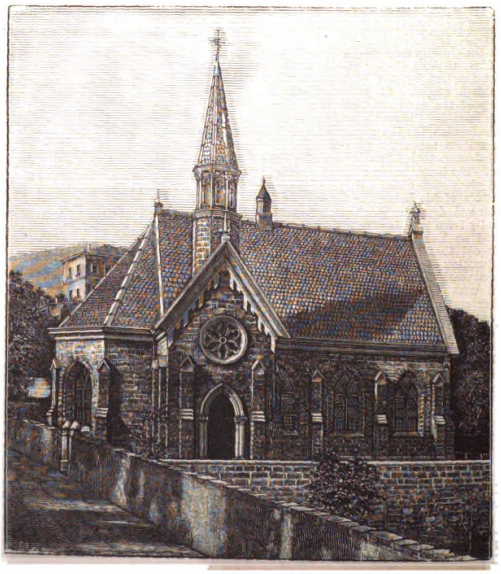
At a meeting of this institution held on Thursday, July 12, at its house, John-street, Adelphi, its silver medal, accompanied by a copy of the vote inscribed on vellum and framed, was awarded to Mr. William Niles, *in recognition of his long and faithful services as coxswain of the Cardigan life-boat.* He has assisted to save fifty-three lives from various wrecked vessels. Rewards amounting to £236 were also granted to the crews of life-boats of the institution for services rendered during the past month. The Caister No. 2 life-boat rescued the crew, consisting of twenty-seven men, from the ship Tay, of Glasgow, which was totally wrecked on the Hasborough Sands during a strong north-east wind and a heavy sea. The life-boat stationed at Runswick, Yorkshire, piloted safely ashore seven fishing-cobles which were in danger, having been overtaken by a heavy gale with a tremendous sea, on Tuesday, July 10. Rewards were also granted to the crew of a fishing-boat and others for saving life from wrecks on our coasts. Payments amounting to £3025 were made on the 293 life-boats of the institution. New life-boats have been recently sent to Hauxley, Southport, Baddon Ness, and Broughty Ferry.

COLON AND THE PANAMA SHIP CANAL.

A series of Illustrations of the works of the Ship Canal, which is being constructed by the French Company under the presidency of M. Ferdinand De Lesseps, across the isthmus of Panama, to connect the Atlantic with the Pacific Ocean, with a correct description of that magnificent undertaking, lately appeared in two Numbers of this Journal. Our Special Artist, Mr. Melton Prior, arrived at the Atlantic port of the Canal, which is Colon, near Aspinwall, on Feb. 25, and thence passed in a steam-boat up that portion of the canal already made available for the Company's servants employed in the works. He has also sent us a Sketch of the view in the main street of Colon, with the railroad which runs along its length. The houses of every class, the side pavements, and the wharves of the port, are constructed entirely of timber; and the present town is quite new, having been rebuilt after a fire three years ago. Aspinwall, the terminus of the Panama Railroad, is close by, and is a port of considerable traffic.

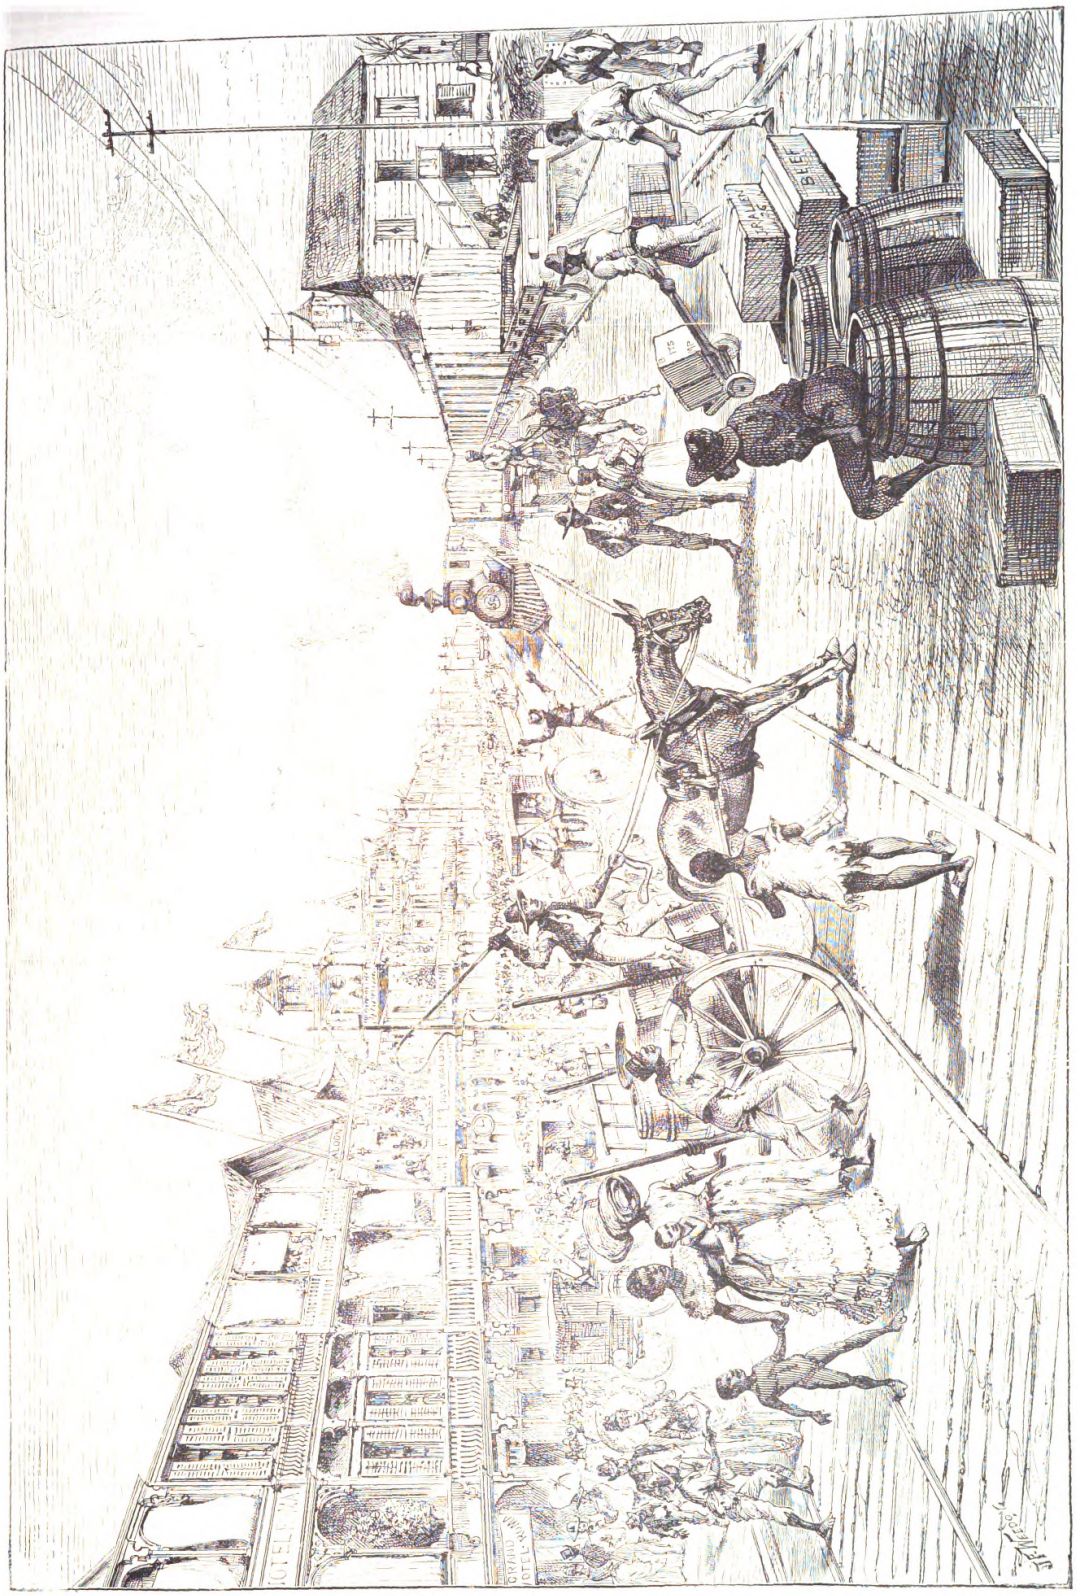
LATE SIR W. OWEN LANYON, C.B., K.C.M.G.

At the church of St. Jude, Southsea—which is the property of his cousin, the Hon. Mrs. Nelson Byng, and in which are other memorials of this family—on the fifth anniversary of the death of Lady Lanyon, was opened a side chapel, erected in loving memory of the late Sir W. Owen Lanyon, C.B., and of his wife. The chapel, on the site of the old south porch, externally, is built of flint stones, corresponding with the rest of the church, and has a lean-to roof against the south side aisle, finished by half-gables, with a centre gable pierced by a rose-window. On the east side is a single-light, tracery-headed window. Under the rose-window are the words "In Memoriam" and the monograms of the late Sir Owen and Lady Lanyon. The interior walls are of Bath stone, diapered; and the roof is vaulted and groined in the same material; the panels next to the apex are of tinted glass, to get a top light. A deeply-moulded cut-stone arch, 9 ft. wide, opens into the church. The centre bay of the arch is carried by two polished Devonshire marble columns, having carved cups and bases. In a panel round the arch is the following text:—"Where the wicked cease from troubling and where the weary are at rest." Immediately facing this arch, on a richly-carved table, is placed the white marble monument, designed and executed by Onslow Ford, A.R.A. On the face of the table is the text "She is not dead but sleepeth" (Luke viii. 5). On the table are two polished brass vases, filled with white lilies and other flowers. The window in the east wall is filled with glass painted by Messrs. Heaton, Butler, and Bains, representing St. Jude. Opposite is a panel corresponding with this window, filled in with Venetian mosaic work by Messrs. Burke and Co. The upper part contains an heraldic design—the arms of the Lanyon and Levy families, the knight's helmet and plumes, the Orders of the K.C.M.G., C.B., and Osmanieh, and the various medals gained by Sir Owen. Below these is the following inscription:—



This Monumental Chapel has been erected to the glory of God and in loving memory of Colonel Sir William Owen Lanyon, C.B., K.C.M.G., who died in New York on the 5th day of April, 1887, in his 48th year, and also of his wife, Florence, who died in London on the 6th day of May, 1883, in her 32nd year. They lie in the same grave in Brompton Cemetery, London.

There are two steps of red polished Devonshire marble. The floor is mosaic-work; in which are the initials "F. and W. O. L."; and on the step below, the word "Resurgam." Two brass standards divide the chapel from the side aisle. From the vaulting is suspended a sanctuary lamp of polished brass. The building has been carried out by Messrs. Pinker Brothers, of Havant, from the design of Sir Owen's eldest brother, Mr. J. Lanyon, of Belfast.



Colonel Sartorius, of the 1st Beloochees, who recently marched throughout the Southern Shan and Red Karen country, has made an interesting and elaborate report on the country traversed. He speaks highly of the district. Iron ore of extraordinary richness was found at Saga. Tin is plentiful in Lower Kerennie, and coal in abundance exists at the Lowelon mountain. Silver, saltpetre, and sulphur were also found. The Rosambhe Lake is described as being as beautiful as the lakes of Cashmere; while the cataracts of Kazor, 130 ft. high, are, perhaps, the finest in the East. Colonel Sartorius dwells on the improvement and revival of trade which have already taken place in districts within reach of the influence of Fort Sedman, where a British garrison is maintained.

MEMORIAL CHAPEL TO THE LATE SIR W. OWEN LANYON AND HIS WIFE, ST. JUDE'S, SOUTHSEA.

NEW ENGLISH CHURCH AT BELLAGIO, LAKE OF COMO.

ACROSS TWO OCEANS: COLON, THE ATLANTIC TERMINUS OF THE PANAMA SHIP CANAL.
BY OUR SPECIAL ARTIST, MR. MELTON PRIOR.

HOLIDAY RAMBLES.

(By our Paris Correspondent.)

FRANKFORT-ON-THE-MAIN.

The first thing I did on arriving in Frankfort was to take my seat in the baronial dining-hall of the Hôtel X——, and to wrestle with the table-d'hôte dinner. Opposite me sat a very gentle and civilised German and his pale, blonde wife, whose delicate face was just beginning to yellow into wrinkles. This worthy pair, evidently well-to-do people, ordered *half a bottle* of Médoc, which they shared, diluted with much water, and seemed happy. Alas! this spectacle filled me with sadness, for it was a proof that the woes and mockeries of travel had begun. These good people would certainly have preferred their national beverage, beer; but the German hotel tables d'hôte are too stuck-up to permit beer-drinking, and the profits on wine are too great to be sacrificed. In some hotels there is a notice posted to the effect that if you do not drink wine, the dinner will be reckoned one mark dearer.

After a tremendous one o'clock meal, I sallied forth to explore the town, and found it gay, elegant, well-kept, and prosperous. The old town round the red sandstone cathedral abounds in quaint corners and picturesque narrow streets. The river, with its bridges, and its stream dotted with timber-rafts, the glimpses of the town and its towers and spires, the panorama from this point and from that—all amuse the eye and provide subjects for the photographer. On the quay called the Schöne Aussicht, or *belle vue*, I noticed on No. 17 a memorial-tablet announcing that in this house Arthur Schopenhauer used to live, and I have no doubt he had a good time there, his pessimistic point of view being just as conducive to happiness as any other. In the pursuit of happiness one of the chiefest conditions of success is not so much a point of view as a good stomach, and as Schopenhauer dined contentedly for many years at a table d'hôte, as his biographer tells us, I conclude that he must necessarily have been a man of singularly serene mind and imperturbable powers of digestion.

To judge from the display in the shop-windows the Frankforters are especially proud of two things—the marble group of Ariadne in the Bekmann Museum, which you see reproduced in all materials from alabaster down to gingerbread, and the Imperial family and the three Emperors of 1888. I saw the three Emperors—old William, Frederick, and young William—stamped on pocket-handkerchiefs, cast in bronze and terra-cotta, carved on the bowls of briar-root pipes, painted on porcelain pipes, embroidered on sofa-cushions, printed on fearful chromo-lithographs. Photographs of the Emperor Frederick on his death-bed, with the Empress shedding big pear-shaped tears on the counterpane, and below the inscription, "Lerne zu leiden ohne zu klagen," are sold by hundreds As for the present Emperor, his portrait and that of his wife and children are to be seen everywhere, the family groups being especially in favour. And what groups!—the ideal of a Putney green-grocer. The Emperor, in uniform, with his arm round the Empress's waist, standing on the brink of a photographer's imaginary lake, and the Imperial children sitting in a "property" boat. A veritable sentimental German family group!

Towards nightfall the aspect of Frankfort becomes very interesting and amusing. The great show street and promenade in Frankfort is the Ziel, where the fine shops are situated, and where the beaux and the belles walk up and down. At evening, too, the cafés become evident, but they are not audacious and flaunting like those of Paris. As soon as the gas is lighted the curtains are closely drawn, and some of the best cafés are up one or two flights of steps on the first or second floors: the Frankforter, like the Dutchman, seems to prefer to drink his beer in private, far from the eyes of the madding crowd, and the spectacle of the street does not interest him. Very wonderful are some of these cafés, notably one in the Schiller Strasse: a monumental place with wrought iron vines trailing up cast iron pillars and branching out ingeniously into incommodious hat-pegs; a ceiling decorated with the signs of the zodiac intermingled with cupids, monkeys, and a vague Temptation of St. Antony; walls decorated with frescoes in the style of Schnorr von Carolsfeld; a stupendous bar presided over by a statuesque lady of Flemish proportions; the whole inundated with a blaze of electric light. In this café I fought successfully against a gigantic glass of beer, and read the leader in the *Anzeiger*, in which the writer treated the subject of "Boulangismus," and in a short column and a quarter found means to quote Aristophanes, Cicero, and Madame Roland, translating the original in footnotes for the benefit of the less erudite. Bravo, Herr Doctor! What a blessed thing it is to have frequented the University of Göttingen, and to have learnt to be learned with ostentation!

With its irregular streets and irregular houses, some antique, with quaint gables and innumerable windows; some modern, surmounted by skeleton signs and meshes of telegraph-wires; with its multitude of Renaissance cupolas and bulbous spires, its green masses of shade trees looming up out of the mysterious obscurity, and contrasting with the glaring electric-lamp of some go-ahead "Restauration," Frankfort at night is suggestive at once of New York and of Nuremberg; it is a charming and not inharmonious mixture of past and present—of oldtime ways and nineteenth-century progress.

CASSEL.

Statistics show Cassel to be a town of some 60,000 inhabitants, and the indulgent observer would doubtless pronounce it to be an animated commercial centre. It boasts a vast railway station; a monumental "Regierung" or Government palace; a huge post-office; and a handsome modern Bilder Gallerie, in the most approved Renaissance style, enriched with Greek ornaments, and surmounted by reproductions of the bronze winged "Victory" which is the jewel of the Museum Fredericanum. There is a steam-tramway at Cassel, and horse-cars, and well-paved streets. But all this is of little interest: the charm of Cassel is the old town, such as the Electors made it; the round Königs Platz; the Gothic church, the Friedrichs Platz with its fine eighteenth-century electoral palace, its statue of the Landgrave Frederick II., its Bellevue terrace overlooking the tree-tops of the Aue Park which Le Notre laid out—the Cassel that abounds in quaint old houses with pointed or convoluted gables, and in squares and irregular places planted with luxuriant shade-trees.

At the end of the Bellevue, which is naturally the fashionable promenade of Cassel, is a round temple, or belvedere, in the Neo-Greek style invented by the French architects of the eighteenth century. From here the view is wide-sweeping and imposing. Beyond the park you see the green valley of the Fulda fading away into the blue distance, where the purple hills close it around and form the horizon; in the other direction you see the town climbing up one hill and down another, and finally sloping towards the old castle and the Fulda bridge, and joining the open fields. The comparison with Athens suggests itself: the Bellevue is the Acropolis of Cassel and the Bilder Gallerie its Parthenon. Doubtless, this comparison must have occurred to the old Landgraves who vied with each other in making these German Residenz towns centres of literary and artistic culture, and who ruined themselves and their subjects in imitating the costly splendour of Versailles and the magnificence of the Grand Monarque. In the making of Cassel there were three influences at work—feudal, French, and Neo-Greco-Roman; exemplified still by the old Schloss, by the Friedrichs Platz and the Aue Park laid out by Le Notre, and by the triumphal arch of the Auethor and the new picture gallery which is the outcome of the terrible Neo-Greco-Roman distemper which has been devastating Germany for now a century.

With all this, Cassel, the Cassel of the days of the Electors, is complete in itself with its castle, its archives, its library, its museums, its river, its park, and charming promenades. All that is wanting to make the town absolutely ideal is a handsome old Landgrave at the head of a literary and artistic Court—a Landgrave who would ride in a gorgeous coach, and have his servants dressed in gay livery. If while strolling one evening along the Bellevue the Landgrave's coach should appear, and behind it that of the Chevalier Jacques De Casanova, recently arrived in the town with swindling intentions, nobody would be surprised or embarrassed. Like all the ex-Residenz towns, Cassel has retained something of its courtly past, and all the modern improvements seem to be mere temporary excrescences that have *no raison d'être*.

As you pass along the Friedrichs Platz of an evening you will see in the open loggia of a café a whole family—men, women, and children—sitting calmly around a few beer-pots, thinking matters over and looking for all the world like one of those family portraits by the old Dutch masters—a "Familienbild" by Gonzales Coques, for instance. Such a group might be taken as a symbol of the town of Cassel: it is an old-fashioned place, musing sleepily over the past and accepting the present without enthusiasm, as if it were all a dream.

Cassel an animated commercial town! This is not possible. One cannot reconcile these spacious promenades and shady squares with serious business, except of such a kind as is indicated by a frequent signboard on which is announced this strange combination of commerce: "Wood, Coal, Bottled Beer, and Potatoes"—"Holz, Kohlen, Flaschenbier, Kartoffeln." And, after selling the usual amount of coal, bottled beer, and potatoes, the good tradesmen of Cassel light their penny cigars, and, with their wives and children, take an evening stroll along the Bellevue, admire the "schöne Aussicht," and so to bed. On Sundays, too, in summer, they will take the tramway to Wilhelmshöhe, to see the fountains play. And so they pass their lives in sleepy, charming Cassel, where even the spurs of the military men clink discreetly.

Nevertheless, for the traveller of artistic tastes Cassel must always remain a place of pilgrimage. The Museum possesses a most important collection of pictures, including no less than twenty Rembrandts of the first quality—notably the painter's wife, Saskia Van Uelenbergh, dressed as a bride; the portrait of Nicolaus Bruyningh; the portrait of a man in armour; and "Jacob Blessing Ephraim and Manasseh." In order to see such paintings as these one would willingly brave the direst *ennui* and the most porcine developments of German cookery.—T. C.

GOOD SAMARITANS.

Pessimistic philosophers and literary cynics who delight in railing against this world and its inhabitants, and in commenting upon the fever and unintelligibility of life, and the faults and failings, the weaknesses and vices of humanity, are invited to remember the good deeds that are daily being done by Good Samaritans. It is surely something very pleasant to think of: the number of persons who live mainly, if not entirely, for the benefit of their fellow-creatures, and devote themselves with unselfish energy to the task of increasing the sum of human happiness. The moralist often reminds us of the woes and sorrows of the poor, and they cannot be disputed; he tells us of the grievous ills that flow from social inequalities—of the half-starved vagrant that hides his sores and his rags in some loathsome cellar; of the mother who stitches day and night at the slop-seller's hard bargain, in order to keep body and soul together for her children and herself. The picture, God knows! is a gloomy one; but it is only fair to remember the other side of it: to think of the men and women who are never so happy as when penetrating into the haunts of poverty and the abodes of wretchedness, carrying with them material help and practical sympathy—feeding the hungry, clothing the naked, encouraging the despondent, soothing the mourner; and all this without thought or expectation of reward, even of that reward of advertised publicity which falls to the lot of the Good Samaritans who respond to the appeals of charitable associations. There are, alas! too many pilgrims who lie down by the wayside, ill and exhausted, wounded almost unto the death, and for whom no helpful strangers come with oil and bandage to rescue them, and send them on their way rejoicing. There are too many who perish through long waiting. This, however, is not the fault of our Good Samaritans, but of those social difficulties which too often erect an iron barrier between them and the afflicted whom they would only too gladly relieve if they knew of their distressful condition. Perhaps, too, the number of such cases is too great to be overtaken by the agency even of the most active private benevolence. But the fact remains that, to the great honour and glory of human nature, the Good Samaritans are at this very moment engaged in their noble work; and that hundreds of hearts are throbbing with unaccustomed emotions of joy and gratitude, as the tender hands bind up the sufferer's wounds, and the strong arm supports him to his feet, and the consoling voice bids him be of good cheer, for the darkness and the night are passing away, and God's light begins to shine over the distant hills.

I suppose that, at some time or other, most of us need the aid of the Good Samaritan. Few can get through life without sympathy; many are the better for kindly advice; and some would be borne down in the lost battle if no helping hand were extended to them. When we discover the falsehood of the friend in whom we have placed our all of hope and faith; when Death takes from us those whose affection has been our stay and support, and the most precious thing we possessed or could desire; when the great aim and object of our exertions is baffled by unforeseen accidents; when the cherished dream of our young ambition is suddenly and rudely swept aside; when our feet are lacerated by the thorns that have started up in our path, and our spirits sink at the sight of the menacing shadows that gather around it—then it is that we hail with gratitude the inspiring presence of the Good Samaritan, and are reconciled to our lot by the feeling that we are not left to bear the pressure of our anxieties unaided and alone.

I suppose, too, that at some time or other most of us can, in our turn, play the Good Samaritan's part. The poorest can be rich in kindly words, in tender wishes, in earnest prayers; and we may know from our own experience that, in the hour of trial, these may be helpful and profitable exceedingly. If we have not the two pence, like the Samaritan in the parable, we can surely provide the oil and the wine; and if these be wanting, we have still at our disposal the boundless resource of thoughts that breathe and words that glow with the spirit of love and tenderness. Next to the pleasure of receiving a kindness—and there is no greater pleasure, for it kindles and sustains one's faith in human nature—is the pleasure of doing one. "A brother to relieve," says Burns, "how exquisite the bliss!" When that Good Samaritan had cleansed and bound the wayfarer's wounds, and poured in the oil and the wine, and provided for his future comfort, I can fancy that he walked with a lighter step, and held his head more erect, in the secret consciousness that he had done something for the welfare of his fellow-man. In this way, charity is twice blessed: it blesses him that gives and him that receives, and the Good Samaritan shares in the happiness of which he is the author.

However numerous the ills of life—and I deny neither their number nor their severity—its alleviations are at least as many. Why, there are more Good Samaritans than the world wots of, if you will but take the trouble to look for them, and have the wisdom to make use of them. I think a valuable essay might be written by some competent hand on the therapeutics of books—on their influence in healing or mitigating the maladies of the mind or heart. You will remember that some hints towards so admirable a science are thrown out by Pisistratus Caxton. For the irremediable sorrows of middle life and old age, he recommends the study of a new language; or you may take, like Goethe, to the study of a new science. For hypochondria and satiety, he says, nothing is better than a brisk alterative course of travel; and for that vice of the mind which we call sectarianism, what can equal a large and generous, mildly aperient course of history! "But when some one sorrow, that is yet reparable, gets hold of your mind like a monomania, oh! then diet yourself well on biography—the biography of good and great men." Of this I am convinced: that books are the best of Good Samaritans! They never weary of you; they never change towards you; they are unlimited in their gentle offices: and they expect no gratitude! And you can turn from one to the other at your will, always seeking that which is best adapted to the present trouble. Open your heart, my friend, and let them pour in the oil which will heal your wounds and the wine which will brace up your nerves! Open your heart, and take freely of the consolation which they are ready freely to bestow. To these Good Samaritans you can confide your most secret griefs, and their sympathy will never fail you. They will supply you with whatever you lack the most—courage, hopefulness, patience, fortitude, or forgetfulness. They will rouse you in your despondency; direct you in your perplexity; console you in your anguish. They will take you away from the contemplation of your petty ills, and lift you into a larger sphere of thought and vision. Stanley's "Life of Dr. Arnold"; that wonderful book, the "Imitatio Christi"; Jeremy Taylor's "Holy Living"; Pascal's "Pensées"; Bishop Wilson's "Sacra Privata"—of which Matthew Arnold was so fond; Sir Thomas Browne's "Hydriotaphia"; Carlyle's "Sartor Resartus"; Wordsworth's "Prelude":—here be friends on whose friendship you may make exhaustive draughts without fear of coming to an end. Here be friends who, whatever your anxiety, will trace it to its cause, and prove to you its littleness. Oh, those great griefs of yours! How small the space which they really fill: how slight, after all, is the scar which they leave behind them! According to Diodorus, the inscription on the great Egyptian library was, "The Medicine of the Mind." But I prefer to think of books as "Good Samaritans," their companionship being a moral as well as an intellectual good, their beneficence operating on the heart as well as on the brain, on the feelings and emotions no less than on the intellect.

Then Nature also is prepared to fulfil the office of a Good Samaritan for those who will trust themselves to her bosom. She, too, like one's books, is ever at hand—ever ready to receive one's confidences, ever willing to bestow of her benedictions with a generous liberality. She never stints her consolation or her encouragement. She gives us of her best, and so elevates the mind into a different and more exalted world; supporting us in gloomy hours by the high thought that we belong to God; upholding, cheering us, and impressing upon us that "our noisy years" are but as moments "in the long of the eternal Silence." With one impulse from a vernal wood, with one breath of fragrance from a flowering hedgerow, she fills the veins with fresh activity and banishes the cobwebs which have gathered about the inactive mind. The majestic silences of the mountains or the mysterious voices of the seas, the cheerful splendour of the summer morning or the solemn pomp of the sunset, the bright gaiety of the ripening cornfields or the austere solitude of the autumnal groves—with these she will soothe or stimulate the soul, restrain or support it, according to its necessity. Therefore, be you once and always a lover of the meadows, the woods, and the mountains—of all that this green earth commands—of all the mighty world of eye and ear, both what they half create and what they only perceive:—

> Well pleased to recognise
> In nature and the language of the sense,
> The anchor of your purest thoughts, the nurse,
> The guide, the guardian of your heart, and soul
> Of all your moral being.

in a word, the Good Samaritan, who waits, with largesse of oil and wine, to minister to your needs, be they great or little.

I might invite the reader to look at Art in the capacity of a Good Samaritan, and dwell upon the consolation which it may be made to afford, and the lessons which can be extracted from it; but I have said enough, if I have succeeded in indicating certain sources as available for our inspiration, our strength, our recuperation, in the manifold chances and changes of life, when the "helping hand" of friend or benefactor may not be forthcoming; or, as supplemental to that "helpful hand," and yielding a more permanent and less onerous pleasure. But, after all, when we are in want of the Good Samaritan, the best thing we can do is, according to our means, to play the Good Samaritan to others. While we are binding up *their* wounds, be sure our own will heal! W. H. D.-A.

The sale of the Londesborough collection was concluded on July 11, when the Celtic and Saxon antiquities, coins, &c., were disposed of. The total realised by the six days' sale of 980 lots was £25,647.

The *tableaux vivants* at the Anglo-Danish Exhibition, which were temporarily suspended on account of the Silver Wedding Fête, have been resumed, and are supplemented by a special performance twice daily by the Hayward troupe. The Amager peasants, who were absent from the Danish Village during the Silver Fête, have also resumed their vocation.

The new church of St. Philip, Buckingham Palace-road, in the parish of St. Michael, Chester-square, was consecrated on July 12 by the Bishop of Marlborough. The church is close to Ebury-square and the Grosvenor Working-Men's Club, and will supply church accommodation, especially for the poorer classes in that district. The seats, numbering about 750, are to be free and unappropriated. The church site has been presented as a free gift by the Duke of Westminster, who has also contributed the munificent sum of £5000. A district will shortly be given to the church, of which the Rev. W. C. Gib is the Vicar-Elect. Some handsome gifts have been presented, including a new organ by Colonel Paley.

WILLS AND BEQUESTS.

The will (dated May 10, 1887) of the Right Hon. Jane Frederica Harriot Mary, Countess of Caledon, late of Tyttenhanger Park, St. Albans, Herts, who died on March 30 last, was proved on July 7 by the Hon. Walter Philip Alexander, the son, the sole executor, the value of the personal estate amounting to over £14,000. The testatrix makes bequests to her son, the Earl of Caledon, and her other children; and gives legacies to her maid and servants. Some articles of jewellery are made heirlooms to go with the mansion-house at Caledon, in the county of Tyrone. The residue of her property she leaves to her three younger children, Walter Philip, Charles, and Jane Charlotte Elizabeth.

The Scotch Confirmation, under seal of the Sheriffdom of Berwick, of the disposition and settlement (dated May 21, 1886) of Sir William Marjoribanks, Bart., J.P., D.L., of Lees, Berwickshire, who died at Torquay on Feb. 22 last, granted to Dame Frances Anne Marjoribanks, the widow, Watson Askew, and Charles Bowman Logan, the executors nominate, was resealed in London on July 3, the value of the personal estate in England and Scotland amounting to upwards of £25,000.

The will (dated Dec. 15, 1886) of the Rev. Robert Andrews, late of Middleton, Essex, who died on April 28 last, was proved on July 5 by George William Andrewes, the brother, George Lancelot Andrewes, the nephew, and Henry Crabb Canham, the executors, the value of the personal estate amounting to upwards of £94,000. The testator gives one fifth of all his real and personal estate to the children of his brother George William and the issue of any deceased child; one fifth is given, in a similar manner, to the children of his brothers Charles and William Nesfield, and his sister Ann; and the remaining fifth to the children, and the issue of any deceased child, of his sister Frances Jane Fearon, except Charles Tatham Fearon, who is otherwise provided for.

The will (dated Aug. 16, 1887) of Mr. Frank Ash Yeo, J.P., M.P. for the Gower Division of Glamorganshire, late of Sketty Hall, in that county, who died on March 4 last, was proved on June 21, by Mrs. Mary Dawson Yeo, the widow, Frank Cory Yeo, the son, and John Viriamu Jones, the executors, the value of the personal estate amounting to upwards of £68,000. The testator bequeaths all his furniture, plate, pictures, books, effects, horses and carriages, and £7000 to his wife; £3000 and certain shares of the nominal value of £38,000 to his son Frank Cory; certain shares of the nominal value of £40,000 to his son John Arthur Ash; and legacies to his executor, Mr. Jones, to his brother, and to a nephew. The residue of his real and personal estate he leaves to his wife and his five children, Frank Cory, Mary Woollacot Goodwin, Sarah Louisa, Ethel Jane, and John Arthur Ash, in equal shares.

The will (dated Jan. 19, 1888) of Mr. Richard Brinsley Sheridan, F.R.G.S., J.P., D.L., formerly M.P., late of Frampton Court, Dorsetshire, who died on May 2 last at No. 33, Wimpole-street, was proved at the Blandford District Registry on June 28 by Algernon Thomas Brinsley Sheridan, the son and sole executor, the value of the personal estate being sworn under £50,000. The testator makes provision for his daughter, Helena Charlotte; and appoints to his said son certain moneys in settlement. The Stafford Vase, and his plate, jewellery, books, pictures, &c., are made heirlooms to go with Frampton Court, but his daughter is to have the use for life of part. He bequeaths £100 Three-per-Cent Consols, upon trust, the income to be applied in tending as a garden the piece of ground added by him to the churchyard of Frome Vauchurch; and there are bequests to Adelaide Budden and to the widow of his bailiff. The residue of his real and personal estate he leaves to his said son.

The will (dated Nov. 20, 1883) of Mr. Benjamin William Farey, late of "Salamanca," Farquhar-road, Upper Norwood, who died on May 9 last, was proved on June 27 by Mrs. Eliza Farey, the widow, Edward Farey, and Charles Westley, the executors, the value of the personal estate amounting to upwards of £41,000. The testator leaves £1000 to his nephew, Arthur John Ikin; an annuity of £60 to his uncle, James Barnard; £100 each to his executors, Mr. Farey and Mr. Westley; £10,000, upon trust, for his wife, for life, then as to £4000 for each of his wife's nephews, Charles Barnard Westley and Arthur William Westley, and as to £2000 to Barnard Rood; and the residue of his property to his wife.

The will (dated March 30, 1882), with three codicils (two dated Dec. 11, 1885, and the other May 7, 1888), of Mr. John Bruce, late of South Park, Wadhurst, Sussex, who died on May 16 last, was proved on July 4 by John Warrington Haward, Edward Horsman Bailey, and William Robert White, the executors, except as to property in the United States or elsewhere out of the United Kingdom, the value of the personal estate amounting to upwards of £34,000. The testator bequeaths £2000 each to St. George's Hospital, Hyde Park-corner, and the Hospital for Sick Children, Great Ormond-street; £1000 each to the Scottish Hospital in London of the foundation of Charles II., and the Royal Caledonian Asylum, Caledonian-road, Holloway; £12,000 to Mr. J. W. Haward, in gratitude for his professional services as a surgeon; £3000 to another surgeon; £7000 to his valet; £2500 each to his two nurses; £3000 to his architect; £2000 each to his coachman and footman; £1000 each to his gardener, second coachman, and footman; £600 to his housekeeper; and other considerable legacies. As to the residue of his property, he gives one half to the said Mr. J. W. Haward, and the other half between his cousins, William Nicoll and Henry D. Nicoll.

The will (dated June 16, 1879) of Mr. Thomas Rider, J.P., late of Boughton Park, Boughton Monchelsea, Kent, and Saint Clears, in the county of Carmarthen, who died on March 25 last, was proved on June 26 by George Lloyd, the acting executor, the value of the personal estate amounting to over £17,000. The testator leaves all his real and personal estate, upon trust, for his daughter, Caroline.

The will of Mr. Joseph Yellowly Watson, F.G.S., J.P., late of Thorpe Grange, Thorpe-le-Soken, Essex, who died on May 18 last, was proved on July 9, by Joseph Yellowly Watson and William Hudson Howard Watson, the sons, two of the executors, the value of the personal estate exceeding £12,000. The testator gives legacies to his wife and children. All his real estate (not under settlement) and the residue of his personal estate, he leaves, upon trust, to pay the income to his wife for the use of herself and his unmarried daughters; and on her death to be realised and divided among his children, the same as the settled property.

The annual dinner in aid of the funds of the Metropolitan Hospital, formerly known as the Metropolitan Free Hospital, was held on July 11 at the Hôtel Métropole. The chairman in the course of his speech said the London hospitals got £650,000 a year, and of this only £42,000 was received from the patients who go there, while the institutions were at the present moment £100,000 a year short of the money necessary to carry them on. In conclusion, he appealed for funds for the hospital, which, he said, was unable to occupy all its beds because of the difficulty in getting money at the present time. The subscriptions amounted to £2031.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

MESCAS (Potosi, Mexico).—The problem is undoubtedly wrong, and has often been proved so. In your proposed solution, however, you fail to notice the effect of a check on Black playing 4. Kt to Q 7th and 5. Kt to K 5th (ch). The following seems a quicker way than the published answer:—1. Q to R 4th (ch), R interposes; 2. Q to B 8th (ch), R interposes; 3. Q to K 6th (ch), R interposes; 4. K to R 6th, any move but K to B sq (a); 5. Q to K 8th (ch), R interposes; 6. Q to K 7th, R to B 2nd; 7. Q to Kt 3rd (ch), K moves, and mates next move. If (a) Black play 4. K to B sq, then 5. B to Q 4th, &c.

PERCY ANDREA (Clapham).—R to Q Kt 6th does not solve No. 2307, so that the correction still requires correcting.

SIGNOR ASPA.—Thanks for problems. No. 1 is too easy, and, as good port ought to be, curiously old. The other is good, and shall appear in due course.

J DIXON (Colchester).—We give the latest news up to the time of going to press.

H COOPER (Baileybury).—Your problem shows some idea of construction, but Black is too much overwhelmed from the first.

J DALY (Chatham).—Please send a diagram of your amended position. We do not clearly understand your corrections.

T BAIT (Mooselaw, Canada).—Allowance is always made for solvers living so far away. In your proposed solution of No. 2305 there is no mate when Black plays K to Kt 3rd, as the K takes P when Q plays to B 8th for that move. In No. 2304, after 2. Q to K 2nd, B interposes.

J W MARCHANT.—In Problem No. 2295 the move is wrongly printed; it ought to have been 1. B to K 6th, not B 6th. In No. 2294, if Q B P takes Q, then 2. B takes P (mate).

C E P.—Your answer to No. 2307 did not reach us. You are wrong in thinking there is a second solution by 1. B to R 7th, for the simple reason there is not a B on the board. We have replied to 2305, see below.

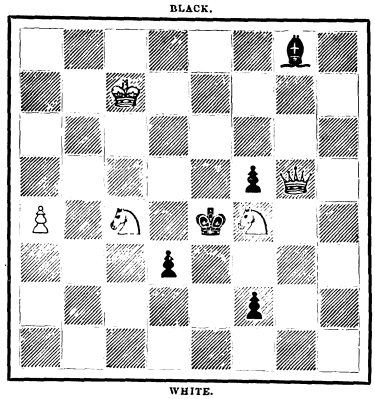
NUMEROUS correspondents write as about No. 2305, requiring to know why 1. K to Kt 2nd does not solve the problem. The defence is 1. Q takes B, and when White continues, as our solvers propose, by 2. Kt to B 7th, Black replies with 2. Q to Kt sq (ch), and no mate follows.

PROBLEMS received, with thanks, from Mrs W J Baird, F Besley, J G Campbell, A Newman, and L Desanges.

CORRECT SOLUTION OF PROBLEM No. 2304 received from G Hewitt (Middle Cobbay); of No. 2305 from Columbus, J W Shaw (Montreal), T Mann (New York), and An Old Lady (Paterson, U.S.A.); of No. 2307 from A Wheeler, C E P, U E Boy, Joseph T Pullen, and J D; of No. 2308 from A Wheeler, J W Marchant, F E Boys, T Schmucke, Joseph T Pullen, W Shaw (Sheffield), Dane John, John G Grant, E Crane, Farsley Baptist Institute, James Sage, Sergeant, Hereward, Nos Redna (Leeds), T Bockmann, and W P Welch.

CORRECT SOLUTIONS OF PROBLEM No. 2309 received from W R Baillie, Joseph T Pullen, A Wheeler, J A Schmucke, H H Brooks, J D Tucker (Leeds), R Worters (Canterbury), Dane John, A Hunter, Jupiter Junior, H Lucas, E Caselis (Paris), A Newman, J Hepworth Shaw, T G (Ware), W W W, Thomas Chown, Dr F St. John Short, E E H, James Sage, Sergeant, T Roberts, D Motley, Major Prichard, G J Veale, Percy Andrea (Clapham), R F N Banks, Shadforth, and E Phillips.

SOLUTION OF PROBLEM No. 2307.



WHITE.	BLACK.
1. K to R 3rd	Kt to Q 5th
2. Q to B 8th (ch)	K takes Q
3. It takes R. Mate.	

If Black play 1. K to K 5th, then 2. Q to Q 3rd (ch), &c.; if 1. R to K 6th (!), then 2. Q takes R, &c.

PROBLEM No. 2311.

By GODFREY HEATHCOTE.

BLACK.

WHITE.

White to play, and mate in three moves.

CHESS IN LONDON.

Game played in the match between Mr. JACOBS and Mr. LOMAN.

(Irregular Opening.)

WHITE (Mr. J.)	BLACK (Mr. L.)	WHITE (Mr. J.)	BLACK (Mr. L.)
1. P to R B 4th	P to Q 4th	17.	Q takes Kt
2. P to K 3rd	P to K 3rd	18. R to B 3rd	Kt to K sq
3. Kt to K B 3rd	P to Q B 4th	19. R to R 3rd	P to K B 4th
4. P to Q Kt 3rd	Kt to Q B 3rd		
5. B to Kt 2nd	Kt to K B 3rd	Black meets the attack, such as it is, steadily. The last two moves are well-timed.	
6. P to Q R 3rd	B to K 2nd		
7. B to Q Kt 5th	B to Q 2nd	20. P to K Kt 4th	B to B 3rd
8. Castles		21. P to Q 4th	
Better to take the Q Kt at once.		Shutting the B out of the game, and allowing the adverse K Kt to take up a strong position at K 5th.	
9.	Q to Kt 3rd		
9. P to Q B 4th		21.	Kt to Q 3rd
A weak move, which gives Black an immediate advantage.		22. P to K Kt 5th	B to Q sq
9.	P to Q R 3rd	23. B to K B 3rd	Kt to K 5th
10. P takes P	P takes P	24. B takes Kt	B P takes B
11. B to K 2nd		25. It takes P	
Loss of time again; the Kt should have been taken.		A bold but unsound sacrifice. The R can be safely taken.	
11.	Kt to Q R 4th	25.	K takes R
12. P to Q Kt 4th	P takes P	26. Q to R 5th (ch)	K to Kt sq
13. B to Q 4th	Q to Q sq	27. P to Kt 6th	R to B 4th
14. Kt to K 5th		28. Q to R 7th (ch)	K moves
We can see no object in this move. Why not take the P and bring the Q Kt into play?		29. Kt to Kt 5th	
		Q to R 8th (ch) and taking the P would have been better; but the K could escape, and the game is lost in any case.	
14.	Kt to Q B 3rd		
15. B to Kt 2nd	P takes P	29.	K to K sq
16. Kt takes P	Castles	30. B to R 3rd	B to K 2nd
17. Kt takes B		31. Q takes P	P takes Kt, and White resigned.

Time. White has the worst of the game, but an attack might have been ventured upon here by P to Kt 4th.

Tyneside chess has suffered a great loss by the death of Mr. William Mitchenson, for thirty years one of the most prominent players in the district. He particularly distinguished himself by his studies in Pawn-end games, some fine examples of which were contributed to Mr. Staunton's periodical, the *Chess World*. Many others appeared in various chess columns, and their peculiar ingenuity delighted students wherever the game was played. He was also a well-known problem composer, and, for many years, a contributor to this column.

The match between Messrs. Jacobs and Loman, at the City Chess Club, one of the games of which is given above, terminated in favour of the former gentleman, who scored 7 against his opponent's 4.

In the Irish Chess Club Handicap Mr. Blackburne has succeeded in raising his score to 10; and, as he has one more game to play, it is probable the result will be a tie between him and Mr. Gunsberg for first and second prizes.

A conference of the representatives of commercial interests and members of Parliament was held at the rooms of the Society of Arts, on July 11, to consider the Bill recently introduced into the House of Lords by the Lord Chancellor to amend the Companies' Act. Mr. Chamberlain condemned the measure as bad by reason both of what it contained and what it did not contain, and said he was not sorry it was to be included among the proposals which the Government had decided to abandon. A resolution was adopted declaring that no legislation on the subject would be satisfactory which did not include provision for the winding up of insolvent limited liability companies in the local bankruptcy courts in the same way as insolvent private firms or individuals.

NOVELS.

The Fatal Three. By the author of "Lady Audley's Secret," &c. Three vols. (Simpkin, Marshall, and Co.).—Miss Braddon's power of conceiving and conducting to its final crisis a story of passionate and sympathetic interest has not been exhausted by nearly fifty works of that kind; while she has risen into a purer moral atmosphere, and her later novels commend themselves, in a high degree, to minds seriously occupied with the problems of right living and duty. It is to be regretted that a tale of modern English domestic life, involving personal embarrassments caused by the English High Church prejudice against marriage with a deceased wife's sister, and in which there is no suggestion of supernatural agencies, should bear a title alluding to the Greek Fates. "Clotho, or Spinning the Thread," "Lachesis, or the Meter of Destiny," and "Atropos, or That which Must Be," could well be spared from their nominal presidency over the incidents told, respectively, in each of these three volumes. The proper functions ascribed to them by ancient mythology were concerned with the single life of an individual, not with the dramatic development of mutual relations between several persons, in which all human experience finds the inevitable effects of preceding actions and situations. But this is not, after all, a fatalist story; for the heroine, Mildred Greswold, owes her mental sufferings to a mistaken religious idea, and to her own voluntary choice under its influence; while her husband's distress is the result of a combination of incidents, in his earlier life, the actual bearings of which are long misunderstood; and in the end, when these are discovered, the problem that has separated an affectionate wedded pair is happily solved. The subject, therefore, is entirely free both from real guilt of any kind, on either part, and from the gloomy heathenish notion of an overwhelming necessity for inflicting or enduring evil; there is no slavery to wrongful passions, no vindictiveness, no hatred of anybody. With all this wholesomeness and gentleness of feeling, there is abundant strength of purpose, and the conflicting currents of emotion flow with unfailing force. In explanation of the plot, which has the merits of originality and possibility, it may be stated that Mildred is the daughter and heiress of Mr. John Fausset, a wealthy retired merchant, who in her childhood, against the wish of Mrs. Fausset, brought to his house an older girl, of unknown parentage, said to be a distant relation of his own family; this girl, called Fay, was disliked and slighted by Mr. Fausset's jealous wife, suspecting her to be an illegitimate child of his, born some years before his marriage. Fay was soon packed off to a Brussels boarding-school, and nothing more has been heard of her until long after Mr. and Mrs. Fausset have died. Mildred, in the mean time, has grown up, and has become the wife of George Greswold, a country gentleman, who is an excellent husband. Their happy life at Enderby Manor, near Romsey, their care for the poor of the village, the outbreak of typhoid fever, owing to the accidental poisoning of milk with water from a condemned well, and the death of their only child, are described with pathetic tenderness, and with minute truthfulness of detail. Grief has a strange effect on George Greswold, who is liable to fits of depression, in which he talks wildly to himself, as he does also in his sleep. Overhearing some words, Mildred is led to fear that he is oppressed with the secret memory of some terrible event in his earlier life. They meet, unfortunately, in the society of their country neighbours, an Italian named Castellani, educated in England, an accomplished musician, and author of an admired book, who knew Greswold formerly at Nice. He reminds Greswold that they met, as he says to him, "soon after your first marriage." Mildred had never before heard that her husband was a widower at the time she married him; and his having concealed this fact, along with his mysterious suffering from some painful reminiscences, of which he refuses at first to give any account, excites grievous apprehensions in her mind. She loses confidence in him, and there is a certain degree of estrangement; but one day, frankly and tenderly appealing to him for an explanation, she is shown the photograph of his first wife, in whom she recognises Fay, the companion for some months of her childhood. Mildred had been told by her mother, Mrs. Fausset, that she had sufficient grounds for believing Fay to be Mr. Fausset's daughter before they married. The identification of Fay with George Greswold's first wife might not seem a very dreadful matter; but a section of the Anglican clergy has imposed on feeble and ignorant people the utterly false opinion, derived from stupidity or fraud in the Dark Ages, denounced by all Protestant communions, and belied notoriously by frequent special dispensations from the heads of the Roman Catholic Church, that for a woman to marry a man who has once married her sister is a sin of "incest." Poor Mrs. Greswold, being the victim of this cruel delusion and of the baneful counsels of her favourite clergyman, the Rev. Clement Cancellor, believing that Fay was her half-sister, fancies it is her duty to forsake a most affectionate and faithful husband, though her union with him stands perfectly valid in law. She goes abroad, with his niece, Miss Pamela Ransome, and on the shores of Lago Maggiore again encounters Castellani, who nearly proposes to take advantage of her unprotected position. Being scornfully repelled, he taunts her with having taken for a husband a man suspected of murdering his first wife. She then goes to Nice, gets information from a resident there, Lady Lochinvar, and learns that George Greswold, in his youth, having married a young Englishwoman studying music at Milan, lived unhappily with her in a lone cottage near Nice, till she was killed by falling from a cliff. He was accused of the crime, but as he seemed to be insane, was released after being confined in the local public asylum. Mildred's visit to this place, and her personal inquiries, which are admirably narrated, convince her that he was not guilty of the murder, while they fully account for his agonising remembrances. On her return to England, though she hastens to see her unhappy husband—a scene described with much depth and delicacy of feeling—she persists in living apart from him, and, resolving to devote herself to labours of religious charity, joins Miss Fausset, her father's sister, a rich elderly lady at Brighton, who is the zealous and munificent patroness of Church work in that town. Mildred appears likely to succeed her aunt, whose health is declining, in this career of devout and pious effort, and never to resume her proper place as a wife; but a still more astonishing discovery is in store for her. Among the old papers left by her father, she accidentally finds a bundle of letters proving that Miss Fausset herself, betrayed by a mock marriage with Castellani's father, was the mother of Fay, whom her brother had privately educated before attempting to introduce her into his house, and who afterwards took a different name. This, of course, puts an end to Mrs. Greswold's scruples, and she returns at length to cheer the home of an excellent man who had been very severely tried; while Miss Fausset, who had been somewhat of a hypocrite, and was unnaturally averse to her own offspring, though an innocent victim in the misfortune that gave it birth, makes a full confession to her niece before she dies. It is not a story of Fate, or "the Fates"; but it is a very interesting story. The subordinate figures and incidents, especially those of Mrs. Hillersdon's visiting party, with her questionable antecedents, do not contribute much to its value.

NEW MUSIC.

CHAPPELL and CO.'S POPULAR MUSIC.

DEAR HEART.
By TITO MATTEI.
This enormously popular Song
Published in three keys.

HEAVEN AND EARTH.
By PINSUTI.
Sung by Madame Enriquez.

ZURICH.—Hôtel Belle-Vue an Lac. First-class Hotel, mostly frequented by English and Americans. On the new bridge, and near the landing of the boats. For a long stay, eight francs per day. POHL, Proprietor.

ADVICE TO MOTHERS.—Are you broken in your rest by a sick child, suffering with the pain of cutting teeth? Go at once to a chemist and get a bottle of Mrs. WINSLOW'S SOOTHING SYRUP. It will relieve the poor sufferer immediately; it is perfectly harmless; it produces natural, quiet sleep, by which the child from pain and the little cherub awakes "as bright as a button." Be sure and ask for Mrs. Winslow's Soothing Syrup, and see that "Curtis and Perkins, New York and London," is on the outside wrapper. No mother should be without it. Sold by all Medicine Dealers, at 1s. 1½d.

FLORILINE. For the Teeth and Breath. Is the best Liquid Dentifrice in the world: it thoroughly cleanses partially-decayed teeth from all parasites or living animalcule, leaving them pearly white, imparting a delightful fragrance to the breath. The Fragrant Floriline removes instantly all odours arising from a foul stomach or tobacco smoke. Some purely-composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly delicious to the taste, and as harmless as sherry. Sold by Chemists and Perfumers everywhere, at 2s. 6d. per Bottle.

MAPLE & CO.

TABLE LINENS.

TABLE LINENS.
During the long-continued depression in trade, many of the best Irish manufacturers have still kept in employment skilful weavers employed, with the result that stocks have accumulated, till of necessity they must be realised, even at a serious sacrifice.

TABLE LINENS.—MAPLE and CO. having been consulted by several manufacturers so situated, have bought out for cash, on most exceptional terms, an immense assortment of pure hand-made, full-bleached CLOTHS and NAPKINS, which they are now offering at a very large percentage under value.

TABLE LINENS.—The cases are now being opened out, and comprise a large variety of CLOTHS of a substantial character, fit for everyday family use, and which, being pure flax, will wear well and retain their natural lustre till the last. The Cloths are mostly of medium sizes—2 yards by 2½ yards, from 5s. 11d.; better quality, 8s. 11d.; extra quality, 14s. 9d.

TABLE LINENS.

TABLE LINENS.

TABLE LINENS.—Amongst the stocks are a number of CLOTHS, in both medium and large sizes, of altogether exceptional quality; the first some of the finest and most beautiful productions of the Irish looms. These are suitable for best use and special occasions, and should certainly be seen. The prices will be found but little more than usually asked for goods of ordinary character.

TABLE LINENS.—Included in the stocks will also be found a large variety of both CLOTHS and NAPKINS suitable for use in Hotels, Clubs, Boarding-houses, &c., and proprietors contemplating renewing these items should certainly make an early inspection, or write for samples or quotations. A great saving may be effected by purchasing at once.

TABLE LINENS.—The Stocks also include piles upon piles of DAMASK NAPKINS, as follow:—Fish Napkins, from 2s. 3d. per dozen; Breakfast ditto, from 4s. 6d. per dozen; Dinner Napkins, all fine flax, from 6s. 11d. per dozen; extra large French size, 9s. 11d. per dozen. These goods will be found of remarkably good value, and are sure to please in use.

SHEETINGS.

SHEETINGS.

SHEETINGS.

Time Bill, with Mapand Fares, free from the owner—DAVID MACBRAYNE, 119, Hope-street, Glasgow.

MONTE CARLO
AS A SUMMER RESORT.
For a summer stay, Monte Carlo, adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea-breezes. The beach is covered with the softest sand; the Hotels are grand and numerous, with warm seabaths, and there are comfortable villas and apartments, replete with every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Establishments on the banks of the Rhine—Theatre, Concerts, Equestrian Fetes, &c.
There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo, or in its special fascinations and attractions—not only by the fascinated climate and by the inviting scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it to-day the rendezvous of the aristocratic world, the spot most frequented by travellers in Europe; in short, Monaco and Monte Carlo enjoy a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY, SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the Gotthard line. Through-going Sleeping-Cars from Ostend to Milan. Railway Carriages, Safety Rugs. Tickets at all correspondent Railway Stations, and at Cooks' and Gaze's Offices.

CRUISE TO THE NORWEGIAN FIORDS, the BALTIC, &c. The steam-yacht VICTORIA, 1841 tons register, Commander Comer, R.N.R. LUNHAM, Commander, will be taken up from Tilbury Dock as follows:—July 31, for 16-day cruise to the Norwegian Fiords. Aug. 20, for 20-day cruise to the Baltic. The VICTORIA is always now in between her cruises, has the Electric Light, bells, and all modern improvements. Apply to MANAGER, Steam-Yacht Victoria office, Carlton-chambers, 4, Regent-street, London, S.W.

MR. EDISON SPEAKING THROUGH THE PERFECTED PHONOGRAPH IN AMERICA.
FROM A PHOTOGRAPH.

A STATESMAN'S RETREAT.

A statesman in the retirement of his Tusculum is always a pleasing picture—the contrast is so great between the forum and the council-chamber, and the sunny seat on the garden terrace or the quiet nook in the blooming orchard. For my part, I think Charles James Fox at St. Anne's-hill a much more lovable and attractive figure than Charles James Fox at St. Stephen's. His moral nature seems to have been purified and elevated by the fresh rural air, and all that was best in the man developed by the sweet sunshine of Heaven, which he enjoyed so thoroughly. One sees in him the fond, devoted husband, the genial host, the kind master, the faithful friend, and, not least, the accomplished scholar, whose love of letters graced and beautified his leisure. Fox thundering in the House of Commons against an irresistible majority I regard as altogether an ignobler and certainly a much less happier person than Fox at St. Anne's, discussing, with fine critical taste, the classics of Greece and Rome, or the masterpieces of French and Italian literature. It is curious to note that of the Latin poets he preferred Ovid, though Horace has been the usual favourite with men of the world; of the Greek tragedians, Euripides, with his profound pathos; and of the ancient historians, Herodotus, with his large simplicness and genial receptivity. He was a great student of the drama, and of our old English poets an assiduous reader and warm admirer. Sometimes he beguiled an idle hour at St. Anne's by writing verses, which were about as good as most of those verses which clever men write who are not poets.

From his correspondence with his young nephew, Lord Holland, it appears that he was well acquainted with the Spanish as well as Italian authors. On one occasion he writes: "I will keep your books for you, nor do I know that there are any, except perhaps the 'Parnass' [a collection of Spanish poems] that I shall beg of you. I have hitherto looked very little into them. I read one novel, 'El Cochero honroso,' which I thought very poor; one thing in Cadalso, 'La Violeta' [a prose satire], or some such name, which I like exceedingly; and 'Galatea' [a pastoral romance, by Cervantes], in which there are many pretty things, but not much genius. Cervantes's style in this, and, I think, in some other things, appears to me to be formed entirely upon Boccaccio—whom, by-the-way, I do not know that he anywhere mentions—and it appears to me to be forcible, or affecting, or descriptive, precisely in proportion as it resembles its original." Again, he writes: "I have been reading Ariosto, and I declare I like him better than ever. If I were to know but one language besides my own, it should be Italian." And next he has something to say about the immortal poet to whom a great living statesman has devoted a much closer and more scholarly, if not a more loving, consideration: "If you will not read the 'Iliad' regularly through," he says, "pray read the tenth book, or, at least, the first half of it. It is a part I never heard particularly celebrated; but I think the beginning of it more true in the description of the uneasiness in the Greek army, and the solicitude of the different chiefs, than anything almost in the poem. . . . You see, I have never done with Homer, and, indeed, if there was nothing else, except Virgil and Ariosto, one should never want reading."

At St. Anne's, Fox received his intimate friends, delighting them by the fresh flavour of his conversation, and drawing them to him by the warmth of his nature and the kindliness of his disposition. Everybody knows the inscription on the monument of the accomplished Elizabethan, Fulke Greville, Lord Brooke—"Here lies Fulke Greville, servant to Queen Elizabeth, Counsellor to King James, and *friend to Sir Philip Sidney*." But everybody may not remember that a similar boast of honourable friendship is made by Lord John Townshend, who desired to be described on his gravestone by the title of which he was proudest—"*The friend and companion of Mr. Fox.*" There was something in Fox that laid hold upon men's hearts: I suppose it was the keen interest he took in everything connected with the people he knew. He made them feel that he was concerned for them and about them; and you can pay a man no greater compliment than to show that you value him so much as to care about what befalls him.

How delightful, says Earl Stanhope, must Fox have been as a companion! How frank, how rich, how varied his flow of conversation! 'Twas certainly no small privilege to be admitted to his beautiful rural retreat; to sit by his side beneath the cedars which he had planted; to hear him in eloquent discourse upon the books he loved and the men he knew. Mr. Greville tells us that Talleyrand was never tired of expatiating upon Fox's simplicity, almost boyish gaiety, vivacity, and yet, at times, his profoundness. And ah! with what sunny humour did he make a jest of his indolence at St. Anne's! Once, when Rogers remarked on the pleasantness of lying upon the greensward all day with a book in one's hand, the idler rejoined: "Yes; but why with a book?" Though, perhaps, there was more wisdom than idleness in this rejoinder, since a man ought, at times, to suffice to himself. How genial was his aspect, when, walking with slow, gouty feet, but with radiant countenance, and a laugh in his voice, along his garden alleys, he expanded his broad breast, inhaled the fragrant airs, and, at intervals, exclaimed: "Oh, how fine a thing is life!" He had a keen relish—this giant of debate, this Ajax of the political arena—for the sweet sights and sounds of Nature; and enjoyed, with an unrestrained enjoyment, the pleasure of a warm June day, or a balmy April morning, with "a sweet, westerly wind, a beautiful sun, all the thorns and elms just budding, and the nightingales just beginning to sing." In one of his letters, our statesman-off-duty exclaims, in a kind of lyrical rapture: "If ever there was a place that might be called the seat of true happiness, St. Anne's is the place!" Here he loitered about the green fields, plucked the scented blossom from the hawthorn-hedge, and with curious eye watched the growth of his vegetables and fruits. "Where is Fox now?" said a friend to General Fitzpatrick, at a critical moment in the French Revolution, "Where is Fox now?" "I dare say he is at home," was the answer, "sitting on a haycock, reading novels, and watching the jays steal his cherries."

The grounds, which were very agreeable, with some admirable prospects of wood and water, Fox liked to see kept in excellent order. He erected at different points a small temple as a memorial of Henry Lord Holland attaining his majority, a pyramid, and some vases with poetical inscriptions. Such things were according to the taste of his day: they were the juvenilities of the art of the landscape-gardener. Altogether, he was so happy at St. Anne's that one wonders St. Stephen's could ever draw him from it. To be the leader of a great political party—to be the object of the eulogies of one half of your countrymen and the target of the execrations of the other half—is, no doubt, a grand and glorious position; but there are some among us who can never be persuaded that the fever and unrest of the Forum furnish anything like a satisfactory equivalent for the repose and tranquillity of the Tusculum!

W. H. D.-A.

EDISON'S PERFECTED PHONOGRAPH.

The improved apparatus devised by Professor Edison, of Orange, New Jersey, in the United States, to perfect his wonderful acoustic machine, by which spoken words or music, inscribing their precise tones, syllables, and accents, on cylindrical rollers of wax, can be afterwards repeated at any distance of place and time, continues to excite public curiosity. We gave last week an Illustration of the hearing of the first message from America, a letter dictated to the machine by Mr. Edison, in his laboratory, at three o'clock in the morning, on June 16, which was repeated, without the loss of a word, on July 25, by a corresponding machine, at the house of his agent in England, Colonel Gourand, Little Menlo, Beulah Spa, Upper Norwood; the waxen record or "phonogram" having been sent to England by mail steam-ship. The Illustration given in the present Number, from a photograph, is that of Mr. Edison speaking this message to the machine; and, in order to render the parts of the instrument more clear, the following explanation will be interesting. To the left is the electric motive power, in this case a bichromate bottle battery. To the right of this is the motor box; above it is the regulator. Under Edison's recording or speaking tube is the wax cylinder, placed over an iron core. The projecting rod in front of the cylinder is an index to the contacts of the phonogram. In front of the box are three wax cylinders or phonograms. In front of these is a branched tube, the "earphone," for more certainly excluding outside noises; this is to be fitted over the receiving tube—that on the frame to the left of the recording tube. By a swift and exact arrangement, either of these tubes can be shifted, when required, to its place over the wax cylinder.

We are informed that extensive preparations have been made, in America, for the manufacture of these machines; the works at present under construction having a capacity of making two hundred machines a day. There will be a variety of forms of phonographs adapted to different purposes, and of various prices. The form to be first made available to the public will be similar to the one sent to Colonel Gourand by Mr. Edison, and is expected to be sold for about £20. It will be found both useful and amusing.

Rear-Admiral Robert A. E. Scott has been awarded the Flag-Officer's Greenwich Hospital pension of £150 a year, void by the death of Admiral George Goldsmith.

The competition for the Charles Lucas Medal at the Royal Academy of Music was decided on July 14. The prize was awarded to Dora Bright.

The Bishop of Rochester presided on July 16 at a meeting of his diocesan society, when the following grants were made:—£250 for the church of St. Barnabas, Gillingham; £100 towards the endowment of St. Luke, Reigate; £200 for a parsonage for the parish of St. Stephen, Battersea; and £1063 for stipends of mission-clergymen, scripture-readers, and mission-women.

In London 3520 births and 1288 deaths were registered in the week ending July 14. Allowing for increase of population, the births were 205, and the deaths 460, below the average numbers in the corresponding weeks of the last ten years. The deaths included 1 from small-pox, 26 from measles, 18 from scarlet fever, 24 from diphtheria, 32 from whooping-cough, 12 from enteric fever, 1 from an undefined form of continued fever, 72 from diarrhœa and dysentery, and 3 from cholera and choleraic diarrhœa. Deaths referred to diseases of the respiratory organs were 164, being 43 below the average.

Second Edition, now ready,

SYLVIA ARDEN,

A NOVEL by OSWALD CRAWFURD,
Author of "Beyond the Seas,"

Price 6s.

From the "Saturday Review."—"A capital story."

From the "Queen."—"A well-written and exciting story."

From the "Guardian."—"Sylvia Arden is really first-rate. . . . And the interest, which is quite exceptional, is kept up throughout the whole story."

From the "World."—"Mr. Crawford's story is full of interest and excitement, and fulfils its *raison d'être* by holding the breathless attention of the reader from first to last."

From the "Daily News."—"The author of this novel has the power of striking the true note of mystery and awe without any melodramatic trick or too obvious intention. Mr. Crawford's style and method are alike essentially clear, straightforward, and sincere."

From the "Graphic."—"Mr. Oswald Crawford has distanced the field in the way of uncompromising sensation; but he has also shown what style, constructive skill, and the finer order of literary qualities will do for a romance."

London: KEGAN PAUL, TRENCH, & Co.

MISS BRADDON'S NEW NOVEL.
In 3 vols., at all Libraries,

THE FATAL THREE: A Novel. By the Author of "Lady Audley's Secret," &c.

NESTLE'S FOOD
AN ENTIRE DIET FOR INFANTS.

Supplies all the elements necessary for the complete nourishment and growth of the human frame.

Nestle's Food, being partly composed of milk, is complete and entire in itself, and requires simply the addition of water to make it instantly ready for use. It is not merely an auxiliary, like other Infants' Foods, which require milk to be added in preparing for use

Recommended by the highest medical authorities as the nearest equivalent to Mother's Milk.

Pamphlet with Medical Testimonials, sent, post-free, on application to H. NESTLE, 9, Snow-hill, London, E.C.

CORPULENCY.

Recipe and notes how to harmlessly, effectually, and rapidly cure Obesity without semi-starvation dietary &c. "Sunday Times" says: "Mr. Russell's aim is to *eradicate*, to *cure* the disease, and that his treatment is the true one seems beyond all doubt. The medicine he prescribes *does not lower but builds up and tones the system*." Book, 116 pages (8 stamps).

F. C. RUSSELL, Woburn House, 27, Store-street, Bedford-square, London, W.C.

THE GAMBETTA STATUE IN PARIS.

The statue of Gambetta, erected in the Place du Carrousel, close to the Louvre Garden, was publicly unveiled on Friday, July 13, in the presence of M. Carnot, President of the French Republic, assisted by all the Ministers and the Presidents of the Senate and the Chamber of Deputies. M. Floquet, the Prime Minister (President of the Council of Ministers), who had that morning fought his sword-duel with General Boulanger, walked at the head of his colleagues, and had an enthusiastic popular reception. Addresses were delivered by M. Spuller, chairman of the committee for this monument, who was secretary to Gambetta in the Provisional Government of 1870; M. Le Royer, President of the Senate, M. Meline, President of the Chamber, M. Floquet, and M. De Freycinet, another of Gambetta's colleagues at the commencement of the Republic; an ode was recited by the eminent actor M. Mounet-Sully, of the Théâtre Français. There was a marching-past of troops, and the whole affair was decidedly imposing. On Saturday, July 14, the anniversary of the capture of the Bastille, President Carnot and the members of the French Government held a military review, and attended a banquet given to 1500 provincial Mayors and other official dignitaries, at the Exhibition buildings in the Champ de Mars. Statues of Etienne Marcel, a patriotic ancient Mayor of Paris, and of Sergeant Bobillot, a soldier who died bravely with the army in Tonquin, also a monument and bust commemorating incidents of the Revolution of 1789, were unveiled on the same day.

The Rev. Dr. R. C. Billing, many years Rector of Spitalfields, and the Ven. F. H. Thicknesse, D.D., Archdeacon of Leicester, were, on Sunday morning, July 15, consecrated in St. Paul's Cathedral as Bishop Suffragan of Bedford and Bishop Suffragan of Leicester respectively.

The annual general meeting of the Society for the Protection of Women and Children was held at St. James's Hall Restaurant on July 13, Lord Mount-Temple, president of the society, occupying the chair. The twenty-ninth annual report stated that owing to the increased support that had been given to the society of late years, the council had been enabled not only considerably to extend their work, but also greatly to improve their financial position. The report specified a number of cases in which the society had successfully acted in the interest of ill-used women and children, the cases investigated during 1887 numbering 683. The receipts for the year amounted to £1149, and the expenditure to £615.

The second Public Archery Meeting of the season at the Crystal Palace closed on July 13. The top scores of the meeting, or the double York and National Rounds, were made by Mr. C. E. Nesham, Royal Toxophilite Society, and Mrs. P. Legh. Applying the percentage system to the scores in respect of past successes, first score prizes went to Mrs. W. Yates Foot, and to the Rev. C. H. Everett; second prizes to Mrs. W. Legh and Mr. W. G. Mason; third prizes to Mrs. Haigh and Captain E. M. Allen; fourth prizes to Miss C. Radford and Rev. Eyre Hussey; fifth prizes, Mrs. Nesham and Mr. Nesham; sixth prize, Mrs. Preston; and seventh prize, Miss Hutchinson. The prizes for most golds went to Mr. Preston and Mrs. Eyre Hussey, but the greatest number of golds in scoring were made by Mrs. C. Radford and Mr. C. E. Nesham. Two notable events in the contest were Mrs. Legh making three consecutive golds at one end at fifty yards, and receiving the customary subscription shillings, and a fine pin-hole gold at sixty yards by Mrs. Preston.

FASHIONABLE MARRIAGES.

The marriage of Colonel Inigo Richmond Jones, Scots Guards, with Miss Charteris, daughter of the late Colonel the Hon. Richard Charteris, took place in St. Mark's Church, North Audley-street, on July 12. Captain the Hon. Charles Harbord (Scots Guards) acted as best man. The bride, who was attended to the altar by four bridesmaids, entered the church at half-past two o'clock, with her brother, Mr. Charteris. A detachment of non-commissioned officers and privates of the Scots Guards attended, and lined the aisle. The bride was given away by her brother.

The marriage of the Rev. R. H. Hadden, Vicar of Aldgate, and Eva Prudence, daughter of Mr. J. Carbery Evans, of Hatley Park, Cambridgeshire, was solemnised in the Chapel Royal, Savoy, on July 12. The bridegroom was attended by Dr. W. Baugh Hadden as best man; and the four bridesmaids were the Misses Millicent and Dorothy Evans (sister of the bride), Miss Hadden (sister of the bridegroom), and Miss Dorothy Leadam. Two little boys, nephews of the bride, acted as pages. The historical chapel was quite filled with the wedding-party, and in the chancel stalls were several clergymen.

The marriage of General J. Thornhill Bushby, late Judicial Commissioner of Berar, H.A.D., and Mrs. Costley Daly, of 23, The Boltons, South Kensington, and of Glan-y-Mor, Torquay, was solemnised on July 11 at St. Mary, The Boltons, South Kensington. The presents were numerous and costly.

A marriage will shortly take place between Dr. Butler, Master of Trinity College, Cambridge, and Miss Agneta Frances Ramsay, third daughter of Sir James Henry Ramsay, of Banff, in the county of Perth. Miss Ramsay, it will be remembered, was, last June, placed in the First Division of the First Class of the Classical Tripos, Part I., no man and no other woman having attained a place in the same division. Her position was practically equivalent to that of Senior Classic of the year.

The ball in aid of the London Hungarian Association of Benevolence, which took place on July 12, at Prince's Hall, Piccadilly, was a most successful and enjoyable one. Over 500 ladies and gentlemen were present, including representatives of the Austro-Hungarian and Servian Consulates.

A terrible accident occurred near Hyde, on the Manchester, Sheffield, and Lincolnshire Railway, early on the morning of July 15. The axle of one of the passenger-carriages broke, causing the vehicle to oscillate and topple over. It was run into by the engine of a goods train, and four women were killed. Several other passengers were seriously injured.

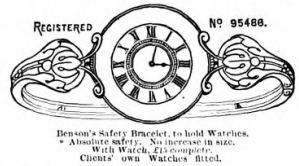
On Wednesday, July 11, 1888, after a short illness, at Belmont Park, Lee, Kent, Marianne, the beloved and affectionate wife of Brackstone Baker, aged 58.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings.*

OPENING OF A NEW PARK AT BEDFORD.

The pleasant and prosperous town of Bedford, which has almost trebled its population within half a century, and has now to boast of sanitary improvements, educational institutions, social conveniences, and suitable public buildings not excelled by any other town of its size, was the scene of much festivity on July 11, at the opening of the new park and grounds for popular recreation, with a new foot-bridge over the Ouse, and a pretty "carnival" on that river. The Marquis of Tavistock, son of the Duke of Bedford, and M.P. for the county from 1875 to 1885, performed the threefold opening ceremonies, supported by Mr. Samuel Whitbread, M.P., Lord Charles Russell, Lord Baring, Alderman James Howard, Mr. Joshua Hawkins, Mayor of Bedford, and other gentlemen of local note and influence. There was a procession from the Shirehall to the park, a ceremonial at the opening of the gates, and a luncheon in the Corn Exchange. The park, which has been formed by the Corporation of Bedford, consists of sixty-one acres, beautifully laid out by Messrs. W. Barron and Son, of Derby, landscape gardeners, at a cost of £7000; the iron gates, lodge, and pavilion are constructed in very good taste. This town possesses also the Cauldwell Recreation Ground and an agreeable promenade on the Embankment.



The concluding match of the Royal Cinque Ports Yacht Club Regatta was sailed on July 14, the race being from Dover to Boulogne and back, for the Town Cup and £100, the second receiving £40, and the third £20. Seven started—the cutters May, Petronilla, Neptune, Mohawk, and Leander, and the yawls Vol-au-Vent and Gudrun. The Petronilla ran away from the others and held the lead throughout, turning the buoy at Boulogne at half-past two. The run home occupied about five hours, the result being—Petronilla first, Neptune second, and Mohawk third.

A fête and demonstration of Sunday-school scholars, to commemorate the Silver Wedding of the Prince and Princess of Wales, was held on July 14 at the Crystal Palace. The chief feature of the day was a concert in the afternoon, rendered by 5000 voices, the huge orchestra being completely filled by the performers, who represented upwards of 100 schools, whose members are drawn from all parts of the metropolis, while contingents had also been sent from Croydon, Kingston, and Leytonstone. The other attractions of the day comprised athletic sports, balloon ascent, a display of fountains, and the open-air ballet, while the band of the Coldstream Guards was in attendance, performing in the grounds in the afternoon and evening.

The Lord Mayor has received from the Rev. Dr. Hermann Adler, Delegate Chief Rabbi, £648 8s. 11d., being the amount collected in the Jewish Synagogues in London for the Hospital Sunday Fund. The fund now exceeds £39,000.—The fifteenth annual outdoor collection on behalf of the Metropolitan Hospital Saturday Fund took place on July 14, when over 2000 collecting-stations were occupied. At an early hour ladies were at their posts at the various markets. The cab-trade, as last year, had 500 special boxes, and displayed pennants upon the whips, and announced the collection on the windows of their cabs. The docks, railway companies, and other industrial centres appeared to be vying with each other to bring about a successful collection. By favour of Mr. Edgar Shand, twenty-five boxes had been placed on the river-boats. By the consent of Lieutenant-Colonel Milman, a collection was made for the first time at the Tower of London. The workshop collection will continue weekly until Dec. 1.

THE curative powers of St. Jacobs Oil are simply marvellous. It is wholly an outward application. It conquers pain quickly and surely. It acts like magic. It penetrates to the seat of the disease. It cures, even when everything else has failed. A single trial will convince the most incredulous. It has cured thousands of cases of Rheumatism and Neuralgia, which had resisted treatment for the greater part of a life-time. It has cured people who have been crippled with pain for more than twenty years. After the most thorough and practical test, St. Jacobs Oil has received Six Gold Medals at different International Exhibitions, for its marvellous power to conquer pain. It is used extensively in the leading Hospitals and Dispensaries of the metropolis and provincial cities, and also on board Her Majesty's Troop-ships and the Cunard Steam-ship Company's Fleet. Put up in white wrappers for human use, and in yellow wrappers for veterinary purposes, price 2s. 6d. per Bottle, of all Dealers in Medicine throughout the world; or sent post-free by the Proprietors, The CHARLES A. VOGELER CO., 45, Farringdon-rd., London, E.C.

THE PUREST, THE MOST PALATABLE, THE MOST DIGESTIBLE, AND THE MOST EFFICACIOUS
IN CONSUMPTION, THROAT AFFECTIONS, AND DEBILITY OF ADULTS AND CHILDREN.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D.,
Physician in Ordinary to the Queen in Ireland.
"I consider DR. DE JONGH'S Light-Brown Cod-Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College.
"DR. DE JONGH'S Light-Brown Cod-Liver Oil has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

Sir G. DUNCAN GIBB, Bart., M.D.,
Physician to the Westminster Hospital.
"The value of DR. DE JONGH'S Light-Brown Cod-Liver Oil as a therapeutic agent in a number of diseases, chiefly of an exhaustive character, has been admitted by the world of medicine."

Dr. SINCLAIR COGHILL,
Physician to the Hospital for Consumption, Ventnor.
"In Tubercular and the various forms of Strumous Disease, DR. DE JONGH'S Light-Brown Oil possesses greater therapeutic efficacy than any other Cod-Liver Oil with which I am acquainted."

Sole Consignees—ANSAR, HARFORD, & CO., 210, High Holborn, London, W.C.
CAUTION.—Resist mercenary attempts to recommend or substitute inferior kinds.

The "WHIPPET" CYCLES.

In designing our Cycles for this season, we have devoted our attention to perfecting those styles which have been so successful in the past. We have also added several new designs which we have thoroughly tested ourselves before placing them on the Market, and we are able, therefore, to submit them to the approval of our patrons without hesitation.

We removed the one great inconvenience which interfered with the pleasures of cycling—viz., the vibration communicated by every inequality of the road through handle, saddle, and pedals to the rider. This great inconvenience has long been patiently submitted to, because it was supposed to be inevitable.

The success of the "WHIPPET" Spring Frame has caused nearly the whole of the Cycle Trade to imitate our specialty—**NON-VIBRATING CYCLES.** Intending purchasers should remember that **"THE WHIPPET"** stand out clearly as **THE ONLY MACHINE** upon which **THE RIDER IS COMPLETELY INSULATED FROM ALL VIBRATION.**

THE NAVAL MANŒUVRES.—CLEARING FOR ACTION ON BOARD THE FLAG-SHIP: SENDING DOWN TOPMASTS.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

OUR NOTE BOOK.

BY JAMES PAYN.

What is it that makes "Boards" so wooden, so destitute of human feeling? or do they begin with being wooden and derive their name from their material? The late action of a provincial Burial Board in taking away the glass-case of flowers which a poor man had placed upon his daughter's tomb, is unintelligible on any other ground; no man would have done it, nor any body of men that was not a Board. In purchasing the grave, it appears that the father did not purchase the legal right of putting flowers on it; yet surely it is the flowers that sanctify the grave! The glass-case may not have been very appropriate; but in these matters the very want of appropriateness is often touching. There is nothing more common in the cemeteries of the poor than to see sea-shells placed upon the graves of those who have never been to sea: they are the only permanent record of piety within the means of the mourners, and are not, after all, more out of keeping with him who rests below than an angel insufficiently clothed, or one of those marble beasts to be bought in the Euston-road, supposed to be symbolic of human virtue. When I was a boy, I used to think it a recreation to wander among the tombs in Kensal-green; but they are much thicker on ground than they used to be, and it is difficult to find one's old favourites: moreover, some who were my companions are lying there, which makes a difference. There used to be a picture of a beautiful child on one of the graves, with the affecting inscription: "'Is it well with the child?' 'It is well.'" (I wonder what the provincial Burial Board would have said to *that*.' Got an "injunction," perhaps, to remove it.) Some of the epitaphs were, on the other hand, unintentionally humorous. I remember one on the west side of the cemetery, near the entrance, over a Frenchman: "Suffocated in a London fog." One poor fellow had no epitaph, nor apparently any surviving friend: his name stood out amid the multitude of sorrowing adjectives—"beloved," "respected," "deplored," &c.—with pathetic blankness: "Captain somebody, *unattached*." Perhaps the wittiest epitaph ever written (but it is not to be found in Kensal-green) was that composed on the heir of the Duc de Penthièvre, who died of love for Mademoiselle Miré, the musician: it was composed of the five musical notes, "MI, RE, L'A, MI, LA," which were made a double debt to pay: "Miré has placed him there."

'T is now the very witching time of year when house agents yawn—open their mouths, that is, very wide indeed, for poor Paterfamilias in search of a country residence. Those in the neighbourhood of London, whence a man can run up and down to his business, are let at fancy prices, though there is rather a curious limit to them. A cottage with a lawn upon the Thames will fetch its 25 guineas a week; but a palace in the same locality, I am told by those who hire palaces, is only 15 guineas more. Dear or cheap, I don't think Paterfamilias enjoys his tenancy much, except for "the back end of the week"—from Friday to Monday. He is too old for bolting his breakfast and catching morning trains, and it is disagreeable to have his rubber cut short in the afternoon because of the necessity of reaching some terminus in order to get home for dinner. For once it is the ladies who have the best of it. No one laughs at the head of the house for his urban proclivities, as they would do if it was the time of year for sport. It is thought shameful in an Englishman not to like pushing through the wet woods or turnips in pursuit of game; and it is popularly believed that in old times this was much more the case: that a man who preferred a town life to a country one was a contemptible "Cit," or "Cockney."

This, however, is an error: a letter lies before me, written exactly a hundred years ago, in dispraise of a country life, by one who was neither a man of letters, nor a man of fashion. He is telling his town correspondent what he has been doing in his rural retreat. "I ordered the old timber to be thinned: the workmen, for every tree they cut down, destroyed three by letting them fall on each other; I received a momentary satisfaction from hearing the carpenter had cut his thumb in felling a tree, but this pleasure was soon allayed on finding that he had measured false, and cheated me of 20 per cent. . . . . I made a fine haystack, but quarrelled with my wife as to the manner of drying the hay: the stack took fire, whereby I had the double mortification of losing my hay and finding my wife had more sense than myself. . . . . I paid £20 for a dung-hill because I was told it was a good thing, and now I would give anybody twenty shillings to tell me what to do with it. . . . . In one thing only I have succeeded: I have quarrelled with all my neighbours, so that with a dozen gentlemen's seats in my view I stalk along like a lion in the desert. I kept no plough, for which I thank my Maker, because then I should have wrote this from a jail. Such being the pleasures of the country, I mean to spend the spring in London."

This is also the time of year for abusing the river-launch, a vessel much "run down" on account of his supposed habit of running others down. It is too big for its waters; it is ugly; its voice is shrill; it causes waves to rise that are disagreeable to rowing-boats. All this is very true: but, nevertheless, for comfort and convenience, give *me* (or even lend me) a steam-launch in preference to any other boat that cleaves the stream. There are no perspiring rowers to watch, which is itself a relief to tender-hearted persons; you can move about in it without upsetting the ship, or shipping a sea, or unshipping a rudder, or doing anything else nautically objectionable. You have not got to look out (metaphorically speaking) for squalls: other people have to look out for *you*—and squall: you can take your luncheon like a civilised being, at an angle that admits of digestion, and a much better lunch than can be packed in a row-boat; you are not concerned about up-stream or down-stream—("But, oh, the difference to me," if I have to row!)—and when it rains you can get under cover. Moreover, a steam-launch need not be a river demon. I know of one which bears the name of the Comet, but which is termed by the aquatic world (because of the gentle ways of its lady-owner) the Compassion. It never "spurts" unless the course is clear; it "slows" whenever there is a boat within fifty yards of it; it never screams when it wants anything, such as a lock-gate opened, but blows a horn. Sometimes it tows a boat or two up-stream, when the joy and gratitude of the oarsmen are delightful to witness, and show what they really think of "rowing."

Alexandre Dumas has just been made Commander of the Legion of Honour for his "distinction in literature"; but he doesn't like Emile Zola being made a Knight of it for a similar reason. In France, it appears, there is some literary jealousy among novelists. In England we have nothing of the sort. Sir William Black does not turn up his nose at Sir Walter Besant, nor Sir Richard Blackmore at Sir George Meredith. They enjoy the titles conferred upon them by a grateful country without being envious of one another. It is understood that they have had much higher honours offered to them, but have declined them on the ground that they already "sit among their peers." It is only lately that men of letters have been "decorated" in France, unless being published in an *édition de luxe*, with illustrations, can be so considered: but, even when admission to the Academy was their only reward, they showed their teeth at one another, and—when they were not admitted—at the Academy. Everyone remembers Piron's epitaph, written by himself:—

Ci-git Piron, qui ne fut rien,
Pas-même Académicien.

Much later Vigée wrote to the *Journal des Débats*:—"Sir.—Ill, in pain, and feeling my end approach, I have thought it right to make my epitaph in order to spare my friends the trouble, and, above all, the embarrassment, of making it for me. Have the goodness, I beg, to give it a place in your paper. It is not very poetical, but, if my extreme age has not destroyed my judgment, I think it has, at least, common-sense:—

Here lies a poor poet: his verses were flat;
And yet he the Institute missed for all that."

The "hostile meeting," as such affairs used to be called, between General Boulanger and M. Floquet has brought up all the old arguments for and against duelling. It is taken for granted by its supporters that when men could call one another out, they were more careful in their general behaviour, and more polite in society. This was really not at all the case; the good shots were very civil to one another, but exceedingly insolent to the world at large. The late Horatio Ross, who lived in the fighting days, and in the thick of the fighters, has left testimony upon this point that cannot be questioned. He was known to be the finest pistol-shot of his day; and, although he acted no less than sixteen times as second, was never challenged. The duellists knew better: but they bullied everybody they dared to bully. "I notice," writes Ross, "that people are now much more guarded in their language than they were in the days when swaggering and offering to fight a duel whitewashed them. . . . Some forty or fifty years ago (that is, seventy or eighty now), I have known the grossest insults offered to gentlemen, and without any ground for them; and I have not the slightest doubt that a marked improvement in the amenities has been caused by the abolition of duelling." The professional duellists used (metaphorically) to trail their coats behind them in every drawing-room—like Irishmen at Donnybrook Fair—but not for men like Ross to tread upon them. They had always the advantage of the weapon, and, what was still more unfair, risked very worthless lives against some that were valuable.

From Russia—of all places to hear of ready money!—comes one of those rumours of buried treasure, which, if it does not turn the "sluggard's blood to flame," has power at least to quicken his pulse. To become rich unexpectedly, and on a sudden, is always an excitement, but still more so when the wealth comes from some source a very long way off and unconnected with ourselves. A crock full of old gold coins, found in one's back garden, is welcome to everybody, whether they are numismatists or not; and even the stories of such discoveries have a charm for us all. In this particular case the treasure—which, by-the-by, is not found yet—is only three-quarters of a century old, but full of dramatic interest. It is a chest containing £34,000 in bullion, which, when its convoy in the Retreat from Moscow was pursued by the Russians, was buried, as certain documents declare, by the roadside near Grodno. A Frenchman, the grandson of the sole survivor—the whole detachment having been cut to pieces but himself—has found the narrative among the manuscript "tales of his grandfather," and laid it before the Russian Government, who have promised him a third of what he finds. I wish he may get it, and that, if he does, it may not be paid to him in rouble notes.

This is the sort of money that is described in the histories as "blood and *treasure*"; what a lot of it there must be underground, if one did but know where to look for it! Perhaps the richest and oldest lost treasure in the world, and also the one invested with the greatest interest, is the Urim and Thummim, the sparkling of whose jewels is supposed to have manifested the presence of the Highest—though Josephus tells us that this property became extinct (through the degeneracy of the age) two centuries before his time. Those jewels, as the late Mr. King, the great authority on precious stones, tells us, are absolutely indestructible, and must exist somewhere. No lapse of time can produce any visible effect upon them—indeed, the tablets bearing the title of Thotmes III., the contemporary of Moses, are still in existence, though they are of a far softer material; nor can they shine unrecognised among the State jewels of their captors, for their inscriptions must needs remain unchanged. We know that the breastplate described by Josephus was carried to Rome after the destruction of the Holy City by Titus, and, after that, we lose sight of it. There are three stories of the subsequent fate of these jewels:—I. That they were sent off by Genseric to Carthage upon the sack of Rome; II. That the reason why the Franks, in the sixth century, pressed the siege of Narbonne was because this precious "loot" was reported to have been sent thither by Alaric; III. That they were returned by Justinian to the Holy City, where they fell into the hands of Chosroes, the Persian, in 615. When he sacked the city he no doubt "sacked" *them*, and Mr. King's conclusion is that they now lie buried in some unknown Persian treasure-chamber, to have a chance of emerging from oblivion at the hands of some modern explorer. I have no turn for exploration myself, but I should like some enterprising friend to find these jewels, and give them to me, as a token of esteem and regard, upon my birthday (or, indeed, any day), very much.

THE COURT.

The Queen, accompanied by Princess Beatrice, Princess Margaret and Prince Arthur of Connaught, and the infant Prince and Princess of Battenberg, arrived at Osborne on July 18. Her Majesty crossed over from Gosport on board her Majesty's yacht Alberta, Captain Fullerton, A.D.C. Prince Henry of Battenberg met the Queen and Royal family at Osborne. Her Majesty and the Royal family and the members of the Royal household attended Divine service on Sunday morning, July 22. The Rev. Arthur Peile, the Vicar of Holy Trinity, Ventnor, and Chaplain-in-Ordinary to her Majesty, officiated. The Empress Eugénie, attended by Madame D'Arcos, Madame Le Bréton, and M. Peitri, arrived at Osborne Cottage on July 23, and was met at Trinity Pier, East Cowes, by Prince and Princess Henry of Battenberg, attended by the Hon. Ethel Cadogan and Colonel Clerk. The Queen and Princess Beatrice, attended by the Dowager Duchess of Athole, drove in the afternoon, and visited the Empress at Osborne Cottage. Sir Edward and Lady Ermyntrude Malet had the honour of dining with the Queen and the Royal family. The Queen has driven out daily.

The Prince of Wales attended at St. John's Gate, Clerkenwell, on July 18, and was installed as Grand Prior of the Order of the Hospital of St. John of Jerusalem in England, recently incorporated under Royal Charter by the Queen. He was accompanied by Prince Albert Victor, who was received and admitted as a Knight Justice, and nominated sub-Prior of the Order. Prince Pedro of Saxe-Coburg and Gotha visited the Prince and Princess on July 19, and remained to luncheon. The Prince presided at a meeting of the Royal Commission for the Exhibition of 1851 at Marlborough House. Prince Albert Victor, attended by Major Miles, left Marlborough House for York. The Prince and Princess, accompanied by their three daughters, visited the Comte and Comtesse de Paris at Sheen House, East Sheen, on the 20th, and remained to luncheon. Mr. Van Der Weyde had the honour of taking a photographic portrait of the Princess of Wales at Marlborough House. On the 21st, the Prince and Princess, accompanied by Princesses Louise, Victoria, and Maud, visited the Volunteer camp at Wimbledon, and, after lunching with Lord and Lady Wantage, the Princess distributed the prizes to the successful competitors of the National Rifle Association. On Sunday, the 22nd, the Prince and Princess and the three Princesses were present at Divine service. Prince Christian, with Prince Christian Victor, visited the Prince and Princess on July 24, and remained to luncheon. The Prince visited the studio of Mr. H. Herkomer, A.R.A., in Ebury-street, and the Summer Exhibition of Pictures at the Grosvenor Gallery.—Prince Albert Victor on July 20 visited the thirty-second show of the Driffield and East Riding Agricultural Society at Driffield, and witnessed a parade of all the prize horses; and next day the Prince opened the new Jubilee Recreation-Grounds at Bury. The grounds are four in number, and have been completed and laid out at a cost exceeding £35,000. Prince Albert Victor arrived at Marlborough House on July 24 for the purpose of unveiling a statue of the Queen at Bristol next day.

Prince Christian presided on July 24 at the annual general meeting of the Corporation of the Royal College of Music held in the hall, Kensington-gore. The report showed the satisfactory progress of the college, and a satisfactory increase in its work and its income. Mr. Samson Fox, of Leeds, had offered £30,000 for a new collegiate building, and for this a free site in Prince's-gate had been granted by the Commissioners of 1851.

Princess Louise and the Marquis of Lorne have honoured Mr. F. J. Williamson by a visit to his studio at Esher to inspect the statue of the Queen that he is executing, and which is to be placed in the Examination Hall of the Royal College of Physicians and Surgeons.

Princess Mary Adelaide presented the prizes to the boys of the Royal Hospital School, Greenwich, on July 21. Her Royal Highness was accompanied by Princess Victoria and Prince Francis of Teck. On the 23rd the Princess presented the prizes to the successful competitors at the Royal Naval Female School, St. Margaret's House, Twickenham.

Dom Pedro Augustus of Brazil left Claridge's Hotel on July 23 for Paris. During his short stay the Prince was visited by the Prince of Wales and other members of the Royal family.

The new Calliope Dock at Auckland, New Zealand, of which we gave an Illustration early in this year, was designed by Mr. W. Errington, M.Inst.C.E., of Auckland, and was constructed from the plans which that engineer had prepared.

The romantic scenery of the coast of Norway, which has been described and illustrated with special effect, on more than one occasion, in this Journal, is made accessible in this season to English visitors, direct from London, by the managers of the steam-yacht Victoria, a fine vessel of 1800 tons register, with engines of 1500-horse power, having a speed of fourteen and a half knots an hour, sailing from Tilbury Dock, opposite to Gravesend. The Victoria, which is comfortably and elegantly fitted up for gentlemen and ladies as passengers, carries neither mails nor cargo, but performs, in each trip, a sixteen days' cruise, entering the Hardanger Fjord, the port of Bergen, the Sogne Fjord, the Geiranger Fjord, and the port of Molde, where she lies three days, allowing time for exploring the Romsdal Valley. Under command of Captain R. D. Lunham, she started from Gravesend on Saturday, July 21, and would be back on Aug. 6, after which, on Aug. 11, she would start again for a similar pleasure cruise to the Norwegian Fjords; and, having returned to the Thames, would receive passengers for a longer cruise to the Baltic. Sixty-nine passengers went by this vessel on July 21, some of whom would go on to the North Cape; among these is our Special Artist, Mr. Douglas Almond, who will furnish us with Sketches likely to be interesting to our readers. The offices of the manager are at Carlton-chambers, Regent-street. It is proposed that the Victoria shall undertake a voyage round the world, sailing at the beginning of November.

THE NAVAL MANŒUVRES.

The Admiralty plan of operations for the competing trials and exercises of naval strategy and tactics between two opposed fleets, one representing an enemy occupying Irish ports, the other defending Great Britain, is an interesting scheme. The A Fleet, commanded by Rear-Admiral Baird, and consisting of thirteen armoured or ironclad ships, eleven cruisers, two torpedo gun-boats, and twelve torpedo-boats, represents the British defending fleet; it was formed in two divisions, of which the first, under Admiral Baird, took up its station in Milford Haven; while the second division, under Rear-Admiral Rowley, proceeded to Lamlash, Isle of Arran, opposite to the entrance of the Firth of Clyde. The B Fleet, commanded by Admiral Sir George Tryon, consists of nine ironclad ships, eight cruisers, two torpedo gun-boats, and twelve torpedo-boats; its first division went to Berehaven, Bantry Bay, on the west coast of Kerry; and the second division, under Rear-Admiral Fitzroy, to Lough Swilly, on the north coast of Donegal. It would be the aim of the B Fleet to do all the mischief it could to British commerce, to attack any ports of Great Britain that it could get at, and to secure opportunities for landing troops anywhere on the shores of England, Wales, or Scotland. The first division of the A Fleet, composed of H.M.S. Northumberland, Hotspur, Benbow, Northampton, Collingwood, Monarch, Conqueror, Rover, and Arethusa, with the cruisers and torpedo-boats, anchored in Milford Haven on Wednesday, July 18; and the second division, of which H.M.S. Agincourt was the flag-ship, arrived next day at the Isle of Arran. The Agincourt, near Falmouth, came into collision with a steamer from Newport, and lost some of her boats and an anchor from one side. The first division of Sir George Tryon's fleet, the B Fleet, consisting of H.M.S. Hercules (flag-ship), Iris, Warspite, Rupert, Cyclops, Alacrity, and Hero, with torpedo-boats, had proceeded, meanwhile, from Portland to the west coast of Ireland. Our Special Artist contributes a Sketch of the flag-ship of this division passing the Longships lighthouse, at the mouth of the British Channel; and one of the scene on board in clearing for action. The two divisions of the A Fleet on Tuesday, July 24, were going round, south and north, to blockade the B Fleet on the Irish coast.

FOREIGN NEWS.

President Carnot has returned to Paris from his visit to the Southern Provinces, where he was received with enthusiasm.—At the election in the Ardèche and the Dordogne General Boulanger was left in a hopeless minority.—The Queen of Servia arrived in Paris on July 18.

King Humbert has had a sudden attack of giddiness and felt otherwise unwell, and it was in consequence of this that his Majesty hastened his departure from Rome.—After an animated debate occupying several sittings, the Italian Chamber of Deputies, by 269 votes to 97, passed the Communal and Provincial Reform Bill, which gives to two million citizens the right to vote in administrative elections, besides introducing other important liberal reforms in local government. The Chamber has been prorogued until November.

A charming fête was held on the Lake of Gmünden on July 22. A regatta, a battle of flowers, and a competition of decorated boats, in which Vienna society took an active part, attracted many spectators. There were several Archdukes in the boats. The Queen of Hanover, Princess Mary, the Dukes of Würtemberg and Montpensier were in the stands.

The meeting of the Emperors of Germany and Russia is recorded in another column.

The King of the Hellenes left Corinth at daybreak on July 23, in the Royal yacht, on his way to St. Petersburg. King George proposes to visit Berlin and Copenhagen also.

A force of 400 Dervishes attacked a village five miles north of Wady Halfa on July 20. Colonel Wodehouse took out a detachment of troops and police, and, after some severe fighting, drove the enemy to the hills. Three boats, crowded with fugitives who escaped down the Nile, sank, and 150 persons were drowned.

The United States Senate has confirmed the President's nomination of Mr. Fuller as Chief Justice. The Copyright Bill has passed the Senate, and is now before the Lower House. The House of Representatives has passed Mr. Mills's Tariff Bill, which makes large reductions in the duties on woollen goods, chemicals, &c., and admits tin-plate, wool, and other articles to be used in manufactures, free.—The new American naval cruiser Charleston was launched at San Francisco on July 19. She was planned by Messrs. Armstrong, and is a duplicate of their Japanese cruiser Nanawa, of 3750 tons displacement, and carries eight heavy guns. This is the first naval ship built on the Pacific coast.—A disastrous storm has swept over a portion of the American continent. After a heavy rainstorm at Wheeling, West Virginia, a freshet appeared, and overwhelmed a bridge over the Wheeling River on which several persons were standing. Ten were drowned, the others being rescued. Four dwellings were also destroyed, eleven of the inmates being drowned.—The coal-mining town of Roslyn, Washington Territory, has been destroyed by fire, and fifteen hundred persons have been rendered homeless.

A large portion of Port-au-Prince, Hayti, has been destroyed by incendiary fires. While the Chamber of Deputies was in session an upper floor of the building was set on fire.

The Natal Legislative Council was opened by Sir Arthur Havelock on July 18. His Excellency declared that the financial prosperity of the colony had been maintained, and that the result of the Sugar Conference would largely contribute to the development of the country's resources. Alluding to affairs in Zululand, Sir Arthur expressed his great concern and anxiety at what he termed the lamentable outbreak.—It is stated that a party of Boers has invaded the territory of a native chief.

A Reuter's telegram from Bombay says that Mr. Crawford has been released on bail to the amount of 70,000 rupees.—An expeditionary force, 10,000 strong, is to be sent in the autumn to the Black Mountain, where an exploring party was recently attacked, and two British officers were killed.

A volcanic eruption has occurred in Japan, and 400 persons are reported to have been killed and 1000 injured.

Lord Carrington, the Governor of New South Wales, has, in the name of the Queen, given the Royal assent to the new Chinese Act. The Legislative Assembly agreed to the Council's amendments relating to Chinese residence, registration, licenses, and mining. The measure as now settled provides that the Government is indemnified for its past actions. The naturalisation of Chinese will in future not be allowed, and all Chinese leaving the colony, except those naturalised therein, will, on returning, be subject to the provisions of the Act.

The Hon. Duncan Gillies, Premier and Treasurer of Victoria, made his Budget statement in the Legislative Assembly on July 24. He congratulated the colony on the remarkably prosperous state of its finances, and stated that the revenue largely exceeded the Estimates, the surplus amounting to £837,000.

THE SILENT MEMBER.

"And this our life, exempt from public haunts," might almost be the general exclamation of noble Lords, so smoothly does the stream of business flow in the hushed and decorous Upper Chamber save when the sonorous voice of the Duke of Argyll is raised to vindicate the Government's maintenance of law and order in Ireland. There was a little ripple of excitement when, on the Twentieth of July, Earl Beauchamp moved that the clerk should take down the names of their Lordships who unanimously assented on the Twelfth to his Grace's resolution of confidence in her Majesty's Ministers on the above point. In a light and airy spirit of banter, Earl Granville and Lord Rosebery made it clear that they did not take the Duke's lugubrious sermon seriously. But the Marquis of Salisbury, with much adroitness, attributed the silence of the noble Earls on the occasion of the Duke of Argyll's set oration to agreement with the administration of affairs in Ireland.

Lord Cross, on the Twenty-third of July, rose from his place in the House of Lords to correct a strange mis-statement by Sir William Harcourt. The Secretary for India neatly explained that it was not he who gave notice in the Lower House of a motion for the release of Mr. Parnell and his fellow-prisoners from Kilmainham, but the late Mr. J. Kynaston Cross, then Liberal member for Bolton. Sir William Harcourt was indisputably caught napping by Lord Cross, whose correction afforded obvious satisfaction to Ministerialists.

Lord Randolph Churchill, who rejoices in Parliamentary pyrotechny, may be said to have departed for his castle-building holiday in Spain amid a shower of fireworks. In the old days, yet not so very long ago, when the noble Lord was the dashing leader of the privateering "Fourth Party," no member spoke more boldly or more frequently than he did. He was essentially a law unto himself. Other times, other manners. His Lordship has borne the burdens of high office since then. He has learnt the wisdom of reticence. In fine, limp and glum in his corner seat behind Ministers, he had almost come to be regarded as a "Silent Member" when he suddenly dispelled the notion by rising on the Twentieth of July to reassume for the nonce the leadership of the Commons, and in severe and portentous language took Mr. Conybeare to task for a malevolent attack on the Speaker for applying the closure the previous night to the brief discussion on the Bann Drainage Bill. This reprehensible reflection on our estimable Speaker's decision appeared in a letter to the *Star* newspaper. Characterising the epistle as "a gross libel on the Speaker," Lord Randolph Churchill moved that Mr. Conybeare "be suspended from the service of the House for the remainder of the Session." After a protracted discussion, in which Mr. W. H. Smith, Mr. Gladstone, Mr. Labouchere, Lord Hartington, and Mr. Chamberlain took part, it was resolved, on the motion of the First Lord of the Treasury, that Mr. Conybeare be relieved from attendance in the House for the rest of the Session, "or for one calendar month, whichever shall first terminate." Lord Randolph Churchill, having secured the pyrotechnic object desired, and vindicated the authority of the Speaker, lost no time in setting out on his travels in Spain—thus, in a spirit of justice, freely inflicting upon himself the same punishment Mr. Conybeare is suffering from. Such magnanimity is rare.

The judicial calm necessary for the unprejudiced consideration of the heinous charges brought against Mr. Parnell during the hearing of Mr. F. H. O'Donnell's libel action against Mr. Walter has, generally speaking, been conspicuous by its absence from the debates on the Ministerial measure for a Commission of Inquiry. Mr. W. H. Smith, for one, preserved his equanimity in moving the second reading of the Bill, on the Twenty-third of July. Concisely put, the Leader of the House offered a Royal Commission empowered to searchingly investigate all the allegations in that which the Lord Chief Justice declared to be a "tremendous indictment" against hon. members and those who were associated with them: the Judges composing the Commission to be "Sir James Hannen, as President of the Court, and Mr. Justice Day and Mr. Justice Smith as the two other members of that Court." Very pale, and with an excitement not at all habitual with him, not surprising under the grave circumstances of the case, Mr. Parnell, in a long speech, repudiated the charges brought against him in the forensic address of the Attorney-General, again stigmatised the incriminating letters alleged to have been written by him as forgeries, claimed to be represented by counsel before the Commission, but energetically objected to the extension of the inquiry to the doings of the Land League and of the "other persons" alluded to, and declared it be unfair to ask him and his colleagues to accept such a measure in response to the claim for no more than ordinary justice in the shape of an investigation into the infamous charges against themselves. In the engrossing discussion that ensued, Mr. Gladstone, Sir Charles Russell, Mr. T. P. O'Connor, Mr. Whitbread, and Sir William Harcourt sided with Mr. Parnell on this point, that the inquiry should be thus limited: and Mr. Chamberlain (who, I regret to say, still looks very wan and ill in face), while approving the Bill, also coincided rather with this view in his clear and discriminatory speech as one who, when he first entered the House, "formed a judgment of the hon. member for Cork, of his character, of his motives, of his honesty, of his sincerity, of his patriotism, which do not allow me very easily to accept the charges that are made against him." The Home Secretary, on the other hand, earnestly strove to show that the inquiry, to be thorough, must necessarily embrace the collateral matters in question. Sir Edward Clarke, the Solicitor-General, in the most pregnant passage of his speech, read from the "Parnellism and Crime" articles in the *Times* the names of those accused of being implicated:—"They have, however, revealed nearly all the chief members of the first Home Rule Ministry—Mr. Parnell himself, Mr. Justin M'Carthy, Mr. T. P. O'Connor, Mr. Sexton, Mr. Arthur O'Connor, Mr. Healy, Mr. Biggar, the Messrs. Redmond, Mr. William O'Brien, and Davitt—in trade and traffic with avowed dynamiters and known contrivers of murder." But against this heavy accusation should be set the explicit assurance of Sir William Harcourt on the Twenty-fourth of July:—

> I believe there are no two persons who have better means of knowledge than Lord Spencer and myself of the transactions of that period, and during all the anxious investigations of that terrible period we never discovered any evidence which connected the hon. member for Cork, or the other Irish representatives, with complicity or perpetration of crime.

In the end, Mr. Labouchere's amendment, aimed against the Bill as a whole, was withdrawn, at the request of Mr. Parnell; and the measure was read a second time without division, it being left for the Committee-stage to decide whether the inquiry should be curtailed as desired. All this debate, however, seems to make an autumn session inevitable.

Mr. W. J. Ingram, who formerly represented Boston, has accepted an invitation to contest the seat in the Liberal interest at the next vacancy.

The Mercers' Company have contributed £105, and the Goldsmiths' Company £25, towards the cost of the Exeter Hall gymnasium of the Young Men's Christian Association.

THE EMPERORS AT PETERHOF.

The meeting of the German Emperor, William II., with the Emperor Alexander III. of Russia, took place at Peterhof, a palace of the Russian Emperor on the southern shore of the Gulf of Finland, nearly opposite to the island-fortress of Cronstadt, and some twenty miles from St. Petersburg by the railway around the sea-coast. Peterhof and Oranienbaum, which is situated five miles beyond it westward, are pleasant abodes, with very beautiful gardens, amidst green pastures and groves of fir-trees and birch-trees. The park of Peterhof is finely wooded, and parts of the grounds are laid out in the style of Versailles; there is a pretty cottage named Marly, on the bank of a lake, in which is preserved the old furniture used by Peter the Great. Marble temples, fountains, and statues adorn the gardens, with stately terraces, avenues of trees, and waterworks; and there are two small palaces on little islands. The grand palace contains splendid apartments, with pictures representing the historical scenes of Russian glory, and portraits of Emperors and Empresses.

The German Emperor, with his brother, Prince Henry of Prussia, came on Thursday, July 19, his yacht, the Hohenzollern, anchoring in Cronstadt Roads with a squadron of ten ships of the German navy. The Russian Imperial yacht, the Alexandra, with his Majesty the Emperor Alexander on board, went out to meet this arrival; and the Russian fleet of twenty-five ships, besides torpedo-boats, under command of the Grand Duke Alexis, High Admiral, fired a grand salute, to which the German ships replied. The Emperor William, going on board the Alexandra, exchanged kisses and embraces with the Czar. On landing at the Peterhof pier he was met by the Empress of Russia and the Grand Dukes and Duchesses. There was a splendid guard of Kuban Cossacks along the alleys through which the carriages passed from the pier to the palace. On Friday, the 20th, the German Emperor was conveyed in the Alexandra by the new Ship Canal and the Neva to St. Petersburg, where he visited the tomb of Alexander II. and of the late Empress, in the Cathedral of the fortress of St. Peter and St. Paul. On Saturday, both Emperors, with the Empress of Russia, went to inspect the great military camp of Krasnoe Selo, and witnessed a review of nearly 50,000 troops under the command of the Grand Duke Vladimir. The Emperor William then went to St. Petersburg, to a grand dinner at the German Embassy. On Sunday, after attending the Protestant worship at the small German Church at Peterhof, his Majesty entertained the Czar and Czarina with luncheon in the balcony overlooking the palace gardens. In the evening, the Emperor Alexander gave a magnificent banquet to his Imperial and Royal visitor, and to the whole Court, in the "hall of Peter the Great." The park and gardens of Peterhof, and the Marly fountains, were beautifully illuminated. On Monday, July 23, the Emperor William saw the Russian cavalry manœuvres, performed under the direction of the Grand Duke Nicholas. His Majesty next day took his leave, re-embarked in the Hohenzollern, and proceeded to visit Copenhagen and Stockholm. It is believed that no very important political conference took place between the two Emperors, whose Ministers of State were not in attendance.

The Home for Crippled Boys, Kensington, has received £100 from the Grocers' Company.

The Archbishop of Canterbury and Mrs. Benson gave their second and last garden-party at Lambeth Palace on July 21, when they were "at home" from five to seven o'clock.

Sir Edward Guinness has forwarded to the chairman of the South London Polytechnic Institute a cheque for £1000 towards the fund now being raised.

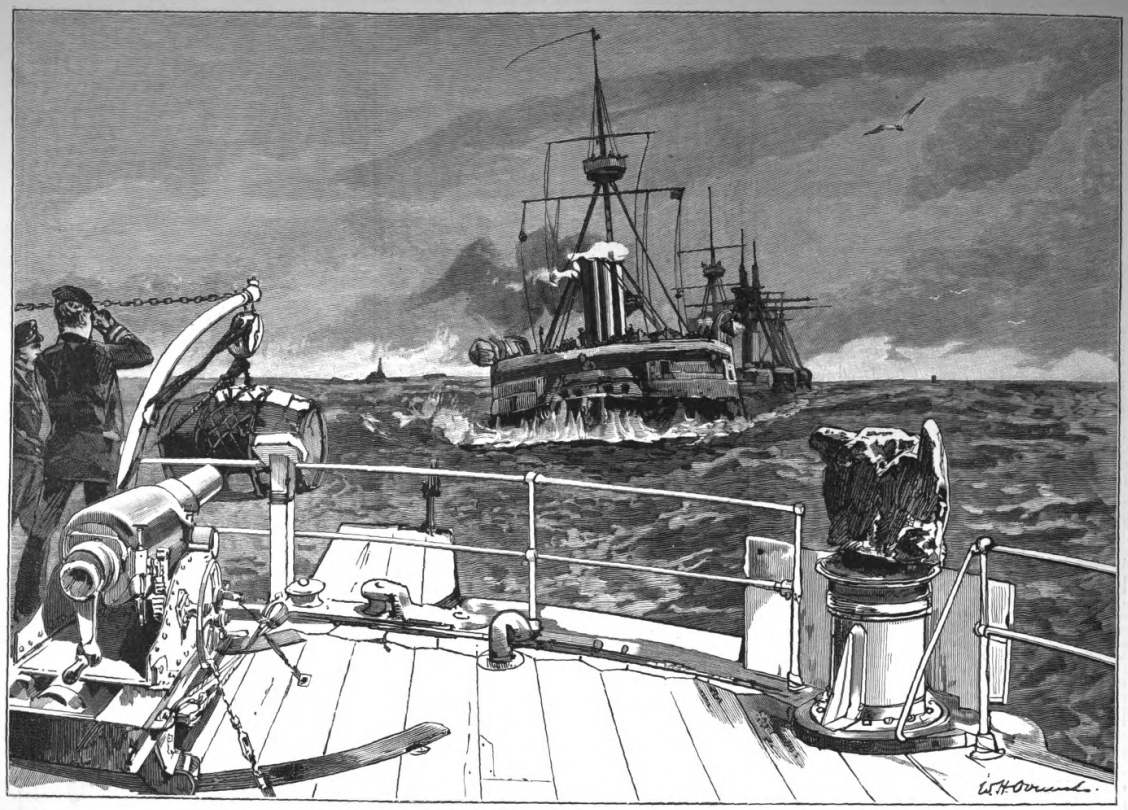
It is stated that Lord Grimthorpe intends to give £10,000 towards providing a Suffragan Bishop for the Archdiocese of York, of which he is the Chancellor.

The Speaker of the House of Commons presided at the distribution of Trinity College music certificates by Mrs. Peel, at the Public Hall, Leamington, on July 21, and gave an address on the music of the future.

On and after Aug. 1 private letter boxes for use during the night may be rented at all post-offices at which a night staff is on duty, and at which there is a delivery of letters to callers during the day.

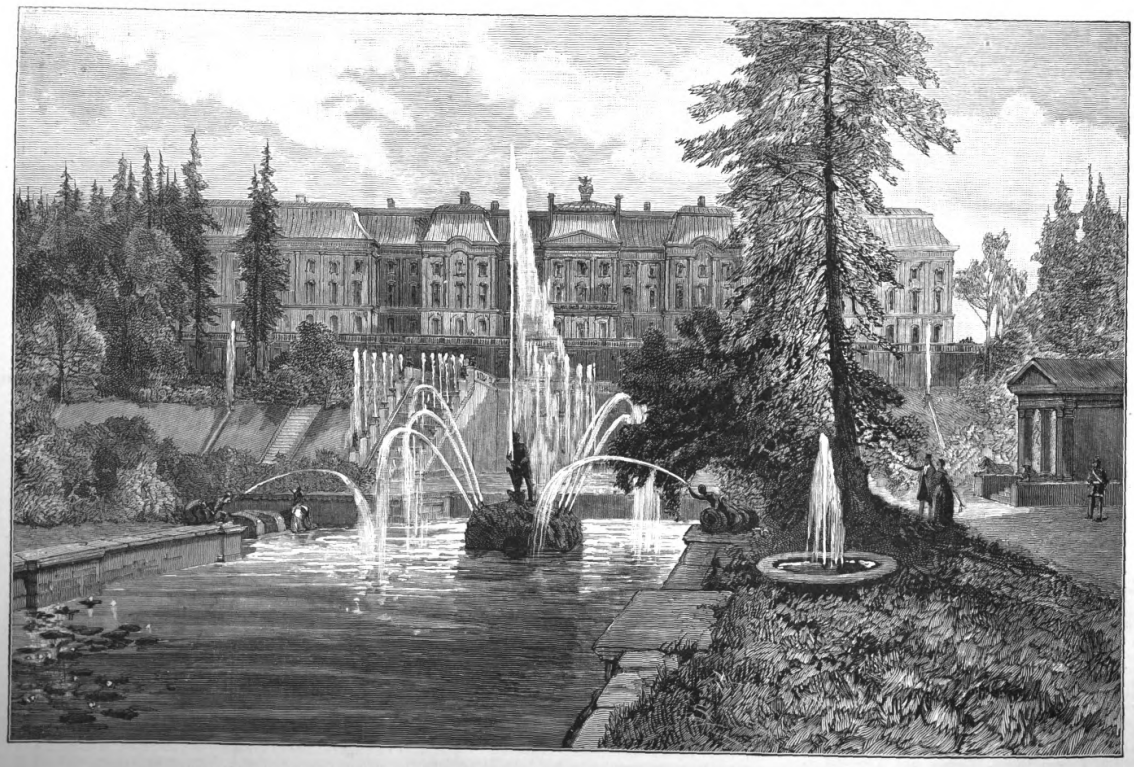
At Wimbledon, on July 23, the All-England Lawn-Tennis Championship meeting was concluded by a match for the four-handed championship, in which the brothers Renshaw beat the Hon. P. B. Lyon and Mr. H. W. Wilberforce, the winners of last year.

At an influential meeting held in the Mayor's room at the Leeds Townhall on July 20 it was unanimously resolved to invite the British Association to hold its meeting for the year 1890 at Leeds. It was also decided to raise a guarantee fund of £5000 to defray the usual expenses.



The Australian cricketers were defeated at Brighton on July 21, Sussex being victorious by 58 runs; and at the Oval, Surrey won the match with Middlesex by three wickets. On July 24 at Beckenham the second innings of Kent closed for 53, leaving Surrey victorious by 89 runs.

Visitors to the Brussels Exhibition, or tourists in Belgium, Holland, Switzerland, or up the Rhine and Moselle, will find a useful and chatty illustrated handbook in the Great Eastern Railway Company's "Tourist Guide to the Continent." A new edition, edited by Mr. Percy Lindley, has just been published, price sixpence, at 125, Fleet-street, E.C.



Mr. Edgar Bruce and Miss Edith Woodworth gave a matinée at the Globe Theatre, on July 26, in aid of the "Buttercups and Daisies" Fund, which was started to give, once a year, a day's holiday in the country to a number of the poorest children of London, and to send away for a week or two some of the more sickly ones to the seaside. Several well-known artistes gave their assistance.

A handsome specimen of horological art is now on view at Mr. Benson's, 62 and 64, Ludgate-hill, having been made to the special order of one of the Indian Princes. It is a clock of the Oriental type, showing the days of the week, months, &c., with an alarum which can be used when required. It chimes the Westminster quarters on four pure-toned gongs, and strikes the hours on a powerful tenor gong. The whole is finished in a case of the Renaissance style of solid metal, the pillars and greater portion being of solid nickel silver, the remainder of the finest brass, richly engraved and gilt.

The committee of the South London Association for Assisting the Blind are anxious to give to their poor blind members and guides their annual summer outing. For some years past the committee have taken them to the seaside, and the return of the excursion is looked for with the keenest enjoyment. There are upwards of 300 persons to provide for; all of these are more or less in great poverty, and most of them live in pent-up places, so that a day's outing in the fresh air is especially grateful to them. Contributions will be received by the treasurer, Mr. C. D. Millett, London and Westminster Bank, Westminster Bridge-road; or by Mr. J. T. Edmonds, hon. sec. and solicitor to the association, 155, Brixton-road, S.W.

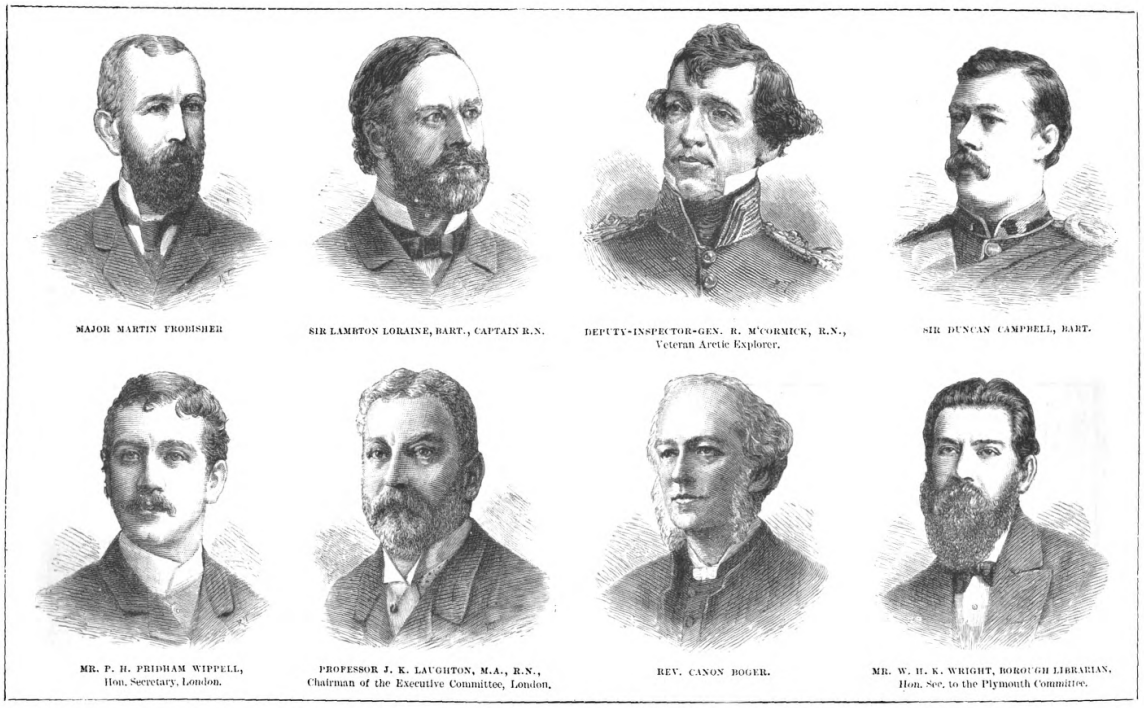
THE ARMADA TERCENTENARY COMMEMORATION.



The proceedings at Plymouth, on Thursday, July 19, in celebration of the three-hundredth anniversary of the Spanish Armada coming in sight of the English shores, were conducted in a manner worthy of the occasion. They were not of a merely local character, though Plymouth, as the port where the English fleet, under Lord Howard of Effingham, lay ready to engage the enemy, and off which, at no great distance, the first conflict took place on July 21, was properly chosen for the place of this commemoration. The National Memorial, of which, as designed by Mr. Herbert Gribble, architect, we gave an Illustration last week, is to be erected on Plymouth Hoe, where the statue of Sir Francis Drake, Vice-Admiral and next in command to Lord Howard of Effingham, was erected five years ago. The foundation-stone of this memorial, to consist of a granite obelisk with bronze figures and sculptured tablets, was laid by the Mayor of Plymouth, with a brief ceremony, witnessed by a large assembly of people. The Honourable Artillery Company of London Volunteers, whose predecessors bore their part three hundred years ago in the military preparations to defend the country against the landing of a Spanish army, sent two hundred men. They were arrayed in position with the troops and sailors, who formed a square round the site of the Armada Memorial. Major-General Lyons, C.B., commanding the Western District, arrived with his staff, and was received with a general salute. Provincial Mayors, and members of the Plymouth Corporation, had been received by the Mayor in the Council Chamber, and went together in procession to the Hoe. On their arrival, the massed bands played "Rule, Britannia," and the ceremony commenced. The Ven. Archdeacon Wilkinson read an impressive prayer. The Mayor was presented by Mr. Gribble, the designer of the monument, with a silver trowel, and was asked to lay the foundation-stone. It bore the following inscription:—"This foundation-stone of a national memorial was laid, in the presence of naval, military, and civic representatives, by the Right Worshipful the Mayor of this borough (Alderman H. J. Waring), on Thursday, July 19, 1888, being the three-hundredth anniversary of the first sighting of the Spanish Armada from Plymouth Hoe. Patroness, her Majesty the Queen." The Mayor having declared the stone well and truly laid, the Royal ensign was hoisted, the naval battery and guns in the citadel fired a Royal salute, and the bands played the National Anthem. The ceremony over, the procession returned to the municipal buildings, accompanied by the Honourable Artillery Company as a guard of honour. The memorial will overlook the Sound, the site being to the left of the Drake statue, and near the spot where Drake is said to have played his game of bowls, with other captains, when the news came of the approach of the Armada.

THE MAYOR OF PLYMOUTH, Alderman H. J. Waring.

The day's later proceedings included a military concert in the citadel, and a game of bowls between the Leeds and Torrington bowling clubs. The two teams played in Elizabethan costumes, on what is supposed to be the exact spot where the game took place on July 19, 1588. Several thousand persons witnessed the match. In the afternoon an historical procession of the Kings and Queens of England, with descriptive tableaux depicting striking events in the history of our country, perambulated the town. In the evening, a civic banquet was given by the Mayor in the Guildhall, the company exceeding three hundred, and including many of the Hon. Artillery Company, in addition to the naval and military officers in the Western District.

Besides our Illustrations of these proceedings, which passed off very well, being favoured by fine weather, portraits are here given of the Mayor of Plymouth, Alderman H. J. Waring, who has presided over the general committee for the Armada commemoration, as well as over the local arrangements: Mr. W. H. K. Wright, Borough Librarian, honorary secretary at Plymouth, and editor of the *Western Antiquary*, in which many valuable documents and historical essays have been published; the chairman of the executive committee in London, who is Professor J. K. Laughton, M.A., Professor of Modern History in King's College, London, and formerly an instructor in the Royal Navy, and on the staff of the Royal Naval College at Portsmouth and at Greenwich; and several other active members of the managing committees, besides one of the London honorary secretaries, Mr. P. H. Pridham Wippell, the other being Captain Woolmer Williams. Among these gentlemen are Sir Duncan Campbell, Bart., of Barcaldine and Glenure, Argyllshire, Captain in the 4th Battalion Highland Light Infantry and Gentleman Usher in the Queen's Household, who is a Fellow of the Society of Antiquaries of Scotland; Captain Sir Lambton Loraine, R.N., Bart., of Kirk Harle, Northumberland, a distinguished naval officer, who has

MANAGERS OF THE TERCENTENARY CELEBRATION OF THE DEFEAT OF THE SPANISH ARMADA.

performed active services in the West Indies and on the "Spanish Main," the coast of Central America; the Rev. Canon Boger, of Rochester Cathedral, one of an old Cornish family living near Plymouth at the time of the Armada; he was head-master of Queen Elizabeth's School, Southwark, nearly thirty years; Deputy-Inspector-General R. M'Cormick, R.N., the oldest surviving medical officer in the Navy, who accompanied the Arctic exploring expedition of Parry, in 1827, and similar expeditions of later date, and has also served in the West Indies; and Major Martin Frobisher, now residing at Woolwich, the namesake and only living descendant of one of the most illustrious Armada heroes, Sir Martin Frobisher, a Yorkshireman, who was an early Arctic explorer in the reign of Elizabeth, seeking to discover the North-west Passage, and gave his name to Frobisher Bay in that region. Major Frobisher was born in 1839, and served in India, but retired from the Army in 1870 on account of ill-health, and is well known at Woolwich; he is secretary to the Waldensian Church Mission. Dr. Henry Holman Drake, M.A., of London, is descended from Captain John Drake, who was cousin to Sir Francis Drake, and his companion in his voyage round the world; Dr. H. H. Drake is a learned antiquary, and editor of the "History of the Hundred of Blackheath," a work of importance to the county of Kent.

The Prince of Wales has given 50 guineas towards the new Roman Catholic church at Lynn, for which an urgent appeal has been made.

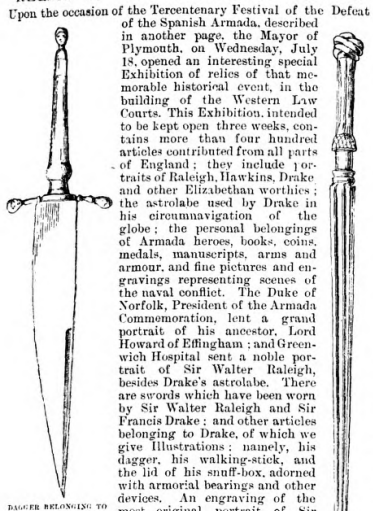
A friend, who wishes to remain anonymous, has handed to the Founder of the Mission to Deep-Sea Fishermen a cheque for three thousand five hundred pounds, to cover the cost of building and equiping another Hospital Mission Ship, on the lines of the Queen Victoria, now rapidly approaching completion at the yard of Messrs. Fellows and Son, Great Yarmouth. The Queen, who is patron of the Mission, has expressed her consent to the donor's request that the second Hospital Ship shall be named the Albert.

FASHIONABLE MARRIAGES.

The marriage of the Hon. FitzRoy Keith Stewart, youngest son of the ninth Earl of Galloway and brother of the present Earl, with Elizabeth Louisa, widow of Mr. J. Stanley Thompson, was celebrated in St. Paul's, Knightsbridge, on July 17. The bridegroom was attended by Mr. George W. E. Russell as best man, and the bride was accompanied by her brother, the Rev. Arthur Rogers, Rector of Yarlington, Somersetshire, who gave her away. The wedding-party was numerous.

A fashionable congregation assembled on July 18 at St. George's, Hanover-square, to witness the marriage of Mr. Charles Vansittart to Miss Constance Miller, younger daughter of the late Sir Thomas Miller, of Glenlee, and Lady Miller. The service was fully choral. The bride was given away by her brother, Sir William Miller. She wore a costume of rich white duchesse satin, the front being tastefully draped with fine mousseline-de-soie, and trimmed with sprays of orange-blossom. Her long train was borne by two little pages dressed in pretty costumes of blue plush, with white satin facings. There were six bridesmaids, attired in gowns of pale-blue China silk, trimmed with gold embroidery, and white silk waistcoats, white hats, and tan shoes and gloves. Each carried a bouquet of roses, and wore a diamond initial brooch, the gift of the bridegroom. Captain Victor Fergusson, of the Royal Horse Guards, was the bridegroom's best man.

The marriage of Mr. L. Willoughby, son of the late Hon. and Rev. Charles Willoughby, to Miss Ada Cousens was solemnised on July 18 at St. Matthew's Church, St. Petersburg-place, by the Hon. and Rev. T. Willoughby, uncle of the bridegroom, assisted by the Hon. and Rev. Francis Byng and the Hon. and Rev. G. B. Legge. The church was filled by an aristocratic gathering. The bride was conducted to the altar by her father. She wore a costume of ivory-white satin trimmed with Brussels lace; her ornaments were diamonds and rubies. There were eight bridesmaids, who were attired in pretty dresses of cream Indian muslin and Valenciennes lace, with large green moiré sashes, and Leghorn hats trimmed with Marshal Niel roses. Captain Graham Pearce was the best man.



The marriage of the Hon. Philip B. Petre, third son of the late Lord Petre and Lady Petre, with Julia, eldest daughter of Mr. and Mrs. Cavendish Taylor, of Elvaston-place, Queen's gate, took place on July 19, at the Oratory, Brompton. The Hon. Bernard H. Petre was his brother's best man; and the four bridesmaids were Miss Beatrix and Miss Anita Cavendish Taylor, sisters of the bride; Miss Ethel Cavendish, her cousin; and Miss Stapleton Bretherton, niece of the bridegroom. The bride was given away by her father. Monsignor Weld performed the marriage rite, and was celebrant at the nuptial mass which followed.

In St. Paul's Church, Knightsbridge, on July 23, took place the wedding of Mr. F. G. Hodgson Roberts, only son of the late Mr. H. and Mrs. Armstrong Roberts, of 11, Kensington-gore, with Miss Violet Cunliffe, eldest daughter of Mr. and Mrs. Ellis Brooke Cunliffe, of High Legh Hall, Knutsford, Cheshire, and 18, Ennismore-gardens, Kensington, S.W. The service was fully choral. The bride was given away by her father. The bridesmaids were Misses Veronica, Vanda, and Verbena Cunliffe, sisters of the bride, and Miss Lue Hodgson Roberts, sister of the bridegroom. Mr. Greenall acted as groomsman.

The marriage of Mr. Charles Adeane, of Babraham, Cambridgeshire, with Madeline Pamela, second daughter of the Hon. Percy and Mrs. Wyndham, was solemnised in St. Peter's Church, Eaton-square, on July 23, in the presence of a large gathering of relatives and friends. Mr. Riversdale Walrond was the bridegroom's best man; and in the bridal procession eleven bridesmaids assisted—namely, Miss Pamela Wyndham, sister of the bride; the Hon. Marie Adeane and Miss Maude Adeane, sisters of the bridegroom; Miss Pamela Campbell, Miss Dorothy Carleton, Miss Mure, the Hon. Mary Wyndham, and Lady Edith Douglas, cousins of the bride; Lady Constance Grosvenor, Lady Eleanor Lambton, and Miss Poore; and there were two pages—the Hon. Hugo and the Hon. Guy Charteris, Lady Elcho's children, and nephews of the bride.

RELICS OF THE ARMADA AND DRAKE.

Upon the occasion of the Tercentenary Festival of the Defeat of the Spanish Armada, described in another page, the Mayor of Plymouth, on Wednesday, July 18, opened an interesting special Exhibition of relics of that memorable historical event, in the building of the Western Law Courts. This Exhibition, intended to be kept open three weeks, contains more than four hundred articles contributed from all parts of England; they include portraits of Raleigh, Hawkins, Drake and other Elizabethan worthies; the astrolabe used by Drake in his circumnavigation of the globe; the personal belongings of Armada heroes, books, coins, medals, manuscripts, arms and armour, and fine pictures and engravings representing scenes of the naval conflict. The Duke of Norfolk, President of the Armada Commemoration, lent a grand portrait of his ancestor, Lord Howard of Effingham; and Greenwich Hospital sent a noble portrait of Sir Walter Raleigh, besides Drake's astrolabe. There are swords which have been worn by Sir Walter Raleigh and Sir Francis Drake; and other articles belonging to Drake, of which we give Illustrations: namely, his dagger, his walking-stick, and the lid of his snuff-box, adorned with armorial bearings and other devices. An engraving of the most original portrait of Sir Francis Drake, reproduced for this occasion under the supervision of Dr. H. H. Drake, the lineal descendant of Captain John Drake, brother and companion of the illustrious navigator and warrior, has been placed on sale at this Exhibition. The original painting is not known to be extant; but it is considered to be rather older than the one painted by the French artist, Jean Rabel, which was engraved in Paris by Thomas Le Leu, who dedicated the engraving to Sir Edward Stafford, then English Ambassador at the Court of Henry III. of France. That King was assassinated a twelvemonth after the date of the Spanish Armada; and Le Leu's engraving, with its inscription referring to his reign, was apparently published some time before that event. There is reason to believe that the artist Rabel borrowed the likeness of Drake's face, altering the costume and accessories, from the picture represented in the engraving now reproduced and offered for sale at the Plymouth Exhibition. Its Latin inscription speaks of Drake, not as conqueror of the Spanish fleet, but as the circumnavigator, "qui, toto terrarum orbe, duorum annorum et mensium decem spatio, Zephyris faventibus, circumducto, Angliam, sedes proprias, revisit," adding the dates of his sailing in 1577, and of his return home at the end of 1580. No painter's name appears in the engraving, but the picture must have been the work of a skilful and tasteful artist. Drake wears a handsome, not too sumptuous, costume, with a very moderate neck-ruff; he stands bare-headed, with his right hand quietly resting on a casque and corslet of steel armour, and in his left hand a truncheon held against the broadsword that hangs from his belt. A globe, showing the seas and lands of the eastern hemisphere, is suspended in an open window, through which is the view beyond of a seaport town with islands in the harbour, and huge bags of money on the beach. With regard to the Drake family, it is well known that Sir Francis, who died in 1596, had no children by his wife Elizabeth, who afterwards married William Courtenay, of Powderham Castle, one of the family of the Earl of Devon. Sir Francis was succeeded in his estates by his brother Thomas, of Buckland Monachorum, whose son Francis was created a baronet; this baronetcy expired in 1789; but the Drake lineage has passed, in the female line, as well as that of Admiral Eliott, Lord Heathfield, who defended Gibraltar, to the Trayton Fullers, of Sussex, who, therefore, also took the names of Eliott and Drake, and whose representative, Sir Francis Fuller Eliott Drake, Bart., resides at Nutwell Court, near Exeter.

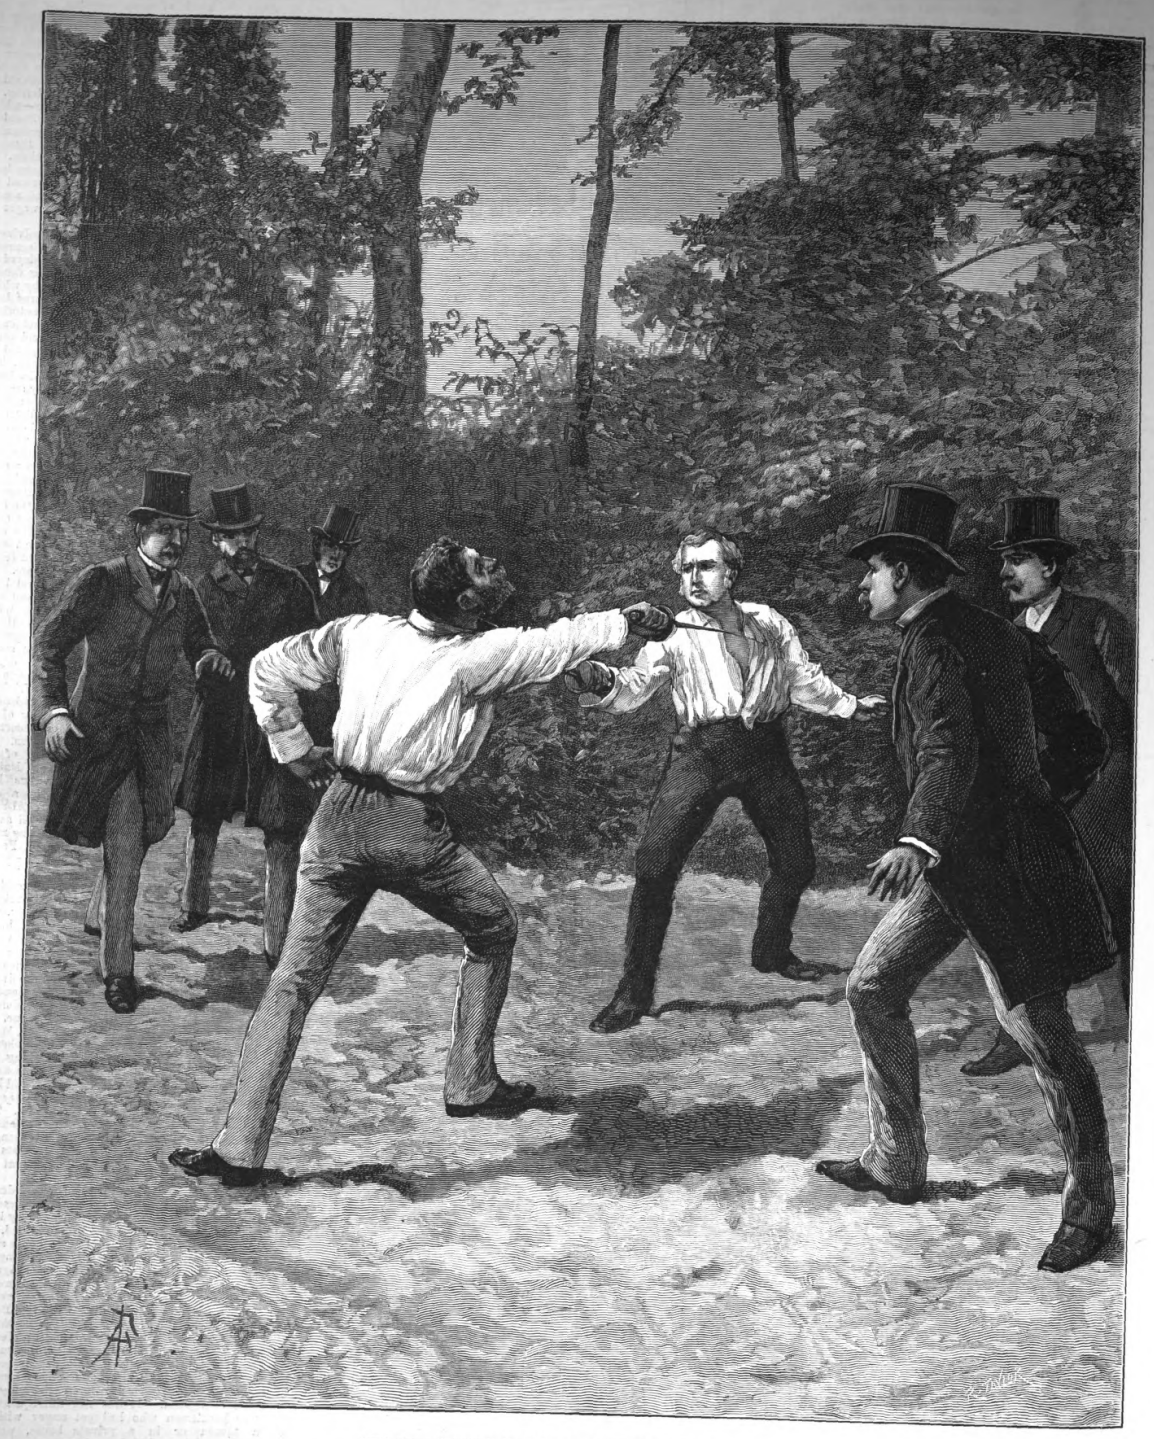
THE IRISH EXHIBITION.

In the vast covered space of the building called "Olympia," close to the Addison-road or West Kensington Railway Station, where the Paris Hippodrome found a sufficient arena for its performances, and in seven acres of adjacent open pleasure-grounds, the managers of this Exhibition have set forth a great and varied display, not less instructive and useful than attractive to the eye and mind, of Irish arts and industries, and the interesting antiquities of Ireland. It comprises the processes and sample products of agriculture, textile and other manufactures, shipbuilding and sea industries, machinery and engineering, mining and mineral products, brewing and distilling, paper, printing and book-binding, scientific, chemical, and allied industries; education and science, furniture and decoration, women's industries and cottage industries, fine arts, historical and antiquarian relics or memorials. Unionists and Home-Rulers most heartily agree in wishing well to all these Irish interests; and eminent members of the opposite political parties—Englishmen and Irishmen, Protestant and Catholic clergy, with Peers who have been Lords Lieutenant of Ireland and their Ladies who have presided over Viceregal Drawingrooms in Dublin Castle, are associated in the lists of patrons and committees for the Exhibition. The most active of its working managers has been Lord Arthur Hill, M.P., the honorary secretary, to whom Mr. John H. Raffety has rendered valuable assistance. The Irish benevolent committees, presided over by the Duke and Duchess of Abercorn, Lord and Lady Aberdeen, and Mr. Ernest and Mrs. Hart, have especially laboured for the encouragement of cottage industries. The Women's Art and Industries Section, from which very beneficial results are to be hoped, got up a fashionable Fancy Fair, from Tuesday, July 17, to Friday, July 20, inclusive of the four days, in the "Old Irish Marketplace"; and we give a few Sketches of this scene and its characteristic incidents, which were pleasant and amusing. Among the ladies who officiated at the thirteen bazaar stalls were the Marchioness of Salisbury, Mrs. Gladstone, the Countess of Aberdeen, Countess Spencer, the Duchess of Manchester, the Marchioness of Downshire, the Marchioness of Londonderry, the Countess of Bective, and many others of rank and note. The articles sold were Irish work, lace, embroidery, ornamental needlework, fancy wares, bags, cushions, baskets, fans, glass, china, cutlery, stationery, photographs, drawings, books, papers, and music, flowers, fruit, perfumery, confectionery, pet birds, kittens, dogs, and other domestic animals. The sales realised a handsome sum of money, to pay the cost of erecting the "Old Irish Market."

SWORD-DUELS.

The duel between M. Floquet, Prime Minister of the French Republic, and General Boulanger, on Friday, July 13, has not been mortal to either combatant; the General's wound in the throat is healed. They fought in the exercise-ground of the private garden attached to the house of Count Dillon, at Neuilly. The seconds of M. Floquet were M. Clémenceau and M. Georges Perrin; those of General Boulanger were M. Laisant and M. Le Hérissé. An eminent surgeon, Dr. Léon Labbé, was present. M. Floquet had sent the challenge, in consequence of General Boulanger having insulted him by twice saying in the Chamber of Deputies, "You lie impudently," in the debate of the day before, when M. Floquet, as a Republican, had taunted the General with being formerly a suitor or visitor of "ante-chambers and sacristies." It is not doubted that the General intended to provoke the duel; but, having received the formal challenge, he was entitled to the choice of weapons. He chose swords, and being a soldier, ten years younger than M. Floquet, who is a lawyer, and about sixty years of age, the chances might have seemed greatly in favour of Boulanger. The two men stripped to their shirts, taking off their cravats and collars, and went at it with rapiers. At the first pass M. Floquet was slightly cut below the left calf, and General Boulanger got a puncture of the right forefinger. At the second pass M. Floquet was cut in the left hand, and his body was grazed on the right side. General Boulanger, who had rushed wildly at his opponent, received a serious wound; M. Floquet had quietly raised his sword, and Boulanger, stumbling forward, got it in his throat. The seconds, by common consent, stated that General Boulanger's wound made it impossible for him to continue to fight. The bleeding was stopped by the surgeon, and the General was able to walk to Count Dillon's house. The sword had pierced the right side of his neck to a depth exceeding two inches, passing between the jugular vein and the carotid artery, and nearly severing the phrenic nerve. There was danger of tetanus, and some fear lest the damage to the nerve should interfere with the respiratory movement of the diaphragm; but, after two days, all anxieties concerning the General's life were relieved, and he has sustained no permanent injury.



The foolish and wicked practice of duelling has been extinct in England for half a century past. Neither public opinion, nor the administration of the criminal law, would spare to punish any malefactor, however aristocratic or fashionable, who should resort to this method of avenging a personal quarrel. It is now generally agreed in this country, which is so far civilised, that a man has no right to take the life of another except by warrant of military service at the bidding of his Sovereign; and further, that a man has no right to expose his own life to be taken by another, except in defence of his country or of his neighbour, and in preventing or repelling some violent outrage. The former action, without such justification, is regarded as murder; the latter involves the moral guilt of suicide. But in looking back at the history of duelling in past pages, and within the recollection of many persons now living, there appear some mitigating considerations. In various instances, where one of the duellists was actually killed, there is ample reason to believe that the man who killed him was not animated by any malignant spirit, and did not intend or desire to kill or even to wound him. Both were not uncommonly the mere slaves of a silly custom, and of a preposterous "rule of honour," which they obeyed under fear of being reputed cowards. This natural sentiment, and the willingness of each to attest the truth of some assertion, or his own innocence of some imputed misbehaviour, by pledging the risk of his life, could perhaps have been satisfied by some other process than a hostile encounter. They might have undertaken, in company, to brave some common danger, as in the ancient ordeal of passing through fire, or in twenty different ways. That two men who did not hate each other, in such a degree as to be capable of wilfully murdering, or even wilfully doing bodily harm to each other—which negative temper was often their case—should deliberately attempt to shoot or stab one another, because each pretended to be in the right, and because they wanted to be thought brave, was the most irrational and unpractical of actions. It would have been less inconsistent, though it would have been grossly absurd and still more dreadful, to have stood on opposite sides of an open barrel of gunpowder, and simultaneously cast lighted matches into it, in proof and wager of their equal courage.

The duel, however, was an institution that, involving a trial of skill as well as of chance, besides the trial of courage, lent itself to atrocious abuses, being habitually employed by scoundrels who had become accomplished in wielding deadly weapons to terrorise all men less perfect in the art, by which they maintained a social ascendancy, in spite of all true laws of honour, of decency, and good manners. The most notorious liar, swindler, and traitor, the most dishonest and mischievous profligate, could defy the censure of public opinion, and could insult gentlemen of high character, if he were reputed to handle the sword or pistol more expertly than other men. The sword, especially, was the favourite instrument of the bully duellist, who knew how to use it so as to be tolerably sure of escaping all danger from his adversary's sword; whereas nobody can be sure of not being hit and killed by a pistol-bullet, even from the hand of an inferior marksman. There was, however, this only to be said in favour of the sword when all gentlemen learned somewhat of fencing—that a superior swordsman, who did not mean to kill, might easily contrive to inflict a wound disabling, but not dangerous to life. Indeed, the fine-bladed rapier, used from the sixteenth to the eighteenth century, or the sharp-pointed fencing-foil, might be run through the body without killing, if it did not touch the heart or some other vital organ; while a thrust through the flesh of the arm, which was called "winging" or "pinking," gained the victory by slight infliction of personal suffering, and would be felt as a polite rebuke or lesson to avoid impertinence in future.

Of a very different complexion were the professional bully duellists, who abounded in France and Italy, more than anywhere, from the beginning of the sixteenth century, but whose school of homicide and lawless insolence found pupils all over Europe. It was a regular art in the Italy of the Renaissance, which invented what one of Shakspeare's gentlemen speaks of as "that poking fight of rapier and dagger," the dagger being held in the left hand, ready either to turn aside the opponent's sword or to inflict a mortal stab. This frightful combination of weapons caused the death of both combatants in an English duel in the reign of James I. Two of his courtiers, Sir George Wharton and Sir James Stuart, in November, 1609, fought at Canonbury, Islington, and killed each other. In the same year, two officers of the English army, Sir Hatton Cheek and Sir Thomas Dutton, fought with rapier and dagger at Calais, where both were slain. In 1613, Lord Bruce was killed in a duel at Bergen-op-Zoom by Edward Sackville, Earl of Dorset. But it was in France, under King Henry IV. as well as the preceding Kings of the House of Valois, that duelling raged with the utmost ferocity. More than six thousand French gentlemen fell victims to this baneful custom within a period of about one hundred years. A man disabled, or disarmed, or fallen prostrate, was to be killed at once, if he would not beg mercy of the victor. Among the most noted instances are the killing of Lachesnaye, an old man of eighty, with sword and dagger, by young Châteauneuf, to whom he was guardian; the hamstringing cut of Jarnac, who thus overthrew his adversary and then put him to death; the triple combat between D'Entragues and Quélus, with two friends on each side, when three of the six were killed; and the duel, in 1613, between the grandson of the great Coligny and the grandson of the famous Duke of Guise, former leaders, respectively, of the Huguenots and of the Catholic League. One ruffian, the Chevalier d'Andrieux, at the age of thirty, boasted that he had killed seventy-two men in duels. Another, the Comte de Bouteville, who was a Montmorency, seeking reputation with "the small sword and the poignard," went about challenging every man who was said to be skilful, and killed them so frequently, having not the slightest cause of quarrel, that the Parlement issued several edicts to forbid him. These he openly disobeyed, and was therefore condemned and beheaded in Richelieu's time. Laws were passed then, and further in the reign of Louis XIV., to punish duellists with loss of rank, office, and estate, or with banishment; but pardons were constantly granted.

In England, on the Restoration of Charles I., sword-duelling became more fashionable than ever; and every reader is acquainted with the killing of the Earl of Shrewsbury by the Duke of Buckingham, at Barn Elms, the Duke's second, Sir J. Jenkins, being at the same time killed by the Earl's second, while Lady Shrewsbury, the adulteress, held Buckingham's horse standing by. "O tempora! O mores!" The sanguinary blackguard Lord Mohun, also, is likely to be remembered; he who shared in the murder of Montford the actor, and who afterwards, in 1712, fought a savage duel with the Duke of Hamilton in Hyde Park, where both were killed, each receiving three or four horrible wounds. Swords were still preferred to pistols in England, being usually worn by gentlemen, until after the middle of the last century; but the dagger had been rejected since the time of Charles I. Duellists sometimes came with swords and pistols; after exchanging shots they would use cold steel. It was not unfrequent, however, that two gentlemen who had got angry with each other at a tavern or in a private house, would at once draw their swords and fight, without any seconds or witnesses or formal arrangements. Lord Byron, great-uncle of the poet, in 1765 killed Mr. Chaworth, at a house in London in an impromptu sword-fight. Examples of this kind, in the memoirs and anecdotes, or in the comedies and old novelists' works of the eighteenth century, prove that "The world went very well then," as Mr. Walter Besant ironically says. Comparing the England of George II. with the England of Charles I., it looks rather like a relapse into barbarism, owing to the decay of religion and morality and domestic life. In the method of duelling, we observe that pistolling found favour in Ireland as a gentlemanly pastime; indeed, it seems to have been the main pursuit of reckless men in the upper classes of society until after the Union.

The pistol-duels in England, during the reigns of the last two Georges, of William IV., and at the beginning of Victoria's reign, were often very serious; and some persons of considerable eminence, noblemen, statesmen, and distinguished military

THE DUEL BETWEEN M. FLOQUET AND GENERAL BOULANGER.

FROM A SKETCH BY AN EYE-WITNESS, LENT BY THE PROPRIETORS OF THE "ILLUSTRATION," PARIS.

officers, were engaged in them. The present writer, among the personal recollections of his boyhood in a provincial town, has that of the lamented death of a benevolent medical man, the Mayor of the city, who was shot by a certain Baronet in a silly quarrel about dancing with a young lady at a ball the night before. The sword-duel has been maintained, in France especially, since 1830, as an accessary to political ambition, part of the stock-in-trade of adventurers in journalism, professional orators, and Parliamentary debaters. It is, at the same time, almost a compulsory obligation, in certain cases, among military men in France, in Austria, and in Germany. French public men too commonly think it a needful accessary to their pretensions; it has cost several valuable lives, and has degraded the tone of political contention. The Bonapartist faction has been supported by this species of bullying for many years past, and the Royalist faction has sometimes resorted to it; but Republicans ought to be wiser, for their cue is to uphold the civil authority in redressing all private wrongs.

Among the notable sword-duels in France were that in which Armand Carrel, editor of the *National* in 1830, was badly wounded by a hostile journalist—Armand Carrel was afterwards killed by the pistol of Emile De Girardin; the attack on Henri De Pène, of the *Figaro*, who had to fight successive sub-lieutenants till one of them could run him through the liver; the two duels between the Marquis de Gallifet and Comte Lauriston, in 1858, when both were wounded; that in which Edmond About, in 1861, paid for a severe criticism of music with a wound in the shoulder; and one in 1867, between Prince Achille Murat and the Marquis de Rougé, who did slight harm to each other. Lamartine, in his youth, when secretary of the French Legation at Florence, got a sword-thrust in the arm from Colonel Gabriel Pepe for some verses reflecting on the degeneracy of Italians. M. Beaupoil de St. Aulaire, who had written a political pamphlet, was killed by a cousin of the Duc de Feltre, as it had censured his conduct. General Foy, Benjamin Constant, and other leading politicians under the Restoration, had to fight duels with political opponents. The last duel fought in England was between two refugee Leicester-square Frenchmen, soon after the Exhibition of 1851; one was killed, while the other, named Barthélémy, got off, and was afterwards hanged for a different murder. In 1862, Mr. Dillon, a British subject residing in Paris, editor of *Le Sport*, was killed in a sword-duel with the Duc de Gramont-Caderousse. Fencing is constantly practised as an exercise, and studied as an art, by a large number of Frenchmen, and is not neglected in Germany, Italy, Spain, and Belgium.

CHAPTER VII.

MEDICINÆ DOCTOR.

Humphrey DID not, like Benjamin, brag of the things he would do when he should go forth to the world. Nevertheless, he thought much about his future, and frequently he discoursed with me about the life that he fain would lead. A young man, I think, wants someone with whom he may speak freely concerning the thoughts which fill his soul. We who belong to the sex which receives but does not create or invent, which profits by man's good work, and suffers from the evil which he too often does, have no such thoughts and ambitions.

"I cannot," he would say, "take upon me holy orders, as Mr. Boscorel would have me, promising, in my cousin Robin's name, this living after his death, because, though I am in truth a mere pauper and dependant, there are in me none of those prickings of the spirit which I could interpret into a Divine call for the ministry; next, because I cannot in conscience swear to obey the Thirty-nine Articles while I still hold that the Nonconformist way of worship is more consonant with the Word of God. And, again, I am of opinion that the Law of Moses, which forbade any but a well-formed man from serving at the altar, hath in it something eternal. It denotes that as no cripple may serve at the earthly altar, so in heaven, of which the altar is an emblem, all those who dwell therein shall be perfect in body as in soul. What, then, is such a one as myself, who hath some learning and no fortune, to do? Sir Christopher, my benefactor, will maintain me at Oxford until I have taken a degree. This is more than I could have expected. Therefore, I am resolved to take a degree in medicine. It is the only profession fit for a mis-shapen creature. They will not laugh at me when I alleviate their pains."

"Could anyone laugh at you, Humphrey?"

"Pray Heaven, I frighten not the ladies at the first aspect of me." He laughed, but not with merriment; for, indeed, a cripple or a hunchback cannot laugh mirthfully over his own misfortune. "Some men speak scornfully of the profession," he went on. "The great French playwright, Monsieur Molière, doth make the physicians the butt and laughing-stock of all Paris. Yet consider. It is medicine which prolongs our days and relieves our pains. Before the science was studied, the wretch who caught a fever in the marshy forest lay down and died; an ague lasted all one's life; a sore throat putrefied and killed; a rheumatism threw a man upon the bed from which he would never rise. The physician is man's chief friend. If our Sovereigns studied the welfare of humanity as deeply as the art of war, they would maintain, at vast expense, great colleges of learned men continually engaged in discovering the secrets of nature—the causes and the remedies of disease. What better use can a man make of his life than to discover one—only one—secret which will drive away part of the agony of disease? The Jews, more merciful than the Romans, stupefied their criminals after they were crucified; they died, indeed, but their sufferings were less. So the physician, though in the end all men must die, may help them to die without pain. Nay, I have even thought that we might devise means of causing the patient by some potent drug to fall into so deep a sleep that even the surgeon's knife shall not cause him to awaken."

He therefore, before he entered at Oxford, read with my father many learned books of the ancients on the science and practice of medicine, and studied botany with the help of such books as he could procure.

Some men have but one side to them—that is to say, the only active part of them is engaged in but one study; the rest is given up to rest or indolence. Thus Benjamin studied law diligently, but nothing else. Humphrey, for his part, read his Galen and his Celsus, but he neglected not the cultivation of those arts and accomplishments in which Mr. Boscorel was as ready a teacher as he was a ready scholar. He thus learned the history of painting, and sculpture, and architecture, and that of coins and medals, so that at eighteen Humphrey might already have set up as a virtuoso.

Nor was this all. Still by the help of the Rector, he learned the use of the pencil and the brush, and could both draw prettily, or paint in water colours, whether the cottages or the church, the cows in the fields, or the woods and hills. I have many pictures of his painting which he gave me from time to time. And he could play sweetly, whether on the spinnet, or the violin, or the guitar, spending many hours every week with Mr. Boscorel playing duetts together; and willingly he would sing, having a rich and full voice very delightful to hear. When I grew a great girl, and had advanced far enough, I was permitted to play with them. There was no end to the music which Mr. Boscorel possessed. First, he had a great store of English ditties such as country-people love—as, "Sing all a green willow," "Gather ye rose-buds while ye may," or "Once I loved a maiden fair." There was nothing rough or rude in these songs, though I am informed that much wickedness is taught by the ribald songs that are sung in playhouses and coffee-rooms. And when we were not playing or singing, Mr. Boscorel would read us poetry—portions from Shakspeare or Ben Jonson, or out of Milton's "Paradise Lost"; or from Herrick, who is surely the sweetest poet that ever lived, "yet marred," said Mr. Boscorel, "by his coarseness and corruption." Now, one day, after we had been thus reading—one winter afternoon, when the sun lay upon the meadows—Humphrey walked home with me, and on the way confessed, with many blushes, that he, too, had been writing verses. And with that he tugged a paper out of his pocket.

"They are for thine own eyes only," he said. "Truly, my dear, thou hast the finest eyes in the world. They are for no other eyes than thine," he repeated. "Not for Robin, mind, lest he laugh: poetry hath in it something sacred, so that even the writer of bad verses cannot bear to have them laughed at. When thou art a year or two older thou wilt understand that they were written for thy heart as well as for thine eyes. Yet, if thou like the verses, they may be seen by Mr. Boscorel, but in private; and if he laugh at them do not tell me. Yet, again, one would like to know what he said; wherefore, tell me, though his words be like a knife in my side."

Thus he wavered between wishing to show them to his master in art, and fearing.

In the end, when I showed them to Mr. Boscorel, he said that, for a beginner, they were very well—very well, indeed; that the rhymes were correct, and the metre true; that years and practice would give greater firmness, and that the crafty interlacing of thought and passion, which was the characteristic of Italian verse, could only be learned by much reading of the Italian poets. More he said, speaking upon the slight subject of rhyme and poetry with as much seriousness and earnestness as if he were weighing and comparing texts of Scripture.

Then he gave me back the verses with a sigh.

"Child," he said. "To none of us is given what most we desire. For my part, I longed in his infancy that my son should grow up even as Humphrey, as quick to learn; with as true a taste; with as correct an ear; with a hand as skilful. But—— you see, I complain not, though Benjamin loves the noisy tavern better than the quiet coffee-house where the wits resort. To him such things as verses, art, and music are foolishness. I say that I complain not; but I would to Heaven that Humphrey were my own, and that his shoulders were straight, poor lad! Thy father hath made him a Puritan: he is such as John Milton in his youth—and as beautiful in face as that stout Republican. I doubt not that we shall have from the hand of Humphrey, if he live and prosper, something fine, the nature of which, whether it is to be in painting, or in music, or in poetry, I know not. Take the verses, and take care that thou lose them not; and, child—remember—the poet is allowed to say what he pleases about a woman's eyes. Be not deceived into thinking——But no—no—there is no fear. Good-night, thou sweet and innocent saint."

I knew not then what he meant; but these are the verses, and I truly think that they are very moving and religious. For if woman be truly the most beautiful work of the Creator (which all men aver), then it behoves her all the more still to point upwards. I read them with a pleasure and surprise that filled my whole soul, and inflamed my heart with pious joy:—

Around, above, and everywhere
The earth hath many a lovely thing;
The zephyrs soft, the flowers fair,
The babbling brook, the bubbling spring.

The grey of dawn, the azure sky,
The sunset glow, the evening gloom;
The warbling thrush, the skylark high,
The blossoming hedge, the garden's bloom.

The sun in state, the moon in pride,
The twinkling stars in order laid;
The winds that ever race and ride,
The shadows flying o'er the glade.

Oh! many a lovely thing hath earth,
To charm the eye and witch the soul;
Yet one there is of passing worth—
For that one thing I give the whole.

The crowning work, the last thing made,
Creation's masterpiece to be—
Bend o'er yon stream, and there displayed,
This wondrous thing reflected see.

Behold a face for heaven designed;
See how those eyes thy soul betray—
Love—secret love—there sits enshrined;
And upwards still doth point the way.

When Humphrey went away, he did not, like Benjamin, come blustering and declaring that he would marry me, and that he would break the skull of any other man who dared make love to me—not at all; Humphrey, with tears in his eyes, told me that he was sorry I could not go to Oxford as well; that he was going to lose the sweetest companion in the world; and that he should always love me: and then he kissed me on the forehead, and so departed. Why should he not always love me? I knew very well that he loved me, and that I loved him. Although he was so young, being only seventeen when he was entered at Exeter College, I suppose there never was a young gentleman went to the University of Oxford with so many accomplishments, and so much learning. By my father's testimony he read Greek as if it were his mother tongue, and he wrote and conversed easily in Latin; and you have heard what arts and accomplishments he added to this solid learning. He was elected to a scholarship at his college, that of Exeter, and, after he took his degree as Bachelor of Medicine, he was made a Fellow of All Souls, where Mr. Boscorel himself had also been a Fellow. This election was not only a great distinction for him, but it gave him what a learned young man especially desires—the means of living and of pursuing his studies.

While he was at Oxford he wrote letters to Sir Christopher, to Mr. Boscorel, and to my father (to whom also he sent such new books and pamphlets as he thought would interest him). To me he sent sometimes drawings and sometimes books, but never verses.

Now (to make an end of Humphrey for the present), when he had obtained his fellowship, he asked for and obtained leave of absence and permission to study medicine in those great schools which far surpass, they say, our English schools of medicine. These are that of Montpellier; the yet more famous school of Padua, in Italy; and that of Leyden, whither many Englishmen have resorted for study, notably Mr. Evelyn, whose book called "Sylva" was in the Rector's library.

He carried on during the whole of this time a correspondence with Mr. Boscorel on the paintings, statues, and architecture to be seen wherever his travels carried him. These letters Mr. Boscorel read aloud, with a map spread before him, discoursing on the history of the place and the chief things to be seen there, before he began to read. Surely there never was a man so much taken up with the fine arts, especially as they were practised by the ancients.

There remains the last of the boys—Robin, Sir Christopher's grandson and heir. I should like this book to be all about Robin—yet one must needs speak of the others. I declare, that from the beginning, there never was a boy more happy, more jolly; never anyone more willing to be always making someone happy. He loved the open air, the wild creatures, the trees, the birds, everything that lives beneath the sky; yet not like my poor brother Barnaby—a hater of books. He read all the books which told about creatures, or hunting, or country life; and all voyages and travels. A fresh-coloured, wholesome lad, not so grave as Humphrey, nor so rustic as Barnaby, who always seemed to carry with him the scent of woods and fields. He was to Sir Christopher, what Benjamin was to Jacob. Even my father loved him though he was so poor a scholar.

Those who stay at home have homely wits: that is well known: therefore Robin must follow Humphrey to Oxford. He went thither the year after his cousin. I never learned that he obtained a scholarship, or that he was considered one of the younger pillars of that learned and ancient University; or, indeed, that he took a degree at all.

After he left Oxford, he must go to London, there to study Justice's Law and fit himself for the duties he would have to fulfil. Also his grandfather would have him acquire some knowledge of the Court and the City, and the ways of the great and the rich. This, too, he did; though he never learned to prefer those ways to the simple customs and habits of his Somerset village.

He, too, like the other two, bade me a tender farewell.

"Poor Alice!" he said, taking both my hands in his. "What wilt thou do when I am gone?"

Indeed, since Humphrey went away, we had been daily companions; and at the thought of being thus left alone the tears were running down my cheeks.

"Why, sweetheart," he said, "to think that I should ever make thee cry—I who desire nothing but to make thee always laugh and be happy! What wilt thou do? Go often to my mother. She loves thee as if thou wert her own daughter. Go and talk to her concerning me. It pleaseth the poor soul to be still talking of her son. And forget not my grandfather. Play backgammon with him; fill his pipe for him; sing to the spinnet for him; talk to him about Humphrey and me. And forget not Mr. Boscorel, my uncle. The poor man looks as melancholy since Humphrey went away as a turtle robbed of her nest. I saw him yesterday opening one of his drawers full of medals, and he sighed over them fit to break his heart. He sighed for Humphrey, not for Ben. Well, child, what more? Take Lance"—'twas his dog—"for a run every day; make George Sparrow keep an eye upon the stream for otters; and—there are a thousand things, but I will write them down. Have patience with the dear old man when he will be still talking about me."

"Patience, Robin," I said. "Why, we all love to talk about thee."

"Do you all love to talk about me? Dost thou, too, Alice? Oh, my dear, my dear!" Here he took me in his arms and kissed me on the lips. "Dost thou also love to talk about me? Why, my dear, I shall think of nothing but of thee. Because—oh! my dear!—I love thee with all my heart."

Well, I was still so foolish that I understood nothing more than that we all loved him, and he loved us all.

"Alice, I will write letters to thee. I will put them in the packet for my mother. Thus thou wilt understand that I am always thinking of thee."

He was as good as his word. But the letters were so full of the things he was doing and seeing, that it was quite clear that his mind had plenty of room for more than one object. To be sure, I should have been foolish, indeed, had I desired that his letters should tell me that he was always thinking about me, when he should have been attending to his business.

After a year in London, his grandfather thought that he should travel. Therefore, he went abroad and joined Humphrey at Montpellier, and with him rode northwards to Leyden, where he sojourned while his cousin attended the lectures of that famous school.

CHAPTER VIII.

A ROYAL PROGRESS.

When all the boys were gone the time was quiet, indeed, for those who were left behind. My mother's wheel went spinning still, but I think that some kindness on the part of Mr. Boscorel as well as Sir Christopher caused her weekly tale of yarn to be of less importance. And as for me, not only would she never suffer me to sit at the spinning-wheel, but there was so much request of me (to replace the boys) that I was nearly all the day either with Sir Christopher, or with Madam, or with Mr. Boscorel.

Up to the year 1680, or thereabouts, I paid no more attention to political matters than any young woman with no knowledge may be supposed to give. Yet, of course, I was on the side of liberty, both civil and religious. How should that be otherwise, my father being such as he was, muzzled for all these years, the work of his life prevented and destroyed?

It was in that year, however, that I became a most zealous partisan and lover of the Protestant cause in the way that I am about to relate.

Everybody knows that there is no part of Great Britain (not even Scotland) where the Protestant religion hath supporters more stout and stanch than Somerset and Devonshire. I hope I shall not be accused of disloyalty to Queen Anne, under whom we now flourish and are happy, when I say that in the West of England we had grown—I know not how—to regard the late misguided Duke of Monmouth as the champion of the Protestant faith. When, therefore, the Duke came into the West of England in the year 1680, five years before his Rebellion, he was everywhere received with acclamations and by crowds who gathered round him to witness their loyalty to the Protestant faith. They came also to gaze upon the gallant commander who had defeated both the French and the Dutch, and was said (but erroneously) to be as wise as he was brave: and as religious as he was beautiful to look upon. As for his wisdom, those who knew him best have since assured the world that he had little or none, his judgment being always swayed and determined for him by crafty and subtle persons seeking their own interests. And as for his religion, whatever may have been his profession, good works were wanting—as is now very well known. But at that time, and among our people, the wicked ways of Courts were only half understood. And there can be no doubt that, whether he was wise or religious, the show of affection with which the Duke was received upon this journey, turned his head and caused him to think that these people would rally round him if he called upon them. And I suppose that there is nothing which more delights a Prince than to believe that his friends are ready even to lay down their lives in his behalf.

At that time the country was greatly agitated by anxiety concerning the succession. Those who were nearest the throne knew that King Charles was secretly a Papist. We in the country had not learned that dismal circumstance: yet we knew the religion of the Duke of York. Thousands there were, like Sir Christopher himself, who now lamented the return of the King, considering the disgraces which had fallen upon the country. But what was done could not be undone. They, therefore, asked themselves if the nation would suffer an avowed Papist to ascend a Protestant throne. If not, what should be done? And here, as everybody knows, was opinion divided. For some declared that the Duke of Monmouth, had he his rights, was the lawful heir; and others maintained, on the King's own word, that he was never married to Mistress Lucy Waters. Therefore, they would have the Duke of York's daughter, a Protestant Princess, married to William of Orange, proclaimed Queen. The Monmouth party were strong, however, and it was even said—Mr. Henry Clark, minister of Crewkern, wrote a pamphlet to prove it—that a poor woman, Elizabeth Parret by name, touched the Duke (he being ignorant of the thing) for King's Evil, and was straightway healed. Sir Christopher laughed at the story, saying that the King himself, whether he was descended from a Scottish Stuart or from King Solomon himself, could no more cure that dreadful disease than the seventh son of a seventh son (as some foolish people believe), or the rubbing of the part affected by the hand of a man that had been hanged (as others do foolishly believe), which is the reason why on the gibbets the hanging corpses are always handless.

It was noised abroad, beforehand, that the Duke was going to ride through the west country in order to visit his friends

* All Rights Reserved.

The progress (it was more like a Royal progress than the journey of a private nobleman) began with his visit to Mr. Thomas Thynne, of Longleat House. It is said that his chief reason for going to that house was to connect himself with the obligation of the tenant of Longleat to give the King and his suite a night's lodging when they visited that part of the country. Mr. Thynne, who entertained the Duke on this occasion, was the same who was afterwards murdered in London by Count Konigsmark. They called him "Tom of Ten Thousand." The poet Dryden hath written of this progress, in that poem wherein, under the fabled name of Absalom, he figures the Duke:—

> He now begins his progress to ordain.
> With chariots, horsemen, and a numerous train.
> Fame runs before him as the morning star,
> And shouts of joy salute him from afar.
> Each house receives him as a guardian god,
> And consecrates the place of his abode.

It was for his hospitable treatment of the Duke that Mr. Thynne was immediately afterwards deprived of the command of the Wiltshire Militia.

"Son-in-law," said Sir Christopher, "I would ride out to meet the Duke in respect to his Protestant professions. As for any pretensions he may have to the succession, I know nothing of them."

"I will ride with you, Sir," said the Rector, "to meet the son of the King. And as for any Protestant professions, I know nothing of them. His Grace still remains, I believe, within the pale of the Church as by law established. Let us all ride out together."

Seeing that my father also rode with them, it is certain that there were many and diverse reasons why so many thousands gathered together to welcome the Duke. Madame, Robin's mother, out of her kind heart, invited me to accompany her, and gave me a white frock to wear and blue ribbons to put into it.

We made, with our servants, a large party. We were also joined by many of the tenants, with their sons and wives, so that when we came to Ilchester, Sir Christopher was riding at the head of a great company of sixty or more, and very fine they looked, all provided with blue favours in honour of the Duke.

From Bradford Orcas to Ilchester is but six miles as the crow flies, but the ways (which are narrow and foul in winter) do so wind and turn about that they add two miles at least to the distance. Fortunately the season was summer—namely, August—when the sun is hottest and the earth is dry, so that no one was bogged on the way.

We started betimes—namely, at six in the morning—because we knew not for certain at what time the Duke would arrive at Ilchester. When we came forth from the Manor House the farmers were already waiting for us, and so, after greetings from his Honour, they fell in and followed. We first took the narrow and rough lane which leads to the high road; but, when we reached it, we found it full of people riding, like ourselves, or trudging, staff in hand, all in the same direction. They were going to gaze upon the Protestant Duke, who, if he had his way, would restore freedom of conscience, and abolish the Acts against the Nonconformists. We rode through Marston Magna, but only the old people and the little children were left there; in the fields the ripe corn stood waiting to be cut; in the farmyards the beasts were standing idle; all the hinds were gone to Ilchester to see the Duke. And I began to fear lest when we got to Ilchester we should be too late. At Marston we left the main road and entered upon a road (call it a track rather than a road) across the country, which is here flat and open. In winter it is miry and boggy, but it was now dry and hard. This path brought us again to the main road in two miles, or thereabouts, and here we were but a mile or so from Ilchester. Now, such a glorious sight as awaited us here I never expected to see. Once again, after five years, I was to see a welcome still more splendid; but nothing can ever efface from my memory that day. For first, the roads, as I have said, were thronged with rustics, and next, when we rode into the town we found it filled with gentlemen most richly dressed, and ladies so beautiful, and with such splendid attire that it dazzled my eyes to look upon them. It was a grand thing to see the gentlemen take off their hats and cry, "Huzza for brave Sir Christopher!" Everybody knew his opinions and on what side he had fought in the Civil War. The old man bent his head, and I think that he was pleased with this mark of honour.

The town which, though ancient, is now decayed and hath but few good houses in it, was made glorious with bright-coloured cloths, carpets, flags, and ribbons. There were bands of music; the bells of the church were ringing; the main street was like a fair with booths and stalls, and in the market-place there were benches set up with white canvas covering, where sat ladies in their fine dresses, some of them with naked necks, unseemly to behold. Yet it was pretty to see the long curls lying on their white shoulders. Some of them sat with half-closed eyes, which, I have since learned, is the fashion at Court. Mostly, they wore satin petticoats, and demi-gowns also of satin, furnished with a long train. Our place was beside the old Cross with its gilt ball and vane. The people who filled the streets came from Sherborne, from Bruton, from Shepton, from Glastonbury, from Langport, and from Somerton, and from all the villages round. It was computed that there were twenty thousand of them. Two thousand at least rode out to meet the Duke, and followed after him when he rode through the town. And, oh! the shouting as he drew near, the clashing of the bells, the beating of the drums, the blowing of the horns, the firing of the guns, as if the more noise they made the greater would be the Duke.

Since that day I have not wondered at the power which a Prince hath of drawing men after him, even to the death. Never was heir to the Crown received with such joy and welcome as was this young man, who had no title to the Crown, and was base-born. Yet, because he was a brave young man, and comely above all other young men, gracious of speech, and ready with a laugh and a joke, and because he was the son of the King, and the reputed champion of the Protestant faith, the people could not shout too loud for him.

The Duke was at this time in the prime of manhood, being thirty-five years of age. "At that age," Mr. Boscawel used to say, "one would desire to remain if the body of clay were immortal. For then the volatile humours of youth have been dissipated. The time of follies has passed; love is regarded with the sober eyes of experience; knowledge has been acquired; skill of eye and hand has been gained, if one is so happy as to be a follower of art and music; wisdom hath been reached, if wisdom is ever to be attained. But wisdom," he would add, "is a quality generally lacking at every period of life."

"When last I saw the Duke," he told us while we waited, "was fifteen years ago, in St. James's Park. He was walking with the King, his father, who had his arm about his son's shoulders, and regarded him fondly. At that time he was, indeed, a very David for beauty. I suppose that he hath not kept that singular loveliness which made him the darling of the Court. That, indeed, were not a thing to be desired or expected. He is now the hero of Maestricht, and the Chancellor of Cambridge University."

And then all hats were pulled off, and the ladies waved their handkerchiefs, and the men shouted, and you would have thought the bells would have pulled the old tower down with the vehemence of their ringing; for the Duke was riding into the town.

He was no longer a beautiful boy, but a man at whose aspect every heart was softened. His enemies, in his presence, could not blame him; his friends, at sight of him, could not praise him, of such singular beauty was he possessed. Softness, gentleness, kindness, and goodwill reigned in his large soft eyes; graciousness sat upon his lips, and all his face seemed to smile as he rode slowly between the lane formed by the crowd on either hand.

What said the Poet Dryden in that same poem of his from which I have already quoted?—

> Early in foreign fields he won renown
> With Kings and States allied to Israel's crown;
> In peace the thoughts of war he could remove,
> And seemed as he were only born for love.
> Whate'er he did was done with so much ease,
> In him alone 'twas natural to please;
> His motions all accompanied with grace,
> And Paradise was opened in his face.

Now I have to tell of what happened to me—the most insignificant person in the whole crowd. It chanced that as the Duke came near the spot beside the cross where we were standing, the press in front obliged him to stop. He looked about him while he waited, smiling still and bowing to the people. Presently his eyes fell upon me, and he whispered a gentleman who rode beside him, yet a little in the rear. This gentleman laughed, and dismounted. What was my confusion when he advanced towards me and spoke to me!

"Madam," he said, calling me "Madam!". "His Grace would say one word to you, with permission of your friends."

"Go with this gentleman, child," said Sir Christopher, laughing. Everybody laughs—I know not why—when a girl is led out to be kissed.

"Fair White Rose of Somerset," said his Grace—'twas the most musical voice in the world, and the softest. "Fair White Rose"—he repeated the words—"let me be assured of the welcome of Ilchester by a kiss from your sweet lips, which I will return in token of my gratitude."

All the people who heard these words shouted as if they would burst themselves asunder. And the gentleman who had led me forth lifted me so that my foot rested on the Duke's boot, while his Grace laid his arm tenderly round my waist and kissed me twice.

"Sweet child," he said, "what is thy name?"

"By your Grace's leave," I said, the words being very strange, "My name is Alice. I am the daughter of Dr. Comfort Erskin, an ejected minister. I have come with Sir Christopher Chullis, who stands yonder."

"Sir Christopher!" said the Duke, as if surprised. "Let me shake hands with Sir Christopher. I take it kindly, Sir Christopher, that you have so far honoured me." So he gave the old man, who stepped forward bareheaded, his hand, still holding me by the waist. "I pray that we may meet again, Sir Christopher, and that before long." Then he drew a gold ring, set with an emerald, from his forefinger, and placed it upon mine, "God grant it bring thee luck, sweet child," he said, and kissed me again, and then suffered me to be lifted down. And you may be sure that it was with red cheeks that I took my place among my friends. Yet Sir Christopher was pleased at the notice taken of him by the Duke, and my father was not displeased at the part I had been made to play.

When the Duke had ridden through the town, many of the people followed after, as far as White Lackington, which is close to Ilminster. So many were they that they took down a great piece of the park paling to admit them all; and there, under a Spanish chestnut-tree, the Duke drank to the health of all the people.

At Ilminster, whither he rode a few days later; at Chard, at Ford Abbey, at Colyton, and at Exeter—wherever he went, he was received with the same shouts and acclamations. It is no wonder, therefore, that he should believe, a few years later, that those people would follow him when he drew the sword for the Protestant religion.

One thing is certain—that in the West of England, from the progress of Monmouth to the Rebellion, there was uneasiness, with an anxious looking forward to troubled times. The people of Taunton kept as a day of holiday and thanksgiving the anniversary of the raising of Charles's siege. When the Mayor, in 1683, tried to stop the celebration they nearly stoned him to death. After this, Sir George Jeffreys, afterwards Lord Jeffreys, who took the spring circuit in 1684, was called upon to report on the loyalty of the West country. He reported that the gentry were loyal and well disposed. But he knew not the mind of the weavers and spinners of the country.

It was this progress; the sight of the Duke's sweet face; his flattery of me, and his soft words, and the ring he gave me, which made me from that moment such a partisan of his cause as only a woman can be. Women cannot fight, but they can encourage those who do; and they can not only ardently desire, but they can despise and contemn those who think otherwise. I cannot say that it was I who persuaded our boys five years later to join the Duke; but I can truly say that I did and said all that a woman can; that I rejoiced when they did so; and that I should never have forgiven Robin had he joined the forces of the Papist King.

(To be continued.)

INTERNATIONAL GEOLOGICAL CONGRESS.

The following arrangements have been made for the London meeting of the International Geological Congress, which will be held from Sept. 17 to 22. The meetings will be held in the rooms of the University of London, Burlington-gardens, where accommodation for the council, committees, exhibition, &c., has been granted by the Senate of the University.

The opening meeting of the congress will take place on Monday evening, Sept. 17, at eight p.m., when the council will be appointed, and the general order of business for the session will be determined. The ordinary meetings of the congress will be held on the mornings of Tuesday, the 18th, and succeeding days, commencing at ten a.m. In the afternoons there will be visits to museums, or to places of interest in the neighbourhood of London. Arrangements for the evenings will be made at a later date.

The ordinary business of the congress will include the discussion of questions not considered at Berlin, or adjourned thence for fuller discussion at the London meeting. Amongst these are:—The Geological Map of Europe; the Classification of the Cambrian and Silurian Rocks and of the Tertiary Strata; and some points of Nomenclature, &c., referred to the congress by the International Commission. Miscellaneous business will also be considered. A special sitting will be devoted to a discussion on the "Crystalline Schists." Contributions on this subject are expected from several foreign authorities; these will be printed in advance, and will be distributed at the opening meeting of the congress. The memoirs may therefore be taken as "read" at the meeting, and the discussion be proceeded with at once. At one of the evening meetings arrangements will be made for the exhibition of lantern-slides, illustrating the discussion of the Crystalline Schists.

Excursions will take place in the week after the meeting (Sept. 24 to 30). The number of these will depend upon the number of members desirous of attending; those at present suggested are:—1. The Isle of Wight (visiting the Ordnance Survey Office at Southampton on the way). 2. North Wales. 3. East Yorkshire. 4. Norfolk and Suffolk. 5. Central England (Jurassic Rocks). 6. West Yorkshire.

ASTRONOMICAL OCCURRENCES FOR AUGUST.

The MOON will be near Mercury on the morning of the 8th; she will be near Saturn on the 7th; and near Venus on the morning of the 8th; she will be very near Mars during the evening hours of the 13th, the nearest approach will be at 9h p.m.; and she will be near, and a little to the right of, Jupiter on the 14th. Her phases or times of change are:—

New Moon on the	7th at 21 minutes after	6	in the	afternoon.
First Quarter	„	14th	„	44	„	4	„	„
Full Moon	„	21st	„	20	„	3	„	„
Last Quarter	„	29th	„	18	„	2	„	„

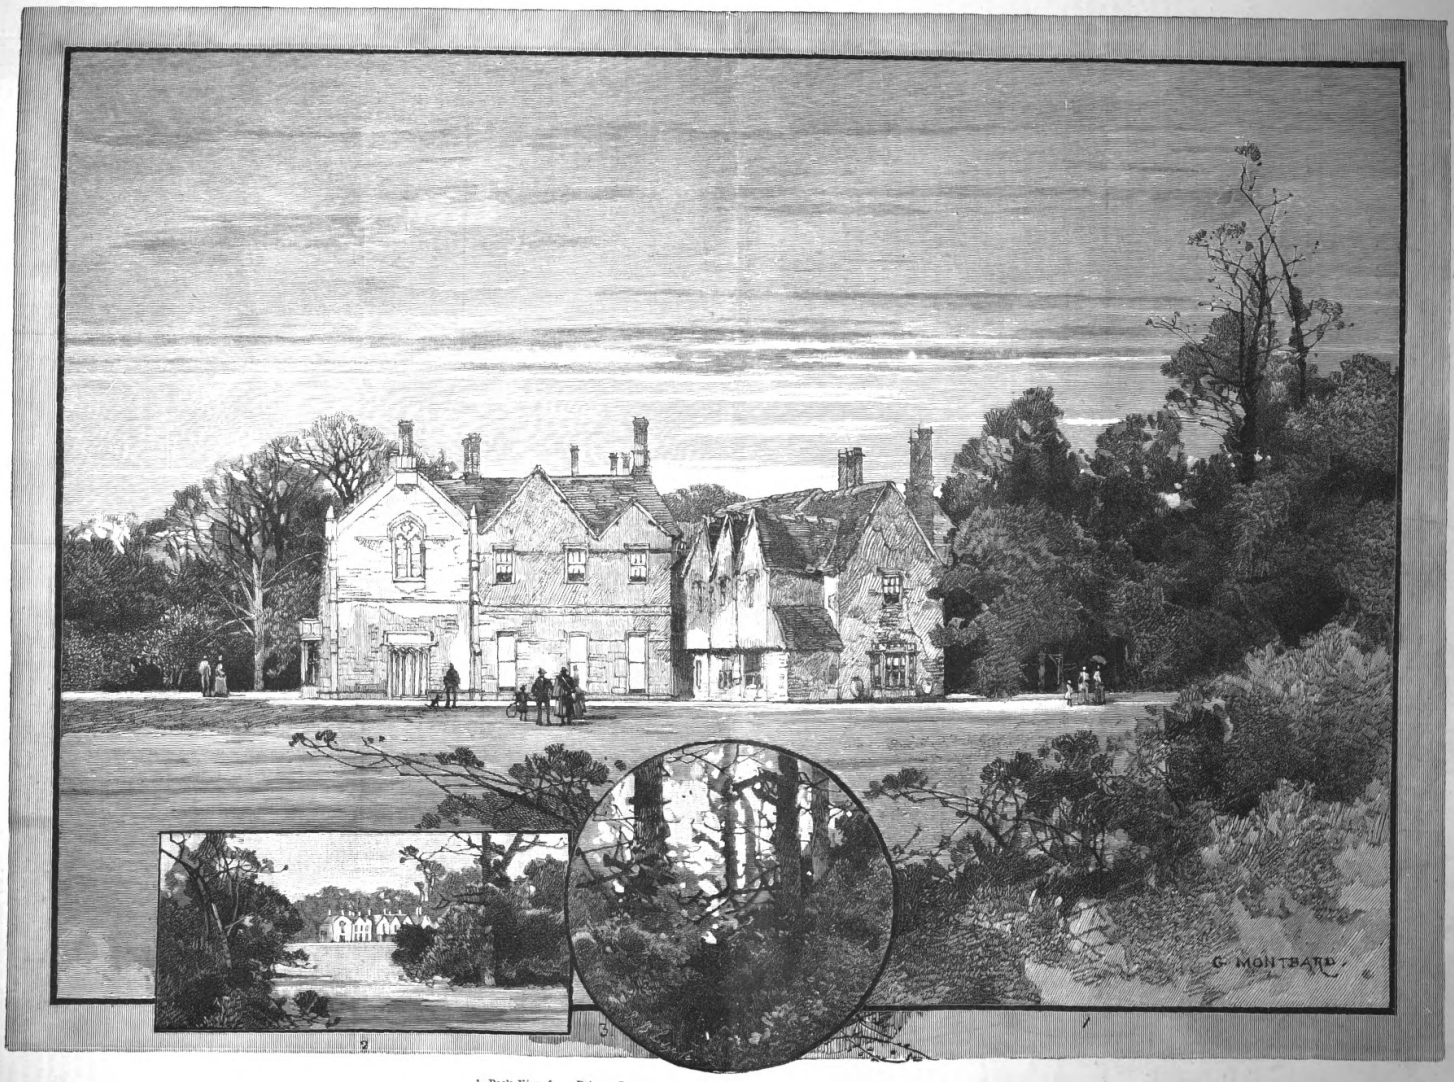
She is nearest the Earth on the 14th, and most distant from it on the 28th.

MERCURY is a morning star, rising on the 1st at 2h 49m a.m., or 1h 37m before the Sun rises; on the 4th at 2h 52m a.m., or 1h 38m before sunrise; on the 9th at 3h 13m a.m., or 1h 23m before the Sun rises; on the 14th at 3h 44m a.m., or 1h 1m before sunrise; on the 19th at 4h 20m a.m., or 33 minutes before the Sun rises; on the 24th at 4h 58m a.m., or 3 minutes before sunrise. He sets on the 19th at 7h 14m p.m., or 2 minutes after sunset; on the 24th at 7h 14m p.m., or 12 minutes after the Sun sets; and on the 30th at 7h 9m p.m., or 20 minutes after sunset. He is near the Moon on the 6th, and in ascending node on the same day. He is at least distance from the Sun on the 9th; is near Saturn on the 14th; and in superior conjunction with the Sun on the 24th.

VENUS is an evening star, setting on the 1st at 8h 8m p.m., or 23 minutes after sunset; on the 10th at 7h 56m p.m., or 25 minutes after the Sun sets; on the 20th at 7h 41m p.m., or 31 minutes after sunset; on the 30th at 7h 21m p.m., or 32 minutes after the Sun sets. She is near the Moon on the 8th.

MARS sets on the 1st at 10h 17m p.m., on the 10th at 9h 52m p.m., on the 20th at 9h 24m p.m., and on the 30th at 9h 0m p.m. He is near the Moon on the 13th.

JUPITER sets on the 1st at 11h 18m p.m., on the 8th at 10h 51m p.m., on the 18th at 10h 14m p.m., and on the 28th at 9h 37m p.m. He is near the Moon on the 14th, and in quadrature with the Sun on the 20th.



SATURN sets on the 1st at 7h 51m p.m., or 6 minutes after the Sun sets; on the 4th at 7h 44m p.m., or 2 minutes after sunset. He rises on the 9th at 4h 0m a.m., on the 19th at 3h 28m a.m., and on the 29th at 2h 56m a.m. He is in conjunction with the Sun on the 2nd, and is near the Moon on the 7th.

ENGLISH HOMES.

No. XIV.

Scrivelsby Court,

HOME OF THE DYMOKES,

HEREDITARY Cchampions OF ENGLAND.

They hailed him Lord of Fontenay,
Of Lutterward, and Scrivelsbaye,
Of Tamworth tower and town.

EVERYONE knows the author and the subject of these familiar and oft-quoted lines, but comparatively few take the trouble to remember that the Marmion to whom they refer had no more to do with Scrivelsby than Bailie Nicol Jarvie or any other of the imaginary characters that had their origin in the teeming brain of the great Wizard of the North. Long before the days of Flodden Field, the great name of Marmion had entirely disappeared from the roll of the hereditary Champions of England, the last Marmion who lived at Scrivelsby being Sir Philip, who died in 1291, and whose effigy in stone, according to an old tradition, is still to be seen in Scrivelsby church.

According to the generally received account, the Manor of Scrivelsby was given by William the Conqueror to his favourite Knight, Robert De Marmyon, who had accompanied him to England, and whose ancestors at Fontenoy had long performed the office of Champion to the Dukes of Normandy. A similar duty was now attached to the holder of the Manor of Scrivelsby, which was to be held by grand Sergeantry, to perform the office of Champion at the King's Coronation. The Championship has never since been formally detached from the ownership of Scrivelsby, although the ceremony was performed for the last time at the coronation of George IV., and although, as we shall presently see, an unsuccessful attempt was made in 1377 to transfer this particular duty to the Manor of Tamworth, which had also been assigned to Robert De Marmyon under apparently similar conditions.

The Marmions were a proud and powerful race, of vast possessions in money, and land situated in different parts of the country; but they only continued to hold Scrivelsby, in direct male succession, to the year 1291, when Philip De Marmyon, the last, but by no means the least distinguished, of a highly distinguished race, died without male issue, after having acquired great fame in the Baronial wars under Simon De Montfort, in the time of Henry III. As he was seised of estates, at the time of his death, in Warwickshire, Staffordshire, and Lincolnshire, his two surviving daughters shared between them their father's inheritance, Scrivelsby falling to Joan, the younger, who was only eight years old when her father died, and was subsequently married to Sir Thomas De Ludlow; while the elder sister, who was already married to Sir Alexander De Freville, succeeded to the more extensive estates of Tamworth. Brief, however, was the reign of the Ludlows at Scrivelsby, for, on the death, without male issue, of the grandson of Sir Philip De Marmyon, Margaret, the only child of the second Thomas De Ludlow, succeeded to the Scrivelsby estate, and was shortly afterwards married to a Knight of Gloucestershire, Sir John Dymoke—a name destined to live long in connection with the Manor of Scrivelsby and the Championship of the Sovereigns of Great Britain.

Upon the death of Edward III. in 1377, Sir John Dymoke claimed, on behalf of his wife, to act as Champion at the coronation of Richard II.; but Sir Baldwin De Freville put in a similar claim, as the lineal descendant of Sir Philip De Marmyon's eldest daughter, who had inherited the Tamworth estates. The Lord Steward of England held a solemn inquisition to investigate the claims of the rival petitioners; but as there was great room for doubt, the duties of the Championship being apparently attached to the tenure of both estates, the preponderance, however, of oral rather than of written testimony being in favour of the Scrivelsby claim, it was adjudged that for this particular occasion Sir John Dymoke, in right of his wife, should do the service at Richard's coronation, but without prejudice to any future claim that might be advanced by Sir Baldwin De Freville. A limit, however, and that a brief one, was assigned for advancing this claim, for it was decided that "if within three weeks after Hilary next, Sir Baldwin would come and show his reasons and evidences, he should have full justice, and if he did not do so he should be for ever excluded; and the said John should do the aforesaid service, in the right of his said wife, according to the tenor of the petition in that behalf." Sir Baldwin failed to make good his claim within the appointed time, and as Margaret was still living at the date of the next coronation, and enjoying by-the-way the reputation of being a lady of very resolute will and indomitable determination, she again claimed to perform the service of the Championship, in the person of her son, Sir Thomas Dymoke, who afterwards succeeded her. Again did a Sir Baldwin Freville, of Tamworth, the son of old Sir Baldwin, put in a counter claim, pleading that on the last occasion his father was prevented by sickness from producing his "reasons and evidences" within the stipulated time, and again was the claim of the Dymokes allowed for the occasion only, a stipulation being added that the case should not be considered finally settled if Sir Baldwin could, within a stated time, produce evidence of his father's alleged sickness. This Sir Baldwin either could not or did not do, and consequently to the Dymokes was adjudged the right of performing the feudal service of the Championship, which was now definitely attached to the ownership of Scrivelsby Manor.

The following well-known ballad has oft been quoted in connection with the Championship; but it gives, in its own quaint and homely language, such an accurate description of the early history of the successive owners of Scrivelsby that no apology is needed for once more reproducing it:—

The Norman Baron, Marmyon
At Norman Court held high degree:
Brave Knights and Champions every one,
To him who won broad Scrivelsby.
These Lincoln lands the Conqueror gave,
That England's glove they should convey
To Knight renowned amongst the brave,
The Baron bold of Fontency.

The Royal grant, through sire to son,
Devolved direct on equity,
Until deceased Phil Marmyon,
When rose fair Joan of Scrivelsby.
Thro' midnight's gloom one sparkling star
Will seem to shine more brilliantly
Than all around, above, afar:
So shone the Maid of Scrivelsby.

From London city on the Thames,
To Berwick town upon the Tweed,
Came gallants, all of courtly names,
At feet of Joan their suit to plead.
Yet *mutiny* all this goodly band,
The maiden's smile, young Ludlow won,
Her heart and hand, her grant and land,
The sword and shield of Marmyon.

Out upon Time! the scurvy knave,
Spoiler of youth, hard-hearted churl,
Fast hurrying to one common grave
Goodwife and ladie, thrall and earl.
Out upon Time!—since world began
No Sabbath hath his greyhound limb,
In coursing man, devoted man,
To age and death—out, out on him!

In Lincoln's chancel, side by side,
Their effigies from marble hewn,
The *aunt* written when they died,
Repose De Ludlow and Dame Joan.

One daughter fair survived alone,
One son deceased in infancy;
De Ludlow and De Marmyon
United thus in Margery.
And she was wooed as maids have been,
And won as maids are sure to be,
When gallant youths, in Lincoln green,
Do suit, like Dymoke, fervently.

Sir John De Dymoke claim'd, of right,
The Championship through Margery,
And 'gainst Sir Baldwin Freville, Knight,
Prevail'd as Lord of Scrivelsby.
And ever since, when England's Kings
Are dialed—no matter where—
The Champion Dymoke boldly flings
His glove, should treason venture there.

On gallant steed in armour bright,
His vizor closed, and couch'd his lance,
Proclaimeth he the Monarch's right
To England, Ireland, Wales and France.
Then bravely cry with Dymoke bold,
"Long may the King triumphant reign!"
And when fair hands the sceptre hold,
More bravely still—"Long live the Queen!"

From 1370 to the present time, a Dymoke of Scrivelsby has always been available for performing the office of Champion at each successive coronation. It is generally supposed that at the conclusion of the ceremony it was the invariable custom to present a gold cup to the Champion; but as there are only seven of these cups now in the possession of the family, although it is highly probable that some have been lost or otherwise disposed of, it is still more probable that in earlier times a guerdon in money was given instead of the golden cup. However this may be, the following incident, in connection with these coronation cups, is an apt illustration of the old adage—*Homme propose, Dieu dispose*. By the last will of Mr. H. Lionel Dymoke, in 1875, all the cups in hand were bequeathed to the "reigning Sovereign;" but her Majesty, Queen Victoria, with that gracious consideration for others which is such a conspicuous feature in her character, reconveyed them, by special gift, to her new Champion, the present owner of the estates and title. These cups, therefore, instead of being at Windsor and in danger of losing their individuality amidst the other contents of the Royal plate-closet, are now, through the thoughtful liberality of the Queen, to be seen once more in their natural home at Scrivelsby, where, amongst other records, they serve to keep up the continuity of the family history by exhibiting, in material shape, one of the most interesting and characteristic distinctions of the House of Dymoke.

The name of "Dymoke," as might have been expected, was usually found on the roll of Sheriffs, and occasionally some member of the family has represented the county in Parliament. Most of the Champions have led peaceful and uneventful lives; but, as was almost sure to happen in the turbulent period of the fifteenth and sixteenth centuries, a member of this family is found, from time to time, taking a prominent part in the political disturbances of the time, and once, at least, a Champion was beheaded. This fate befel Sir Thomas Dymoke, who had sided with the Lancastrians in the Wars of the Roses, and was, under somewhat harsh circumstances, put to death by Edward IV. in 1471. Another Dymoke was Sheriff of Lincolnshire, in his father's lifetime, at the rising in the North, which afterwards expanded into the "Pilgrimage of Grace," under Robert Aske, and took an active part on the side of the insurrectionists, much to the indignation and disgust of the King, who vented his spleen against the commons of Lincolnshire in a highly offensive, but characteristic fashion. "How presumptuous," said the irate Monarch, forgetting his good manners in the unseemly expression of his wrath, "How presumptuous are ye, the rude commons of one shire, and that one of the most brute and beastly of the whole realm, and of least experience, to take upon you, contrary to God's law and man's law, to rule your Prince whom ye are bound to obey and serve, and for no worldly cause to withstand." Luckily for our Sheriff, a general amnesty was shortly afterwards proclaimed, so that he escaped with his head, which, considering the temper of Henry VIII. at the time, must have been in considerable peril. This same Dymoke, who afterwards became Champion, and acted as such at the coronation of Edward VI., Mary, and Elizabeth, was present at the barbarous murder of the Chancellor of the Bishop of Lincoln on Roughton-heath, near Horncastle, in 1536, and he even distributed the clothing and the money taken from the murdered man amongst the rabble who had committed the murder.

The recent history of the family is interesting and remarkable. In the year 1875 Henry Lionel Dymoke died without issue; and an end, to all appearance, had at last come to the family of the Champion Dymokes. But even in this, which seemed to be the darkest hour of the Dymoke family, the true light was all the while unmistakeably shining in the immediate neighbourhood, though somewhat obscured by extraneous surroundings. At the village of Tetford, near Horncastle, a Dymoke was living, around whom had always centred a tradition that in his person was represented the descendant of an elder branch of the family, with even stronger hereditary claims to the Championship than were to be found in the line which for more than three generations had inherited the family honours at Scrivelsby. The old entail, however, had long been broken off; and the Tetford Dymokes had no more chance of establishing a legal claim to the succession at Scrivelsby than any other of her Majesty's subjects. And yet, in spite of all probability, the hereditary claim was acknowledged, and the succession of the Tetford branch was secured, by one of those unexpected turns of Fortune's wheel which serves from time to time to break the dull monotony of ordinary life, and to give an additional zest to the interest which is so generally taken in the vicissitudes of our chief county families. When, after the death of Mr. H. Lionel Dymoke, in 1875, his last will was opened, it was found that the Scrivelsby estate was bequeathed after the death of the widow of the deceased Champion, not, indeed, to the Tetford Dymoke by special designation, but to "the heir-at-law of John Dymoke, who had died at Tetford in the year 1782." No one—not even the testator himself—doubted that the Dymoke resident at the time at Tetford was the lineal descendant of the Dymoke named in the will; but it would seem as if the dying Champion wished in this emphatic manner to signify his intention not so much to benefit the individual as to redress a supposed wrong which had been done to the elder branch of the family about a hundred years ago. In accordance, however, with the provisions of the will, Mr. Francis S. Dymoke, of Tetford, in 1884 succeeded in establishing his title to the Lordship of Scrivelsby, though not without much trouble and expense. It might not seem a very difficult matter for a gentleman to prove that he was the lineal descendant of his great-grandfather, especially when, as in

ENTRANCE TO THE PARK.

this case, he was himself a landed proprietor, and had inherited property which had come to him by direct succession from his grandfather and great-grandfather. But a hundred years ago, registers were carelessly kept—never perhaps more so than at the end of the last and the beginning of the present century—and members of the Tetford branch of the Dymoke family had an inconvenient habit of dying abroad, without leaving any distinct trace behind them. At last, however, every missing member was duly accounted for, every necessary document was produced, and the Court of Chancery announced with all solemnity that Mr. Francis Scaman Dymoke fully answered the description in Henry Lionel's will, and that he was consequently entitled to take possession of the Scrivelsby Manor as the heir-at-law of the John Dymoke who died and was buried at Scrivelsby in the year 1782.

To understand aright this testamentary disposition, it will be necessary to go back to the year 1760, when the Hon. Lewis Dymoke died a bachelor, at the ripe age of ninety-one, after having officiated as Champion at the Coronation of George I. and George II., and having lived to the year when George III. came to the throne, but not to the year of his coronation, which did not take place before 1761. This Lewis Dymoke, whose monument is a striking object in Scrivelsby church, seems to have outlived all his natural heirs, and striving, we may well believe, to act fairly by his kinsfolk, he instituted an inquiry into the respective claims of the various members of the family; but presently, losing himself in the bewildering mazes of remote cousinhood, he bequeathed the Scrivelsby estates to Edward, the grandson of John Dymoke, the *third* son of Sir Edward, who died in 1664, whereas a descendant of Edward Dymoke, the *second* son of the same Sir Edward, was then living at Tetford, in the person of John Dymoke, the very man to whose heir-at-law the Scrivelsby Manor was bequeathed by Henry Lionel in 1875. Edward Dymoke, however, who at the time was engaged in business in London, succeeded to the Championship on the death of Lewis, in February, 1760, and, dying himself in September of the same year, he was succeeded by his son, John, who acted as Champion at the coronation of George III. Thus, after the protracted life and Championship of the nonagenarian Lewis, no less than three Champions appeared on the scene in the single year 1760. This John Dymoke was followed in succession by his two sons—Lewis, who died a bachelor in 1820, and the Rev. John, who was Champion at the time when George IV. was crowned; but who, being in holy orders, was represented on the occasion by his son Henry, afterwards well known as Sir Henry Dymoke, who, succeeding his father in 1828, died, without male issue, in 1865, and was succeeded by his brother, John, also in holy orders, whose only son, Henry Lionel, bequeathed

THE CHURCH.

the family estates, as above mentioned, to the present proprietor.

The coronation of George IV. was the last occasion when the ceremony of the Championship was performed. Most people have read the account of this ceremony as given by Sir Walter Scott, but it may be worth while to repeat it here. The service was, "on the day of coronation, to ride, completely armed, upon a barbed horse, into Westminster Hall, and there to challenge the combat against any who would gainsay the King's title. At the coronation of George IV. the duty of Champion was performed (as of right) by young Dymoke, a fine-looking youth, but bearing, perhaps, a little too much the appearance of a maiden Knight to be the challenger of the world in the King's behalf. He threw down the gauntlet, however, with becoming manhood, and showed as much horsemanship as the crowd of knights and squires around him would permit to be exhibited. On the whole, this striking part of the exhibition somewhat disappointed me, for I would have had the Champion less embarrassed by his assistants, and at liberty to put his horse on the *grand pas*; and yet the young Lord of Scrivelsby looked and behaved extremely well."

The county of Lincoln does not challenge comparison with such counties as Derbyshire, Kent, or Devon for romantic views or mountain scenery; but it has its own special charms and attractions for those who are strong enough to enjoy the bracing air, and sufficiently appreciative of the beauties of Nature to revel in the glorious sunsets and the wide prospects which can only be seen to advantage in a comparatively flat country.

Indeed, we have heard of a bold assertion made by an enthusiastic native that Lincolnshire is the healthiest county in England, and his own particular village the most charming village in Lincolnshire. That village must surely have been Scrivelsby, for, though on a small scale, it is a very oasis in a somewhat uninteresting neighbourhood. It is well wooded, and the park, which is abundantly studded with deer, is so ingeniously laid out as to give the appearance of being much larger than it really is; and we can easily understand the tradition that comes down to us from old coaching days—that the drive through Scrivelsby was looked forward to as a special treat, and that many a weary traveller has ofttimes been refreshed by the sight of the charming glades and beautiful timber which still attract everyone who has the capacity for enjoying tranquil sylvan scenery.

Scrivelsby Court is a mansion of the Tudor order of architecture, not very large or imposing in appearance, but prettily situated, and quite sufficient for the ordinary requirements of a country gentleman. It has more than once suffered from fire, and the consequent repairs and rebuildings give it an irregular appearance. Part of the house is very old, and part comparatively modern, the greater portion consisting of the house that was built after the great fire that occurred towards the end of the last century. It is much to be regretted that on that occasion one of the special features of the residence of the old Champions was entirely consumed. This was a large hall, ornamented with panels, each one of which had its own special tale to tell of the former glories of the house. In these panels could be traced, we are told, in heraldic emblazonment the various arms and alliances of the family, and great and irretrievable was the loss to the antiquary by the destruction of this series of historical representations. A few years ago might be seen in the corridor leading to the principal apartments a series of figures in complete armour, supposed to represent the different Champions that had taken part in successive coronations. Some of these coats of armour were of great value, being plentifully embellished with gold and ornamental devices of exquisite workmanship; but these, unhappily, have entirely disappeared, and their place is now occupied by one or two figures in armour of no great value or interest.

The Armoury, one of the most characteristic features of Scrivelsby Court, stands at the right hand of the principal entrance, and bristles with warlike implements of every kind. Here are to be seen, on a small scale, all the paraphernalia of a mediæval knight, horse accoutrements in every variety, richly-embroidered saddles and tasselated bridles, stirrups and bits with pendant ornaments, trappings and frontlets for the steed with greaves and gauntlets for the rider, massive swords for the battle-field and dainty little swords for the drawing-room, pikes and halberds and lances of every size and description, the ponderous mace to stun the foe and the light dagger to give him the *coup de grace*, swinging instruments for crushing at a distance and sharp poignards for use at close quarters, bucklers and breastplates and cuirasses—the whole array constituting an apparatus sufficiently extensive to satisfy the personal requirements of the most bellicose warrior of ancient times, while it forms a very remarkable contrast to the weapons in use at the present day. There is also a leathern flagon or black-jack of huge capacity, which, when filled with beer or wine, no Champion, however stalwart, could easily raise to his lips, and which no thirsty soul, however anxious to distinguish himself, could possibly empty at a draught, even after the heavy fatigue of a coronation day in Westminster Hall!

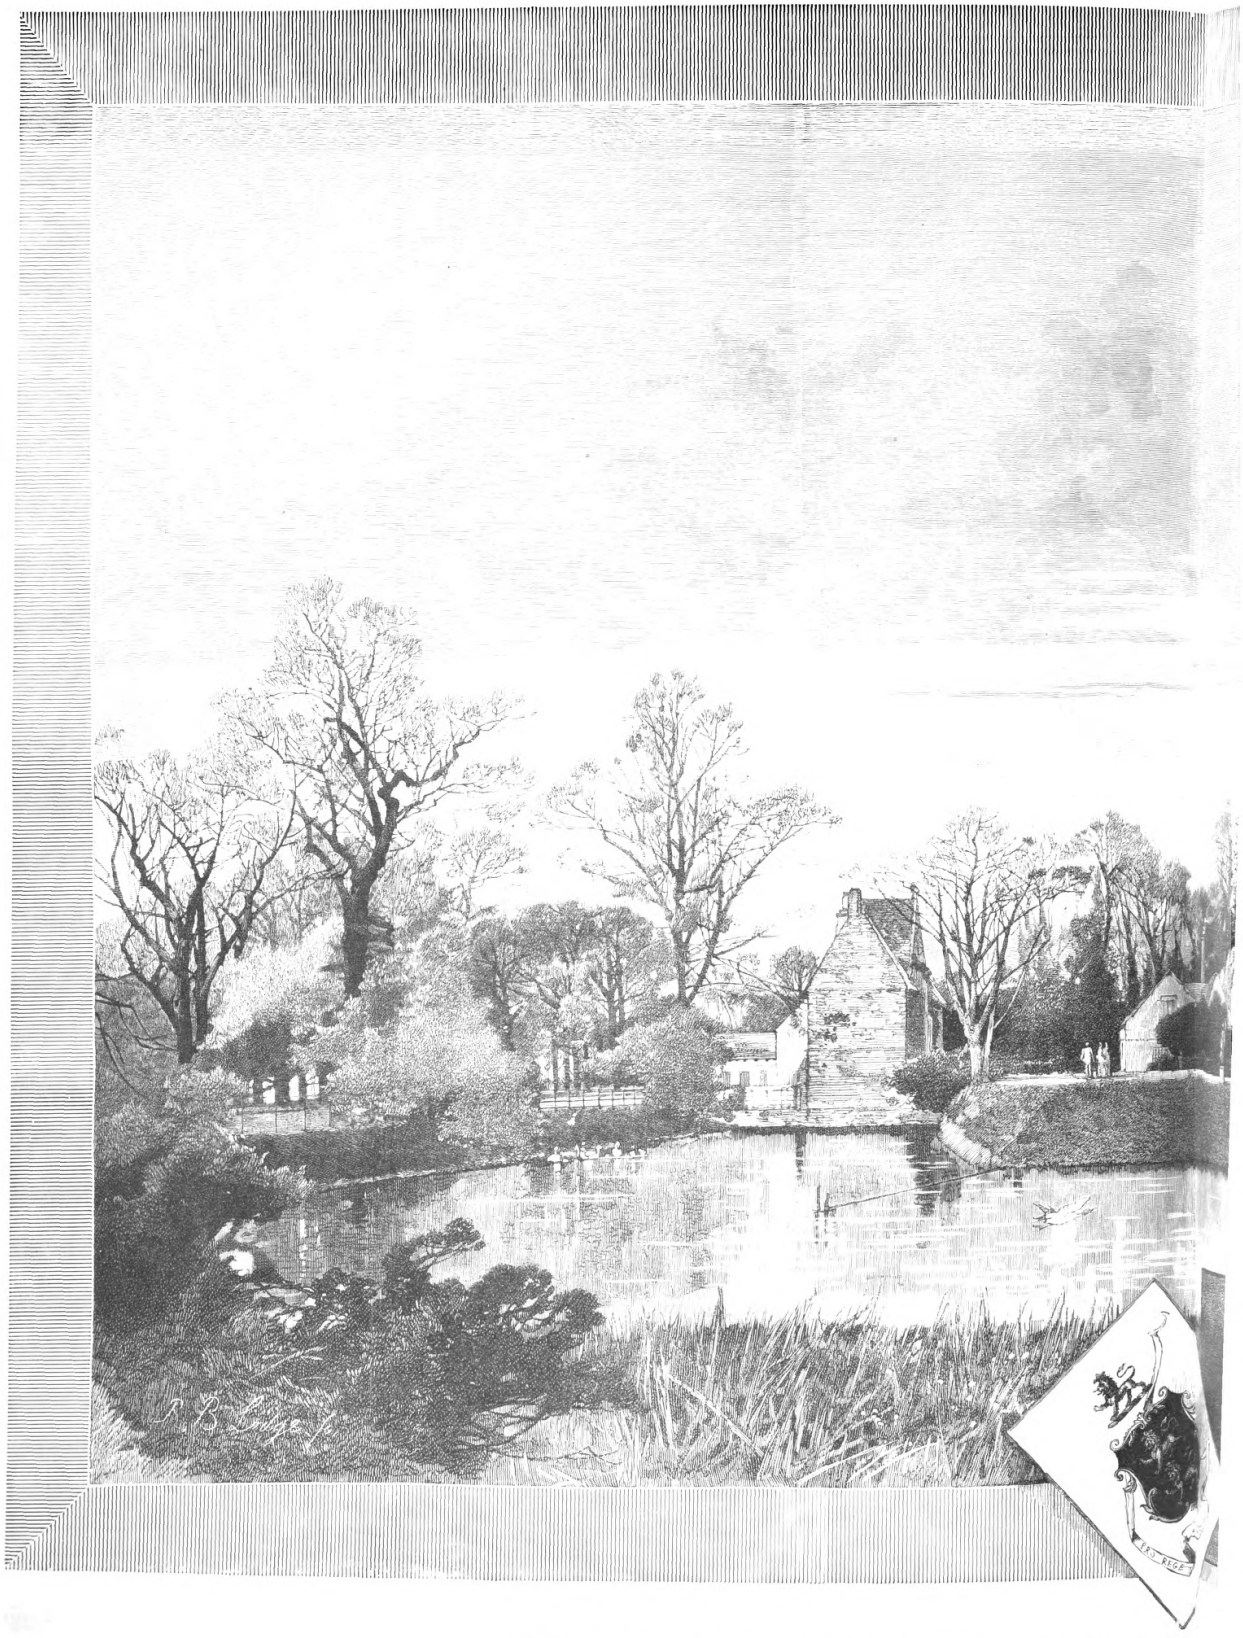
A few family portraits by old masters, and of different degrees of excellence, are to be seen in the dining-room, where is also a life-size portrait of young Henry Dymoke, as he appeared at Westminster in 1828, mounted on his charger, fully armed and accoutred for the bloodless duties of the Championship, which, as the representative of his father, he performed at the coronation of George IV.

The village of Scrivelsby is situated some two miles and a half from Horncastle, the central town of Lincolnshire, and famous all the world over for its great horse-fair. Taking the Southern-road—the old coach road to Boston and London—we reach Scrivelsby by a gentle rise, which, though in the parish of Horncastle, is generally called "Scrivelsby Hill." As we pass the boundary line which separates Scrivelsby from Horncastle we are at once conscious of passing into a different atmosphere, and into different surroundings. No longer a bare prospect, with only an occasional tree to relieve the monotony of the view, but a sudden plunge into small copses at the extreme edge of a deer park, a distant sight of pleasant coverts giving hopes of abundance of game, the cheery appearance of a cock pheasant hurrying across the road to join his mates on the other side, an occasional hare or two, and, as we go forward, troops of rabbits scampering to their burrows at the roots of many an aged tree, all betoken the approach to a gentleman's seat. As we reach the park itself, and catch sight of the deer scudding away at the sound of approaching wheels, we pause a moment to admire the view, and to take stock of the beautiful timber. A few steps bring us to the gardener's ivy-clad cottage, and to the chief entrance to Scrivelsby Court, up a slight winding incline, hemmed in close with trees on either side, forming a natural archway overhead, and affording a subject for a telling sketch, which at different times has been taken by many an artist and amateur. Here, at the entrance to the park, a little to the left, and facing the road leading to the Rectory, stands the famous Lion Gate, so-called from the lion which stands on a stone archway, which is covered with ivy, and gives abundant evidence of old age. The careful observer will not fail to notice on the right-hand side of the arch a rude, but curious, cutting, giving a rough delineation of the etymology of the name of Dymoke. An oak-tree is plainly visible, the stem of which divides into two equal portions the letters R D Y M O K, which in all probability may be taken to signify that the arch was built by Sir Robert Dymoke, who was Champion at the coronations of Richard III., Henry VII., and Henry VIII., and that the name of Dymoke is derived from an oak-tree. To this derivation agrees the description which is found in ancient charters of the family name, which is represented as Dimoak, *de umbrosâ quercu*, Dimok, Dimmock, and so on through various changes to Demok, Dimock, Dymok, till we come at last to Dymoke, which is new, and has been for a long time, the descriptive title of this ancient family. It has sometimes been gravely asserted that the punning motto of the house, *Pro rege dimico*, contains the germ from which the family name is derived; but it is evident that the name was cleverly adapted to give point to the motto, not that the motto suggested the name. The Dymokes can trace their history further back than to their connection with Scrivelsby and the Championship. They came originally from Gloucestershire; but by the marriage of Sir John Dymoke to Margaret Ludlow, in the fourteenth century, the name of the original Champions, Marmyon and Ludlow, disappears, and is merged in that of Dymoke, which "holds the field" to the present day.

SOME OF THE CORONATION CUPS.

THE GARDENER'S HOUSE IN THE PARK.

Scrivelsby church is a rather disappointing building. It stands in an unusually large churchyard of nearly two acres, and is very prettily situated, but it has no pretensions to architectural beauty, and until quite a recent period it had no spire to relieve the appearance, which it used to present, of a long nave attached to a steep-roofed chancel. In the year 1860, however, the Champion of the time, Sir Henry Dymoke, who was always foremost in every good work, took advantage of a general restoration which was being carried out by the parishioners, to erect a spire, which is exactly identical with the spire of the neighbouring church at Wood Enderby, which was built at the same time, and at the sole charge of Sir Henry Dymoke. The interior of Scrivelsby church has been fitted up with new woodwork, in the time of the present Rector, and though the building is, apparently, too large for the scanty population, it is well adapted for the orderly and reverent celebration of Divine service. A handsome screen separates the chancel from the nave, and just without the screen on the north side is a tomb, with a beautifully-preserved brass plate, which bears the following inscription:—



Here liethe the Body of sir Robert Demoke of Screbelsby knight baronet who departed owt of this present lyfe the xb day of Aprll in ye yere of our lord god mdlxb upon whose sowle almighte god habe m'ci Amen.

This inscription is remarkable as describing the Champion, who died in the reign of Queen Elizabeth, by the title of *Baronet*, a title which, as every schoolboy knows, was first introduced into England by King James I. The probable explanation is that the tomb was not erected till many years after Sir Robert's death, and that the sculptor, who was becoming familiar with the new title of Baronet, substituted that word for *Banneret*, the word which was probably contained in the instructions given to him by some member of the Dymoke family. The church also contains two recumbent effigies in stone, on raised platforms, representing a knight in chain-armour of the thirteenth century, and his dame, with the wimple on her head and the favourite dog at her feet, which, as has been mentioned above, are supposed to be the figures of Sir Philip Marmyon and his wife, who were the last of the Marmyons who lived at Scrivelsby. In different parts of the church may be seen the marble monument to old Lewis Dymoke, and mural tablets to the Hon. John and his two sons, Lewis and the Rev. John Dymoke the elder, both of whom succeeded to the Championship. There is also a tablet to the memory of Sir Henry Dymoke, who died in 1865, and over whose grave in the adjoining churchyard has been erected a handsome canopied marble monument which bears a suitable inscription to the memory of himself and also of his dame, who died in London and was buried at Scrivelsby in the year 1884. A memorial window to the same lady, in rich painted glass, has been recently placed in Scrivelsby church by Captain Hartwell and his wife, who was the only child of the late Sir Henry and Lady Dymoke. Outside the church, at its north-western extremity, is a handsome and conspicuous churchyard cross to the memory of Henry Lionel Dymoke, the last of that branch of the family which for little more than half a century enjoyed the Scrivelsby inheritance. Near this cross is a stone recording the death and interment at Paris, together with the re-interment at Scrivelsby after an interval of five years, of Mary Anne, widow of the Hon. and Rev. John Dymoke, the younger, who was Champion from the time of his brother Henry's death, in 1865, to his own death, in 1873, when he was succeeded by his son Henry Lionel, who only survived his father for the short space of two years.

In concluding this brief account of the interesting associations which cluster thick around the historical records of Scrivelsby Court, it is impossible to forbear a passing sigh of regret at the discontinuance of the ancient ceremony of the Championship at the coronation of our Kings and Queens, which, though possibly unsuited to this prosaic and utilitarian age, was, at least, a connecting link with our past history, and was not without its own special interest to the lovers of tranquil and orderly government. But although the appearance of an armed Champion in Westminster Hall may be no longer necessary to symbolise the readiness of a loyal people to rally round the Sovereign in the hour of need, the rôle of the Champion Dymokes is, happily, not yet played out. There are other and more peaceful duties besides those connected with the Championship—duties which are inseparable from the position of a country gentleman, resident on an estate which has been in the occupation of his ancestors for more than 500 years. And now that this ancient family is beginning a new chapter in its eventful history, we may be permitted to echo the general wish that, like the sapling from which it takes its name, it may strike deep its roots, and crown with many a well-earned wreath in years to come the bearers of the time-honoured title—the Champion Dymokes of Scrivelsby.

DUKES, HEREDITARY CHAMPIONS OF ENGLAND.

NEW BOOKS.

The Fighting Veres. Lives of Sir Francis Vere and Sir Horace Vere, Lord Vere of Tilbury. By Clements R. Markham, C.B. (Sampson Low and Co.).—The tercentenary commemoration of the defeat of the Spanish Armada, which was the turning-point of English intervention to aid the people of the Netherlands in their heroic struggle for freedom, gives a special interest to this valuable historical work. The author has long since gained public esteem by his labours as secretary to the Hakluyt Society and to the Royal Geographical Society, by his learned researches, his personal surveys, and his share in different explorations in the Arctic Regions, in South America, in India, and in Abyssinia, and by literary productions of an instructive kind. He is intimately conversant with the naval and military history of the sixteenth and seventeenth centuries, and has made diligent study of local antiquities and biographical documents concerning the worthy Englishmen whose deeds are recorded in this volume. Its title, though sufficiently promising of tales of warlike adventure, does not, we think, at all do justice to its real importance as a contribution to general history. The lack of a full and accurate narrative, in English, of the actions of our countrymen, during more than half-a-century, in the great conflict for political and religious liberty on the shores of Holland and Flanders, and in Brabant and Gelderland, has often been felt. Neither Mr. Motley nor Mr. Froude has supplied this deficiency; Mr. Froude's history of the reign of Elizabeth tells us very little, and with extraordinary mistakes, of the incidents that took place in the Netherlands from 1585 to 1589, beyond which date it is silent. We are much indebted, therefore, to Mr. Clements Markham for supplying, in the guise of mere biographical memoirs, a very complete and comprehensive special account of this memorable series of transactions, which redound to the honour of the English nation. Of the two distinguished brothers, Francis Vere, born about 1560, and Horace Vere, born in 1565, grandsons of the Vere who was fifteenth Earl of Oxford, at one of the family residences near Colchester, the first joined the military force under the Earl of Leicester, sent to aid the Dutch at the end of 1585, and was from August, 1589, when Lord Willoughby, the successor to Leicester, had retired, actually in command of the English troops. Sir Francis Vere was chiefly employed in that service until 1606, with the exception of sharing in the expeditions of the Earl of Essex to Cadiz, in 1596, and next year to the Azores. Horace Vere, who began serving under his brother in 1590, remained in the Netherlands, performing brave actions and holding important offices, till 1619; he commanded the English troops in the Palatinate during three or four years, and in 1624 was again in Holland, making a skilful but unsuccessful effort to relieve the besieged garrison of Breda. Nearly forty years of English action in "the Low Countries" will thus be found comprised in their united biography; and it is not so much for the personal interest of the career of these "Fighting Veres," as for the popular and national character of the cause in which they fought, that we care to learn how it was conducted. Queen Elizabeth herself deserves no praise whatever for the help willingly given by her subjects, mostly volunteers serving at their private cost, to the oppressed Dutch and Flemings. She was neither a true Protestant, or at all friendly to the rights of conscience, nor was she favourably disposed to claims of civil freedom; but she complied with an irresistible movement of public opinion, while often dealing perfidiously with those whom she pretended to assist. Before the excention of Mary Stuart, Elizabeth secretly betrayed the Flemings The whole war against Spanish tyranny and Popish persecution was never so much the Queen's war as the English people's war. Mr. Markham's suggestion, that it had the effect of originating, at least of developing, those ideas and sentiments to which are owing the English Revolution of the seventeenth century, the progress of constitutional liberty in this country, and the rise of the United States of America, does not appear to us much overstrained. They were English and Dutch ideas, in the Elizabethan period, but were not Elizabeth's ideas, and she would rather have extinguished them if she could. As for her favourite, Leicester, a personage grossly maligned by romance, and not guilty of the heinous crimes imputed to him, we believe, with Mr. Markham, that he was zealous, like his nephew, Sir Philip Sidney, who repelled the calumnies against him, in his devotion to the Protestant cause. The misconducted action of Zutphen, in which Sidney lost his life, was just such a military blunder as that of Balaklava in the Crimea. Leicester was not a skilful general, but he did his best with his moderate ability; and his successor, Lord Willoughby, whom Mr. Froude ignores, did excellent service. Though Mr. Markham refrains from exposing Mr. Froude's careless superficiality, it is worth while, for instance, to compare the correct and minute account of the defence of Bergen-op-Zoom, and the stratagem by which the Spaniards were defeated there, with the slighting mention of it by Mr. Froude, who speaks of a "Colonel Grimstone" as being in command when the Duke of Parma was deceived by allowing him to approach the North Fort, relying on the pretended consent of some officers to let him in. The fact is that Grimstone was an obscure underling of no rank, who had detected the offers of treachery, and that Lord Willoughby, in personal command of the garrison, aided by Francis Vere, adroitly took advantage of them, inflicting a severe repulse on the enemy. Mr. Froude is seldom to be relied upon for the truth respecting military actions, and his statements of diplomatic and political negotiations are coloured to suit his partial views. We find much ground, on the contrary, to trust Mr. Markham, whose very instructive book, containing precise details of every notable incident, an exact topographical and picturesque description of every notable place, with abundance of good maps and plans, and a particular account of the organisation, equipment, and methods of operation of the Spanish army, will supersede all other English historical writings on this subject. It is a narrative of great interest, temperately and clearly related with a justifiable modest pride in English valour; and we should like, if our space permitted, to follow it through many campaigns and sieges, from Flushing, Sluys, and Bergen-op-Zoom to Breda, to the Westphalian frontier, to Gertruydenberg and to Gröningen, to the Bommelwaart, to Nieuport and Ostend, and to Bois-le-Duc and Maestricht in 1632, where "the Fighting Veres," with hundreds of gallant English volunteers, fought again and again for the rights of free nations and for religious liberty. The independence of the Netherlands has ever been regarded as essential to the safety of England; and, if the neutrality of Belgium or Holland were hereafter invaded by any great Continental Power, we earnestly trust that our countrymen, who defended those lands against Philip II., against Louis XIV., and against Napoleon, would once more rise to the emergency, however indifferent they may be to any other territorial changes in Europe.

The Prima Donna: Her History and Surroundings from the Seventeenth to the Nineteenth Century. By H. Sutherland Edwards. Two vols. (Remington and Co.).—A well-chosen collection of anecdotes and testimonies concerning the famous and charming persons who have won public favour as female performers of dramatic music cannot fail to be entertaining. Mr. Sutherland Edwards, as a learned and experienced musical critic and a skilful compiler of anecdotal literature, was excellently qualified for this task; and his recent work has an especial interest just now, in view of the uncertain prospects of Italian Opera. In the progress of the fine arts, one may say, the only notable advance of modern times, besides landscape-painting, has been the combination of elaborate singing with stage acting. The female sex have gained more celebrity than male singers, through the superior flexibility of voice, which, in some cases, for instance in that of Madame Catalani, has vied with the utmost effects of single instrumentation. At the same time, though mere prettiness is no special qualification for an actress striving at powerful expression, a graceful womanly figure, with a face capable of representing the passions, is a needful agent to produce the romantic and emotional effects of the lyrical drama. Women successful in this line of art must be endowed with physical vigour, but can dispense with the gift of regular beauty, and are not, by any necessary demand of their work, highly intellectual women. Their lives are nevertheless apt to be interesting, while it is but just to say of them, as a class, that, considering the temptations of celebrity, their private characters, in a long list, bear comparison with those of most other ladies living within reach of luxury and fashion. This is certainly true of some who have attained the highest eminence; and the "chronique scandaleuse," relating to a few less important artists who were in vogue on account of their feminine attractiveness, and two or three of whom finally married Englishmen of rank, is but very little touched in these volumes. The besetting sins of the prima donna were rather, in the last century, a furious jealousy of her professional rivals; and, in later times, a pecuniary greediness for which her vast opportunities might afford sufficient excuse. But it is disagreeable to dwell on the faults of persons who have given so much pleasure to mankind, and several of whom, in our own day, have been esteemed for their generosity, amiability, and domestic virtues, as well as their good sense and discretion. We of this generation can take up Mr. Sutherland Edwards' gallery of first-rate opera-singers, in the middle of his first volume, with almost contemporary interest, having perhaps heard our parents speak of their hearing Catalani, who sang in London or Dublin so lately as 1828. The visit here, soon afterwards, of the great composer Rossini, with his wife, who had been Mademoiselle Colbran, a native of Spain, and a fine interpreter of his music, was an event to be remembered. Madame Pasta, till her retirement in 1839; Fräulein Sontag (Countess Rossi), who died in 1854, having returned to the stage after eighteen years' retirement; and Madame Malibran, whose husband was the Belgian violinist, De Beriot, and whose career was unhappily stopped by an untimely death in 1836, were admired by our elders. Their personal characters, and the incidents of their history, as well as their noble gifts of song and of telling expression, merit the place here allotted to them. Sontag, the wonder and the darling of Germany, and Malibran (born Marietta Garcia), whose versatile cleverness and delightful vivacity, shown in various ways among her private acquaintance, are described by Moscheles in delightful passages of his journal, are singularly attractive subjects. But there is a yet stronger interest, to our mind, in the life of Grisi and Mario, a happily wedded couple who, for nearly thirty years, mutually aided each other's studies and performances, in beautiful companionship, and of whose true-hearted frankness and kindliness, the warmth of their family affections, and their simple tastes and habits at home, this book gives a very pleasing account. The great era of Italian opera is past; those compositions of Rossini, Donizetti, Bellini, and Verdi, which once had power to stir the sympathetic imagination, as well as to gratify the senses, have had all other entertainments, may hereafter be cast aside; but no one who ever heard Grisi in "Norma," or the prison duet in "Il Trovatore," sung by Grisi and Mario, can lose the impression of that dramatic music. Of their genial manners, and of their pure and refined enjoyments in private life, we learn a good deal from Mr. Willert Beale, and from Mrs. Godfrey Pearse, one of the daughters of Madame Grisi and Signor Mario, in some notes supplied by them to Mr. Sutherland Edwards. His second volume begins with a short memoir of Jenny Lind, the late Madame Goldschmidt, whose career on the opera stage was indeed very brief, and who soon relinquished even singing at public concerts; but whose exquisite natural gifts of voice, feeling, and artistic capacity have scarcely been excelled, and whose sweetness of nature made her the object of enthusiastic popular affection forty years ago. Madame Bosio, removed from an admiring world, like Malibran, by an early death, occupies the next chapter; in which also the author, who was at Moscow in 1856 at the coronation of Alexander II., minutely describes Glinka's celebrated Russian national opera, "Life for the Czar." The successor to Grisi, as we may consider Titiens was, seems to have had no adequate successor in the classic characters of grand Italian opera; and Mr. Sutherland Edwards has not, apparently, a very sanguine hope of its restoration to its former importance. In the remaining chapters of his work, as might be anticipated, the principal figures are those of Adelina Patti, Pauline Lucca, and Christine Nilsson, three distinguished contemporaries whose success has been most conspicuous; and Madame Albani, the wife of Mr. Ernest Gye, a lady of French Canadian birth, whose original name was Lajeunesse. Her most remarkable performances in England being associated with Wagner's compositions, we have some critical and historical notice of these in the chapter devoted to Madame Albani. Public interest being still fresh and lively, at the present day, in what regards Madame Patti and Madame Nilsson, we need only refer to Mr. Sutherland Edwards as a competent recorder of matters within the recollection of all who care for the opera, and for its leading performers of recent date. Many other ladies of some note are disposed of by him in "A Flight of Prime Donne"; and his candid remarks on their position, and on the management of London opera theatres, are worthy of due attention. It would seem that the "prima donna," by her inordinate demands, has killed and devoured the opera as a remunerative enterprise, and as a satisfactory artistic representation of grand works. Paying one lady at the rate of £500 a night makes it impossible to employ good singers and actors in the accompanying parts; and there is an end of dramatic combination.

POSTAGE FOR FOREIGN PARTS THIS WEEK.

JULY 28, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates: To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny;* THIN EDITION, *One Penny.* To Australia, Brazil, Cape of Good Hope, China (viâ United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence;* THIN EDITION, *One Penny.* To China (viâ Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny;* THIN EDITION, *Three-halfpence.*

Newspapers for foreign parts must be posted within eight days of the date of publication, free of postage, at the *departure* of the mails.

THE LADIES' COLUMN.

Very Irish is much of the management of the Irish Exhibition. The grounds are, up to this moment, in a state of squalid-looking dirt and disorder, the grand stand is yet in process of building, and the special attractions—feats of horsemanship and the like—can hardly be presentable till the time comes for the whole affair to end. The Fancy Fair held there from July 17 to 20 was, however, quite properly prepared—no doubt because a committee of ladies managed it! All drawbacks arose from the narrow and dark condition of the wood and cardboard structure called the "Irish Village-street," in which the fancy fair was held. The pushing was the most appalling that I ever experienced at such an event, and the darkness of the stalls, necessitating artificial light, raised the temperature so high that really the ladies who remained there for hours displayed downright heroism. A great many titled women gave their services as sellers: the object being to recoup the expenses of bringing to the Exhibition for sale the work of Irish peasant women. There were ten stalls, covered with the usual fancy goods, and a special display of Irish products.

Princess Mary, Duchess of Teck, opened the fair. Her Royal Highness, of course, wore black; her gown being of plain and moiré silk stripes, and her bonnet of tulle with feather aigrette. To the general regret, the pretty, bright Princess Victoria Mary was absent from the scene, but there were dozens of lovely maidens helping their mammas or friends at most of the stalls; nearly all the girls were dressed in white muslin or lace with sashes of various colours. Foulard dresses were most popular with the married ladies, and, indeed, no material can make better fête-gowns, elegant, simple, and unrushable all at once.

Amongst the group of patronesses awaiting the arrival of the Princess at the door of Olympia, Lady Aberdeen, with her three sweet little children, attracted great attention. The ex-Vicereine of Ireland wore a gown of white Irish poplin, made with a round body, and a narrow belt and hanging reticule of green poplin. Limerick lace formed a short drapery at the top of the tablier; Irish moss composed the foundation and the coronet of the bonnet, the green ribbon strings of which were fixed by three little shamrock brooches of Irish spar, while a necklace of shamrocks in the green Connemara marble finished a costume carefully and kindly thought out to compliment the country concerned. The little Lord Haddo and his tiny brother were dressed like Irish peasants, in grey frieze coat and knee-breeches and green knitted stockings, the get-up being carried out even to the extent of a short pipe and a few half-burnt matches stuck in the hat-band of the soft low round cap: while small Lady Marge Hamilton-Gordon, a pretty child of eight, had on a blue check cotton peasant's gown turned up over a green frieze petticoat. There was a very charming gracious intention in all this, and Lady Aberdeen can lack only one qualification for being an acceptable Vicereine to the Irish—that she is not Irish, but Scotch. Another ex-Viceroy's wife there was Countess Spencer, in black silk, with a grey net bonnet embroidered in steel beads and trimmed with grey ribbon. The reigning Vice-Queen, the Marchioness of Londonderry, was one of the chief ornaments of the occasion, her vivacious and airy style making her a model mistress of the flower-stall, where susceptible gentlemen from the wilds of the provinces gladly paid her a shilling each for her roses provided she placed the flowers in their buttonholes. Lady Londonderry looked charming in a foulard dress with a white ground and a pattern of blue wheat-ears over it, and a love of a bonnet in white tulle, trimmed up the back and high in front with white "traveller's joy" or wild jessamine and white moiré ribbon.

Lady Salisbury, in black-striped foulé, with a triangular vest of black moiré back and front and jet epaulettes, also sold at the flower-stall. The Duchess of Manchester was there also, wearing a superb white poplin dress, trimmed gold passementerie. Countess Delawarr, in a pretty gown of transparent lace and heliotrope silk ribbon alternate stripes, sold books and photographs. The Countess of Caledon, wearing white Ottoman silk with a full waistcoat of pleated muslin and white lace and moiré ribbon bonnet, was with Lady Leitrim at a fancy stall. Lady Fanny Fitzwygram had a tan-coloured foulard, prettily embroidered with many-coloured silks and panelled with brown velvet. The Countess of Kilmorey's gown was black and white check foulard with a full and folded white silk front, and a black chip bonnet with white feathers. The Marchioness of Waterford, tall and beautiful, wore white mousseline-de-soie, with tablier of embroidered lisse and a full vest of the same gathered at the bottom; green and gold straw bonnet trimmed with green ribbon bows and narcissi. Lady Jane Taylour wore black frisé velvet. Lady Charles Beresford had a smart trimming of gold passementerie on a black dress. The Dowager Lady Westbury was in a black and white foulard, with a white vest. Mrs. J. S. Wood was with "the greatest of the great ladies" at the flower-stall, and looked as nice as anybody, in a heliotrope foulard dress and big-brimmed Leghorn hat; while Mrs. Oscar Wilde had an Empire dress of black silk and lace, with sash high up under the arms. Mrs. Gladstone, at Lady Aberdeen's stall, looked extraordinary with a big square of white Irish point reaching to near the bottom of her black gown.

Everybody who has followed through its course the case of the Indian child-wife, Rukmabhai, who was married in her earliest infancy and refused to fulfil the contract when she came to years of discretion, will be glad to hear the final result. The English court of law, before which the case first came, ordered Rukmabhai to go to live with her husband, and sentenced her to six months' imprisonment in case of her refusal to obey the order. She would not, of course, have been freed from the order by the punishment, but might have been sent to prison again and again till she consented to submit to receive as her husband the man to whom she had so great an aversion, and to whom she had been united in her helpless infancy. I pointed out, when this judgment was given, that it was iniquitous for our courts of law, our prisons, and our police to be used in this way to fix the yoke of a cruel custom on our Indian sisters. It may not be possible for England to take a decisive step and prohibit baby marriage, though such interference with native evil customs was successfully ventured upon in the case of Suttee. When the priests sent a message to Lord W. Bentinck that their law and religion compelled them to burn widows alive, the robust Governor replied that if they did so English law and English religion would have them one and all hanged; and that put an end to Suttee. If this much cannot be done with regard to child marriage, at the very least the English law should not sanction it and compel by its force the Hindoo women to submit to the practice. This, most happily, is the view taken by the Supreme Court of Appeal. Infant marriages are not declared illegal, but English courts and prisons will never be used to enforce their claims. At the same time, an important meeting of great Indian Princes has just been held, and has declared that no girl shall be married till she is twelve years of age. If this be generally adopted, the sorrows of Indian womanhood will be greatly diminished.

FLORENCE FENWICK-MILLER.

MUSIC.

ROYAL ITALIAN OPERA.

As previously stated, the fortnight's extra performances at this establishment terminated on July 21. Since the production of Verdi's "Aïda" (already noticed), the proceedings have included Boïto's "Mefistofele," which, like "Aïda," was given but once this season. The production of the last-named work could, owing to pressure on space, only be noticed now. The libretto, as well as the music, is the work of Signor Arrigo Boïto, who resembles, in the combination of the poet with the composer, the late Richard Wagner, whose later music has undoubtedly influenced the style of the living Italian master. "Mefistofele" was originally produced at La Scala, Milan, in 1868, and obtained great success there and elsewhere in Italy. It was first given in England by Mr. Mapleson, at her Majesty's Theatre, in 1880, and has since been repeatedly performed there and at the Royal Italian Opera. The characteristics of the opera, and the individuality of the treatment of Goethe's "Faust," which distinguish it from Gounod's opera founded on the same subject, have before been dwelt on, and need not here be further discussed. In the recent performance now alluded to, the characters of Margherita in the first part, and of Elena in the second (classical) part, were sustained, respectively, by Miss Macintyre and Miss Ella Russell, instead of being assigned to the same artist, as heretofore. Each lady sang with special grace and refinement. The secondary, but still important, character of Marta in the first part, and that of Pantalis in the subsequent classical part, were, as previously, sustained by the same representative; who, on this occasion was Madame Scalchi, whose vocal excellence was admirably manifested in each portion of the opera. A special feature was the fine performance of M. E. De Reszké as Mefistofele, both in its dramatic and its musical aspect. The declamatory passages which so largely prevail were grandly delivered. As Faust, Signor Ravelli sang in genuine cantabile style. With four such artists as Miss Macintyre, Madame Scalchi, Signor Ravelli, and M. E. De Reszké, the beautiful music of the garden-scene could not fail to be adequately rendered; this fine scene having, as usual, formed an admirable contrast to the weird style of other portions of the opera. The subordinate characters of Wagner and Nereus were sufficiently well filled by Signor Rinaldini. The stage effects were worthy of the occasion, orchestra and (augmented) chorus were excellent, and the performance was skilfully directed by Signor Mancinelli. The closing performance, on July 21, consisted of a repetition of "Les Huguenots," with a strong cast, nearly as before. Mr. Harris made a short address to the audience, expressive of a hope to render the season of 1889 equally successful with that which has just ended.

The season just closed opened on May 14, and has comprised many performances, classical and popular operas having been given with a general efficiency, and, in many instances, with an exceptionally strong cast, that have rendered Mr. Augustus Harris's first occupancy of the Royal Italian Opera-House a memorable event in the history of that establishment, and a worthy pendant to his first venture in Italian opera at Drury-Lane Theatre last year. On that occasion the excellence of the musical arrangements, and the exceptional splendour of the scenic and stage accessories, were such as to elicit general acknowledgment; very noticeable was the attention paid to accuracy of costume and the consequent avoidance of the absurd anachronisms in that respect which have so often before characterised performances of Italian opera. The results obtained last year have, in every respect, been fully equalled in Mr. Harris's first season at the Royal Italian Opera-House. Artists of high excellence have appeared—including several who were associated with last year's Drury-Lane performances. Mesdames Albani, Nordica, Minnie Hauk, Fürsch-Madi, Hastreiter, Scalchi, and Trebelli; Mdlles. Sigrid Arnoldson, Ella Russell, Bauermeister, L. Lablache, and C. Desvignes; MM. J. and E. De Reszké, Lassalle, and Prévost; Signori Ravelli, Rinaldini, Del Puente, Cotogni, Ciampi, Navarrini, Novara, De Vaschetti, and Miranda have appeared in the season of 1888; not to specify others who contributed in their several degrees to the general efficiency: besides which several new appearances have been made, the most important of which was that of Miss Macintyre, who achieved a special success; one, indeed, that was remarkable, considering her youth and previous inexperience of the stage. As said in previous notices, such a commencement so young should lead to a distinguished career. Mdlle. Rolla claims particular mention for her excellent performance as Donna Elvira, in sudden replacement of Miss Macintyre in consequence of illness. The effect then made was sustained by Mdlle. Rolla on subsequent occasions. First appearances were also more or less successfully made by Mdlles. Zepilli-Villani, Melba, Martini, Columbia, and De Lussan—other débuts not having been sufficiently important to call for specific mention. The chorus manifested marked improvement on performances of previous seasons, the effects, in grand opera, having been greatly enhanced by large reinforcements of fresh voices. The orchestra was not, at first, so satisfactory as afterwards, owing to the importation of many new members, the result having been much improved after the first few nights. The office of conductor-in-chief was zealously and skilfully fulfilled by Signor Mancinelli, similar praise being due to Mr. Randegger for his occasional direction of performances.

There has been a judicious avoidance of the usual struggle after the production of novelties, these in recent years having been generally, more or less, failures. The policy has been the wise one of giving classical and popular operas of proved power of attraction, thoroughly well rendered, and mounted with scenic splendour.

The artistic result of the past season has been such as to induce a desire for the continuance of Mr. Augustus Harris in his new position as director of Italian opera, and we believe the financial results are such as also to justify the expectation.

With the termination of Mr. Augustus Harris's first lesseeship of the Royal Italian Opera, and the approaching end of the London season, comes the subsidence of musical performances which is naturally consequent thereon. The lull, however, is but comparative. Covent-Garden Theatre will be reopened for promenade concerts on Aug. 11, again under the lesseeship of Mr. W. Freeman Thomas, and with Mr. Gwyllym Crowe as conductor.

Recent miscellaneous concerts have included those of M. Hollman, the esteemed violoncellist; Señor Manjon, the blind guitarist; Mr. and Miss Asher, and Miss M. De Grey; concerts at Stafford House and the Kensington Townhall—in the former case in aid of the funds of the National Physical Recreation Society, in the latter instance in aid of the London Anti-Vivisection Society; by Signor Bottesini, the incomparable contrabassist; by Mr. Templer Saxe; performances by the students of the Royal Academy of Music, and distribution of prizes to pupils of the institution; and a concert of Dr. Wylde's London Academy of Music and distribution of medals to students thereof.

Mr. Jerome Hopkins, who announces himself as "the American Musical Radical Composer and Pianist," gave an invitation-concert lately at St. James's Hall (in one of the small rooms). As the occasion was of a quasi-private nature, all that need be said is that Mr. Hopkins's executive skill was displayed in various pieces of his own composition, in some of which he had the co-operation of Mdlle. Jeanne Douste (pianiste), Mr. G. Frank (violinist), Mr. Whitehouse (violoncellist), and Mr. B. Grove, who was announced as "the distinguished basso." Mr. Hopkins has composed a large number of works (he says between seven and eight hundred) in nearly all styles, and has received congratulatory letters from Liszt, Berlioz, and other celebrities, besides many laudatory notices in American newspapers.

In advance of the longer-established autumn provincial festivals—at Birmingham, Hereford, and Bristol—was that (of more recent institution) at Chester, on July 25, 26, and 27. Having already given details of the arrangements and the scheme of performances, brief notice may now suffice. The special Sunday services of July 22 were followed by the opening performance of "Elijah" in the cathedral on July 25. The only absolute novelty was the symphonic cantata, "Oh, sing unto the Lord," composed for the festival by Mr. Oliver King This formed part of the programme for Thursday, July 26.

Performances of Wagner's "Parsifal" (nine), and of his "Die Meistersinger" (eight), were announced to begin at Bayreuth, on July 22, and to conclude on Aug. 19.

ROSE-LEAVES.

"I have been in Corisande's garden;" says Lothair, in Lord Beaconsfield's novel, "and she has given me a rose." What rose—besides herself—she selected on that interesting occasion one would have liked to know. Was it the grand old Provence (or cabbage) rose, which made such a figure in our gardens some half a century ago? Or the Portland rose, than which, by-the-by, none is better for the composition of *pot-pourri*? Or was it the Maiden-blush, or that delicate sweet China rose, with pale pink petals, which (like a true friend) is among the first to come and the last to go? Or that York and Lancaster, which reconciles the rival colours of the two Kingly houses, as did Henry Tudor and Elizabeth Woodville, "in the days of old"? In the modern rose-garden there is, at all events, no lack of choice; new varieties, indeed, being brought forward every year; so that one is tempted to wonder when this development of rose culture will reach exhaustion-point. *Tempora mutantur*, and with them the roses! One might as well ask what has become of last year's snows as of one's childhood's roses, or of those which Shakspeare and Herrick celebrated! I am Goth enough to think that the newcomers have not always as much charm as those dear old friends, with all their sweet memories and fond traditions. There is just a doubt whether, in the passion for huge symmetrical blooms, and that thirst for something new which possesses the Englishman of to-day, as it possessed the Athenian in the time of St. Paul, the ancestral roses that bloomed in the parterres, and scattered odours from the vases, of our great-grandmothers, have not unjustly been set aside and discredited. At all events, they were rich in a magic of association which their successors have not. It was of no Gloire-de-Dijon or Sénateur Vaisse that Herrick was thinking, when he sang, in his semi-Pagan way, "Gather ye rosebuds while ye may, Old Time is still a-flying!" And the "lovely rose" that Waller sent to his Sacharissa was, we may be sure, of none of the varieties that bloom with so much forwardness at our annual rose-shows and are duly entered in the catalogues of our florists.

In the sixth century, as Dean Hole reminds us, St. Mildred instituted the custom of giving a wreath of white roses as an annual prize to the most modest and duteous of the maidens of Salency. What a delightful harmony between the prize and its recipient, between the pure white flower and the maiden with the white purity of soul! It is not often that gifts are appropriated with such a sense of fitness. There seems a certain degree of violence, however, in the expression—"a *white* rose," but it is sanctioned by the usage of generations; and I find it difficult to think of anything more beautiful in itself, whatever may be one's fancy about the name, than the snowy Niphetos or Alba, or the exquisite moss-rose known as White Bath. In white roses this island of ours was at a very early date so rich that the fame thereof reached the naturalist Pliny in his villa on the bright Parthenopean shore; and he sat down and calmly wrote that "Albion" was so-called either from its white, sea-washed cliffs or from the white roses with which it abounded. There is a pretty story that, in the fifteenth century, the Duke of Clarence, a Yorkist, having become enamoured of the Lady Eliza Beauchamp, a Lancastrian, he sent to her a white rose, and with it a right princely and poetical compliment, which, long afterwards, was versified by Congreve and Somerville in the manner following:—

If the pale rose offend your sight,
It in your bosom wear:
'T will blush to find itself less white,
And turn Lancastrian there.

But if thy ruby lips it spy—
To kiss it shouldst thou deign—
With envy pale 't will lose its dye,
And Yorkist turn again.

In a previous paper I referred to Sir John Maundeville's legend of the Hebrew maiden, unjustly burned to death at Bethlehem. He tells how the stake to which the pure and innocent victim was bound became a budding rose-tree. As the legend—which, by-the-way, Southey has put into verse—professes to explain the origin of white roses, I will quote it in Maundeville's own words:—"Betweene the cityee and the chirche of Bethelem is the felde Floridus, that is to seyee, the feld floriched (or flowery); for als moche as a fayre mayden was blamed with wrong and sclaundered, for which cause sche was domed to the dethe, and to be brout to that place, to the whiche sche was ladd. And as the fyre began to burne aboute hire, sche made hire prayeres to oure Lord, that als wissely as sche was not gylty of that synne, that He wolde helpe hire, and make it to be knowen to alle men, of His mercyfulle grace; and whanne sche hadde thus seyd, sche entred into the fuyer, and anon was the fayr quenched, and oute; and the brandes that weren burnynge becommen *white rosers, fulle of roses*; and theise weren the first roseres and roses, bothe white and rede, that ever any man saughe." But, for myself, I do not accept this fanciful story, having no doubt at all that white roses (and red) bloomed in the Garden of Eden, which, indeed, without them would have been no Earthly Paradise.

One is surprised that the English poets have had so little to say in praise of the white rose. It is true that Burns has the grace and good taste to exclaim, "Here's the flower that I love most. The rose that's like the snow"; and Bryan Waller Proctor talks ungallantly of "the pale rose that hangs her head like a love-sick girl"; and Beddoes speaks of "a white rose, fitting for a wedding gift"; and Mrs. Browning of "a white rose delicate, On a tall bough and straight . . . Uplifting its white head"; and Tennyson plants a white rose in Maud's rose-garden:—but, generally speaking, our English minstrelsy is devoted to its blushing sister. Half a hundred instances rise to one's memory:—"Whatso'er of beauty Yearns and yet reposes," says Leigh Hunt, "Blush and bosom and sweet breath, Took a shape in roses." Byron alludes to "the odorous purple of a new-blown rose." Shelley is in love with "the depth of her glowing breast." Mrs. Hemans speaks of "that fervid hue of love which to its heart-leaf glows," just as L. E. L. reads within its petals "the crimson annals of true love." Mrs. Browning has a poet's eye for "The red roses, used to praises long, Contented with the poet's song." Lewis Morris apostrophises, "Oh, vermeil rose and sweet, Rose with the golden heart of hidden fire." Roden Noel inquires whether we most love those which "lie full blown with a delicate flush," or those which open "coy with a crimson blush"; to which I, for one, answer that I love both equally! Tennyson has a charming phrase about "the spirit of a crimson rose"; and Augusta Webster is in love with her rose, "A very child of June, Spreading its crimson coronet of leaves."

In mediæval France a romantic custom obtained in connection with the flower of flowers. It was called the "Baillée aux Roses," or "Tribute of Roses," and, appropriately enough, was instituted by a woman in compliment to a woman—by Blanche of Castille, widow of Louis VIII. of France, and Regent in 1227, for Marie, the fair daughter of Dabuisson, first President of the Parliament. The Regent and her Court, together with the Peers of Parliament, assembled at Poitiers, in May, to make and administer the laws. Various causes awaited their decision, one of which had been entrusted to the advocacy of a gallant, but pleasure-loving, young noble, the Comte de la Marche, who, however, showed but little inclination to examine into its merits, being deeply in love with Marie Dabuisson. He had previously pressed his suit upon her, and been rejected; but his love burned all the more fervently, and after their arrival at Poitiers, he ventured by night into a rose-garden which bloomed near the maiden's window, and serenaded her, according to the custom of the time. Marie opened her lattice. "Are you not ashamed, fair sir," she said, "to employ the hours of thought and study in idle gallantry? 'T will be your task to-morrow to defend before the Parliament the honour and fortune of the orphans, and you are wasting your time in idle pleasures. If you would win my favour, go and prepare to do your duty worthily!" The young Count took his mistress's reproach to heart; went home and mastered the details of the case; on the following day pleaded it with brilliant success—with such success that the Queen-Regent, with a smile, asked him whence he had derived his inspiration. "From the voice of an angel!" was his impassioned reply. The sequel is easy to guess; Marie became the Comtesse de la Marche; and in memory of the incident, the Queen ordered that every year, on the first of May, the youngest noble should pay to Parliament "a tribute of roses." The practice survived until 1589.

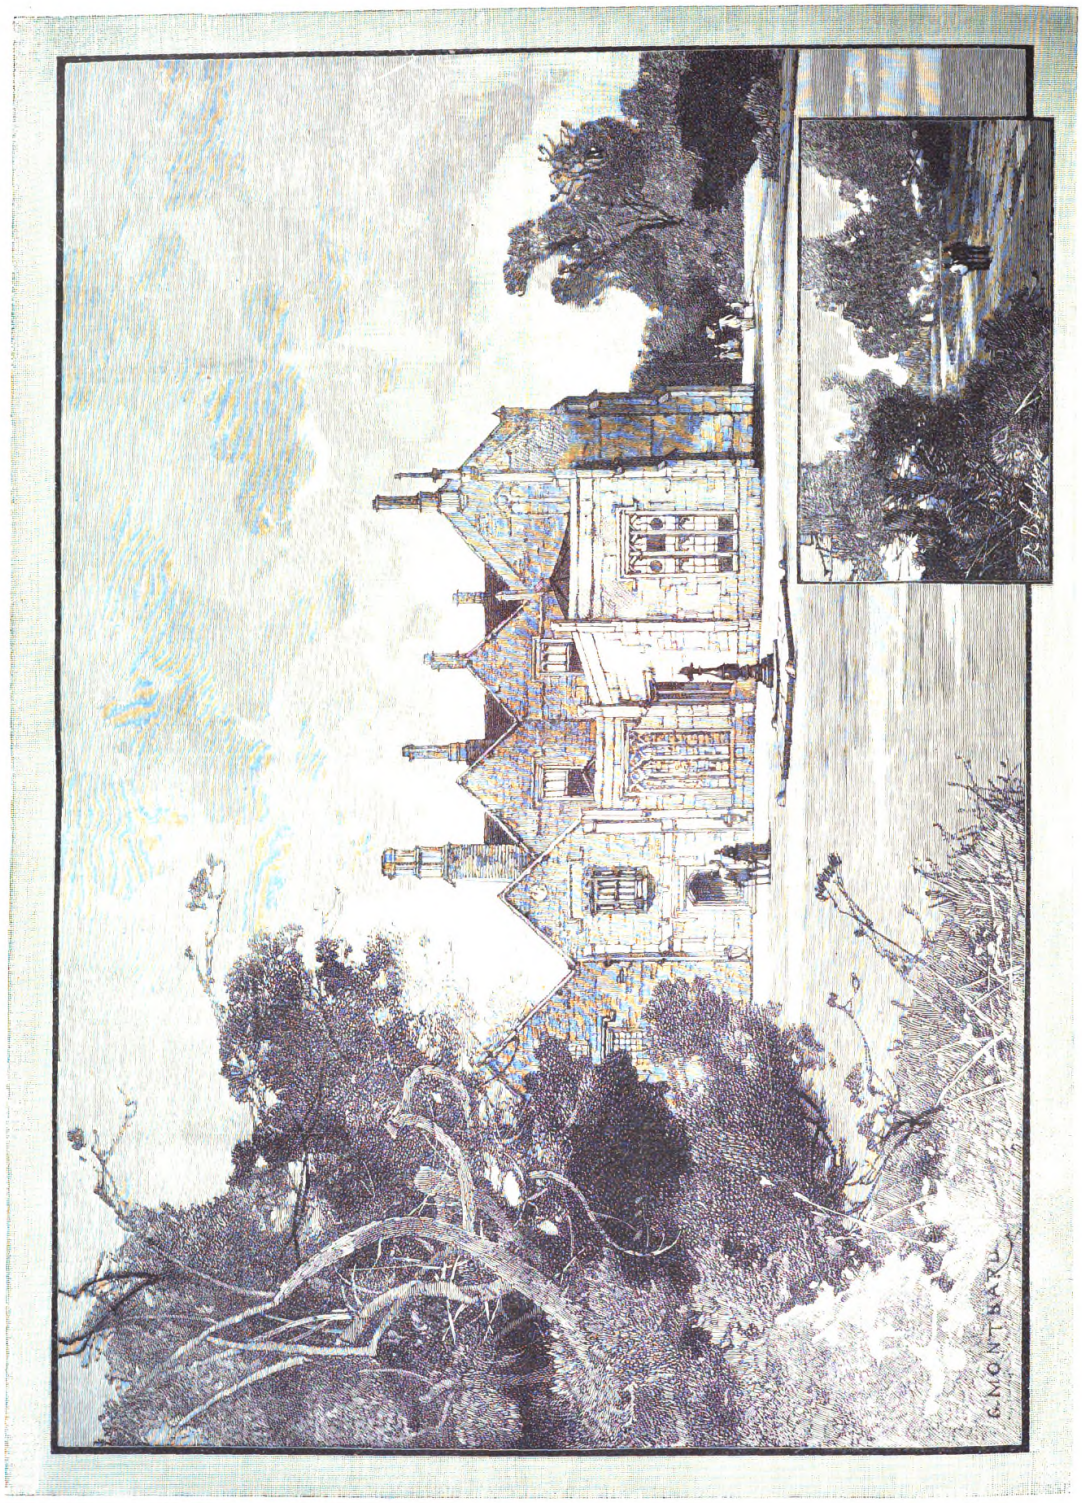
During the imprisonment of Charles I. in the Isle of Wight, he was being conducted—one day in November, 1648—through the streets of Newport, when a loyal gentlewoman, named Frances Prattle, respectfully presented her Royal master with a damask rose—the last which had lingered in her garden. It was all she could give, except her prayers. The King was much affected, no doubt, by this proof of her devotion.

In "The Song of Solomon" we read of "The Rose of Sharon"; and the Prophet Isaiah, when he speaks of the blessings that shall attend the coming of the Messiah, predicts that "the desert shall rejoice and blossom as the rose." Some authorities believe, however, that the Hebrew word indicates the narcissus; while Gesenius asserts that the autumnal crocus is intended. If we must give up the rose, I prefer the narcissus as a substitute. But it is to the rose that allusion is made, in Ecclus. xxiv. 14, where Wisdom is said to be exalted as a "rose-plant in Jericho." It is needless to say that roses were greatly valued in the East, and that the rose-water distilled from their petals is an adjunct of every boudoir. The hundred-leaved rose (*Rosa centifolia*) and the Damascus or damask rose (*Rosa damascena*) are everywhere cultivated.

So much for some of the poetical and historical associations of our regal flower. Let us now take a hurried glance at the curiosities of its nomenclature, which does not appear to be constructed upon any definite or intelligible principle. Sometimes the name of a rose-grower, or of his sister, his cousin, or his aunt, is called into requisition; sometimes it is the name of a warrior, statesman, or other popular personage; sometimes it is entirely fanciful. I do not find that it is often found to indicate any characteristic of form, structure, or colouring. To some small extent, our roses are made to chronicle passing moods of popular feeling: as is the case with the Lord Clyde, Lord Herbert, Lord Raglan, Prince Albert, Charles Darwin, and Christine Nilsson. Among the few which boast a poetical savour are La Perle des Jardins, Coupe d'Hébé, Boule-d'Or, and Boule-de-Neige. Apparently, these represent the highest flights of fancy to which the rosarian has attained—which is, surely, remarkable when the flower should have served, one would think, as a stimulus to the imaginative faculty. Why not link the names of our poets and their airy creations with the beautiful flower which poetry has done so much to consecrate? Why should we not have among the roses a Perdita, an Imogen, a Rosalind, a Castara, a Lucasta, or an Elaine!

But the readers who would know more about rose-lore, and dip into rose-culture, should turn—as I have done—to Dean Hole's delightful "Book about Roses," Mr. Shirley Hibberd's monograph on "The Rose," and Mr. H. Bright's "A Year in a Lancashire Garden." There is an excellent practical treatise, by Mr. William Paul, which any rose-grower would do well to study.

W. H. D.-A.



In the Oxford examination for Women the following class-list has been issued:—French and German Honours.—Class I. W. Hogg and W. Holinden, Somerville Hall. Class II. A. M. Partridge and M. S. Tait, Somerville Hall. Class IV. M. A. Moger, Gay-street, Bath.

Lord Mostyn has intimated to his tenants in Cheshire his intention of returning 10 per cent on the tithe-rent charge due to him. Sir A. Rivers Bulkeley, Bart., of Baron-hill, Beaumaris, also intends returning 10 per cent on the rents due by his agricultural tenants in Anglesea.

Earl Cadogan presided on July 18 at a meeting held in Chelsea House in support of a scheme for establishing a Polytechnic Institute for south-west London, for which £50,000 has been promised by the Charity Commissioners, if a similar amount be raised by voluntary effort. The scheme was supported by Lord Knutsford, Lord Monkswell, Sir A. Borthwick, M.P., Mr. Goschen, M.P., Sir A. Hayter, and others, and resolutions approving it were adopted.

It is purposed, as soon as £2000 shall have been specially contributed, to open a home in connection with the Royal Military Benevolent Fund. As is doubtless known to the majority of our readers, this fund grants annuities, up to £40 each, to distressed ladies, being (exclusively) widows or daughters of officers of the army, inclusive of the Royal Marines. To show the need that exists for its operations, it may be mentioned that for every person awarded there are between thirty and forty applicants. These ladies are all the relatives of officers whose services had been long and meritorious, and in many instances of a highly distinguished nature; they are all in circumstances of great need, and many are absolutely destitute. Contributions, either for the home or for the fund, are received by Messrs. Barclay, Bevan, Ransom, Bouverie and Co., bankers, 1, Pall-mall East, S.W., by Messrs. Cox and Co., Army agents, 17, Charing-Cross, S.W., and by the hon. treasurer, Mrs. Ellis-Williams, 40, Bedford-square, W.C.

ENGLISH HOMES.—No. XIV. SCRIVELSBY COURT.

Scrivelsby Court, Front View.

On the Road to Scrivelsby.

SEASIDE IDYLLS: MUSSEL-GATHERERS.

SEASIDE IDYLLS: LISTENING TO THE WAVES.

WILLS AND BEQUESTS.

The will (dated July 31, 1877), with a codicil (dated April 9, 1878), of Dame Laura Buchan, widow of the late Lieutenant-General Sir John Buchan, K.C.B., late of No. 5, Sussex-square, Hyde Park, who died on May 10 last, was proved on July 14 by Sir Walter Buchanan Riddell, Bart., Sir Mark Wilks Collett, Bart., and Francis Joseph Coltman, the executors, the value of the personal estate in the United Kingdom amounting to upwards of £132,000. The testatrix bequeaths £1000 each to the Isle of Man General Hospital, the House of Industry (Douglas, Isle of Man), the Middlesex Hospital, and the Hospital for Sick Children (Great Ormond-street); £500 each to the Hospital for Consumption and Diseases of the Chest (Brompton), and the National Hospital for Consumption and Diseases of the Chest (Ventnor); her leasehold residence in Sussex-square, with the furniture and effects (except certain plate and jewellery specifically bequeathed), horses and carriages, to her cousin, the said Sir Mark Wilks Collett; and numerous and considerable legacies to relatives, friends, and servants. She recites that by a separate disposition she has settled certain lands, teinds, and pertinents in the Sheriffdom of Berwick. As to the residue of her real and personal estate, she leaves one third to the said Sir Mark Wilks Collett; one third to her late husband's nephew, General Charles Francis Fordyce, C.B.; and one third, upon trust, to pay an annuity of £200 to her cousin, Eliza Eleanor Newton, and subject thereto for such one or more of the three surviving children of George William Fordyce Buchan, who shall, under his will, become possessed of the mansion of Kelloe, in the county of Berwick.

The will (dated April 16, 1888) with two codicils (dated May 4 and 28 following), of Mr. William Howard, late of Ersham House, Canterbury, who died on June 1, was proved on July 10 by John Howard, the son, one of the executors, the value of the personal estate amounting to upwards of £229,000. The testator states that his wife, Mrs. Julia Howard, is already possessed of property at Nice, and of various investments, and he leaves her £2000, all his furniture, plate, pictures, jewellery, effects, horses, carriages, and stock; £1500 per annum for life, and the personal use, if she desires to have it, of Ersham House, with the lands and cottages. His freehold paper-mill at Chartham, his freehold rag-house at Canterbury, with the goodwill of the business and all the machinery, stock, and book debts, he leaves to his son John; and there are a few legacies. The residue of his real and personal estate he gives to his children, Helen, Elizabeth, Agnes, and William; but if their respective shares exceed £60,000, which is to be taken as the value of the paper-mill estates, then his son John is to participate in the residue, after his sisters and brother have each received £60,000 thereout.

The will (dated April 17, 1883), with five codicils (dated June 20, 1883; Oct. 27, 1884; and March 12, April 22, and Oct. 6, 1886), of Mr. Edwin Knight, late of Palmeira Mansions, Brighton, who died on April 22 last, was proved on July 11 by Mrs. Alice Knight, the widow, and Thomas Moy, two of the executors, the value of the personal estate amounting to over £91,000. The testator bequeaths £400, and all his household furniture and effects, to his wife; and a complimentary legacy to his executor, Mr. Moy. The residue of his real and personal estate he leaves, upon trust, to pay £1000 per annum to his wife, she maintaining and educating his children under twenty-one, to be reduced to £800 per annum on his youngest child attaining twenty-one, or to £250 on her marrying again. The ultimate residue he leaves, upon further trust, for all his children, in equal shares, excepting his son Arthur Edwin Kilvington, whose share is not to exceed £5000.

The Scotch Confirmation, under seal of the Commissariot of Renfrew, of the trust disposition and settlement (dated June 17, 1881), with a codicil (dated April 7, 1886), of Mr. Alexander Cattanach, of Auchentorlie, distiller in Paisley, who died on May 3 last, granted to William Thomson, Andrew Millar, jun., Robert Binnie, James Dickie, Mrs. Mary Lorimer Millar, the sister, and John Stewart, the surviving executors nominate, was rescaled in London on July 7, the value of the personal estate in England and Scotland amounting to upwards of £84,000.

The will (dated March 17, 1883), with a codicil (dated Sept. 23, 1886), of Mr. Jonathan William Battley, late of Sussex House, Amhurst-park, Stamford-hill, who died on June 6, has just been proved by Mrs. Jane Eleanor Battley, the widow, William Ernest Battley, the son, Clement Dukes, M.D., Percy Pedley Hasluck, and John Bernard Portway, the executors, the value of the personal estate amounting to upwards of £62,000. The testator bequeaths the jewellery, plate, pictures, books, furniture, effects, horses and carriages at his residence to his wife; and some annuities to relatives. The share of the capital, stock-in-trade, and goodwill of his partnership business of lamplback manufacturers and tar distillers, carried on at Edith-street, Haggerston, and Bow-common, he gives to his said son, William Ernest, conditionally on his paying interest at 5 per cent on the capital so given to him, to his (testator's) wife, for life. The residue of his real and personal estate he leaves, upon trust, for his wife, for life, and then for all his children except William Ernest; but certain sums settled on his daughters, Mrs. Dukes, Mrs. Hasluck, and Mrs. Portway, are to be brought into account in the division.

The Irish Probate, granted at Dublin, of the will (dated June 16, 1887) of Mr. Denis Crofton, late of No. 8, Mountjoy-square, Dublin, who died on Dec. 2 last, to Lord James Butler, Frederick Villiers Clarendon, and William Oliver Barker, M.D., the executors, was rescaled in London on July 11, the value of the personal estate in England and Ireland amounting to upwards of £52,000. The testator bequeaths £10,000 to the Representative Body of the Church of Ireland for the spiritual use and benefit of poor parishes and districts thoughout Ireland; £15,000 to the Church Missionary Society for Africa and the East, to endow a mission to be designated the "Denis Crofton" Mission; £1000 to the Religious Tract Society (London); £500 each to the Adelaide Hospital (Peter-street, Dublin), the Fever Hospital and House of Recovery (Cork-street, Dublin), the Société Evangélique de France, and the Société Centrale d'Evangélisation; and legacies to relatives, executors, servants, and others. If he has any curiosities or works of art on view at the time of his death at the Museum of Science and Art, Dublin, or the National Gallery, Dublin, he gives them to the said institutions. The residue of his property he devises and bequeaths to the British and Foreign Bible Society.

The Polytechnic Institute has received the munificent gift of £1500 from "G. L."

The visitation of the Brewers' Company's (Lady Owen's) School, Islington, was held on July 18, at Brewers' Hall, the Master of the Brewers' Company, Mr. W. Hoare, presiding. Numerous prizes and scholarships were awarded, and in the course of the proceedings it was announced that during the past year the first places on the list in the London University matriculation, the University of Cambridge junior local examination, and the Civil Service examination for boys had been taken by boys from this school.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

SIGNOR ASPA.—We take note of your request, and look for the improved position later on.

G HEWITT (Middle Colaba).—The main play is sufficient.

SPHINX (Alexandria).—The manager of the *British Chess Magazine*, 19, Bagby-street, Leeds, will receive your order. The price, if subscriber's name is sent in before publication, is 6s.; afterwards, 7s. 6d. We do not think it is published yet.

W R PHIDMORE (Rugby).—Jacques, Hatton-garden, are the most likely for your purpose.

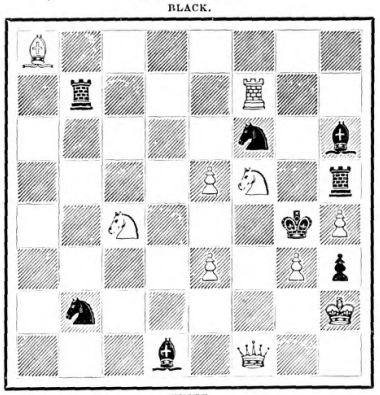
A NEWMAN (Camden Town).—We cannot undertake to answer by post. The problem shall appear if it is up to our standard.

MRS KELLY.—If you will look at the solution of No. 2307 you will probably find wherein your own failed. No. 2309 is characteristic of the author, and we hope No. 2311 will fulfil your anticipations. Solution of No. 2310 is not Kt to K B 8th.

GUSTAV MORSCH.—Your problems want strategy. They are neat, but too simple for publication.

HEREWARD.—Your problem is capable of much improvement: White has at least four superfluous pieces, and can play, for its second move, Kt to either K 2nd or Kt 5th. At best, however, the position is weak.

A G SUTER (Halleybury).—The idea is so hackneyed that, although your problem is well constructed, we could not publish it. The baffling of Black's check by a discovered check has been done to death in two-move problems.



CORRECT SOLUTIONS OF PROBLEM No. 2308 received from B H Cochrane, A W Hamilton Gell, C W H Glover, C Etherington, and C Byng; of No. 2309 from E G Boys, Alpha, C B, Hereward, W S (Sheffield), and W L.

CORRECT SOLUTIONS OF PROBLEM No. 2310 received from Dr F St. T Roberts, Jupiter Junior, H Lucas, A Newman, Percy Ewen, Thomas Chown, R H Brooks, Blair H Cochrane, R Worters (Canterbury), J Hepworth Shaw, E Casella (Paris), J R N (East Sheen), J D Tucker (Leeds), *Shadforth*, Major Prichard, Julia Short, A Wheeler (also of 2307), James Sage, Sergeant, Columbus, W R Raillem, E E H, T G (Ware), Dr G Waltz, Hereward, Alpha, G J Veale, W S (Sheffield), T Hall, L Smith, L Cond, E Phillips, Howard A, and Dawn.

SOLUTION OF PROBLEM No. 2308.

WHITE.	BLACK.
1. R to K R 7th	Any move
2. Mates.	

PROBLEM No. 2312.
By M. BLACKLIDGE.
BLACK.

WHITE.
White to play, and mate in two moves.

CHESS BY CORRESPONDENCE.

Game in the Fraser International Tourney between Mr. J. C. BREMNER, Bronghty Ferry, the well-known problem composer, and Captain M. S. WOOLLETT, of Dublin. Notes by Mr. Fraser.

(King's Bishop Opening.)

WHITE (Mr. B.)	BLACK (Mr. W.)
1. P to K 4th	P to K 4th
2. B to B 4th	Kt to K B 3rd
3. Q to K 2nd	Kt to Q B 3rd
4. P to Q 3rd	Kt to Q R 4th
5. B to Kt 5th	

The King's Bishop is an almost indispensable piece in this opening, and White wisely preserves it, even at the loss of a move or two.

5.	P to Q R 3rd
6. B to R 4th	P to Q Kt 4th
7. B to R 2nd	B to Kt 2nd
8. P to Q 4th	P takes P
9. P takes P	Q to K 2nd
10. P to K B 3rd	P to K R 3rd
11. P to Q R 3rd	P to K Kt 3rd
12. Kt to R 3rd	B to Kt 2nd
13. Castles	Kt to R 2nd
14. Q to Q 3rd	P to Q 3rd
15. P to Q Kt 4th	Kt to Q B 5th
16. R to R 2nd	P to Q B 4th

A good move.

17. Kt P takes P	Q P takes P
18. P to Q 5th	B to Q 5th (ch)
19. K to K sq	K to Kt 4th
20. Kt to B 4th	Q R to Q sq
21. Kt to K 2nd	B to Kt 2nd
22. P to B 4th	Kt to K 3rd
23. Q to K Kt 3rd	Kt to Q 5th

WHITE (Mr. B.)	BLACK (Mr. W.)
24. Kt takes Kt	B takes Kt
25. B to Q 3rd	Kt to Q Kt 3rd
26. R to K sq	Kt to Q 2nd
27. Q R to K 2nd	Kt to K B 3rd
28. B to Q 2nd	Castles
29. P to B 5th	Kt to R 4th
30. Q to R 3rd	B to K 4th
31. B takes R P	Q to Q B 2nd
32. Kt to Q 2nd	

White would obviously gain nothing by capturing B at this juncture.

32.	Kt to K B 5th
33. B takes Kt	B takes B
34. Kt to B 3rd	K to Kt 2nd
35. P to B 6th (ch)	

Played with great judgment. The King is evidently compelled to capture the Pawn.

35.	K takes P
36. Q to R 4th (ch)	K to Kt 2nd
37. P to K 5th	K B takes K P
38. R takes B	R takes Q P
39. B takes K Kt P	

Forcing the game. Black apparently is now at his opponent's mercy.

39.	B takes R
40. Q to R 7th (ch)	K to B 3rd
41. Kt takes R	B to B sq
42. B takes B P,	and wins.

Game between Mr. W. JAY, London, and Mr. F. DOWNEY, South Shields.
(Bishops' Gambit.)

WHITE (Mr. D.)	BLACK (Mr. J.)
1. P to K 4th	P to K 4th
2. P to K B 4th	P takes P
3. B to B 4th	Q to R 5th (ch)
4. K to B sq	P to Q 4th
5. B takes P	Kt to K 2nd

A transposition of moves which leads to difficulties. He should proceed, 5. P to K Kt 4th, followed by 6. B to Kt 2nd, and 7. Kt to K 2nd.

6. Kt to K B 3rd	Q to R 4th
7. Kt to B 3rd	P to K Kt 4th
8. P to K Kt 4th	P to K R 3rd
9. B takes P (ch)	

Perfectly sound, and the key-note of the attack.

9.	Q takes B
10. Kt to K 5th	Q to Kt 2nd
11. Q to R 5th (ch)	K to Q sq
12. Kt to B 7th (ch)	K to Q 2nd
13. Kt takes P	P takes P

Black's position is seriously compromised, and the only chance here was to preserve a numerical superiority, by Q takes Kt; even then, however, White maintains a distinct advantage by 14. P takes P.

14. Kt to B 7th	Kt to B 3rd
15. P to Q 4th	

White presses the attack with great vigour. If this P be captured the Q file will be cleared for the action of Q R.

15.	Kt to Kt 3rd

WHITE (Mr. D.)	BLACK (Mr. J.)
16. Kt to K 5th (ch)	Q Kt takes Kt
17. P takes Kt	B to K 2nd
18. P to K 6th (ch)	

Capitally played; mate in two moves would follow the capture of this adventurous P.

18.	K to Q sq
19. B takes P	Kt takes B
20. R to Q sq (ch)	B to Q 3rd
21. R takes B (ch)	P takes R
22. Q takes P (ch)	Q to Kt 4th
23. Q takes Q (ch)	P takes Q
24. R to R 8th (ch)	K to K 2nd
25. Kt to Q 5th (ch)	

The climax of some very brilliant play on White's part. Black must exchange Knights, and White's Pawns are then established, completely blocking the whole of Black's forces, and winning easily.

25.	Kt takes Kt
26. P takes Kt	P to Kt 3rd
27. P to B 4th	K to B 3rd
28. R to B 8th (ch)	K to K 2nd
29. R to B 7th (ch)	K to K sq
30. R to R 7th	P to R 3rd
31. P to Q Kt 4th	K to B sq
32. R to R 8th (ch)	K to K 2nd
33. K to B 2nd	K to B 3rd
34. R to B 8th (ch)	K to K 2nd,
35. R to B 7th (ch),	and wins.

The British Chess Club Handicap resulted in Messrs. Blackburne and Gunsberg, with eleven wins apiece, dividing the first and second prizes. Messrs. Bird and Wainwright, with ten each, the third and fourth. It will be remembered that Mr. Gunsberg won the first prize and Mr. Bird the third in the late Divan contest, and their similar success on this occasion points to the high and consistent quality of their play. Mr. Blackburne, however, would probably have won outright but for the adverse decision of the committee in the disputed game with Mr. Gattle.

"The Apposition" at St. Paul's School took place on July 25, and in the evening the High Master held a reception in the great school.

HOLIDAY RAMBLES.

(By our Paris Correspondent)

BRUNSWICK.

Next, after Nuremberg, Brunswick is noted as the finest mediæval town in Germany. This reputation is not undeserved; for, although it possesses few monuments worth speaking of, except the old Townhall in the Altmarkt and some fountains of the usual slender, wire-drawn old German style, Brunswick is composed entirely of narrow, tortuous streets, lined with old houses with overhanging gables and irregular red-tiled roofs, such as you see in the background of Albert Durer's pictures. And, curiously enough, these houses have been repaired and rebuilt for the most part in the old style, the only liberty taken being to put in some modern plate-glass shop-fronts. In this maze of narrow streets several lines of tramways run, with an occasional tinkling of bells as they round the corners; there are gas-lamps, too, and even electric lights and swaggering cavalry soldiers, and other modern improvements: still, the town retains its mediæval aspect. Every step we take brings us face to face with something picturesque.

So much for the old town, with its Cathedral, its Castle, its Burg Platz, its Altmarkt; but the kernel of the town is all that remains, the shell has been transformed entirely. The moat is navigable for pleasure-boats and even little steamers; the ramparts have become fine promenades, laid out as parks and gardens, in which has sprung up a girdle of modern detached or semi-detached villa residences, with bow-windows and conservatories, where you see the worthy tenants sitting in solemn state, like mannikins in a waxwork show, watching the people pass and repass. On Sunday afternoon and evening all Brunswick is out on the ramparts—on foot, in carriages, or on bicycles and tricycles; for cycling is in high favour in northern Germany, and I even saw some young ladies with divided skirts riding tricycles, and tearing along in the most ungraceful manner.

But in spite of this apparent animation, Brunswick is a terribly dull place for the visitor: in a couple of hours you can walk all round the town and through almost all the streets. Then what remains to be done? Try the cafés? They are about three in number, and all equally solemn. Sample cigars? This would be too terrible an operation, seeing that there are no less than fifty-nine varieties of cigars at six a penny, all equally deadly! Hunt the streets for a pretty face? This would be chimerical, for everybody knows that, except in Berlin, pretty German faces are rare. Besides, one must be serious, and looking for pretty faces, in the flesh, is not generally considered a serious occupation; at any rate, one does not travel hundreds of miles to some out-of-the-way provincial town on such a frivolous errand. The great attraction at Brunswick is the Museum and Picture Gallery, which are now lodged in a magnificent new building—a model of commodious arrangement, like all the new German museums.

The antiquities and objects of art in the Brunswick Museum are not of the first importance, although some of the objects are of historical interest. On the other hand, there is a very admirable collection of Limoges enamels, and a very complete series of Italian painted pottery of the Urbino and Faenza marks. These objects, however, appeal mostly to specialists; while the average visitor will pay more attention to the Picture Gallery, which is peculiarly rich in works of the secondary masters of the Dutch school. The pearl of the Brunswick Gallery is a life-size, half-length family group, by Rembrandt, which alone repays the journey. Against a background of dark-green foliage the father stands on the left; on the right the mother dances a baby girl on her knee, while in the foreground are two other children, one carrying a basket of flowers. The mother is dressed in deep red, and the baby-girl in rose-red. A rich golden light strikes across the faces, and touches the drapery in luminous masses. In this picture, so charming in its simplicity and *intimité*, Rembrandt has indulged in a veritable painter's feast of colour. Technically, it is a most amusing and prodigious piece of work. But to give an idea of a picture in words is impossible. All I can say is, that I do not regret my stay at Brunswick; the vision of this wonderful Rembrandt stored in my memory consoles me for all the minor inconveniences I endured in a twenty-four hours' stay in the town.

T. C.

THE BISHOPS OF THE ANGLICAN COMMUNION AT CAMBRIDGE. The Senate House of the University of Cambridge was on July 18 the scene of an interesting ceremony. Taking advantage of the assembly of the Bishops of the Anglican Communion from all parts of the world at the Lambeth Conference, the University decided to offer them her hospitality, and, at the same time, to confer upon some of their number honorary degrees in Divinity. Those who received these marks of distinction were the Archbishops of York, Armagh, and Dublin; and the Bishops of Guiana, Fredericton, Capetown—who, however, was kept away by illness—Calcutta, Minnesota, and New York, several of whom are *alumni* of the University.

Such of them as were not already staying in Cambridge or at Ely, as guests of the Bishop, left King's-cross by special train at ten minutes to ten o'clock, arriving at Cambridge a few minutes after eleven. Carriages were in waiting to convey the visitors to the Senate House, where they were received by the Rev. Dr. Taylor, Vice-Chancellor and Master of St. John's. The visitors were formed into groups, each of which was conducted by one or more of the Professors round the colleges. The best use possible was made of the brief time at disposal, under the guidance of the Rev. Professor Browne, the Rev. F. Wallis, the Rev. T. H. Orpen, Mr. W. M. Fawcett, and other gentlemen. Before the conclusion of the tour of inspection, rain began to fall, and later on it came down in torrents, spoiling the enjoyment of the garden-party which the Master of Trinity had arranged to give. The guests were entertained at luncheon by the heads of the various colleges, and at half-past two assembled in the Senate House. Every part of the floor was filled. Nearly eighty Bishops, most of whom wore their scarlet robes, occupied the front places, and around them were members of the University and a large number of gaily-dressed ladies.

The guests adjourned for service in the chapel of King's College; after which further visits were made to places of interest, including Trinity College, at the lodge of which the Master entertained all the guests to tea.

In the evening several dinner-parties were given by prominent members of the University, the principal one being that given by the Vice-Chancellor, who entertained the recipients of honorary degrees and other distinguished persons.

The sixth annual report of the Fishery Board for Scotland for the year 1887 states that 26,907 boxes of salmon were sent to Billingsgate in that year, or about 3500 boxes more than in 1886. At £5 5s. per box, this represented a value of £141,261 15s., and if there is added as much more as the value of the salmon consumed in Scotland, and sent out of Scotland and elsewhere than to London, there is obtained £282,523 as the estimated value of the Scotch salmon fisheries in 1887.

IMPORTANT TO ALL LEAVING HOME FOR A CHANGE.

"Among the most useful medicines that have been introduced within the last century is **ENOS 'FRUIT SALT.'** There is no doubt that where it has been taken in the earliest stage of a disease, it has, in many instances, prevented what would otherwise have been a severe illness. The effect of **ENO'S 'FRUIT SALT'** upon a disordered and feverish condition of the system is marvellous. As a nursery medicine the **'FRUIT SALT'** is invaluable; instead of children disliking it, they look upon it rather in the light of a luxury. As a gentle aperient and a corrective in cases of any sort of over-indulgence in eating or drinking, **ENO'S 'FRUIT SALT'** is all that is needful to restore freshness and vigour. In cases of Nervous Headache and Debility it is especially useful, and should be taken in all cases where persons suffer from a sluggish condition of the liver."—*Young Lady's Journal.*

CAUTION.—Examine each Bottle, and see the Capsule is marked "ENO'S FRUIT SALT." Without it you have been imposed upon by a worthless imitation. Sold by all Chemists.

Prepared only at Eno's "Fruit Salt" Works, London, S.E., by J. C. Eno's Patent.

DISORDERED STOMACH & BILIOUS ATTACKS.

A Gentleman writes:—"Dec. 27, 1887. After twelve months' experience of the value of the **'VEGETABLE MOTO'** I unhesitatingly recommend their use in preference to any other medicine, more particularly in bilious attacks; their action is so gentle, and yet so effective, that nothing equals them in my opinion. They have never failed to give the wished-for relief. I take them at any hour, and frequently in conjunction with a small glass of Eno's 'Fruit Salt.'—Yours gratefully, ONE WHO KNOWS."

ENO'S "VEGETABLE MOTO," OF ALL CHEMISTS.

Price 1s. 1½d.; post-free, 1s. 3d.

ENO'S "FRUIT SALT" WORKS, HATCHAM, LONDON, S.E.

MONTE CARLO
AS A SUMMER RESORT.
For a summer stay, Monte Carlo, adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea-breezes. The beach is covered with the softest sand; the Hotels are grand and numerous, with warm sea-baths, and there are comfortable villas and apartments, replete with every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Establishments on the banks of the Rhine—Theatre, Concerts, Venetian Fetes, &c.
There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo, or in its several fascinations and attractions—not only by the favoured climate and by the inviting scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean sea-border, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it to-day the rendezvous of the aristocratic world, the spot most frequented by travellers in Europe; in short, Monaco and Monte Carlo enjoy a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY, SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the Gothard line. Through-going Sleeping-Cars from Ostend to Milan. Balcony Carriages, Safety Brakes. Tickets at all corresponding Railway Stations, and at Cooks' and Gaze's Offices.

AIX-LES-BAINS.—Grand Hôtel Europe. One of the most renowned and best conducted in Europe. Patronised by Royal Family. 200 sunny chambers. Highest table. Large gardens; lawn-tennis.—BERNASCON, Proprietor.

AIX-LES-BAINS.—Grand Cercle Casino. Theatrical season, May to October; concerts, comedy, grand opera, opera comique, and other representations; orchestra, sixty performers; night Fêtes, illuminations, fireworks, and grand balls. A. VIGIER, Director.

ANDERMATT, Switzerland.—Hôtel Belle Vue and Kurhaus, near the Goeschenen station of the Gothard Railway. Magnificent position, altitude 4570 ft. Pure air; less windy than Davos. Open summer and winter, for persons suffering from lung affection. CHRISTIN-KOCH, Proprietor.

BADEN-BADEN.—Hôtel Victoria. First class. Beautifully situated, nearest the Conversation House and Kurhaus. Sanitary arrangements perfect. Accommodation superior. Moderate charges. F. GROSHOLZ, Proprietor.

DIEPPE.—Hôtel Royal, facing the sea. Superior first-class house, worthily recommended. Nearest the sea, the casino, and bathing establishment. Table d'hôte. Open all the year. LARSONNEUR, Propr.

EVIAN-LES-BAINS, Savoy.—Grand Casino; theatrical representations, operas, concerts, balls. Grand conversation saloons. Bathing establishment. Authorised by the State and Academy of Medicine, for gout, liver affections, &c. BERNARD, Director.

LOECHE-LES-BAINS, Valais, Switzerland. Hôtel de France. First-class. Communicating with the Thermal Establishment. Post and telegraph in hotel. Carriages to Station. Cook's Tickets. Chalet adjoining at reduced prices. OGGIER and LORIAN, Proprietors.

LUCERNE.—Steam-boat travelling on this classical Lake is one of the principal pleasures of Tourists. The Saloon boats make eighteen knots, and have commodious saloons. Restaurant. Table-d'hôte. Tickets equally available by rail.

LUCERNE.—Pension New Schweizerhaus. Comfortable English and American home, near Route and Rail. Large garden. Extensive view of Alps, lake, and town. First medical recommendations. Pension, from 9½ francs. JOSEPH ROST, Proprietor.

LUCERNE.—Hôtels Schweizerhof and Lucernerhof. An extra floor and two new lifts added to the Schweizerhof. The electric light is supplied in the bedrooms; no charge for lighting or service. HAUSER FRERES, Proprietors.

MONT DORÉ-LES-BAINS, Puy-de-Dôme. Bathing Establishment recommended for Bronchitis and Asthma, and for Liver, Throat, Chest, Spleen, and Gout. There are cold springs, varying from 59 deg. to 119 deg. Season, June to September; altitude, 4000 feet.

MÜRREN, Switzerland.—Grand Hôtel des Alpes. Altitude, 5600 yards. One of the most beautiful spots in Switzerland. This Hotel is just rebuilt in stone, and has all modern improvements and comfort; electric light in every room. Residence of English chaplain. Large tennis Museum. Telephonic communication with the Hôtel Steinbach, Lauterbrunnen.

SWITZERLAND.—The Vitznau-Rigi Railway, the shortest, cheapest, and most frequented way to the celebrated Rigi Kulm, is via Lucerne and Vitznau, with Junction at Kaltbad for the Rigi-Scheideck.

THUN.—Hôtel Pension Baumgarten, situated in centre of brace park. The only hotel with elevated position. Splendid views of Lake, Glaciers, and Stockhorn. Family house; old reputation; moderate charges. BETTLER-STADLER, Proprietor.

ZURICH.—Hôtel Belle-Vue au Lac. First-class Hotel, mostly frequented by English and Americans. On the new bridge, and near the landing of the boats. For a long stay, eight francs per day. PONTI, Proprietor.

FLORILINE. For the Teeth and Breath. Is the best Liquid Dentifrice in the world: it thoroughly cleanses partially-decayed teeth from all parasites or living animalcules, leaving them pearly white, imparting a delightful fragrance to the breath. The Fragrant Floriline removes instantly all odours arising from a foul stomach or tobacco smoke; is none partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly delicious to the taste, and as harmless as new milk. Sold by Chemists and Perfumers everywhere, at 2s. 6d. per Bottle.

GOLDEN HAIR.—Robare's AUREOLINE produces the beautiful golden colour so much admired. Warranted perfectly harmless. Price 5s. 6d. and 10s. 6d., of all principal Perfumers and Chemists throughout the world. Agents, R. HOVENDEN and SONS, 31 and 32, Berners-st., W.

A CLEAR SKIN and Beautiful Complexion obtained by using DINNEFORD'S EMOLLIENT CREAM. 2s. 6d. and 4s. 6d. post-free.—180, New Bond-street, W.

KEATING'S POWDER.—Kills bugs, moths, fleas, and all insects perfectly unrivalled. Harmless to everything but insects. Tins, 6d. and 1s. WORMS IN CHILDREN are easily, surely, and with perfect safety got rid of by using KEATING'S WORM TABLETS. Tins, 1s. 1½d. each.

GREY HAIR.—Alex. Ross's HAIR DYE produces a perfect light or dark colour immediately. It is permanent and perfect. 3s. 6d., or 5s. stamps. Depository for hair on face, 3s. 6d.—21, Lamb's Conduit-street, London, W.C.

The Historical Game of Bowls on the Hoe.

The Mayor laying the Foundation-stone of the Armada Memorial.

The Historical Procession.

TERCENTENARY FESTIVAL OF THE DEFEAT OF THE ARMADA AT PLYMOUTH.

THE PARIS EXHIBITION.

The Lord Mayor entertained the members of the Executive Council of the British Section of the Paris Exhibition at a banquet at the Mansion House on July 21. M. Waddington, the French Ambassador, was the principal speaker. Responding to the toast of his health, he said that as the representative of France in this country he should always strive to be on the best possible footing with England. He thought that the possibility of wars in Europe was not so great as a hundred or even fifty years ago, owing to the growth of public opinion, the introduction of universal service on the Continent, and the invention of deadly instruments. The Lord Mayor next proposed "Success to the Paris Exhibition of 1889," and M. Georges Berger, Director-General of the Exhibition, acknowledged the toast. Sir Lyon Playfair gave "The Executive Council of the British Section," for whom Sir Henry Roscoe replied; Mr. E. H. Carbutt proposed "Science and Literature," and W. H. M. Christie, Astronomer Royal, responded for Science, Mr. George Augustus Sala replying for Literature.

In London 2385 births and 1297 deaths were registered in the week ending July 21. Allowing for increase of population, the births were 374, and the deaths 539, below the average numbers in the corresponding weeks of the last ten years. The deaths included 1 from smallpox, 25 from measles, 14 from scarlet fever, 16 from diphtheria, 33 from whooping-cough, 8 from enteric fever, 62 from diarrhœa and dysentery, 2 from choleraic diarrhœa, and not one either from typhus or ill-defined forms of continued fever. Different forms of violence caused 54 deaths; 49 were the result of negligence or accident, among which were 13 from fractures and contusions, 5 from burns and scalds, 10 from drowning, 3 from poison, and 11 of infants under one year of age from suffocation. Five cases of suicide were registered.

The Speaker gave his annual dinner to the Officers of the House of Commons on July 25.

General Sir Edwin Johnson, G.C.B., late Director of Military Education, has been elected a member of the council of the Oxford Military College.

The Lambeth Flower Show, for promoting window-gardening among the working classes, was held in the Lambeth Palace ground on July 24.

A fine flower show of the Royal Horticultural Society, with which was combined a show of carnations and picotees, was held on July 24 in the drill-hall of the London Scottish Volunteers, Buckingham-gate.

THE HIGHLAND AND AGRICULTURAL SOCIETY OF SCOTLAND. For the tenth time the annual show of the Highland and Agricultural Society of Scotland has been held on the Green, at Glasgow. The shorthorns were well represented, the interest being divided between the Royal winner, Mario, and Mr. Thomson's exhibits. The former has also been awarded the Tweeddale gold medal as the best bull in the yard; Royal Ingram, hitherto considered almost invincible, be ing second; and Master Shapeley third. In the two-year-old class Self-Conceit, first at the Royal, has repeated her victory. Viewed as beef producers, the Aberdeen polled cattle are, perhaps, the great attractions of the show; still they are not numerous. Lord Tweedmouth's Cash and Mr. Mackenzie's Esquire are superb specimens of the breed. The Dowager Countess of Leafield has taken the first prize for two-year-old heifers with Pride of Cullen, an animal possessing immense substance. The Duke of Buccleuch is first in the aged bull class with Kinsman II.; and in the yearlings Sir. R. Jardine, M.P., with Jubilee. A great feature of the exhibition is the Clydesdale horses. The first prize in the three-year-old class falls to the Duke of Portland; but the best Clydesdale shown is considered to be Prince Albion, bred by the late Mr. Campbell, M.P. for the Ayr Burghs.

The Wesleyan Methodist Conference was opened at Camborne on July 24, when the Rev. Joseph Bush, chairman of the First London District, was chosen president for the ensuing year; and the Rev. D. J. Waller re-elected secretary.

BEECHAM'S PILLS

Declared by **90** per cent of the Retailers to be the most popular, and nine times more used than all other principal Patent Medicines put together.

BEECHAM'S PILLS, SAINT HELENS, ON THE GOVERNMENT STAMP AFFIXED TO EACH BOX.

THE WIMBLEDON MEETING.

The last annual meeting of the National Rifle Association at Wimbledon was brought to a close on Saturday, July 21. We present, as is our custom, a portrait of the winner of the Queen's Prize in the final stage of the contest on Tuesday, July 17. This prize of £250, with the gold medal of the Association and the Championship Badge for the year, was won by Private Fulton, of the 13th Middlesex Rifle Volunteers, who made a total score of 280—namely, 86 at the first stage, 110 at the second, 43 at the range of 800 yards, and 41 at the 900 yards' range. After his victory at Wimbledon, Private Fulton was promoted to the rank of Sergeant. Mr. Fulton, the first member of his battalion who has won the Queen's Prize, brings the prize back to London for the second time since 1884, before which it had long been absent. He has been six years in the Queen's Westminsters, is thirty years of age, and had the honour of making a tie for the St. George's this year. He is a wood engraver, residing at Battersea.

The results of the shooting since our last issue was put to press have now to be recorded.

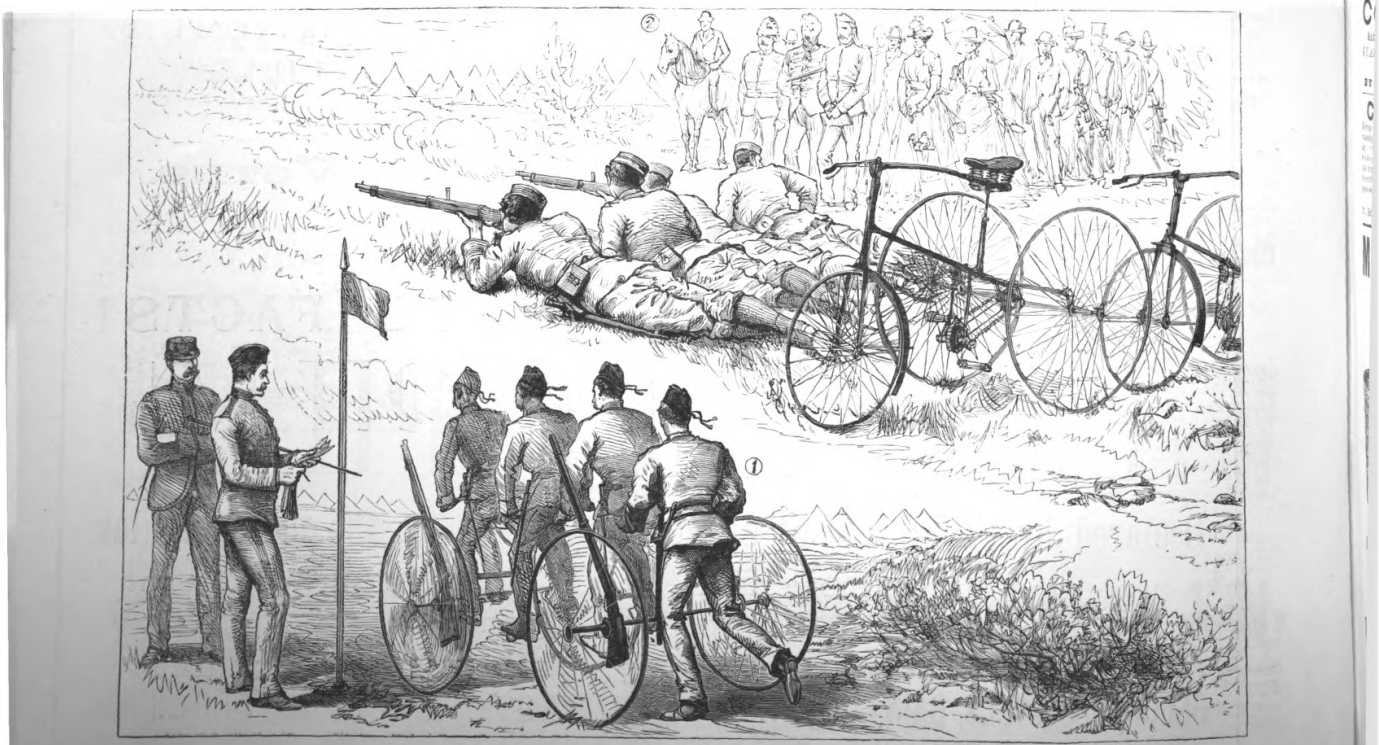
The principal events on the 18th were team-matches for the United Service Challenge Cup between eights of the Volunteers, Royal Marines, Regulars, the Navy, Yeomanry, and Militia; the Kolapore Cup, shot for by representatives of the mother country and the Colonies; and the Chancellor's Plate. The Volunteers won the United Service match, the Kolapore Cup was taken by the Home team, and the Chancellor's Plate was gained by the Cambridge team. The Albert Jewel, being the second stage-prize of the great Any Rifle Competition, was won by Quartermaster Arrowsmith, of Bristol.

On the 19th the Elcho Challenge Shield was won by Ireland with a score of 1652, England having made 1642, and Scotland 1568. The Ashburton Challenge Shield, shot for by the public schools, was taken by Clifton College with 455, Cheltenham being 433, and Eton 432. Lieutenant Wall, of Bradfield, won the Spencer Cup. During the day Princess Louise and the Marquis of Lorne paid a visit to the Canadian Camp.

The Comte de Paris was among the visitors on the 20th to witness the Loyd-Lindsay cavalry competition, a combination of hurdle-racing and shooting, the prize for which was taken by the Dorset Yeomanry; the second by the West Somerset team. In the Mappin, a similar contest on foot, the winners were the Hon. Artillery Company's team, with a score of 103; the first squad of the 1st London coming in second with 186; the Queen's Westminster squad also making 186. In many of the individual competitions there were more highest possible scores than have been recorded in previous years. The Dudley prize was won with ten successive bull's-eyes at 1000 yards by Major McKerrell, who also took the Bass prize.

The business of Saturday, the 21st, comprised but two events. The first was the new Cyclists' Competition. Ten teams, each of four men, were entered. The conditions were, that the teams should ride about seven-eighths of a mile, and should fire, during the ride, each man ten rounds, at a second-class target, the range being about 450 yards. The course was along the road running parallel to the butts. The cyclists rode half the distance, then dismounted, and fired the forty rounds allowed for each team of four men, lying on the grass close to their machines, and just off the road; then they rode back to the starting point. All kinds of cycles were allowed; bicycles, tricycles, and the ingenious multicycle, carrying four men, of the winning team, which was the 1st Company of the 2nd Warwickshire Volunteer Battalion. Eight minutes were allowed, in all, to ride the distance and to complete the firing; and points were deducted from those teams who took more than that time. The first prize, of £20, was awarded to the team of the 2nd Warwickshire, as stated; and the second prize, of £10, to that of the London Rifle Brigade. The men carried their rifles either slung over the back or attached to the machine. This was the first appearance of the military cyclists at Wimbledon.

SERGEANT FULTON, 13TH MIDDLESEX,
WINNER OF THE QUEEN'S PRIZE AT WIMBLEDON.



The contest for the Royal Cambridge Challenge Shield did not begin till late in the afternoon. It is a competition restricted to sections of four men from the regular cavalry, but under similar conditions to those which govern the Loyd-Lindsay competition for yeomanry and mounted rifles. The two Hussar teams made the best time, but the lowest scores. The Royals not only rode well, but shot well, and won the first prize by 97, one point over the 16th Lancers. While the last competition was in progress, the Prince and Princess of Wales, with whom were Princesses Louise, Victoria, and Maud, drove into the Council enclosure amid hearty cheers from an assembled crowd of Volunteers and their friends. The Queen's Westminster, to whose ranks the Gold Medallist of this year belongs, furnished a guard of honour under command of Lieutenant-Colonel Howard Vincent, M.P. The Clifton boys, as winners of the Ashburton Shield; the Irish Eight, who came to bear away the Elcho Shield; and the Canadians were loudly cheered; but individual prize-winners evoked little excitement until Private Fulton advanced to take the Queen's Prize for 1888. "See the conquering hero comes" announced his approach, and gave the signal for loud plaudits; and then the strains, changing to "God Save the Queen," betokened that the last of the Wimbledon meetings was at an end.

THE PLAYHOUSES.

To write a successful Adelphi melodrama seems, to the dramatic student, as easy a task as shelling peas. There are certain obvious rules and conditions to be studied. In the first place your heroine must be as innocent as new milk. She must be pure and without reproach. The virtuous cream of her existence must not be disturbed by even a suspicion of adulterating water. She must have fed on the roses and lain on the lilies of life. Then again, your hero must be brave and beautiful, with a bronzed face and a biceps big enough to knock down an ox or to floor half-a-dozen marines who oppose his reckless course. He must be sufficiently athletic to jump through a port-hole into the sea, and lucky enough to escape being shot as he swims to shore, the target for innumerable bullets. Put your Adelphi hero into uniform and all will be well. Let him have enlisted into the army or navy and risen in the services by pluck and gallantry, or passed into either service after a spirited competition at Woolwich, Sandhurst, or on board the Britannia. The policeman-hero has yet to engage the attention of Mr. Henry Pettitt and Mr. Sidney Grundy. And then the villain or villains. In proportion as the heroes or heroines are spotless in conduct and honour so must the scoundrels be unspeakably vile. Mr. Beveridge was ordinarily considered bad and base enough to oppose the virtuous tradition of the Adelphi; but now-a-days it is considered necessary to supplement him with Mr. Cartwright, who outdoes in the Strand the direful deeds that were once associated with Mr. E. S. Willard in Oxford-street.

Joking apart, however, the new play, called "The Union Jack," is an excellent specimen of honest, wholesome work. It is a stirring play, well acted, well mounted, full of picturesque scenes, and there is not a sentiment in it that could be cavilled at by a Sunday-school teacher. It teaches men to be brave and chivalrous, and women to be honest and self-reliant and pure; the wicked who repent are forgiven, and the evil who glory in their misdeeds are promptly punished; and it would be difficult to recommend to the ordinary sight-seer a bolder, more creditable or comprehensive piece of work. It is quite true that the *raison d'être* of dramatic performance is to amuse and not to instruct, to please the people and not to preach to them; but if, in arranging for harmless pleasure, a manager can contrive to suggest healthy sentiment, so much the better, and so much the more creditable the task. The Messrs. Gatti have conducted their theatre on excellent principles, and hence the enviable popularity of their playhouse.

Mr. William Terriss has once more been invested with a character that exactly suits his temperament. He has a fine voice, and here he has an opportunity of showing it. He has a pleasant smile, and it proves grateful to his audience. He has a buoyant, frank, self-reliant style, and he animates the whole audience with his own enthusiasm. The hero of the new play, of course, does wonderful things. In order to avenge the honour of his ruined sister he pursues her betrayer, is falsely accused, degraded, ruined, and suffers both humiliation and scorn before he is re-established in the favour of his superior officers and in the eyes of society. The strong popularity of Mr. Terriss will not suffer from his present performance, that is as gay, as heroic, and as animated as ever. The best scene in the play, where the sad, ruined little sister confesses her shame to the brother she loves, is acted by Mr. Terriss with great charm and unaffected pathos, and it is almost to be regretted that the play does not afford more chance for the deliberative and thoughtful side of the actor's art. The sister in question, who would be the heroine of the play were it permissible for an Adelphi heroine to ever have made a mistake, is played by Miss Olga Nethersole with great earnestness, simplicity, and charm. She is certainly the most interesting female character in the play; and, comparatively unknown in London, Miss Nethersole has made a

CYCLE VOLUNTEERS AT WIMBLEDON.

MRS GEORGINA WELDON WRITES; "24 MAY 1887"

"I am "50" "to-day"

"but, thanks to "Pears' Soap"

"My COMPLEXION is only 17."

Good Complexion! AND Nice Hands!

NOTHING adds so much to personal attractions as a bright, clear complexion, and a soft skin. Without them the handsomest and most regular features are but coldly impressive, whilst with them the plainest become attractive; and yet there is no advantage so easily secured. The regular use of a properly prepared Soap is one of the chief means; but the Public have not the requisite knowledge of the manufacture of Soap to guide them to a proper selection, so a pretty box, a pretty colour, or an agreeable perfume too frequently outweighs the more important consideration, viz.: *the Composition of the Soap itself*, and thus many a good complexion is spoiled which would be enhanced by proper care.

A most Eminent Authority on the Skin,

Professor Sir Erasmus Wilson, F.R.S.,

Writes in the JOURNAL OF CUTANEOUS MEDICINE:—

"THE use of a good Soap is certainly calculated to preserve the Skin in "health, to maintain its complexion and tone, and prevent its falling "into wrinkles. PEARS is a name engraven on the memory of the "oldest inhabitant; and PEARS' Transparent SOAP is an article of the "nicest and most careful manufacture, and one of the most refreshing "and agreeable of balms for the Skin."

TO persons whose skin is delicate or sensitive to changes in the weather, winter or summer, PEARS' TRANSPARENT SOAP is invaluable, as, on account of its emollient, non-irritant character, *Redness, Roughness and Chopping are prevented, and a clear appearance and soft velvety condition maintained, and a good, healthful and attractive complexion ensured.* Its agreeable and lasting perfume, beautiful appearance, and soothing properties, commend it as the greatest luxury and most elegant adjunct to the toilet.

Testimonial from

Madame Adelina Patti.

"I HAVE found PEARS' SOAP matchless for the Hands and Complexion."

Adelina Patti.

PEARS' Transparent SOAP. TABLETS & BALLS: 1s. each. Larger Sizes, 1s. 6d. and 2s. 6d. *(The 2s. 6d. Tablet is perfumed with Otto of Roses.)* A smaller Tablet (unscented) is sold at 6d. PEARS' Transparent SOAP.

distinct success. Miss Millward, though she is not connected with the strong vein of dramatic interest that runs through the play, acts with admirable force and intensity. She is becoming a powerful and very valuable actress in strongly emotional characters. All the last acts depend upon her nervous strength, and she is not found wanting when she is called upon. In an artistic sense the prize for good acting should, however, be awarded to Mr. Charles Cartwright, who, out of very small material, gives a picture of a modern villain of a very unconventional pattern. His is not the ordinary villain of the "Vic," who shows his temperament by scowls and gestures. We see the man's heart as well as his face; his nature as well as his manner. It is no easy task for an actor to evolve such a character out of the ordinary dialogue presented to him to study. Only artists can do this, and Mr. Cartwright can claim that distinction. Of course it is a repulsive character, one with which no one can sympathise; but it is a type. The actor does not flinch from his work, but goes boldly at it, winning his way by subtlety and thought. Mr. Cartwright is an actor of brains, as opposed to the ordinary actor of beauty. Mr. J. L. Shine has done nothing so well on the stage as his rollicking tar, the very soul of good-nature; and he has to assist him in the comic scenes Miss Clara Jecks, one of the cleverest little actresses on the stage, who makes the most of every line that is given to her. Mr. Beveridge, Mr. Dalton Somers, Miss Sallie Turner, and many more, are very usefully employed, and in few recent Adelphi dramas has the acting been so even and good. The play is mounted in the very best style, and the electric light has already done wonders at the Adelphi. The theatre, always well ventilated, is delightfully cool, and the stage looks far prettier and brighter with the new light than with the old gas. There is not the slightest trouble or difficulty in adapting electricity to revolving scenes, and doubtless, in a short time we shall see it at every theatre in London, whereby heat will be lessened and danger minimised. Messrs. Gatti thoroughly deserve the success that has attended careful management and liberal enterprise. All the country cousins will be flocking to see "The Union Jack," and it will be waving over the new and improved Adelphi long after the hard-worked world has returned from rest and summer holidays.

For the very first time in the memory of man the month of August is to be given up almost wholly to the theatre. Hitherto there has been a pause in theatrical excitement after July. The dramatic critic has been allowed one brief month's holiday. But it is not so this year. Mr. Daniel Bandmann has come forward to destroy our peace. It was all comfortably arranged that Mr. Richard Mansfield should open at the Lyceum with his version of Louis Stevenson's story, "Dr. Jekyll and Mr. Hyde," early in September. The play and the performance having made a great hit in America, Mr. Mansfield was naturally anxious to try his fortune in England. All was arranged. The American company brought over by the clever young actor had actually landed in England, when up starts Mr. Bandmann with a new "Jekyll and Hyde" that had received no American *cachet*, and the Opera Comique Theatre is promptly taken, in order to anticipate his comrade and brother in art. But Mansfield happens to be as sharp as Bandmann, so, without a moment's consideration, he decided to start work at the Lyceum in the month of August, originally marked out as a holiday. Mr. Mansfield will accordingly be first in the field on Saturday, Aug. 4, anticipating by a few hours the Bandmann play on Bank Holiday, Aug. 6. This is as it should be, although a double dose of "Jekyll and Hyde" in the month of August may be trying to the dramatic constitution.

There will be an important change at the Princess's Theatre on Thursday, Aug. 2, when will be produced an American sensation fire-engine drama, called "The Still Alarm," one of the examples of highly-coloured realism that obtain favour at certain seasons of the year.

Meanwhile Miss Sophie Eyre is preparing for her autumn campaign at the Gaiety, and she proposes to open the doors of that theatre under her temporary management either on Friday or Saturday, Aug. 3 or 4. The first venture will be a new version of "Mr. Barnes of New York," called "Marita," by John Coleman, an earnest actor and a capable dramatist. Miss Sophie Eyre will, of course, be the Corsican beauty. At the end of August, the promised version of Rider Haggard's "She" will be ready, a play that has occupied the combined intellects of four dramatists. Mr. Haggard, Mr. Edward Rose, Mr. W. Sidney, and that clever young lady, Miss Clo. Graves, have all had a share in "She"; and it may be hoped that, in this instance, too many cooks may not spoil the dramatic broth. Miss Sophie Eyre has, however, a third iron in the fire. A new play, written by Mr. and Mrs. John Aylmer, and founded on a pathetic story by Ouida, will "follow on" if there be time. Here are, surely, novelties enough for the month of August, and possibly in the year 1888 the wretched dramatic critics will get a fortnight's holiday. Let us hope so; for what with matinées and night performances it has been a desperately trying and exhausting year.

In a letter to the *Morning Post* the Duke of Newcastle contradicts the report that he was about to join the Roman Church.

Sir George Pringle will retire from the office of secretary to the Ecclesiastical Commission at the close of the present session, after a service of about forty-five years, and will be succeeded by Mr. Alfred De Bock Porter, who has held the position of financial secretary for seven years.

Mrs. Fawcett puts forward an irresistible plea for help for the "humble little organisation" called the Travellers' Aid Society. This institution devotes itself to securing the safety and comfort of girls who arrive in London friendless or otherwise in distress. It rescues them from the dangers which would naturally beset them, and, whenever possible, sees that they arrive happily at their destination. Much of the society's work is done gratuitously, but it must needs have expenses, and these the public is asked to assist in defraying.

OBITUARY.

ADMIRAL THE HON. SIR E. HARRIS.

Admiral the Hon. Sir Edward Alfred John Harris, K.C.B., whose death we briefly referred to in our last Number as having taken place at his seat, Sandling Park, near Hythe, on July 17, was the second son of James Edward, second Earl of Malmesbury, by Harriet Susan, his wife, daughter of Mr. Francis Bateman Dashwood, of Well Vale, Lincolnshire; was born May 29, 1808, and received his education at Eton and at the Royal Naval College. His commission as Lieutenant bore date February, 1828 and that of Admiral on the Reserve list, 1877. From 1844 to 1852 he represented, as a Conservative, Christ Church in Parliament. In 1852 he was Chargé d'Affaires and Consul-General at Lima; from 1858 to 1867, Ambassador at Berne; and from 1867 to 1877, Envoy Extraordinary and Minister Plenipotentiary at the Hague. He married, Aug. 4, 1841, Emma Wyly, youngest daughter of Captain Samuel Chambers, by whom he leaves a son, Lieut.-Colonel Edward James Harris, and other issue.

MR. SERGISON, OF CUCKFIELD PARK.

Mr. Warden Sergison, of Cuckfield Park, Sussex, J.P. and D.L., Hon. Major 2nd Sussex R.V., late Captain 4th Queen's Own Hussars, died on July 16. He was only son of the late Mr. Warden George Sergison, of Cuckfield, by Editha, his wife, daughter of Sir Jacob Henry Astley, Bart., of Melton Constable.

MR. BROWNE, OF BROWNE'S HILL.

Mr. Robert Clayton Browne, M.A., of Browne's Hill, in the county of Carlow, J.P. and D.L., died on July 22, aged eighty-nine. He was eldest son of the late Mr. William Browne, of Browne's Hill, Custos Rotulorum county Carlow, and M.P. for Portarlington, by Lady Charlotte Bourke, his wife, daughter of Joseph Deane, Earl of Mayo, Archbishop of Tuam. He served as High Sheriff in 1831; and married, Oct. 28, 1834, Hariette Augusta, daughter of Mr. Hans Hamilton, M.P. for the county of Dublin, and had three sons and one daughter. The Brownes of Browne's Hill have long held a leading position in the county of Carlow.

We have also to record the deaths of—

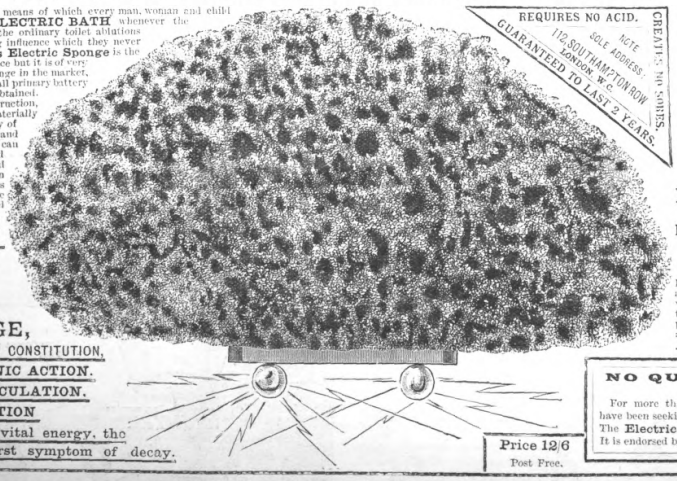
Lady Wilson (Caroline), wife of Sir Charles Rivers Wilson, K.C.M.G., C.B., and daughter of Mr. R. Cooke, on July 13.

Lieutenant-General Fitzroy Millar Mundy, formerly of the Bengal Staff Corps, on July 12, aged seventy-three.

Julia Maria Frances, only daughter of Mr. Henry Hallam, F.R.S., and second wife of Sir John Farnaby Lennard, Bart., of Wickham Court, Kent, on July 15.

Etheldreda Julia, wife of Sir Astley Paston Cooper, Bart., of Gadesbridge, on July 17, aged fifty-three. She was daughter of Mr. George Newton, of Croxton Park, Cambridgeshire, and leaves three sons and two daughters.

Lady Archibald Campbell's pastoral play was given on July 25 at Cannizaro Wood, Wimbledon.



The Portraits and Memoirs of ten eminent contemporary Belgian painters, which appeared in our Journal on July 21, were much appreciated in artistic and amateur society at Antwerp; but the lamented death of one of them, M. Henri De Braekeleer, on the preceding day, gave a melancholy interest to that which concerned him. At the Exhibition of the Belgian Academy of Fine Arts, this year, several young Englishmen have distinguished themselves, gaining prizes for painting and drawing.

For the **BATH** AND **TOILET.**

RANDAL CRESSWELL'S ELECTRIC SPONGE

STARTLING DISCOVERY IN MEDICAL SCIENCE FOR RAPIDLY RESTORING WASTED NERVOUS POWER TO THE HUMAN SYSTEM, STRENGTHENING THE WEAK AND FORTIFYING THE STRONG. (BY ROYAL LETTERS PATENT, No. 4,456.)

An important and ingenious invention by means of which every man, woman and child may enjoy the luxury of a **REAL ELECTRIC BATH** whenever the customary "morning dip" is taken, and the ordinary toilet ablutions be invested with a vitalising, invigorating influence which they never before possessed. **Randal Cresswell's Electric Sponge** is the ordinary Bath Sponge in outward appearance but it is of very superior quality, being, in fact, the best sponge in the market, and contains concealed in its interior a small primary battery from which the current of Electricity is obtained. The battery is of perfectly unique construction, cannot get out of order, and does not add materially to the weight or detract from the pliability of the sponge. By simply wetting the sponge and applying it to the skin the Electric current can be conveyed to any part of the body, and although the current is sufficiently powerful to be distinctly felt by the strongest man it is guaranteed to be absolutely harmless to the most delicate infant. Every sponge is rigidly tested before being sent out, and is guaranteed to be exactly as represented, viz., a genuine **ELECTRIC SPONGE,** suitable for the bath or toilet.

ELECTRICITY,

As conveyed to the system by

Randal Cresswell's

ELECTRIC SPONGE,

INVIGORATES THE DEBILITATED CONSTITUTION.

STIMULATES THE ORGANIC ACTION.

PROMOTES THE CIRCULATION.

ASSISTS DIGESTION

And renews within us that vital energy, the loss of which is the first symptom of decay.

GOUT,

Price 12/6 post free

All fly before the invigorating effects of

ELECTRICITY,

As imparted to the system by

RANDAL CRESSWELL'S ELECTRIC SPONGE.

BEWARE of the numerous fraudulent appliances which are constantly being advertised at extortionate prices, and in which there is nothing Electric but the name; they are absolutely devoid of any Electrical properties whatever. This is the only genuine and simple form of applying Electricity, **Ask your medical man.**

NO QUACKERY HERE.

For more than a century Physicians and Scientists have been seeking a mode of applying Electricity locally. The **Electric Sponge** supplies this long-felt want. It is endorsed by the entire Medical profession.

Price 12/6 Post Free.

LADIES AND GENTLEMEN, YOU ALL USE A SPONGE, WHY ONE? IT IS THE BEST IN THE MARKET, AND NOT TRY THIS POSSESSES PROPERTIES NEVER POSSESSED BY A SPONGE BEFORE.

Price 12/6 post free

The ELECTRIC SPONGE, of which the above engraving is a reduced fac-simile, is a full-sized Bath Sponge, and will be forwarded, securely packed and free by post, with full directions for use, to any part of the World on receipt of Post Office Order or Cheque value **12s. 6d.,** crossed "& Co.," and payable to **THOMAS YOUNG.** Money returned if not as represented. Ask your Chemist to supply you, and, if he cannot, apply direct to the Sole Proprietors,

THE CRESSWELL ELECTRIC ASSOCIATION,

OUR NOTE BOOK.

BY JAMES PAYN.

A writer in the *Spectator* justly points out that a way which seldom fails in cases of sleeplessness is to recall the incidents of a dream. This is a much better plan than the counting-up to a thousand, making a picture in the mind of sheep following one another through a gap, or reciting Gray's Elegy—all of which have been much recommended. It is, however, essential to the success of this plan that the dream should be the one from which one has last awakened; it must still have something of the vagueness natural to dreams about it, or it will not be effectual: an old crusted dream is of no more use for the purpose than any actual incident of life; and it is not so easy to catch your dream while he is young and fresh. For my part, I find the calling-up of a familiar landscape (always the same), very far-stretching and in the horizon blurred by distance, is—in default of a dream—the next best thing to be done. Wittenham Clump seen from the Ilsley Downs is a good place. Next to that, try a railway train: picture yourself travelling by the night express to Scotland over some exposed spot such as Shap Fell; let it be very cold outside, with the wind howling to get at you, while you are snugly ensconced in your railway rugs. If you let the fancy stray, on no account permit it to concern itself with the future; for imagination, which is fatal to sleep, is sure to be thereby set to work. Think of the past, which only summons memory and presents nothing new.

There is a notion abroad that the older one grows the less one has need of sleep, but for my part every year I like it in larger and larger quantities:

> The heights by great men reached and kept
> Were not attained by sudden flight,
> But they, while their companions slept,
> Were toiling upwards in the night,

is a verse that has led a good many people astray. The poet does not tell us how those great men felt in the morning. I don't believe in this night-work. Arsenius used to say that one hour's sleep a night was enough for a monk; but I am not aware that even as a monk he greatly distinguished himself. Caligula never slept above three hours, and no wonder. The best advice, I am persuaded, that can be given to a brain-worker is "go to bed early, and sleep for ten hours"; it is true that doctors are addicted to working at night, but they have the honesty to tell their patients, both in this matter and in feasting (for there is nobody so "imprudent" as your doctor), "Do as I tell you, not do as I do." This cutting short of sleep is one of the snares in which we poor literary folk are so often caught and slain. What terrible examples have I not seen of it in the noblest and best of us! Shakspeare understood the value of sleep thoroughly, and has written the noblest praise of it. The worst punishment even his imagination could devise for a criminal was that he should "sleep no more." This, be it noted, was not because he had murdered his king and guest (though that, of course, was reprehensible), but because he had murdered Sleep itself, a very much more serious matter.

That was a very cruel, though not an uncommon trick to play upon the editor of an American magazine—to send him a short poem of John Keats', saying the author was only thirteen years old, and hoping it would find admittance. If, as reputed, it was played by his own proprietor, I know no more remorseless act, save that, perhaps, of seething a kid in its mother's milk. "How could he, *could* he do so?" What can that editor think of his proprietor? and what can that proprietor think of his editor—*as* an editor? I don't remember one's literary feelings ever being so shocked! I don't think the editor ought to have shown such ignorance of his Keats, or made such a mistake—if he *was* ignorant—about poems every one of which is exceptionally beautiful; but it must not be supposed if, as is probable, this practical joke comes to be imitated by humourists on this side of the water that every rejection of an extract from an established author is to score as a success. There are many things in the British classics, and especially in the blank verse ones, that have not deserved to be printed once, and much less twice. I remember an "able editor" shutting the gates of his magazine in the face of a young gentleman who had fraudulently sent him some lines out of Thomson's "Seasons" as his own, with what he considered the happiest result—rejection. Some good man took up the cudgels for my friend. "You didn't print them because, of course, you knew they were Thomson's," he said, "though you didn't think it worth while to say so!" "No, Sir," observed the editor, blandly, "they were not rejected on that account: I did not know they were Thomson's, but I knew they were dull." This was taking the bull by the horns—or, rather, the young ass by the ears—indeed.

The Czar and his Imperial family have been delighting the civilised world of late by having a picnic, "just like anybody else, you know," on one of the picturesque little islands off Helsingfors. "Orders were given for a hamper, with all the requirements, to be placed in a boat, and their Majesties got into it." If they had got into the hamper the circumstance could hardly have excited more delight and surprise. Having landed, the attendants were sent back, and the Czar, "with the assistance of other members of the Imperial family, arranged an excellent luncheon." As the luncheon was provided and he had "assistance," I don't think so much of this feat; but the Emperor of all the Russias, we are told, then actually "chopped the necessary fuel, to which, after considerable difficulty, he at length set light." Of course, therefore, he did not use a match, none of your Bryant and May's (which once more I am glad to see "strike" only on the box), but doubtless evoked sparks by the rapid rotation of a stick of hard wood applied to a soft one. I should like to have seen him at it: the Imperial family shielding the budding flame with their parasols, and offering strips of the *Incendiary* (the last Nihilist organ) as most likely to take light. The meal, we are assured, was much relished, and "the Samovar enabled the Imperial picnickers to turn out a delicious cup of tea." This Samovar has puzzled a good many people: she is generally supposed to be a lady who answers to the personage who, at our seaside resorts, supplies hot water to tea-parties at twopence a head. Even in that case, the success of the experiment would have seemed nothing surprising; but I am informed by a gentleman who has a wife who says she can speak Russian (which is as near to a Russian scholar as I have ever got) that the Samovar is a tea-urn, which renders the result still less miraculous. Still, it is not the thing done, don't you know, but the person who does it, that gives such a charm to social life.

Fact has been once more trespassing on the domains of Fiction, with certain alterations in the circumstances which it invariably adopts in hopes to conceal its breach of copyright. A happy couple in Scotland—or a couple who would have been happy but for the airs which the lady seems to have given herself—were engaged to be married. The young person, poisoned, perhaps, by the literature of some anti-tobacco society, suddenly set her face against smoking, and declined to set it against that of the beloved object unless he renounced this pernicious habit. She would not marry him, she said, unless he gave up his pipe. Instead of replying like a wise man, "Then don't," or like a cunning one, "All right," with a mental reservation of doing as he pleased when the knot was tied, in a moment of weakness he submitted. The prohibition, however, proved intolerable, and in another moment of weakness he began to smoke again, taking such precautions doubtless as would occur to anybody to conceal the evidences of his crime. Unhappily, however, through circumstances over which he had no control (or hardly any) the lady found it out. "You have been smoking!" she exclaimed; "I smell it; I will bring an action for breach of promise of marriage against you." Which she actually did. As the Judge observed, if she had made her objection to smoking before the engagement commenced, there would have been something (though to my mind very little) in her contention; but that a young person after she has promised to marry you should indulge in all sorts of prohibitory "fads" and absurd conditions is a little too much even for a jury in a breach-of-promise case. "Edwin," this exacting Angelina might one day say, "I love you to distraction, as you know; but I have made up my mind to marry no one who is not fond of peppermint"; and on another, "Edwin, you are all in all to me; but if you would call me yours you must become a vegetarian." I confess the gentleman seems to me to have had a very fortunate escape. I daresay he is not aware, however, that he had a predecessor in fiction in the person of Mr. George Savage Fitz-Boodle. He, too, was engaged to be married to a young person who objected to tobacco; he, too, did his level best to give up Nicotina for her sake and failed; he, too, was detected by the olfactory nerves of his beloved object. The whole story, in short, of this Scotch couple (except their appearance in a law court) has been already told in the "Fitz-Boodle Papers."

Another case of plagiarism from literature has also occurred of late, but lies at the door not of Law but of Science. A poor woman was dying of starvation through her incapacity to take any nourishment. All the ordinary remedies and appliances had failed with her, when it suddenly struck her medical attendants that since digestible matter is emitted through the pores of the skin it might also be introduced that way. "A mixture of oil and grease was therefore composed and applied externally, whereupon the heat of the skin rapidly absorbed the nutriment and the patient showed signs of renewed vigour." It is all very well to ascribe this remedy to medical skill, but those who have read "No Thoroughfare," and remember what Joe Ladle took in "through the pores," will know that it is no novelty.

Those victims of the competitive examination at Sandhurst who were set a question that couldn't be answered are likely to be very popular martyrs. There is nothing so hateful to the youth of Britain as "exams.," even when the papers are capable of solution; and when they are not, the case seems hard indeed. It is not the first time, however, that young gentlemen have got into trouble from the same cause. I remember a certain cramming-school where time was of such importance to the elder pupils that they brought books with them even to their meals, and read until their turns came to be helped to the not very recherché viands; and where everybody else was, more or less, sacrificed to the Moloch of mathematics for their sakes. Misery so sharpened our wits that the ordinary school-books had no power to torment us; we procured cribs to all their problems. But the head-master had a manuscript book of his own, from which issued the most hateful questions: it cost infinite pains and trouble—besides involving us in the serious offence of burglary—to get the crib to *that*, but at last we effected it. The improvement in the work of the school became henceforth very marked, and gave great satisfaction to everybody; the master, our parents and guardians, and ourselves were all equally gratified. There was a little too much quickness, perhaps, consistent with prudence in producing our results, but their accuracy was unimpeachable. On one unhappy day, however, when every boy as usual had brought his sum to a correct conclusion, the pedagogue was suddenly seized with an insane desire to see it worked out on the board: he had no suspicion, or he would not have pitched upon the head of the class to exhibit his skill. This young gentleman had "fudged" the answer, to save himself trouble, like the rest; but he was now compelled to stoop to details, and they brought him to a different result. "There must be a mistake somewhere," observed the master, frowning: and we began to be very much afraid there was. The second boy tried it, and with only too great success: he made it the same as the first. Then the master himself tried it, and arrived at the same terminus. "The answer in my book," he said, in an awful voice, "is *wrong*: and yet you have all got that answer!" I refrain from saying what subsequently took place, because I respect the feelings of those who "like a story to end well"; and this incident had a very sad termination for us all.

THE COURT.

The Queen drove out on Saturday afternoon, July 28, accompanied by Princess Beatrice. The Duchess of Buccleuch, Mistress of the Robes, the Marquis and Marchioness of Lansdowne, and the Right Hon. C. T. Ritchie, arrived at Osborne in the afternoon. Her Majesty's dinner-party included the Empress Eugénie, Prince and Princess Henry of Battenberg, the Duchess of Buccleuch, the Dowager Duchess of Athole, the Marquis and Marchioness of Lansdowne, the Marquis de Bassano, the Right Hon. C. T. Ritchie, and General the Right Hon. Sir Henry Ponsonby, G.C.B. The Ladies and Gentlemen in Waiting had the honour of joining the Royal circle in the drawing-room. Her Majesty and the Royal family attended Divine service on Sunday morning, July 29. The Rev. Canon Prothero, M.A., officiated. The Queen went out on Monday morning, July 30, accompanied by Princess Beatrice. Princess Louise and the Marquis of Lorne visited the Queen in the afternoon, and drove out with her Majesty. The Duchess of Buccleuch, on behalf of the Women of Great Britain and Ireland, presented to her Majesty a diamond and pearl necklace and earrings, as a token of love and sympathy, in remembrance of the Jubilee, June 21, 1887. Captain Fullerton, A.D.C., her Majesty's yacht Victoria and Albert, had the honour of dining with the Royal family in the evening.

The Prince of Wales, accompanied by Duke Paul of Mecklenburg-Schwerin, was present at the inspection of the 1st Life Guards, the Royal Horse Guards (the Blues), and a battery of Horse Artillery by the Duke of Cambridge at Wormwood Scrubbs on Saturday morning, July 28; the Princess and Princesses Louise, Victoria, and Maud were likewise present. On Sunday morning, July 29, the Prince and Princess of Wales and their three daughters were present at Divine service. The Prince and Princess, accompanied by the three Princesses, left Marlborough House on Monday afternoon, July 30, for Portsmouth, where they embarked on board the Royal yacht Osborne. Next morning the Prince arrived on a visit to the Queen at Cowes. On entering the roadstead the Royal Yacht Squadron, of which his Royal Highness is Commodore, and also H.M.S. Valorous, guard-ship, saluted. The various yachts dipped colours as the Osborne steamed to her moorings.

Prince Albert Victor of Wales arrived at Bristol on July 25, where he was most heartily welcomed, and unveiled the Jubilee statue of the Queen. He afterwards lunched with the Mayor, and distributed prizes to the Royal Naval Volunteers. On the 27th Prince Albert Victor was presented with the freedom of the city of York and a loyal address, which were contained in a golden casket. His Royal Highness subsequently opened a new lock at Naburn, on the river Ouse, the journey from York being made in a steam-boat.

July 24 was the anniversary of the birthday of the Duchess of Cambridge, who completed her ninety-first year. The Prince and Princess of Wales, with their daughters, were early visitors to offer their congratulations to the venerable Duchess. The Duke of Cambridge, the Grand Duke and Grand Duchess of Mecklenburg-Strelitz, Princess Mary Adelaide (Duchess), the Duke of Teck, and their sons and daughter, visited the Duchess at an early hour. During the day the Duchess's residence in the Ambassadors' Court was thronged with visitors. In the evening the Duchess of Cambridge received at dinner the Duke of Cambridge, the Grand Duke and Grand Duchess of Mecklenburg-Strelitz, Princess Mary Adelaide (Duchess of Teck), the Duke of Teck, Princess Victoria, and Princes Adolphus, Francis, and Alexander of Teck, Lady Geraldine Somerset, Hon. Mrs. Percy Mitford, General Greville, Colonel George FitzGeorge, Captain Adolphus FitzGeorge, Colonel Augustus FitzGeorge, the Sub-Dean of the Chapels Royal, and Signor Tosti.

The Duchess of Teck, who was accompanied by Princess Victoria of Teck, attended at the High School for Girls at Richmond-green, on July 31, for the purpose of distributing the prizes.

Princess Louise, who was accompanied by the Marquis of Lorne, opened a Polytechnic Institute on July 25 in Ferndale-road, South Lambeth, which has been converted to its new use principally by the efforts of the Rev. Freeman Wills.

The Hereditary Grand Duke of Hesse and Princess Alix of Hesse arrived on July 30 at Queenborough from Flushing, and came to London by the boat-express. In the evening the Grand Duke witnessed the performance of "David Garrick" at the Criterion Theatre.

The Grand Duke and Grand Duchess of Mecklenburg-Strelitz have returned to Germany.

Prince Malcom Khan has left town for the Continent.

Inspector-General D. L. Morgan, C.B., has been appointed honorary physician to the Queen, in succession to the late Inspector-General Domville.

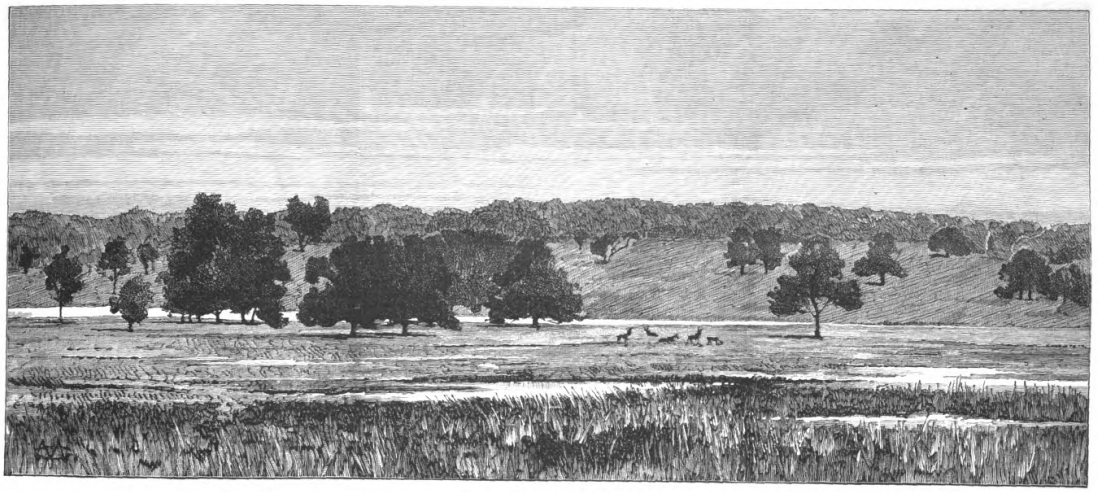
A new grammar school, erected at the cost of £10,000 from the Frances Ashton fund, was opened at Dunstable, on July 30, by Mr. Mundella, M.P.

Mr. O'Kelly, M.P. for North Roscommon, was arrested in the City on July 25 on a warrant charging him with an offence under the Crimes Act, and was removed to Ireland for examination.

Twelve students of the London School of Medicine for Women presented themselves recently for the first and second examinations of the Royal Colleges of Physicians and Surgeons of Edinburgh, and all passed. Miss Waterston, M.D., formerly a student of the same school, has passed the examinations of the Psychological Society for a certificate in mental diseases, and is the first lady who has done this.

The two-hundredth anniversary of the birth of the poet Alexander Pope was celebrated on July 30 at Twickenham, in the presence of a large gathering of spectators. The proceedings began with a water pageant, which started from Pope's Villa, and rowed past Eel-Pie Island to Orleans House, representing the costumes and manners of Pope's time. Mr. Henry Labouchere, M.P., the present tenant of Pope's Villa, threw open the house and grounds, and many persons took advantage of the opportunity to visit the place. The grounds were illuminated, as were the principal streets and the embankment. A museum containing many relics of Pope was opened next day at the Townhall. Sir Mountstuart Grant-Duff occupied the chair; and an address on the life, character, and works of the poet was given by Professor Henry Morley.

The preachers in Westminster Abbey for August will be as follows:—Sunday, 5th, at ten a.m., in choir, the Bishop of Colorado, U.S.A. (Dr. Spalding); at three p.m., in choir, Dr. Westcott, Canon in Residence. Sunday, 12th, at ten a.m., in choir, the Bishop of North Dakota, U.S.A.; at three p.m., in choir, Dr. Westcott, Canon in Residence. Sunday, 19th, at ten a.m., in choir, the Bishop of Springfield, U.S.A. (Dr. Seymour); at three p.m., in choir, Dr. Westcott, Canon in Residence. Sunday, 26th, at ten a.m., in choir, the Bishop of Minnesota (Dr. Whipple); at three p.m., in choir, Dr. Westcott, Canon in Residence.—Dr. Westcott proposes to continue his short lectures in the Abbey on the Saturdays in August, after the close of the afternoon service, on "The Confessions of Christ in the Gospel of St. John."



THE NAVAL MANŒUVRES.

The two opposed fleets of the Royal Navy engaged in a series of conflicting manœuvres around the west and north coasts of Ireland are the A Fleet, under command of Admiral Baird, with a division to the northward under Admiral Rowley, operating for the defence of Great Britain, the one from Milford Haven, the other from Lamlash Bay, Isle of Arran, off the mouth of the Firth of Clyde; and the B Fleet, commanded by Admiral Sir George Tryon, at Berehaven, Bantry Bay, with a division under Admiral Fitzroy at Lough Swilly, on the shores of Donegal. War having been declared, each commander has begun his endeavours, without inflicting any real damage, to capture vessels or forts belonging to his supposed enemy, including coastguard stations on the Irish coast which have surrendered to H.M.S. Northumberland; and the hostile fleets at Berehaven and Lough Swilly have been closely blockaded by the powerful ironclad ships of Admirals Baird and Rowley; while the fast cruisers and torpedo-boats attached to each fleet have been actively employed in trying to draw off the attention of their opponents, or to intercept their communications and to disturb them in their positions. But the general plan of these manœuvres is too complex for easy description until they shall have arrived at some combat between the main forces employed on each side. Our Special Artists, who accompanied the fleet of Sir George Tryon from Portland to Bantry Bay, send us a number of Sketches—one being an illustration of the trying of the electric light on that voyage; another, that of rigging out the network guards, humorously called "crinoline," around the hulls of the ships lying at anchor, for their protection against torpedoes. The latter operation took place at Berehaven on July 21, when the flag-ship made the signal, "Out torpedo-boats, prepare defences against torpedo attack." The Ajax, Warspite, and Hero are the only ships of the B Fleet that carry torpedo-boats, and these are second-class ones; but all the ironclads and the Volage have torpedo-nets. The Iris has the necessary fittings, but has not been supplied with either booms or nets. The Ajax took about an hour to get her crinoline into proper order; but this time would probably be shortened by half were she fitted with steel instead of timber booms. It is remarkable that while steel has been substituted for wood in the case of nearly every spar on board a ship, torpedo-net booms, where, above all things, lightness, portability, and strength are required, should continue to be made of timber. The steam winches with which the ships are supplied made short work of hoisting out the torpedo-boats, a job that without them would have required the services of every available able member of the ship's company and have taken three or four times as long.

The various methods of signalling practised in the fleet require some explanation. Our page of Illustrations shows the different means employed at sea, some of which are used in the mercantile marine as well as in the Royal Navy, to transmit messages from one vessel to others. Signalling by flags is done at ordinary times, where no private cipher is wanted to conceal the meaning of the message, in accordance with an international code, which has been adopted by all the maritime Powers, and which is used by signal-stations on the British coasts, as well as by all ships of war and merchant-ships. The signal-flags are of three shapes: the square flag; the pendant or pennon, a narrow-pointed triangular flag; and the burgee, with an indented or notched outer side, displaying two triangular points. Each flag, by its colour, or by a pattern of combined colours, blue, red, white, and yellow, denotes a letter of the alphabet; but certain combinations of flags are understood to mean phrases of several words: "What ship is that?" "Where are you from?" "Where are you bound to?" "In distress, want assistance." "Engine broken down." "Send a boat." "Can you tow me?" "Can I have a tug?" "I want a pilot." "Short of provisions;" and many of the orders and reports of information peculiar to the naval service; besides the points of the compass, the names of ports, the names of ships of war, and the names of merchant-ships. Not more than four flags are hoisted on one mast or spar, and placing either the burgee, the pendant, or the square flag uppermost indicates the nature of the signal—for instance, geographical, or reporting some danger or distress, or an ordinary inquiry, or the direction of the ship's course. But as the colours of flags cannot be distinguished at a distance, or in hazy atmosphere, while their position and shape may still be discerned, there is a method of using square flags and pendants combined with balls hung above or below them on the mast, to represent various important communications. When a ship hoists a number of signals on different masts and yards, to tell a long story, it must be read by taking them in a certain order, the signal at the main-truck first, then the fore-truck, the mizen-truck, the peak, the starboard main-topsail yard-arm, and so on. The semaphore, which exhibits signals perceptible and intelligible at a still greater distance, is a post, set up at the bulwarks on deck, with arms to be raised or lowered, or to be set pointing up or down at different angles, by which the letters of the alphabet, or numbers, or messages conventionally understood, are indicated where flags could not be distinctly visible.

Morse signalling is, of course, done with the Morse alphabet, so commonly used for electric telegraph messages on shore. This alphabet is entirely composed of combinations of long dashes and short dashes, the short dashes being only square dots. In applying it to signals made at a distance, whether by flashes of a lamp, or of an electric light, or of reflected sunshine in the heliograph, or of a flag or any other visible object, it is only needful to exhibit the single light or the single flag intermittently, during longer and shorter precise spaces of time, which are interpreted as long or short dashes in the Morse alphabet. A short dash followed by a long dash signifies the letter A; a long dash followed by three short ones is B; and so with all the other letters. There is a sign for a full stop at the end of a sentence. In our Artist's Sketches on board ship, one man is using a hand-flag, which he raises and lowers at the officer's bidding, to speak a message in Morse; another man, at night, similarly carries on a Morse conversation with a hand-lamp; in a third instance, when the electric light is displayed at the masthead, its alternate exhibition and eclipse, for the moment, are regulated by the man below, and it speaks very good Morse. Besides the ordinary Morse alphabet, the Royal Navy has "Colomb's flashing signals," by which orders are communicated, at night, from the Admiral's flag-ship to each division or squadron and every ship of a sailing fleet. The powerful apparatus for signalling with the beam of electric light, which sweeps over a vast area of the sea, and which also serves to discover every vessel within its range, is shown in another Illustration.

In foggy weather at sea, by day or night, every steam-ship

PROPOSED SITE IN RICHMOND PARK FOR THE FIRING POINTS OF THE NATIONAL RIFLE ASSOCIATION.

under weigh is bound to sound a steam-whistle, and every sailing ship a fog-horn, which ought to be done every five minutes, under the Board of Trade regulations. The "steam siren," the most powerful kind of whistle, needs no particular comment, for we are all familiar with that of a railway locomotive engine.

The *Times'* correspondent with the fleet in Bantry Bay remarks that "there is no branch of the naval service more important, no department from the failure of which greater calamity might result in the hour of need, than that of the signals, and yet in the Hercules, our flag-ship, there are only five men who can take in signals made on the elementary Morse system, and the other ships are no better off. As to the efficiency of the present system of signalling I shall have more to say by-and-by; but that we ought to have a more numerous staff trained to carry it out there cannot be two opinions. When I say that in the Hercules there are only five men able to read the Morse, I refer to the signal staff proper, for there are probably more than that number among the marines, and it would seem a desirable innovation that they should be employed as signalmen." The signalling from the coastguard stations is so good that more than 400 signals have been received by the fleet at Berehaven, without any mistake or ambiguity.

RICHMOND PARK AND RIFLE MEETING.

The debate in the House of Lords, on July 27, concerning the proposal of the Council of the National Rifle Association to hold its future annual meetings and shootings in Richmond Park, has revived a controversy which is of great importance to the inhabitants of that town and neighbourhood, and to many Londoners who enjoy the use of that beautiful demesne as a place of recreation. The objections to this proposal, and the absence of any necessity for its adoption, since many sites equally suitable for rifle-ranges can be found within a short distance of London, seem to be quite evident; and we trust that the strong disapproval of it expressed by his Royal Highness the Duke of Cambridge, who is President of the National Rifle Association, as well as Ranger of Richmond Park, also by the Earl of Fife, the Earl of Meath, the Earl of Feversham, and other Peers, with the unanimous feeling of the influential residents at Richmond, will induce her Majesty's Government to give it a decided negative. One of our Artists has made a Sketch of the ground where it is proposed to place the firing-points, which is in the present deer-paddock, a portion of Richmond Park not hitherto open to the public, fronting Spanker's Hill and the Isabella Plantation. Those apparent woods, seen in the background of our View, are mere circular fringes of trees with wide open spaces inside; they do not afford the protection which they appear to give. Bullets may pass through them, or, more dangerous still, may glance from the trees at an angle, thus greatly widening the dangerous zone behind the ranges. The ground rises not more than 42 ft. behind the 1100 yards range; the line of fire is clear for about 3500 yards, dropping at about 4000 yards (which is about the range of the new rifles) by a sudden descent to the inhabited district of Ham and the valley of the Thames. Ricochets or bullets glancing from the trees dotted along this plateau will carry danger beyond the immediate zone. The nearest part of the town of Richmond lies about a mile and a half to the right of the line of fire; but the distance to Kingston Vale is considerably less. Within a few yards of the ranges, and running nearly parallel to them, is the main road from London through Kingston to Portsmouth, generally full of traffic, and with villas and houses dotted along its sides. These remarks, which can be verified by reference to the map of the district, with the consideration of the rapid extension of dwelling-houses in the neighbourhood of Richmond and Kingston, should be admitted as proving that the public safety is concerned in the question. The deprivation of quiet people—ordinary visitors to the park in summer—of their enjoyment of its pleasant scenery during a whole fortnight in July would also be felt as a serious grievance. The ground to be devoted to the rifle-ranges would have to be despoiled of trees. As a matter of fact, there are at the present moment no less than seventy-five oak, elm, and ash trees, and fourteen thorns marked for felling, besides hedges and bushes marked for removal from the park, to clear the enclosures for the rifle-ranges demanded by the National Rifle Association. Most of the oaks are of centuries' growth, and may not be of any value commercially; but their value for ornament is far beyond their worth for timber. We earnestly hope that this rash and barbarous scheme will not be carried into execution.

The libel action brought by Mr. O'Brien, M.P., against the *Cork Constitution* was concluded on July 30, when the jury found for the plaintiff, damages, £100.—On the same day the Mayor of Sligo, Mr. P. A. McHugh, was sentenced by Messrs. Turner and Henn, Resident Magistrates, to four months' imprisonment, on a charge of having published intimidating notices in his newspaper, the *Sligo Champion*. Notice of appeal was given.

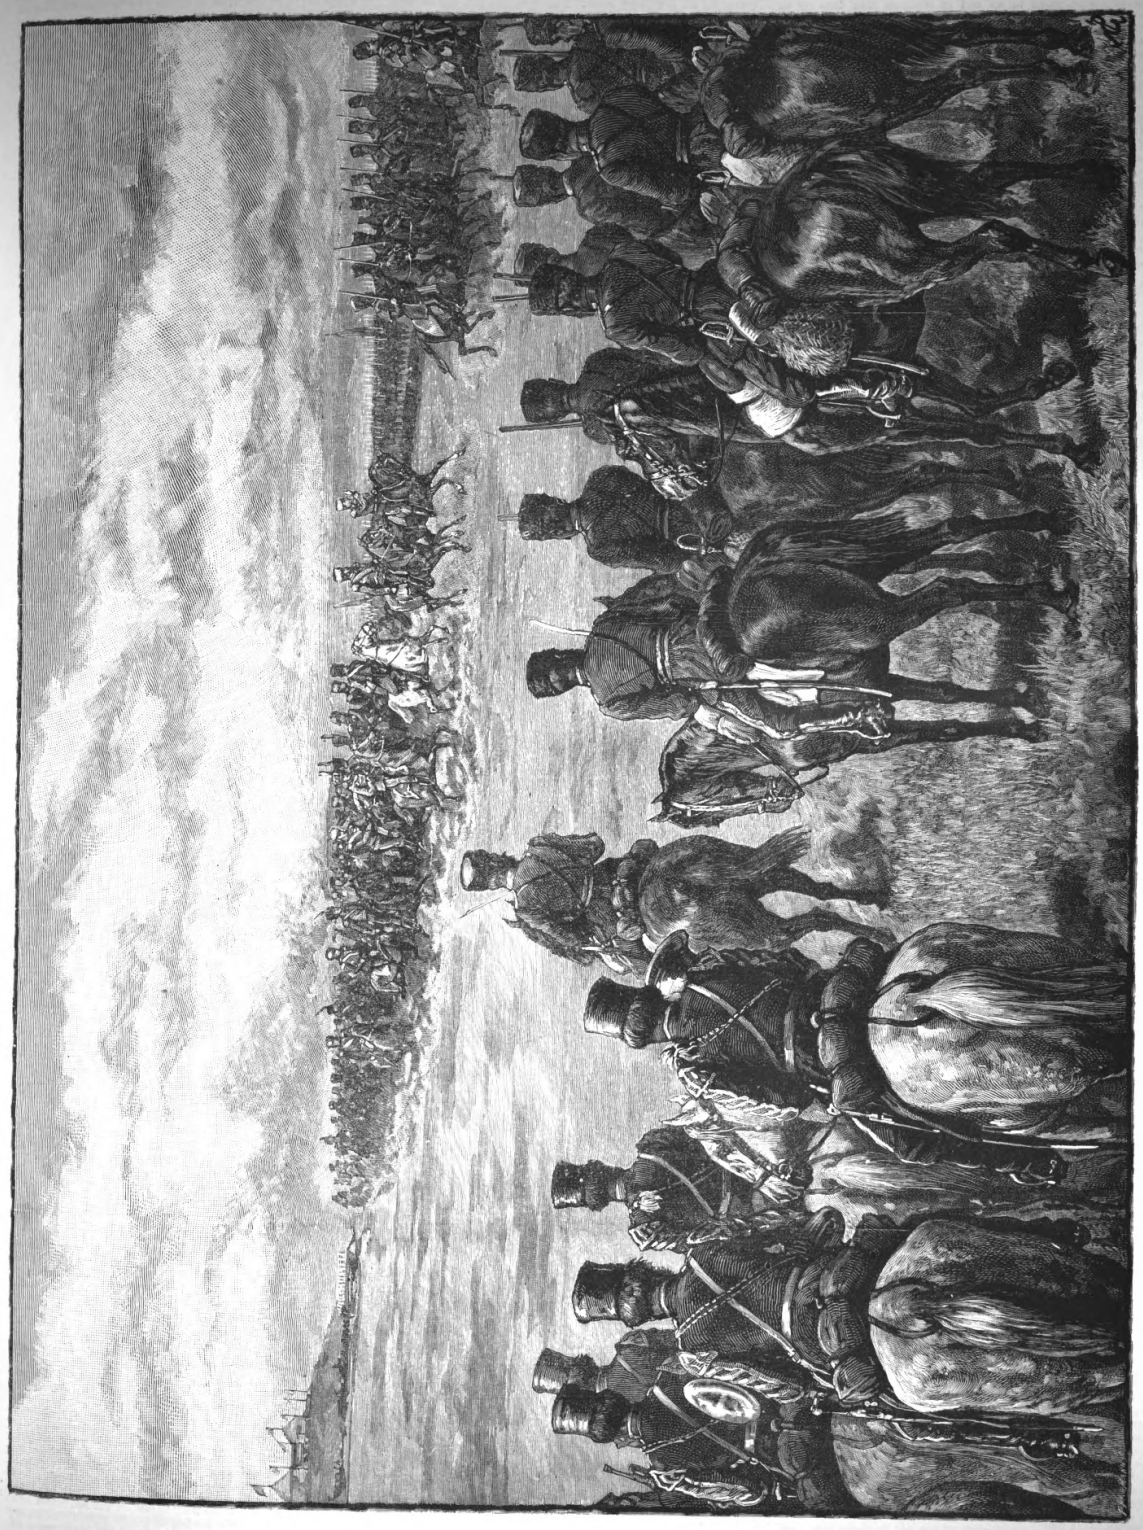
POSTAGE FOR FOREIGN PARTS THIS WEEK.

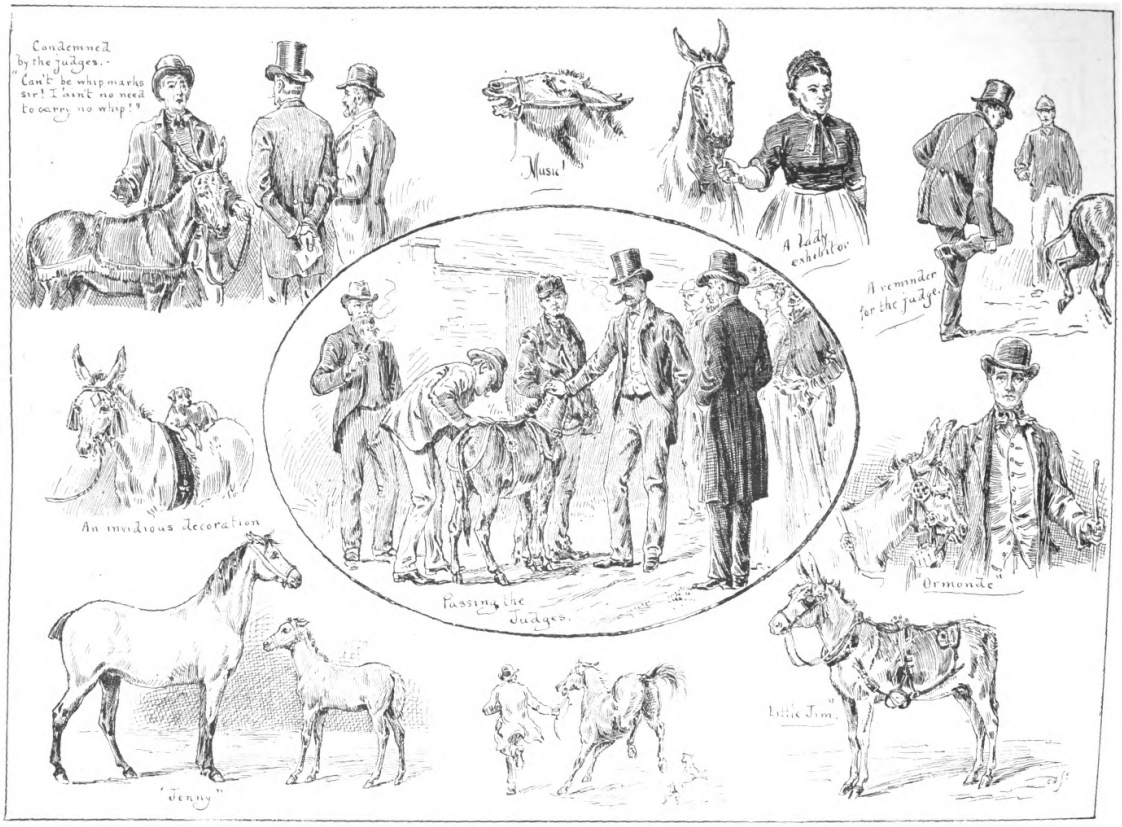


AUGUST 4, 1888.

Subscribers will please to notice that copies of this week's number forwarded abroad must be prepaid according to the following rates:—To Canada, United States of America, and the whole of Europe, THICK EDITION, *Twopence-halfpenny;* THIN EDITION, *One Penny.* To Australia, Brazil, Cape of Good Hope, China (viâ United States), Jamaica, Mauritius, and New Zealand, THICK EDITION, *Threepence;* THIN EDITION, *One Penny.* To China (viâ Brindisi), India, and Java, THICK EDITION, *Fourpence-halfpenny;* THIN EDITION, *Three-halfpence.*

Newspapers for foreign parts must be posted within eight days of the date of publication, irrespective of the *departure* of the mails.

SKETCHES AT BRYANT AND MAY'S MATCH MANUFACTORY.



THE MEETING OF THE EMPERORS: THE REVIEW AT KRASNOE SELO, NEAR ST. PETERSBURG.

MESSRS. BRYANT AND MAY'S MATCH FACTORY.

The strike by which, on July 5, about one thousand girls and others, at the four large factories of matches belonging to Messrs. Bryant and May (limited liability company) at the Fairfield Works, Bow, and elsewhere, were thrown out of employment, came to an end in three or four days by an amicable settlement. This was assisted by a deputation from the executive of the London Trades' Council, which had accompanied a deputation of the girls or young women to confer with Messrs. W. and F. C. Bryant and other managers or directors of the company. The deputation consisted of Messrs. B. Cooper, Cigar-Makers' Society; E. Coulson, Operative Bricklayers; C. Drummond, secretary of the London Society of Compositors; W. Steadman, Bargebuilders; George Shipton, Decorators and Painters; and T. J. Davis, Philanthropic Coopers. There were eight young women, representing the four factories—viz., one from Victoria, two from the centre factory, two from the wax vesta factory, and three from the safety-match factory. The deputation had been courteously received by the directors, who showed a disposition to meet them on fair terms. It would seem that the girls employed in making ordinary matches are divided into three classes—the fillers, the cutters-down, and the packers. The fillers place the strips of wood in the coil. This apparatus has replaced the frame, because it can be filled faster. After the matches have been placed in the coil, they go through the various processes of dipping and drying. They are then removed from the coils by the rackers-out, and the cutters-down take them, cut them in two, and place them in the boxes. The packers next wrap the boxes in paper, and pack into dozens and larger parcels. When the old "frames" were used the girls carried them to their bench, emptied them, cut the matches in half, and filled the boxes for 3d. per three gross. The directors put 2½d. of this down for cutting the matches and filling the boxes and ¾d. for the carrying and emptying of the frames. Since the "coils" have replaced the "frames," the girl carries the "coil" to a machine which empties out the matches, waits while the matches are being emptied out, carries the matches to her bench, and cuts them in half and fills the boxes as before. For all this she receives 2¾d. per three gross. The directors regard this as an increase of wage, comparing it with the 2½d. mentioned above; but the girls said that, owing to the time spent in carrying and in waiting for their turn to have their "coils" emptied, they could not earn as much money as when they used the "frames" and emptied them for themselves. They therefore asked for 3d. instead of 2¾d. per three gross—*i.e.*, for the "penny in the shilling." The directors replied, in the conference during the strike, that if the girls preferred working at the old price of 3d. and providing their own rackers-out, there would be no objection to their doing so. The principal spokeswoman of the girls' deputation said she decidedly preferred the present plan and should recommend it to the other girls, and asked that the rackers-out should be paid by the piece instead of by the day as now. To this the directors agreed, and the girls decided to continue the system. This spokeswoman stated that when in full work she could earn 3s. 9d. per day; but there are practical hindrances to working at this rate, and it is estimated by Mr. Frederick Bryant that an average hand in full work can earn 2s. 3d. per day. The average rate of wages is 11s. 2d. per week, as shown by a careful examination of two periods, each of thirteen weeks, in last year. The directors further say that there are not six girls at present working the new machines who ever worked the old machines, and that steadily-working girls can earn, and do earn, more money on the new machines than their predecessors earned on the old. Several minor grievances, relating to fines for disobeying orders, or for destroying property, and to charges for brushes, paint, and stamps, have been willingly removed by the directors. It has also been arranged that the "packers" may fetch their own paper, if they choose, instead of having threepence weekly deducted from their wages to pay children for doing so. The directors have further undertaken to provide a room in which the girls may eat their meals.

At the meeting of the council of the Metropolitan Hospital Sunday Fund, held at the Mansion House on July 31, it was stated that the amount collected was £39,536, with a prospect of an additional £1500 being received from congregations which had not sent in their returns, so that the total amount would be £41,306.

PONY AND DONKEY SHOW AT THE PEOPLE'S PALACE, WHITECHAPEL.

CIVIL LIST PENSIONS.

A Parliamentary return shows that in the year ended June 30 last, Civil List pensions were granted to the amount of £12,000. The following is the list:—

Mrs. Mary L. Neild, in consideration of the death of her husband, Major Neild, R.M., from the effects of a wound received while on duty at Charleston, £100.

Miss Frances, Miss Blanche, and Miss Amy Tulloch, in consideration of the distinguished services of their late father, Principal Tulloch, of St. Andrew's University, in connection with theology, philosophy, and literature, £25 each.

Mrs. Jessie Jefferies, in consideration of the literary attainments of her late husband, Mr. Richard Jefferies, £100.

Sir John Steell, in consideration of his merits as a sculptor, £100.

Mrs. Mary Hutchinson, in consideration of the services of her late husband, Mr. Thomas J. Hutchinson, M.D., of her Majesty's Consular Service—in this case there is no mention of destitute condition—£20.

Miss Mary, Miss Rose Jane, and Miss Amy Leech, in consideration of the eminence of their brother, the late Mr. John Leech, as an artist, £10 each.

Mrs. Kate Pinkett, in recognition of the services of her late husband as Crown Solicitor, Chief Justice, and Acting Governor of Sierra Leone, £50.

Mrs. Isabella Sarah M'Clatchie, in consideration of the long and valuable services of her late brother, Sir Henry Parkes, £75.

The Rev. F. O. Morris, in recognition of his merits as a naturalist, £100.

Miss Constance Frederica Gordon Cumming, in consideration of her merits as an author, £50.

Mrs. Eugenia Moira, in recognition of the eminence of her late husband as a miniature-painter, £25.

Mrs. Ceiriog Hughes, in recognition of the merits of her late husband, Mr. J. C. Hughes, as a Welsh poet, £50.

Miss Laura Liebe Barnes, in consideration of the merits of her late father, the Rev. W. Barnes, as an author and linguist, £50.

Mrs. Spencer Baynes, in consideration of the eminence of her late husband, Professor T. S. Baynes, as an author and scholar, £75.

Mr. William Kitchen Parker, F.R.S., in recognition of his services to science as an investigator, £100.

Mrs. Barbara Seldon, in consideration of the services of her late husband, Mr. Samuel Seldon, Principal of the Statistical Department of her Majesty's Customs, £100.

Mrs. Balfour Stewart, in recognition of the services rendered to science by her late husband, Professor Balfour Stewart, £50.

Mr. John Bell, in recognition of his merits as a sculptor, £50.

Messrs. Stephens and Solomon's annual soirée took place on July 25 at the Prince's Hall; Miss Florence Menk-Meyer gave a concert at the Marlborough Rooms on July 26; and Mdlle. Cornélie D'Anka's benefit-concert was given at Prince's Hall on July 28.

The opening meeting of the annual gathering of the Institution of Mechanical Engineers was held in Dublin on July 31, in Examination Hall, Trinity College. There was a very large attendance. The Earl of Rosse, the president of the Reception Committee, extended a hearty welcome to the members. Mr. Carbutt, the president of the institution, gave the opening address, dealing with the statistics of Ireland as regards population, industries, and wealth as compared with those of England and Scotland. On the motion of the Earl of Rosse, seconded by the Rev. Dr. Houghton, a vote of thanks was passed to the president. Papers were read by Lord Rosse on an improved sluice weir; and by Sir Howard Grubb on new clock-driving apparatus for astronomical telescopes. The members of the institution were afterwards taken on an excursion round Dublin Bay, for the inspection of lighthouse apparatus and dredging operations.

PONY AND DONKEY SHOW.

The annual show of donkeys and ponies belonging to costermongers and other street-traders was opened on July 23, in the grounds of the People's Palace, Mile-End. This show originated with the late Earl of Shaftesbury, who was presented with a prize animal by the costermongers, in recognition of his sympathy for their class. The show was first held in some ground near the Goswell-road, but has been transferred to the East-End. Mr. W. J. Orsman, of the Costers' Hall, Hoxton, and Mr. H. Boulton have been active in getting up the show, with the cordial co-operation of the Beanmont Trustees, Sir Edmund Currie at their head, and the Earl and Countess of Aberdeen. Last year there were 190 entries; the number of exhibits this year was 217, the classes—ponies and donkeys—being about equally divided. No prizes were awarded, but certificates were given to the owners of all animals which, in the opinion of the judges, showed evidences of good grooming, careful attention, and being in sound condition for work. The object of the promoters is not so much to encourage the breeding of prize animals as to put a premium upon their kind treatment. In addition to these certificates, all those adjudged worthy to receive them obtain 7s. 6d. per day, subsistence money, while the show remains open, in compensation for any loss of trade. The animals, on the whole, were a good-looking lot, and the show attracted several thousand visitors, who were especially interested in the march-past. The certificates were presented next day by the Countess of Aberdeen. Our Sketches show a few incidents of this amusing exhibition, with two or three of the best animals: the pony mare Jenny and her foal, the noble donkey Ormonde, and Little Jem, aged two years and a half. One donkey was thirty years old; another was registered as ninety-nine, and priced at £100, but that must be a joke. It is certainly profitable, as well as commendable, to bestow sufficient care on the donkey, which may for some purposes be more serviceable than the horse.

THE PLAYHOUSES.

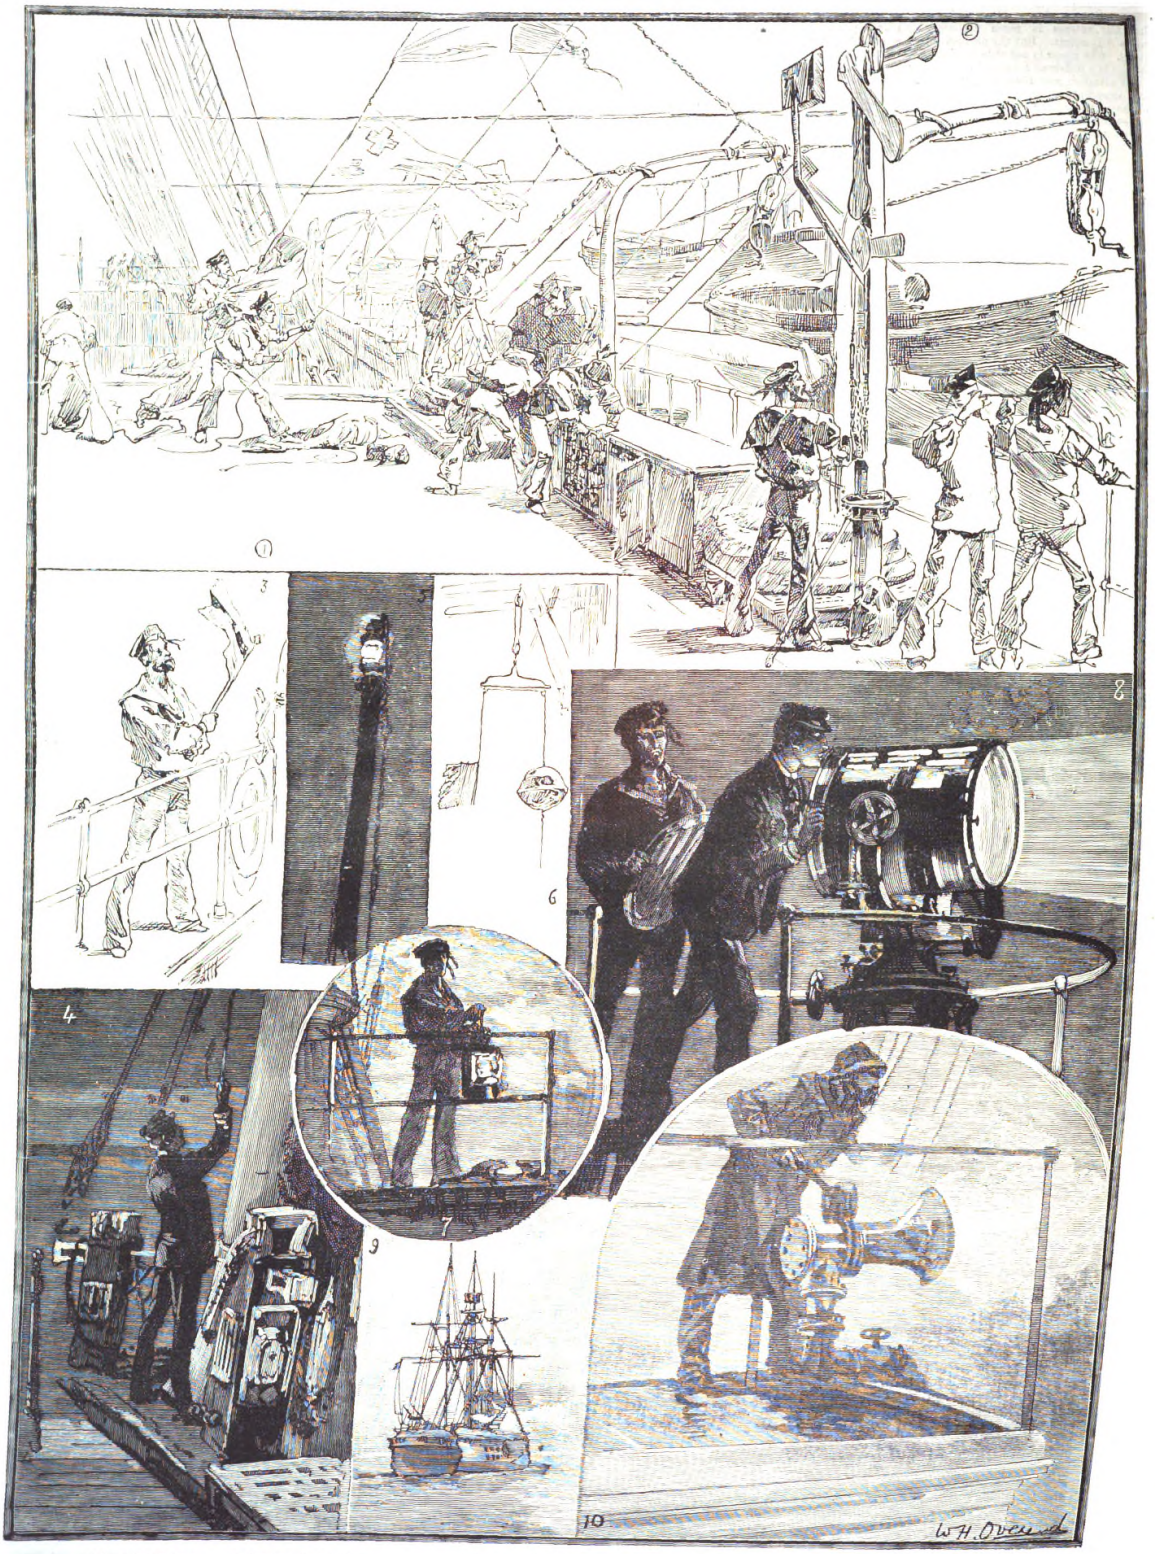
It is one of the penalties of greatness that, at some time or other, a sense of disappointment should steal upon us to destroy the charms of illusion. It cannot be denied that Sara Bernhardt is not the actress she was. It is not that she has merely lost the grace, the movement, and the willowy elegance of a young woman; it is not merely that the golden tones in her voice have become blurred by incessant travelling and overwork. That the actress is more matronly and less pliable most people will admit. But the actress is not responsible for these things. She alone is not able to stop the hands on Time's dial. But she is a different actress in another respect. Her method is less artistic; and these long tours, this incessant starring, these desperate journeys here, there, and everywhere, have had the usual result. They have induced a careless and indifferent tone—a scrambling, hurried method of delivery, and evident signs of weariness that are much to be deplored. Even in her best days, at the Théâtre Français, refinement was not one of Sara Bernhardt's strong points. She was ever inclined to emphasise the shrewish part of a woman's temperament; but the discipline and surroundings of the Comédie-Française held her in some sort of bondage. Left to herself, alone and uninfluenced, she is more inclined than ever to forget the refinement and dignity that are amongst the essentials of her art. It was noticed, in the second act of "La Tosca," the other day, that Sara Bernhardt adopted an unnecessarily familiar tone, suggesting that the presence of so very ill-bred a person was wholly out of place in a Queen's presence. For this there was no authority in the play. The Tosca was not supposed to be a bad specimen of a public singer, and it is certain that if she did not know how to behave she would not be admitted to the salon of so highly-bred a lady as the Queen of Naples. But, on further study of the art of the actress, it will be observed that the reading of this act—which might have been put down merely as a mistaken one—is, in reality, part and parcel of the new and vulgarised method deliberately adopted by the actress.

"Francillon," by Alexandre Dumas—clever, cynical, and epigrammatic as the book may be—is, unquestionably, a vulgar piece of art-work. The author of this extraordinary work shows considerable tact, but no taste whatever. The subject is one which no gentleman or well-bred man would discuss in a mixed assembly, and is therefore, we hold, unfit for discussion on the public stage. The nineteenth century is, no doubt, ripe in social surprises; but are we really to take M. Alexandre Dumas at his word? Zola the realist has told us how peasants talk and what French middle-class people do. He has taken us behind the scenes of the theatre, into the boudoirs of the half-world, into the sitting-rooms of the milliner and artisan, and has considered he was doing society a service by photographing for our edification all that was deplorable and nasty in life. Zola poses as a truthful historian, and we are bound to believe him. But is Dumas the realist equally to be believed when, from the stage, he photographs the vices of the upper classes of French society? It is not only that he tells us that the aristocracy of modern France is abnormally vicious—that may or may not be—but he declares, without hesitation, that the gentlemen of France are wanting in respect for the women of their own set, and that the women have ceased to care to be treated with ordinary respect. If this is not so, how does a dramatist dare to give us scenes where subjects are discussed before women which jeopardise their self-respect? And how does he care, in the guise of philosophy, to approach a thesis as unnecessary as it is coarse and suggestive? France must, indeed, have altered for the worst if the cynicism of its first gentlemen has made them brutal, and if the carelessness of its best-bred women has made them indifferent to womanly modesty! "Francillon" may be art, but it is a very vulgar form of art; and the acting in it of Sara Bernhardt does not make it any the more palatable. It may be true that such conversations take place in the presence of women as are recorded in the first act of "Francillon," by Alexandre Dumas. This may be an accurate, though satirical, picture of modern French life; but surely it is unnecessary to make the heroine, Francillon, even more vulgar than she is represented to be by the author. The whole point of the story, revolting and unnecessary as it is, seems lost when Francillon acts at the outset with a defiant disregard of modesty and good-taste. If Francillon shows no sign whatever of refinement or nobility of temperament, if her love be not pure and spotless, of what value is the homily of Alexandre Dumas? But the subject is scarcely worth discussing. The play, heralded forth and trumpeted abroad as a work of genius, fell flat in this country from the outset. It afforded pleasure to nobody; and, luckily, good acting was not found as an excuse to bolster up a wholly unrefined and essentially vulgar play. The man or woman who introduces certain forbidden subjects into general conversation—such, for instance, as religion, or certain details of social ethics—is held to be a vulgarian. He does what no man of taste or breeding would dream of doing. So M. Alexandre Dumas, by the English code of social rule, must be held to be guilty of very bad taste when he allows such a subject as that contained in Francillon to be discussed on the stage. And what are we to think of the audiences that encourage such discussions? Happily, in England, they did exactly what would be done in the best society: they turned their backs on the author who had made, in their estimate, a grave social blunder.

It is not easy to see on what ground Mr. Henry Irving, or Mr. Richard Mansfield, or any of his advisers, can be held to be guilty of any breach of good-feeling or comradeship when they collectively, or individually, decided to be first in the field with the authorised version of "Dr. Jekyll and Mr. Hyde." Unquestionably, Mr. Bandmann made a bold attempt to forestall Mr. Mansfield in the production of a play taken from Louis Stevenson's story. Mr. Bandmann knew that Mr. Mansfield had made success and reputation with a Jekyll and Hyde play; he knew that Mr. Mansfield's version had received the authority of the author; he knew that Mr. Mansfield had taken the Lyceum, and had brought over an American company to open early in September; he knew that his version would in all probability never have appeared had not Mr. Mansfield succeeded;—and, knowing all these things, he elected to take the Opéra Comique in order to forestall Mr. Mansfield. In all this, Mr. Bandmann was perfectly within his rights. It is an age of competition; and the best man wins. If the public like Mr. Bandmann and his play better than Mr. Mansfield and his play, they will assuredly say so. But, on the other hand, Mr. Mansfield is equally within his rights when he endeavours to stop Mr. Bandmann's performance at all costs and at all hazards until he has produced his own play. It was a sharp bit of business to take the Opéra Comique whilst it was empty, but no sharper than Mr. Bandmann in taking it at all. And if the Opéra Comique was taken in order to stop the Bandmann performance prior to Aug. 6, what a farce it would have been to permit rehearsals or anything else in connection with the Bandmann play! It was sharp practice all round; but Mr. Mansfield has won, that is all. There is no sentiment in the matter that need be advanced. What would Mr. Bandmann expect under the circumstances? Great interest is taken in the play and the performers, who will be seen on Saturday night, Aug. 4, at the Lyceum.

THE RACE FOR THE ECLIPSE STAKES AT SANDOWN: A HUNDRED YARDS FROM THE CHAIR.

SANDOWN RACES: THE ECLIPSE STAKES.

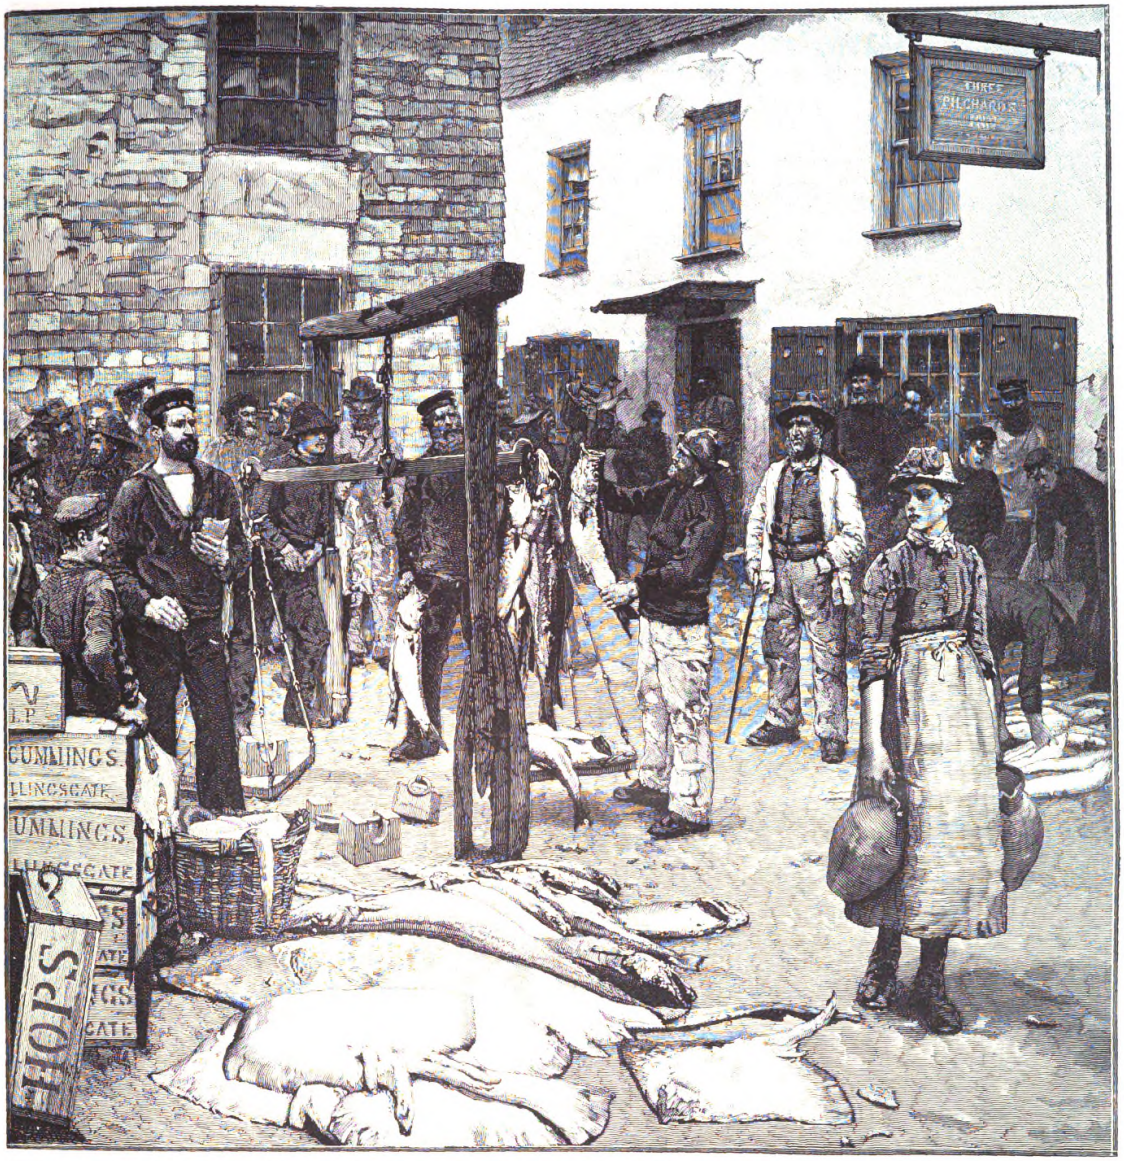


The Sandown Park summer races this year were unfortunately not favoured by fine weather; but on Friday, July 27, when the running for the Eclipse Stakes of £10,000 took place the second time since it was instituted, the rain held off till the proceedings of the day were finished. Their Royal Highnesses the Duke and Duchess of Teck, Prince Christian, and two young Princesses, were among the spectators, with some of the nobility, and members of the Four-in-Hand and Coaching Clubs. The great race was run by thirteen horses; the winner was the Duke of Westminster's Orbit, three years old, by Bend Or — Fair Alice, carrying 8 st. 12 lb., and ridden by T. Cannon. The second horse in, which took a prize of £500 apart from the stakes, belongs also to the Duke of Westminster; being Ossory, three years old, weighted at 9 st. 11 lb., and ridden by T. Cannon, junior. There was only a length between these two at the finish; while Mr. F. Douglas's Martley, which took the third place, and Lord Ellesmere's Estafette, were very close up. We give an Illustration of this well-contested race.

The portrait of the late Mr. Clarence Stewart Lindsay is from a photograph by Mr. Paul Stabler, of Sunderland; and that of the late Rev. Charles Rhind, from one by Messrs. Russell and Sons, of South Kensington.

We have received from Mr. Edmund Lionel Wells Dymoke, of Broadwater Down, Tunbridge Wells, son of Mr. Dymoke Wells, of Grebby Hall, Lincoln, a copy of the pedigree of his family descent from Robert, first Baron Marmyon, who died in 1142. Mr. Dymoke Wells claimed to be heir-general to the Baronies of Marmion and Kyle, and Hereditary Champion of England, being descended from Sir Edward Dymoke, who was Champion to Charles II., and who devised the Grebby estate to his second son, Edward; but, on the death of Robert Dymoke, of Lincoln, in 1735, there was no male successor, and the Grebby inheritance passed in the female line to the children of the Rev. Thomas Wells, who had married Robert Dymoke's sister. Mr. Henry Lionel Dymoke, of Scrivelsby, is descended from John Dymoke, who was the fourth son of Sir Edward Dymoke above mentioned.

THE MEETING OF THE EMPERORS.



The visit of the German Emperor William II. to the Emperor Alexander II. of Russia, with his sojourn of three days at Peterhof, the Russian Imperial palace on the shore of the Gulf of Finland, was described in our last. We now give an Illustration of the grand review of Russian troops, on July 23, in the permanent camp at Krasnoe Selo, near the Tsarskoe Selo palace, a short distance from St. Petersburg. It consisted of some cavalry evolutions and a sham fight. In all there were fifty-two squadrons, including one heavy cavalry division (sixteen squadrons), two Cossack regiments of the Guard (eight squadrons), one light cavalry division (twenty-four squadrons), one mixed regiment of cadets of the Nicholas cavalry school and of officers of the cavalry school, one squadron of Kuban and one of Ural Cossacks. The Imperial party came on the ground in the usual order, the two Emperors on horseback, followed by the Empress in her carriage. After the inspection of the line, a series of exercises was performed, during which the German Emperor took command of his Viborg regiment of foot, posted on the border of the review ground, and gave his orders in Russian. His Majesty appears to speak that language fairly well. Then the whole of the cavalry in line of squadrons dismounted, and advanced as infantry. A sham fight began as soon as the Imperial party had repaired to the tents, which were surrounded by some invited German naval officers. A squadron of the Kuban Cossacks and cadets first advanced across the plain in open order towards the Kavelakht heights, firing their rifles at an imaginary enemy. They soon retired in the same order, still firing, to make room for the reserve Guard and Cossacks in close order, who took up the attack, and dashed forward with loud yells and whoops. The artillery was then brought into play, as the Cossacks again retired, twirling their long lances above their heads in sign of contempt and defiance. Finally the whole of the heavy cavalry were hurled at the enemy, on all sides, and he was held to have been vanquished. The Grand Duke Nicholas commanded and arranged the spectacle. After the ceremonial march past, which concluded the performance, the Imperial party lunched in the palace, and returned to Peterhof by train.

1. Signalling by Flags. 2. Signalling by Semaphore. 3. Morse Signalling by Hand-Flag. 4. and 5. Morse Signalling with Electric Lamp at the Masthead.
6. Helm Signal. 7. Morse Signalling with Hand-Lamp. 8. Signalling with Electric Beam. 9. and 10. Steam Siren Fog Signal.

THE NAVAL MANŒUVRES: SKETCHES BY OUR SPECIAL ARTIST.

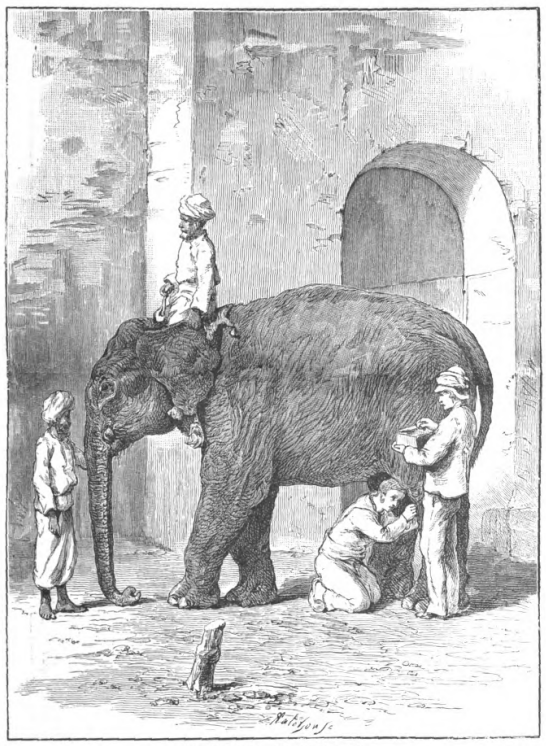
FISH SALE AT POLPERRO, CORNWALL.

FROM THE PICTURE BY MR. W. M. LOUDAN, IN THE ROYAL ACADEMY EXHIBITION.

LEGAL BUSINESS OF THE GOVERNMENT.

The report of the Committee appointed by the Treasury to inquire into the system of conducting the legal business of the Government has been issued. It shows that the salary list of the staff, numbering forty-nine members, of the Treasury Solicitor's office amounts to £21,702. The office hours of the staff are nominally from eleven to five, and those of the messengers from ten to five; all contentious business of a civil character is conducted by agents, whose average profits during the last ten years amounted to £3899 11s.; that out of the total amount for salaries a yearly sum of £2000 is paid to ten copyists, besides which a quantity of copying has been done at the Civil Service Commission. No fewer than seven messengers are employed, at a cost of £726; no shorthand writers are employed; and the telephone has not been introduced into the office. The Committee have come to the conclusion that the staff of the solicitor's department is decidedly in excess of what is necessary in order to perform the professional duties discharged by it, and that many of the members are paid higher salaries than are necessary. They are also of opinion that injurious effects arise from the persons employed under the Solicitor of the Treasury being members of the Civil Service, and from their being entitled to pensions on the termination of their service. The principal injurious effects to which the Committee refer are that if the persons so employed are possessed of vested interests or claims, the Solicitor of the Treasury has no immediate control over them: he cannot procure their dismissal without the commission by them of acts of gross misconduct, and he is hampered in securing from time to time the assistance of persons of ability and industrious habits. The Committee further report that the office hours should not be less than seven hours per day, and that the staff should be in attendance at ten a.m.; that economy in labour and time can and should be effected by the employment of shorthand-writers, by the use of telephones, and by the delegation of small matters of detail by the solicitor to his subordinates; that a large expenditure now takes place in relation to copying documents—an expenditure which, in the opinion of the Committee, might be decreased by causing the copying of all documents not of a secret or confidential character to be executed by law stationers. The Committee are further of opinion that as soon as there are members of the staff capable of conducting causes of a contentious character, the business now performed by the Treasury agents, Messrs. Hare and Co., should be carried on within the department, under the direct supervision of the Treasury Solicitor. The Committee recommend that no new appointment shall be made to the staff of the Treasury Solicitor's department, except with the view of its thorough reorganisation. It is difficult to define the exact number of persons required to discharge the duties of the department; but, as far as they can judge, the Committee are of opinion that if the department were now to be established for the first time it should consist of a solicitor, who should perform the duties now discharged by Sir A. K. Stephenson, three assistant solicitors, five clerks possessing qualifications similar to those possessed by managing clerks in a London solicitor's office, and such number of other clerks as may be found necessary to discharge the labours of the office. The Committee are of opinion that upon any new appointment being made the person appointed should not be a member of the Civil Service, but should be liable to be discharged, as in cases of ordinary employment, and should not be entitled upon the termination of his service to any pension or compensation. If this recommendation be carried into effect the appointments to the department shall be made by the Solicitor to the Treasury, subject to the approval of the Lords of the Treasury.

A FISH-SALE AT POLPERRO.



In this season's exhibition of the Royal Academy, Mr. W. M. Loudan's picture, of which we present an Engraving, was deservedly admired and commended. Much interest is always felt in the Cornish fisheries, the toilsome and perilous life of the hardy, bold, and skilful race of men who brave the stormy western ocean on that rocky coast in pursuit of the various kinds of fish, admirably depicted by this artist; the manner in which their "harvest of the sea" is secured and brought to market, and the welfare of their wives and families, too often left destitute by the accidents of an employment liable to frequent and unexpected dangers. This scene in the village market-place, where a rude pair of scales is used to ascertain the weight of the fish before they are sold, is full of animation and of characteristic expression. Polperro—a quaint outlandish name said to be a corruption of "Porthpyre," which in the ancient Celtic language means "the Sand Port"—is situated on the south coast of Cornwall, halfway between East Looe and Fowey, and about fifteen miles to the west of Plymouth. It was just opposite this part of the coast that the first conflict took place between the English fleet and the Spanish Armada, the day after news of the approach of the enemy was received at Plymouth; and it is very likely that the forefathers of some of the Cornishmen who figure in Mr. Loudan's painting were on board the numerous local craft of privateers that sallied forth to fight with the Dons.

Lord Wolseley on July 27 unveiled in St. Paul's a memorial to the late Sir Herbert Stewart, who was killed at Abu-Klea three years since. Appropriately enough, the memorial has been placed in one of the bays in the north aisle, above the monument of General Gordon, in attempting to rescue whom the gallant officer met with his death.

IN THE DOMAIN.

A rounded, rocky wood. Tangled briars and lichens hang from every slope, and in the holes and dark recesses dwell our semi-domesticated badgers. We used to sit up in the trees at night and watch them dig for roots, or eat the dried fruits which we placed at the mouth of their burrow. Whilst the badgers sought for the small wild fruits of the bushes, the wood-owls hooted and the herons screamed. Sometimes in the moonlight we could see the water-voles feeding, and the night-jars "churred" in the glades. Jays screeched in the darkness, and the lapwings, disturbed by the poachers, flew and screamed in the night. But when the light summer mornings came the gay carpetings of the "domain" were revealed. And such a floral paradise never existed before.

For years one who had loved them brought specimens of rare plants, until we had within our limited area almost the complete botany of the district. Creepers festooned the rocks, and wild thyme covered the slopes. Trailing periwinkles and bluebells hung over the nests of the ground birds, and the warblers all came there in spring. In the "domain" they built their nests and reared their young; nor did they depart until they felt the migratory instinct strong within them. Whitethroats came there, and warblers of every kind. But the most plentiful of all were the wood-wrens—the wood-warblers. They came to us at the close of April or the beginning of May; the males arriving a week or ten days before the females, and immediately treating us to their apology of a song. The long-drawn "chu-chu-chu" generally came from the branches of an oak. When the bird flew from one tree to another, the flight was preceded by a quivering, tremulous motion of the wings. The form of the pretty wood-wren can never be mistaken, with its yellow-green back, green breast, and pure white under-plumage. Its dome-shaped nest is a marvellously beautiful structure, deep buried in summer wood-

INOCULATING AN ELEPHANT.

flowers. We have found the wild hyacinth, anemone, rock-rose, and plumy grasses all airily waving above the nest, yet not a blade disturbed. The little green birds drop down from the boughs and enter by a small hole in the side. Difficult to find is this if the parent birds do not betray its whereabouts. But so small is the hole that when we have known the precise locality of the nest visited we have missed it, the entrance being occupied by the head of the bird, its bright eyes looking timidly out upon us. Of very varied material is the nest—such as the spot in which it may happen to be affords—compactly constructed, and lined with delicate grasses and hair; feathers are never used. Five or six white eggs are laid, with reddish purple spots. Whether or no the fact plays any part in the bird's economy we do not know, but certain it is that a few dead leaves are invariably found on the exterior of the nest. Where districts are well-timbered and the woods old, this warbler loves best to breed, and there, probably, it finds food most abundant, for insect-life more abounds in old-wooded districts than where plantations of trees are younger. Age begets decay, and decay is productive of a host of species of insects. Hard-bodied beetles, the wood-louse, and winged life simply swarm in such congenial spots. The wood and willow warblers and the chiff-chaff differ from their congeners in not being fruit-eaters. They live entirely upon insect-life, and the benefit they confer on the garden during the earlier months of their stay in this country is simply incalculable. Every species of summer fly is taken, both at rest and on the wing, in the latter case the bird darting after its prey. Yet, although flies and aphides constitute the staple of its food, the bird is omnivorous in its range of insect-food, and this is taken both in the larval and matured state. This characteristic, then, of abstaining from fruit and being solely an insect feeder is common to the wood-warbler and its *confrères*, the willow-warbler and the chiff-chaff. The general colour of the plumage, too, of these birds differs from that of the rest of the warblers. But the third and best characteristic is in the nests of the three species, which are invariably dome-shaped. For a long time the wood-warbler was confounded with the willow-warbler, and, in general, it pretty much resembles it, the chief points of difference being (in the wood-warbler) the bright yellow streak over the eye, the brighter green of the upper plumage, the yellowish breast, and the purely white abdominal parts. In the haunts of the birds this difference may not appear to be well marked, but when closely examined they are at once obvious, and so as to make it impossible to confound the two species.

The wood-warbler was one of the birds which Kingsley "set" in his "Charm of Birds." In the delightfully fresh "Prose Idylls" he asks, combating the words of the poet, "In Nature there is nothing melancholy," "Is it true that in Nature there is nothing melancholy?" and bids us "mark that slender, graceful, yellow-warbler, running along the high oak boughs like a perturbed spirit, seeking, restlessly, anxiously, something which he seems never to find; and uttering every now and then a long anxious cry, four or five times repeated, which would be a squeal were it not so sweet. Suddenly he flies away and flutters round the pendant tips of the beech sprays like a great yellow butterfly, picking the insects from the leaves; then flies back to a bare bough, and sings, with heaving breast and quivering wings, a short, shrill, feeble, tremulous song, and then returns to his old sadness, wandering and complaining all day long. Is there no melancholy in that cry? It sounds sad; why should it not be meant to be sad? We recognise joyful notes, angry notes, fearful notes. They are very similar, strangely enough, in all birds. They are very similar, more strangely still, to the cries of human beings, especially children, when influenced by the same passions. And when we hear a note which to us expresses sadness, why should not the bird be sad? Yon wood-wren has had enough to make him sad, if only he recollects it; and if he can recollect his road from Morocco hither, he, maybe, recollects likewise what happened on the road—the long, weary journey up the Portuguese coast, and through the gap between the Pyrenees and the Jaysquivel, and up the Landes of Bordeaux and across Brittany, flitting by night and hiding and feeding as he could by day; and how his mates flew against the lighthouses and were killed by hundreds, and how he essayed the British Channel, and was blown back, shrivelled up by bitter blasts; and how he felt, nevertheless, that that 'wan water he must cross,' he knew not why; but something told him his mother had done it before him, and that he was flesh of her flesh, life of her life, and had inherited her 'instinct,' as we call hereditary memory, in order to avoid the trouble of finding out what it is, and how it comes. A duty was laid on him to go back to the place where he was bred, and he must do it, and now it is done; and he is weary, sad, and lonely; and, for aught we know, thinking already that when the leaves begin to turn yellow he must go back again, over the channels, over the Landes, over the Pyrenees, to Morocco once more. Why should he not be sad?"

In great contrast to the delicate, soft-billed wood-birds, the warblers, are other of the summer migrants to this country. One of these is the hobby. This beautiful little hawk—a "peregrine in miniature" it has been styled—comes in the wake of the migratory hosts in spring, and stays with us till late autumn. Fascinating it is to watch the hobby performing its wonderful aerial evolutions, or lark-hawking far up against the blue. It destroys numerous small birds, and in summer adroitly captures, on the wing, many of the large flying insects and beetles. Its two or three bright red eggs are laid in a nest in some high tree—a nest not always made by the hobbies themselves. Then, another of our interesting summer visitants belongs to the family of butcher-birds — the redbacked shrike. These sprightly birds are bright in colouring, the male having a bright chestnut back, and it has also many pretty airs. The chief point of interest which attaches to the bird is that it hangs up the little carcases of its prey in a regular shambles. Cockchafers, small birds, beetles, frogs, and butterflies are all transfixed on thorns as provision for the bird's wants. It comes and breeds with us, and, on account of its curious habits, we have called it murdering-pie, and the lesser butcher-bird.

J. W.

INOCULATING AN ELEPHANT.

Among the recent valuable discoveries of the famous French physician, M. Pasteur, is that of the vaccination of domestic animals for the prevention of the dire disease known as anthrax, or splenic fever. The marked success attending his system, in combating the Rinderpest in Europe, encouraged Mr. J. H. Lamprey to bring the subject under the notice of the Government of India, where no efficient remedy was known for this rapidly fatal illness, which annually carries off a large percentage of cattle of every kind. An Order in Council has been issued, after the most careful investigation of the merits of the system, and of the probability of securing its favourable reception by native proprietors. In order to carry out this object, some native Indian students, who have received their education at the Cirencester Agricultural College, are now undergoing a course of instruction at the Paris Laboratory of M. Pasteur, and will shortly proceed to stations in India, to dispense the vaccine, which is applied to elephants as well as to oxen and other beasts. It is confidently expected that their labours will be attended with the same success that followed the introduction of the system into those countries where it is now in full operation; with an ultimate prospect of the total extermination of the most serious maladies, working great havoc amongst flocks and herds throughout the world. The elephant, in a domesticated state, is liable, as well as other animals in the service of man, to certain epidemic diseases.

THE LADIES' COLUMN.

Goodwood week, marking the end of the London season, is here, and all the fashionable and would-be fashionable world is departing to seek the restorative influences of ozone and silence. Gowns for Goodwood, which are always smart, are this time being generally composed of foulard silks, large patterns being most in favour. The modest spots or tiny designs of two seasons ago are "selling off." The fashionable dressmaker knows now only of startling and striking patterns, such as a large brown pine-cone figured on a heliotrope ground; bunches of natural-coloured lilac on a white ground; lightning flashes of white meandering over a sky of blackness; or dark blue cornflowers tied together in large clusters on a pale green ground. White vests generally relieve these startling designs, which are almost impossible for the entire front of a bodice; the vests are folded prettily and somewhat irregularly, rarely being plain.

For country gowns for the "going away" season, there is quite a mania for separate skirts and bodices, the latter being made loose and comfortable. Smocked yoke silk, pongee or merveilleux, loose bodices, with waistbelts and full sleeves, are most worn with cotton or even beige or tennis flannel skirts. The actual jersey, made of the original elastic stockingette cloth, is decidedly *passée*, but will be quite à la mode at Margate. The hats for the seaside are all very broad in the brims, which are bent in all manner of ways, but usually are turned sharply up at the back, while they stand out straight just above the brow, so as to shield the face from the sun—if by chance any sun should appear. The crowns are low and trimmed profusely on the top with big bows or loops of muslin, crêpe, or lace, with a cluster of flowers, or a spray of fruit and leaves as if cut from a cherry or plum tree, laid lightly amidst the diaphanous cloud, and falling down towards the front of the hat. Sailor styles of make are popular in serge gowns, the loose bodice, with its broad collar, opening from a white or red flannel vest, and sagging over a trifle at the waist, being most becoming to slight figures. Children's sea-side frocks are very generally made sailor-fashion, too. Zephyr or cotton frocks are made with simple loose blouse tops, confined by a sash not much higher than the knee, or else hanging straight from a yoke to which they are gathered.

Comparatively rarely does a female plaintiff in a breach-of-promise case fail to recover some portion of the damages she asks, because, as a rule, only the most gross cases of hardship and ill-usage are brought forward. A young lady has failed this week, however, under circumstances which were certain to preclude her from the sympathy of most of the jury-sitting sex. She was decidedly an unreasonable young person, for she offered her sweetheart the choice between his cigar and her fair self; and when the ungallant wretch declared that, if he must choose, he elected for the smoke, she sought to punish him in his pocket for the bad taste of his decision. Now, had the contract included, at the first, a provision to give up cigars for her sake, and had this been deliberately violated in order to cause the rupture of the engagement, it would justly have gone hard with the faithless swain; but, surely, when the damsel deliberately elected to place herself in one scale and a cigar in the other, and found herself the lighter of the two in the graceless man's estimation, she was bound to silently accept the judgment that she had challenged; and so thought the Sheriff who tried the case. But oh! that smoke! how selfish, how heartless, how incapable of self-denial it makes its devotees! The man, it is to be presumed, once loved the woman; but he loved the passing amusement of puffing out smoke better than he loved his lady. The age of chivalry was a pre-tobacco era!

No doubt he thought that the woman who objected to tobacco must be a selfish, unkind creature, to want to rob him of his pleasure. Men have no notion of its being their duty to give up anything to women. "Serve him and obey him" are in the wife's vow in the wedding service, and not in the husband's. In a brilliant book of social essays lately published by Mrs. Frank Leslie, that distinguished American woman proposes the formation of a "Woman's Co-operative Union" for the education of man up to the feminine standpoint, "to teach him that he is as much bound to self-denial and self-control as he expects us to be. Man likes to smoke," she observes, "and we all vow that we enjoy smoke, and beg our male friends to favour us with a little of it, and sit smiling amid a blue fog. But suppose a woman likes to have her nursery about her, or keeps the thermometer at 80 deg., or prefers walking slowly to walking fast—or, in short, cultivates any taste opposed to masculine habits. Does the man good-humouredly conform, and pretend to like what he does not, and to enjoy what he abhors? I trow not." And so Mrs. Frank Leslie proposes to form a woman's union in order to educate man to the pitch of common feminine self-denial that makes most women pretend that tobacco is not offensive to them.

Well, perhaps the American women may succeed in such an attempt; the United States have not yet, like this effete old land, produced such a numerical surplus of our sex as to destroy the balance of power. Dear me, how can we be valued at our proper rate when there are a million too many of us! If the case were only the precise opposite we might have a chance. As it is, so little hope of success in a ladies' anti-tobacco crusade does Canon Shuttleworth give us that, being too upright and straightforward to pretend to suppose that non-smokers can really be comfortable in the midst of smoke, he takes refuge in advising us to smoke also. Whereupon that typical "man's man," Professor Blackie, produces a sonnet in which he exclaims, in effect: Ah, no! It is a woman's duty towards man to keep a sweet breath and nice teeth, and therefore smoking would be too vile a habit for her: but from a man a woman has no right to expect such refinements! The noisy Professor does not perceive that when he talks thus he advocates selfishness, and, as Mrs. Leslie says, a lower standard of self-control for men than women.

Alas! smoking in the streets, in public places, and even in resorts where people go especially to breathe pure air, grows more common every day—and every day girls become more numerous. For some years past, according to the Registrar-General's report, the proportion of female to male births has been gradually increasing with each year. There are already a million too many of us: and year by year the surplus grows! I see no help for it; we shall only be strong enough to re-seize our natural empire, and become powerful enough to diminish smoking, by a well-directed and discreet application of the Chinese method of settling this problem. A little while ago an edict was issued in China pointing out that too many girl-babies were being drowned; and that in consequence "many good young men are unable to find wives." When many good young men here are in that position, the successors of the Scotch heroine will be able to make terms. Their weight in the scale of a man's estimation as against a cigar will be vastly increased. Meantime, tobacco is the stronger force, alas!

FLORENCE FENWICK-MILLER.

Mr. Hugh Fraser, barrister-at-law, has been appointed Lecturer in Equity to the Incorporated Law Society.

BY THE LOCHSIDE.

A dozen or so of white cottages, mixed with some houses of a better class, at the foot and on the lower slopes of a ridge of purple upland, and separated from the loch only by a narrow road and a strip of pebbly shore—such is the village: if, indeed, that may be called a village which is really little more than the summer quarters of a few families who make money (and spend it) in a spacious manufacturing city some thirty miles or so "up the water." The clachan, or village proper, lies nearly a mile away, on the threshold of a great noble's finely-wooded grounds; and there, or thereabouts, you will find the parish kirk, and the parish school-house, and the post-office, and the joiner's, and the baker's, and such other necessaries as go to make up a well-conducted village, which has escaped the cold shade of pauperism, and, like Dogberry, has everything handsome about it. For what with the regular employment given, by the great noble aforesaid (or by his factor), and the provisioning of summer visitors and permanent residents, and a little fishing, and the small trading affairs connected with the steam-boat traffic, the villagers in this happy nook are able to put a decent face upon things, and to face the chance and change of life with considerable composure. They are "verra prood" of their sequestered and picturesque home; and well they may be, not only on account of its position, which is beautiful exceedingly, but because the genius of Scotland's greatest son has associated it with the pathos and passion of one of his finest novels. Moreover, its parish minister is known all over the land as a broad-minded theologian, an effective platform orator, and an accomplished man of letters. Item: it is included within the ample estates of one of Scotland's oldest ducal houses. Item: it has been visited by a daughter of the Royal family of England; and in its neighbourhood a deservedly popular novelist has located the deep and painful interest of one of the most successful of those of her fictions which deal with Scottish manners and Scottish scenery. 'Tis not every little village which has such good reasons for the pride that, I have observed, little villages always have a good deal of.

This thrice-favoured clachan clusters near the extremity of a narrow, hilly peninsula, formed on one side by the broad estuary of Scotland's great western river, and on the other by an arm or loch which that estuary throws off to rest among the brown hills and take into its bosom the cool shadows of huge jagged peaks of granite. Above the long sandy spit, which, at low water, contracts its mouth into a channel scarcely wide enough for the passage of a man-of-war, this loch spreads out into an oval basin, its green shore fringed with long lines of birch and rowan, which, on tiny capes and headlands, approach the very margin of the ooze, and droop their branches into the flowing tide. Little timber-built piers, here and there, provide for the convenience of those dwellers "by the lochside," for whom the daily steamer supplies the readiest means of access to the outer world. In sunny open spaces mansions of stately aspect and spacious proportions have been erected by wealthy citizens; and with their trim lawns and shrubberies, their terraced gardens and their thick hedges of fuchsias, make a striking contrast to the bold brown hills rising so steeply in their rear, with no other ornament than wide patches of heather on their acclivities. At the loch-head, where another little clachan snugly nestles among dwarf oaks and birken shaws, the hills make a sudden dip, and there the road finds its way across them, descending to the side of another and much larger loch, which penetrates several miles inland, and washes with deep rolling waves the feet of a range of gloomy, precipitous heights, smitten by the thunders of the ages. But in this romantic country lochs and mountains are as plentiful as green lanes and fields in the pastoral South. Some of the most majestic, though not the loftiest, of the Scottish "bens" are visible from the crest of the range of hills; and, as for lochs, from "the dip" I have spoken of, three of these salt-water basins, with gleaming curves and crescents, are visible—as glorious a spectacle on a radiant day as the seer of Patmos ever saw in Apocalyptic vision. Untravelled Southrons can have no idea of the infinite varieties of life and colour which this weird combination of mountain and water develops. Each height has an individuality of its own; each loch is distinct in character from all other lochs. On this side is the gentler grace; on the other, the fuller majesty. Here the landscape melts into an almost Arcadian softness; there, it is darkened with the sombre gloom of despair. If, on the one hand, the rugged precipices start sheer from the water's edge, like a wall of iron; on the other you see a gracious heathery slope, with a bright burn leaping and shining down its undulating side. Then, again, the aspect of each scene, like the expression of an eloquent face, changes every half-hour—nay, every minute—on one of those joyous days when sunshine and shadow follow each other—over hill and glen, over stream and rock—with all the arrowy quickness of a lover's thoughts; and swift scurries of rain and mist come up from the south-west, to be succeeded by sudden slants of golden glory; and flecks of white cirrus shoot athwart the sapphire-blue sky, deepening with their transient reflections the broad bulk of the great mountains, and the rippled bosom of the copious lochs.

But I have wandered away from the little village by the lochside. For artist, or poet, or jaded man of letters, I know of few plesanter seclusions. There you may study at your leisure the ways of Nature, and all her charming magical changes. In the soft summer-time there is no end to the beautiful things she has to show you—tall clumps of fuchsia, sparkling with tiny crimson petals; the graceful lady-birch, in the sweet delicacy of her cool foliage; fairy-like ferns, with all their fronds unfolded; and spikes of digitalis, with hanging bells so curiously spotted. The morning dawns upon you with the blandness of the later summer; and, looking across the loch you feel for a moment as if you had unwittingly stepped out of the world in which men live and move and have their being, into a strange, ideal world of inconceivable splendour; for lo! a broad band of shining mist is stretched along the opposite shore, which, beneath it, is reflected in the glassy wave with a startling distinctness—hills and trees and turreted mansions, and patches of bright garden-ground—all inverted in that wide and noble mirror—the reality of it above and the image of it below so combined that, as you gaze and wonder as you gaze, and the mist creeps quickly upward, the reality seems to become an image also, and all its details are subdued into a tremulous, vague dream; and then the mist glides away, and the inverted landscape disappears, and before you is the Real once again, shining with a thousand elysian lights as the mounting sun touches it with its fingers of fire.

At sunset, by the lochside, you will often be moved by the deep sweet silence that prevails—a silence which seems to hush every impetuous feeling, every surging thought. The breeze is not yet astir; the birds have ceased their songs and folded their wings in slumber; a calm lies upon the far-off mountains, on the surrounding hills, on the curving shore. The whole loch is possessed by the glory of the setting sun; and such a wonderful radiance fills it and adorns it, such a dream and mystery of colour, that all things seem stilled and subdued into a voiceless adoration by the very immensity of its beauty! The lights come and go—purple, green, and gold—merging at last into a deep crimson lustre, which floods all the western sky, and sinks with a warm glow into the bosom of the loch, until you see, as it were, a double sunset—one in the loch below and one in the heaven above. Silently, this rich, rare glory fades and fades; from loch and sky, like a vision with noiseless feet, the celestial splendour passes; and out into the blue serene comes the moon, with her company of stars; and still the hush is unbroken, except by the low plash of the waves on the "umbered strand," which, indeed, does not so much interrupt the solemn silence as serve to confirm and enhance it. And now the moonlight folds the loch in its embrace; here, ploughing the tranquil surface, as with a silver share, in one broad, unbroken furrow; there, dropping little silvery gleams and pearly lines; touching the wooded shores with streaks of soft pale light, and illuminating the distant peaks of granite till they shine against the intense depths of the firmament like towers of silver.

But a change comes over the spirit of the scene. A little cloud rises in the north, not bigger than a man's hand, and barely visible across the distant summits. All at once, this cloud expands in every direction, deepening and widening until the sky is overcast with mirky gloom, impenetrable and oppressive. There is a pattering on the leaves around you, and you can see the face of the loch troubled with thick-coming raindrops. Rain, rain! And now, flash after flash of lightning—the dark heavens open and shut with sudden bursts of lurid flame, as from a furnace-fire; and the thunder rolls among the mountains with a hoarse reverberation like the echoes of distant battle; and the waters dash in white breakers against the shore, as the wind, let loose from northern heights, sweeps down the loch on shrieking wings. The storm, however, soon spends its fury: the lightnings cease, and the wind subsides—but with muttering, growling noises, like a creature whose wrath is still unsatisfied; and the blackness vanishes; and soon, over the eastern hills, breaks the first dawn of the coming day, and morning, with all its joyous voices and hopeful promises, comes once again to those of the "sons of men" whose lot is cast—not unhappily, I think—"by the lochside."

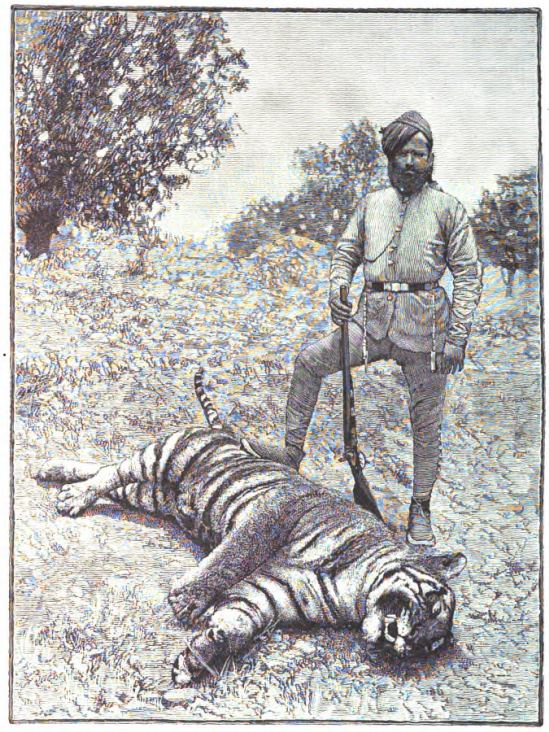
SPEECH DAY, CHRIST'S HOSPITAL.

Additional interest was lent to speech day at the ancient Blue-coat foundation, on July 25, by the new scheme of the Charity Commissioners, which would practically abolish the old school. After the very effective singing of the 100th Psalm by the boys, followed a series of recitations, all of them delivered with unusually good elocution. H. S. Whiteside gave Lord Beaconsfield's "Accession of Queen Victoria"; E. C. Pearce, "Civis Romanus sum" (Cicero); C. Hipwood, part of a speech of Macaulay's on the China War; A. B. Ward, in French, an extract from a discourse of M. Gambetta; R. B. K. Christian, Froude's account of the destruction of the Armada, and also a Greek excerpt from Thucydides; E. A. Rolfe a portion of his prize Latin poem on "Columbus," and H. B. Dickin, "Der Glockenguss zu Breslau."

But the special feature of the gathering was the English Oration by E. A. Rolfe, in which the new scheme of the Charity Commissioners was referred to in a manner which showed unmistakably how it is regarded by the governors, the head master (Rev. R. Lee), the teaching staff, and by the present and old Blues. There would, said the speaker, if this scheme received the assent of Parliament, as it has of the Education Department, still be a Christ's Hospital, but it would be no longer the school of the past. Between the Christ's Hospital founded by good Edward VI. and that of the Commissioners there would be nothing but the name. The applause which greeted this declaration was emphatic and unanimous. Among the events of the year, Mr Rolfe referred to the loss which the great German nation had suffered by the death of two Emperors, one of whom had showed how simply a hero could live, and the other how bravely a hero could die.

After a hearty rendering of the favourite "Dulce Domum," the prizes were distributed by the Lord Mayor. The exhibitioners for 1888 are:—Charles Hipwood, scholar (classical) of Wadham College, Oxford; Arthur Lyon Bowley, major scholar (mathematical) of Trinity College, Cambridge; Eugène Alfred Rolfe, scholar (classical) of University College, Oxford; Joseph William Philipson, scholar (classical) of Selwyn College, Cambridge; and Henry Caldwell Lipsett, scholar (classical) of Lincoln College, Oxford.

The steam-ship Copeland, of Leith, went ashore on the island of Stroma on July 25. She had 200 emigrants on board, who were all landed on the island.



Nearly 40,000 persons were attracted to the Alexandra Palace on July 28 to witness the ascent and descent of Mr. Baldwin, who had promised to drop from a balloon at the height of about 1000 ft. When at a height of about 1500 ft. he detached the parachute, and descended in safety.

The final ceremonial with regard to the Pan Anglican Conference at Lambeth was a special service celebrated on July 28 in St. Paul's Cathedral, and attended by the Archbishops of Canterbury, York, Dublin, and Armagh, the Bishop of London, and about 140 other Bishops, home and Colonial. The sermon was preached by the Archbishop of York.

The following steamers arrived at Liverpool recently with live stock and fresh meat from American and Canadian ports:—The Montreal, with 315 cattle and 854 sheep; the Iowa, with 639 cattle and 692 quarters of beef; the Barrowmore, with 700 cattle; the Lake Huron, with 408 cattle and 670 sheep; the Catalonia, with 960 quarters of beef; the Arizona, with 2920 quarters of beef; and the Germanic, with 760 quarters of beef: the total arrivals being 2062 cattle, 1524 sheep, and 5332 quarters of beef.

THE MAHARAJAH OF TIKUMGURH AND HIS TIGER.

Tikumgurh is one of the Native States in the territory known as Bundelcund; its chief, the Maharajah Pertab Singh, is an ardent sportsman. He visited the Lalitpur district the other day, where he was entertained by the Deputy Commissioner. While he was there, information was brought in that a tiger had appeared near Deogurh, a few miles out; and a shooting-party was at once organised. Beaters were sent into the jungle, and a tigress appeared about thirty yards from where the Maharajah was posted. With a single shot, his Highness killed her. The shooting-party had scarcely been back twenty-four hours, when news arrived of another tiger having been seen; and the Maharajah, with a small party, went out again. He had not long to wait when the tiger appeared, and on seeing the Maharajah, made straight for him, bounding along, and growling savagely. His Highness, with characteristic pluck and presence of mind, waited till the animal was within about fifty yards and then fired. The shell entered the tiger's chest and burst, shattering his lungs and heart. A photograph was taken a few hours after the kill, at the spot where the tiger fell, by Mr. John Gordon, of the Indian Midland Railway. The tiger measured ten feet, and the tigress six inches shorter, immediately after being killed. In addition to the tiger and tigress, the Maharajah was fortunate in catching two young cubs, which he has taken for his menagerie at Tehri.

THE MAHARAJAH OF TIKUMGURH, AND A TIGER KILLED BY HIM.

FASHIONABLE MARRIAGES.

The marriage of Mr. E. Henry Loyd, of Langleybury, Herts, with the Hon. Clementina Brownlow, fifth daughter of the late and sister of the present Lord Lurgan, took place on July 26 in St. Stephen's Church, Gloucester-road. The eight bridesmaids were the Hon. Isabella and the Hon. Emmeline Brownlow, sisters of the bride; Miss Gwendoline and Miss Beatrice Loyd, sisters of the bridegroom; Lady Ottoline Bentinck, Lady Mary Pepys, and Miss Burne, cousins of the bride; and Miss Heneage, cousin of the bridegroom. The Bishop of St. Albans officiated, assisted by the Rev. E. T. Vaughan, Vicar of St. Paul's, Langleybury; the Rev. J. P. Waldo, Vicar of St. Stephen's; and the Rev. Walter Brownlow, cousin of the bride.

Mr. Marcus Henry Milner was married to Caroline Agnes, Duchess Dowager of Montrose, on July 26, at St. Andrew's, Fulham. The Duchess is the youngest daughter of the second Lord Decies, and the widow of the fourth Duke of Montrose, who died in 1874. Her Grace's second husband was Mr. W. S. Stirling-Crawfurd, to whom she was married in 1876 and who died in 1883. The Duchess is well known in racing circles as "Mr. Manton." The bridegroom is the youngest son of the late Mr. Henry Milner, of West Retford House, Notts, and the Old Bank, Leeds, and brother of Lady Gerard and Lady Durham.

The marriage of Lord Beaumont with Violet, only daughter of Mr. Wootton Isaacson, M.P., and Mrs. Wootton Isaacson, was solemnised on July 28, at the Oratory, Brompton, before a large and distinguished congregation. The bridesmaids were—Miss Margaret Peake, Donna Margherita Chigi, Miss Morell Mackenzie, and Miss Riddell and Miss Stapleton, cousins of the bridegroom. The bride was accompanied by her father, who gave her away.

The marriage of Mr. Donald Campbell, eldest son of the Hon. and Rev. Archibald Campbell, of Marchfield House, Berks, late Rector of Knipton, Leicestershire, with Edith Mary, eldest daughter of Mr. Henry Smith Wright, M.P., took place in St. Luke's Church, Chelsea, on July 26. In attendance on the bride were three pages—Master J. H. Smith Wright, youngest brother of the bride; Masters E. J. Wright and C. Howard. The Hon. and Rev. A. Campbell, father of the bridegroom, officiated, assisted by the Rev. H. F. Howard, Rector of Bright Waltham, Berks, uncle of the bridegroom, and the Rev. George Howard Wright, uncle of the bride: Mr. Smith Wright giving his daughter away.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER IX.

WITH THE ELDERS.

OWE went home again, all well pleased, and I holding the Duke's ring tight, I promise you. It was a most beautiful ring when I came to look at it: a great emerald was in the midst of it, with little pearls and emeralds set alternately around it. Never was such a grand gift to so humble a person. I tied it to a black ribbon and put it in the box which held my clothes. But sometimes I could not forbear the pleasure of wearing it round my neck, secretly; not for the joy of possessing the ring so much as for remembering the lovely face and the gracious words of the giver.

At that time I was in my sixteenth year, but well grown for my age. Like my father, I am above the common stature of women. We continued for more than four years longer to live without the company of the boys, which caused me to be much in the society of my elders, and as much at the Manor House and the Rectory as at home. At the former place Sir Christopher loved to have me with him all day long, if my mother would suffer it; when he walked abroad I must walk with him; when he walked in his garden I must be at his side. When he awoke after his afternoon sleep he liked to see me sitting ready to talk to him. I must play to him and sing to him; or I must bring out the backgammon board; or I must read the last letters from Robin and Humphrey. Life is dull for an old man whose friends are mostly dead, unless he have the company of the young. So David in his old age took to himself a young wife. I have sometimes thought that he would have done better to have comforted his heart with the play and prattle of his grandchildren—of whom, I suppose, there must have been many families.

Now, as I was so much with his Honour, I had much talk with him upon things on which wise and ancient men do not often converse with girls, and I was often present when he discoursed with my father or with his son-in-law, the Rector, on high and serious matters. It was a time of great anxiety and uncertainty. There were great Pope burnings in the country; and when some were put in pillory for riot at these bonfires not a hand was lifted against them. They had one at Sherborne on Nov. 17, the anniversary of Queen Elizabeth's Coronation day, instead of Nov. 5, Guy Faux Day. Boys went about the streets asking for halfpence and singing—

> Up with the ladder,
> And down with the rope;
> Give us a penny
> To burn the old Pope.

There were riots in Taunton, where the High Church party burned the pulpit of a meeting-house; people went about openly saying that the Roundheads would soon come back again. From Robin we heard of the Popish plots and the flight of the Duke of York, and afterwards of Monmouth's disgrace and exile. At all the market towns where men gathered together they talked of these things, and many whispered together: a thing which Sir Christopher loved not, because it spoke of conspiracies and secret plots, whereas he was all for bold declaration of conscience.

In short, it was an anxious time, and everybody understood that serious things would happen should the King die. There were not wanting, besides, omens of coming ills—if you accept such things as omens or warnings. To Taunton (afterwards the town most affected by the Rebellion) a plain warning was vouchsafed by the rumbling and thundering and shaking of the earth itself, so that dishes were knocked down and cups broken, and plaster shaken off the walls of houses. And once (this did I myself see with my own eyes) the sun rose with four other suns for companions—a most terrifying sight, though Mr. Boscorel, who spoke learnedly on omens, had an explanation of this miracle, which he said was due to natural causes alone. And at De Brewers there was a monstrous birth of two girls with but one body from the breast downwards; their names were Aquila and Priscilla; but I believe they lived but a short time.

I needs must tell of Mr. Boscorel because he was a man the like of whom I have never since beheld. I believe there can be few men such as he was, who could so readily exchange the world of heat and argument for the calm and dispassionate air of art and music. Even religion (if I may venture to say so) seemed of less importance to him than painting and sculpture. I have said that he taught me to play upon the spinnet. Now that Humphrey was gone, he desired my company every day, in order, he pretended, that I might grow perfect in my performance, but in reality because he was lonely at the Rectory, and found pleasure in my company. We played together—he upon the violoncello and I upon the spinnet—such music as he chose. It was sometimes grave and solemn music, such as Lulli's "Miserere" or his "De Profundis"; sometimes it was some part of a Roman Catholic Mass: then was my soul uplifted and wafted heavenwards by the chords, which seemed prayer and praise fit for the angels to harp before the throne. Sometimes it was music which spoke of human passions, when I would be, in like manner, carried out of myself. My master would watch not only my execution, commending or correcting, but he would also watch the effect of the music upon my mind.

"We are ourselves," he said, "like unto the instruments upon which we play. For as one kind of instrument, as the drum, produces but one note; and another, as the cymbals, but a clashing which is in itself discordant, but made effective in a band; so others are, like the most delicate and sensitive violins—those of Cremona—capable of producing the finest music that the soul of man hath ever devised. It is by such music, child, that some of us mount unto heaven. As for me, indeed, I daily feel more and more that music leadeth the soul upward, and that, as regards the disputations on the Word of God, the letter indeed killeth, but the spirit which music helpeth us to feel—the spirit, I say, giveth life." He sighed, and drew his bow gently across the first string of his violoncello. "'Tis a time of angry argument. The Word of God is thrown from one to the other as a pebble is shot from a sling. It wearies me. In this room, among these books of music, my soul finds rest, and the spiritual part of me is lifted heavenwards. Humphrey and you, my dear, alone can comprehend this saying. Thou hast a mind like his, to feel and understand what music means. Listen!" Here he executed a piece of music at which the tears rose to my eyes. "That is from the Romish Mass which we are taught ignorantly to despise. My child, I am, indeed, no Catholic, and I hold that ours is the purer Church; yet, in losing the Mass we have lost the great music with which the Catholics sustain their souls. Some of our anthems, truly, are good; but what is a single anthem, finished in ten minutes, compared with a grand Mass which lasts three hours?"

Then he had portfolios filled with engravings, which he would bring forth and contemplate with a kind of rapture, discoursing upon the engraver's art and its difficulties, so that I should not, as is the case with ignorant persons, suppose that these things were produced without much training and skill. He had also boxes full of coins, medals, and transparent gems carved most delicately with heathen gods and goddesses, shepherds and swains, after the ancient fashion, unclothed and unashamed. On these things he would gaze with admiration which he tried to teach me, but could not succeed, because I cannot believe that we may without blame look upon such figures. Nevertheless, they were most beautiful, the hands and faces and the very hair so delicately and exquisitely carved that you could hardly believe it possible. And he talked solemnly and scholarly of these gauds, as if they were things which peculiarly deserved the attention of wise and learned men. Nay, he would be even lifted out of himself in considering them.

"Child," he said, "we know not, and we cannot even guess, the wonders of art that in heaven we shall learn to accomplish"—as if carving and painting were the occupation of angels!—"or the miracles of beauty and of dexterity that we shall be able to design and execute. Here, the hand is clumsy and the brain is dull; we cannot rise above ourselves; we are blind to the beauty with which the Lord hath filled the earth for the solace of human creatures. Nay; we are not even tender with the beauty that we see and love. We suffer maidens sweet as the dreams of poets to waste their beauty unpraised and unsung. I am old, child, or I would praise thee in immortal verse. Much I fear that thou wilt grow old without the praise of sweet numbers. Well; there is no doubt more lasting beauty of face and figure hereafter to joy the souls of the elect. And thou wilt make his happiness for one man on earth. Pray Heaven, sweet child, that he look also to thine!"

He would say such things with so grand an air, speaking as if his words should command respect, and with so kindly an eye and a soft smile, while he gently stroked the side of his nose, which was long, that I was always carried away with the authority of it, and not till after I left him did I begin to perceive that my father would certainly never allow that the elect should occupy themselves with the frivolous pursuits of painting and the fine arts, but only with the playing of their harps and the singing of praises. It was this consideration which caused him to consent that his daughter should learn the spinnet. I did not tell him (God forgive me for the deceit, if there was any!) that we sometimes played music written for the Mass; nor did I repeat what Mr. Boscorel said concerning art and the flinging about of the Word of God, because my father was wholly occupied in controversy, and his principal, if not his only, weapon was the Word of God.

Another pleasure which we had was to follow Humphrey in his travels by the aid of his letters and a mappa mundi, or atlas, which the Rector possessed. Then I remember when we heard that the boys were about to ride together through France from Montpellier to Leyden in Holland, we had on the table the great map of France. There were many drawings, coats-of-arms, and other pretty things on the map.

"It is now," said Mr. Boscorel, finding out the place he wanted, and keeping his forefinger upon it, "nearly thirty years since I made the grand tour, being then governor to the young Lord Silchester, who afterwards died of the Plague in London. Else had I been now a Bishop, who am forgotten in this little place. The boys will ride, I take it, by the same road which we took: first, because it is the high road and the safest; next, because it is the best provided with inns and resting places; and, lastly, because it passes through the best part of his most Christian Majesty's dominions, and carries the traveller through his finest and most stately cities. From Montpellier they will ride—follow my finger, child!—to Nismes. Before the Revocation it was a great place for those of the Reformed Religion, and a populous town. Here they will not fail to visit the Roman temple which still stands. It is not, indeed, such a noble monument as one may see in Rome; but it is in good preservation, and a fair example of the later style. They will also visit the great amphitheatre, which should be cleared of the mean houses which are now built up within it, and so exposed in all its vastness to the admiration of the world. After seeing these things they will direct their way across a desolate piece of country to Avignon, passing on the way the ancient Roman aqueduct called the Pont de Gard. At Avignon they will admire the many churches and the walls, and will not fail to visit the palace of the Popes during the Great Schism. Thence they will ride northwards, unless they wish first to see the Roman remains at Arles. Thence will they proceed up the Valley of the Rhone, through many stately towns, till they come to Lyons, where, doubtless, they will sojourn for a few days. Next, they will journey through the rich country of Burgundy, and from the ancient town of Dijon will reach Paris through the city of Fontainebleau. On the way they will see many noble houses and castles, with rich towns and splendid churches. In no country are there more splendid churches, built in the Gothic style, which we have now forgotten. Some of them, alas! have been defaced in the wars (so-called of Religion), where, as happened also to us, the delicate carved work, the scrolls and flowers and statues were destroyed, and the painted windows broken. Alas! that men should refuse to suffer Art to become the minister and handmaid of Religion! Yet in the first and most glorious temple in which the glory of the Lord was visibly present, there were carved and graven lilies, with lions, oxen, chariots, cherubim, palm-trees, and pomegranates."

He closed his atlas and sat down.

"Child," he said, meditating. "For a scholar, in his youth, there is no pleasure comparable with the pleasure of travelling in strange countries, among the monuments of ancient days. My own son did never, to my sorrow, desire the pleasant paths of learning, and did never show any love for the arts, in which I have always taken so great delight. He desireth rather the companionship of men; he loveth to drink and sing; and his nourishuth a huge ambition. 'Tis best that we are not all alike. Humphrey should have been my son. Forget not, my child, that he hath desired to be remembered to thee in every letter which he hath written."

If the Rector spoke much of Humphrey, Madam made amends by talking continually of Robin, and of the great things that he would do when he returned home. Justice of the Peace, that he would certainly be made; Captain first and afterwards Colonel in the Somerset Militia, that also should he be; Knight of the Shire, if he were ambitious—but that I knew he would never be; High Sheriff of the County, if his slender means permitted—for the estate was not worth more than five or six hundred pounds a year. Perhaps he would marry an heiress: it would be greatly to the advantage of the family if an heiress were to come into it with broad acres of her own; but she was not a woman who would seek to control her son in the matter of his affections, and if he chose a girl with no fortune to her back, if she was a good girl and pious, Madam would never say him nay. And he would soon return. The boy had been at Oxford and next in London, learning law, such as Justices require. He was now with Humphrey at the University of Leyden, doubtless learning more law.

"My dear," said Madam, "we want him home. His grandfather groweth old, though still, thank God, in the full possession of his faculties. Yet a young man's presence is needed. I trust and pray that he will return as he went, innocent, in spite of the many temptations of the wicked city. And, oh! child—what if he should have lost his heart to some designing city hussy!"

He came—as you shall hear immediately—Robin came home. Would to God that he had waited, if only for a single month! Had he not come all our afflictions would have been spared us! Had he not come that good old man, Sir Christopher——but it is vain to imagine what might have been. We are in the hands of the Lord; nothing that happens to us is permitted but by him, and for some wise purpose was Sir Christopher in his old age—alas! why should I anticipate what I have to narrate?

CHAPTER X.

LE ROY EST MORT.

In February of the year 1685, King Charles II. died.

Sir Christopher himself brought us the news from Sherborne, whither he had gone, as was his wont, to the weekly ordinary. He clattered up the lane on his cob, and halted at our gate.

"Call thy father, child. Give you good-day, Madam Eykin. Will your husband leave his books and come forth for a moment? Tell him I have news."

My father rose and obeyed. His gown was in rags; his feet were clad in cloth shoon, which I worked for him; his cheek was wasted; but his eye was keen. He was lean and tall; his hair was as white as Sir Christopher's, though he was full twenty years younger.

"Friend and gossip," said Sir Christopher, "the King is dead."

"Is Charles Stewart dead?" my father replied. "He cumbered the earth too long. For five-and-twenty years hath he persecuted the saints. Also he hath burnt incense after the abomination of the heathen. Let his lot be as the lot of Ahaz."

"Nay; he is buried by this time. His brother the Duke of York hath been proclaimed King."

"James the Papist. It is as though Manasseh should succeed to Ahaz. And after him Jehoiakim."

"Yet the bells will ring and we shall pray for the King; and wise men, friend Eykin, will do well to keep silence."

"There is a time to speak and a time to keep silence. It may be that the time is at hand when a godly man must stretch forth his hand to tear down the Scarlet Woman, though she slay him in the attempt."

"It may be so, my friend; yet stretch not forth thine hand until thou art well assured of the Divine Command. The King is dead. Now will my son-in-law ring out the bells for the new King, and we shall pray for him, as we prayed for his brother. It is our duty to pray for all in authority, though to the prayers of a whole nation there seemeth, so far as human reason can perceive, no answer."

"I for one will pray no more for a King who is a Papist. Rather will I pray daily for his overthrow."

"King Charles is said to have received a priest before he died. Yet it is worse that the King should be an open than a secret Catholic. Let us be patient, my friend, and await the time."

So he rode up the village, and presently the bells were set a-ringing, and they clashed as joyously, echoing around the Corton Hills, as if the accession of King James II. was the only thing wanted to make the nation prosperous, happy, and religious.

My father stood at the gate after Sir Christopher left him. The wind was cold, and the twilight was falling, and his cassock was thin, but he remained there motionless, until my mother went out and drew him back to the house by the arm. He went into his own room, but he read no more that day.

In the evening he came forth and sat with us, and while I sat sewing, my mother spinning by the light of the fire, he discoursed, which was unusual with him, upon things and peoples and the best form of Government, which he held to be a Commonwealth, with a strong man for President. But he was to hold his power from the people, and was to lay it down frequently, lest he should in his turn be tempted to become a King. And if he were to fall away from righteousness, or to live in open sin, or to be a merrymaker, or to suffer his country to fall from a high place among the nations, he was to be displaced, and be forced to retire. As for the man Charles, now dead, he would become, my father said, an example to all future ages, and a warning of what may happen when the doctrine of Divine Right is generally accepted and acted upon; the King himself being not so much blamed by him as the practice of hereditary rule which caused him to be seated upon the throne, when his true place, my father said, was among the lacqueys and varlets of the palace. "His brother James," he added, "hath now an opportunity such as is given to few—for he may become another Josiah. But I think he will neglect that opportunity," he concluded; "yea, even if Hilkiah the Priest were to bring him a message from Huldah the Prophetess; for he doth belong to a family which, by the Divine displeasure, can never perceive the truth. Let us now read the Word, and wrestle with the Lord in prayer."

Next we heard that loyal addresses were poured in from all quarters congratulating the King, and promising most submissive obedience. One would have thought that the people were rejoiced at the succession of a Roman Catholic; it was said that the King had promised liberty of conscience unto all; that he claimed that liberty for himself, and that he went to Mass daily and openly.

But many there were who foresaw trouble. Unfortunately, one of them was Sir Christopher, who spoke his mind at all times too fiercely for his safety. Mr. Boscorel, also, was of opinion that civil war would speedily ensue.

"The King's friends," he said, "may for a time buy the support of the Nonconformists, and make a show of religious liberty. Thus may they govern for a while. But it is not in the nature of the Roman Catholic priest to countenance religious liberty, or ever to sit down contented with less than all the pie. They must for ever scheme and intrigue for more power. Religious liberty? It means to them the eternal damnation of those who hold themselves free to think for themselves. They would be less than human if they did not

We played together—he upon the violoncello and I upon the spinnet—such music as he chose.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

try to save the souls of the people by docking their freedom. They must make this country even as Spain or Italy. Is it to be believed that they will suffer the Church to retain her revenues, or the universities to remain out of their control? Nay, will they allow the grammar schools to be in the hands of Protestants? Never! The next generation will be wholly Catholic, unless the present generation send King and priests packing."

These were treasonable words, but they were uttered in the hall of the Manor House with no other listeners than Sir Christopher and the Rector.

"Seeing these things, son-in-law," said Sir Christopher, "what becomes of Right Divine? Where is the duty of non-resistance?"

"The doctrine of Right Divine," said Mr. Boscorel, rubbing his nose, "includes the Divine institution of a Monarchy, which, I confess, is manifestly untenable, because the Lord granted a King to the people only because they clamoured for one. Also, had the institution been of Divine foundation, the Jews would never have been allowed to live under the rule of Judges, Tetrarchs, and Roman Governors."

"You have not always spoken so plainly," said Sir Christopher.

"Nay: why be always proclaiming to the world your thoughts and opinions? Besides, even if the doctrine of non-resistance were sound, there may be cases in which just laws may be justly set aside. I say not that this is one, as yet. But if there were danger of the ancient superstitions being thrust upon us to the destruction of our souls, I say not that we should meekly sit down. Nay; if a starving man take a loaf of bread, there being no other way possible to save his life, one would not, therefore, hold him a thief. Yet the law remains."

"Shall the blood which hath been poured out for the cause of liberty prove to be shed in vain?" asked Sir Christopher.

"Why, Sir," said the Rector, "the same question might be asked in France, where the Protestants fought longer and against greater odds than we in this country. Yet the blood of those martyrs hath been shed, so far as man can see, in vain: the Church of Rome is there the conqueror indeed. It is laid upon the Protestants, even upon us, who hold that we are a true branch of the ancient Apostolic Church, to defend ourselves continually against an enemy who is always at unity, always guided by one man, always knows what he wants, and is always working to get it. We, on the other hand, do not know our own minds, and must for ever be quarrelling among ourselves. Nevertheless, the heart of the country is Protestant: and sooner or later the case of conscience may arise whether—the law remaining unchanged—we may not blamelessly break the law?"

That case of conscience was not yet ripe for consideration. There needed first many things—including the martyrdom of saints and innocent men and poor, ignorant rustics—before the country roused herself once more to seize her liberties. Then as to that poor doctrine of Divine Right, they all made a mouthful of it, except only a small and harmless band of nonjurors.

At the outset, whatever the opinions of the people—who could have been made to rise as one man—the gentry remained loyal. Above all things, they dreaded another civil war.

"We must fain accept the King's professions," said the Rector. "If we have misgivings, let us disguise them. Let us rather nourish the hope that they are honestly meant: and let us wait. England will not become another Spain in a single day. Let us wait. The stake is not yet set up in Smithfield, and the Inquisition is not yet established in the country."

It was in this temper that the King's accession found Sir Christopher. Afterwards he was accused of having harboured designs against the King from the beginning. That, indeed, was not the case. He had no thought of entering into any such enterprise. Yet he never doubted that in the end there would be an uprising against the rule of the priests. Nor did he doubt that the King would be pushed on by his advisers to one pretension after another for the advancement of his own prerogative and the displacement of the Protestant Church. Nay, he openly predicted that there would be such attempts; and he maintained—such was his wisdom!—that, in the long run, the Protestant faith would be established upon a surer foundation than ever. But as for conspiring or being cognisant of any conspiracy, that was untrue. Why, he was at this time seventy-five years of age—a time when such men as Sir Christopher have continually before their eyes Death and the Judgment.

As for my father, perhaps I am wrong, but in the daily prayers of night and morning, and in the grace before meat, he seemed to find a freer utterance, and to wrestle more vehemently than was his wont on the subject of the Scarlet Woman, offering himself as a willing martyr and confessor, if by the shedding of his blood the great day of her final overthrow might be advanced; yet always humble, not daring to think of himself as anything but an instrument to do the will of his Master. In the end, his death truly helped, with others, to bring a Protestant King to the Throne of these isles. And since we knew him to be so deep a scholar, always reading and learning, and in no sense a man of activity, the thing which he presently did amazed us all. Yet we ought to have known that one who is under the Divine command to preach the Word of God and hath been silenced by man for more than twenty years, so that the strength of his manhood hath run to waste and is lost—it is a most terrible and grievous thing for a man to be condemned to idleness!—may become like unto one of those burning mountains of which we sometimes read in books of voyages. In him, as in them, the inner fires rage and burn, growing ever stronger and fiercer, until presently they rend asunder the sides of the mountain and burst forth, pouring down liquid fire over the unhappy valleys beneath, with showers of red-hot ashes to destroy and cover up the smiling homesteads and the fertile meadows.

It is true that my father chafed continually at the inaction forced upon him, but his impatience was never so strong as at this time, namely, after the accession of King James. It drove him from his books and out into the fields and lanes, where he walked to and fro, waving his long arms, and sometimes crying aloud and shouting in the woods, as if compelled to cry out in order to quench some raging fever or heat of his mind.

About this time, too, I remember, they began to talk of the exiles in Holland. The Duke of Monmouth was there with the Earl of Argyle, and with them a company of firebrands eager to get back to England and their property.

I am certain now that my father (and perhaps through his information, Sir Christopher also) was kept acquainted with the plots and designs that were carried on in the Low Countries. Nay; I am also certain that his informant was none other than Humphrey, who was still in Leyden. I have seen a letter from him, written, as I now understand, in a kind of allegory or parable, in which one thing was said and another meant. Thus, he pretends to speak of Dutch gardening:—"The gardeners," he says, "take infinite pains that their secrets shall not be learned or disclosed. I know, however, that a certain blue tulip much desired by many gardeners in England, will be taken across the water this year, and I hope that by next year the precious bulb may be fully planted in English soil. The preparation of the soil necessary for the favourable reception of the bulb is well known to you, and you will understand how to mix your soil and to add manure and so forth. I myself expect to finish what I have to do in a few weeks, when I shall cross to London, and so ride westwards, and hope to pay my respects to my revered tutor in the month of June next. It may be that I shall come with the tulip, but that is not certain. Many messages have been received offering large sums of money for the bulb, so that it is hoped that the Dutch gardeners will let it go.

"From H. C."

The tulip, in a word, was the Duke of Monmouth, and the Dutch gardeners were the Scotch and English exiles then in Holland, and the English gardeners were the Duke's friends, and H. C. was Humphrey Challis.

I think that Sir Christopher must have known of this correspondence, because I now remember that my father would sit with him for many hours looking at a map of England, conversing long and earnestly, and making notes in a book. These notes he made in the Arabic character, which no one but himself could read. I therefore suppose that he was estimating the number of Nonconformists who might be disposed to aid in such an enterprise as Humphrey's "gardeners" were contemplating.

Robin, who certainly was no conspirator, also wrote a letter from Leyden about this time saying that something was expected, nobody knew what; but that the exiles were meeting constantly, as if something was brewing.

It was about the first week of June that the news came to us of Lord Argyle's landing. This was the beginning. After that, as you will hear, the news came thick and fast; every day something fresh, and something to quicken the most sluggish pulse. To me, at least, it seemed as if the breath of God Himself was poured out upon the country, and that the people were everywhere resolved to banish the accursed thing from their midst. Alas! I was but a simple country maid and I was deceived! The accursed thing was to be driven forth, but not yet. The country party hated the Pope, but they dreaded civil war; and indeed, there is hardly any excuse for that most dreadful scourge, except the salvation of the soul and the safeguarding of liberties. They would gladly welcome a rising, but it must be general and universal. They had for five-and-twenty years been taught the wickedness of rebellion, and now there was no way to secure the Protestant Faith except by rebellion. Unhappily, the rebellion began before the country gentlemen were ready to begin.

(To be continued.)

MR. GLADSTONE'S GOLDEN WEDDING.

A reception was held by Earl and Countess Spencer at Spencer House, St. James's, on July 25, at which Mr. and Mrs. Gladstone were, in honour of their golden-wedding year, presented with their portraits, painted respectively by Mr. Frank Holl and Mr. Herkomer. On entering the room Mr. and Mrs. Gladstone, who were accompanied by Miss Gladstone, were received with a hearty welcome.

Earl Granville, on the part of the donors of the portraits, came forward and formally presented them, and also a set of silver vases. He then read a congratulatory address, signed by 116 subscribers, old colleagues or personal friends of Mr. Gladstone, expressing a desire that Mr. Gladstone might long be spared.

Mrs. Gladstone, in a few words, expressed her thanks for and admiration of the beautiful gifts which had been presented to her with so many kindly expressions of regard.

Mr. Gladstone thanked the donors for their beautiful gifts. It was difficult, he said, for him to give any adequate idea of the domestic happiness which he had enjoyed during the fifty years of his married life. To this extent he concurred entirely in the terms of the address. When it came to the allusions to himself a difficulty arose, for he could not help but feel that many of the words used were of too flattering a character. Referring to the long time during which he had been in public life, he said that his conduct had often been criticised—sometimes, perhaps, unjustly criticised—but he could not help feeling that, on the whole, these criticisms had been more to his benefit than the reverse. At all events, he could fairly say that, in the whole of that long retrospect, he could hardly recall in his public life any incident that was in any way painful to his recollection. He thanked them very warmly for their kind presentation.

During the day Mr. Gladstone received addresses of congratulation from a number of political bodies. Mr. and Mrs. Gladstone were married on July 25, 1839.

Princess Christian has sent a third present to the Bethnal-green Free Library; and has become patroness of the institution.

The Leicestershire and Mid-England Agricultural Show was opened at Leicester on July 25. The exhibition contained large classes of young hunters and cart-horses, and a fine collection of dogs. Among the prize-takers were the Earl of Ellesmere, the Duke of Portland, the Hon. E. Coke, Mr. Muntz, M.P., and Lord Belper.

An important addition has been made to the Royal Navy by the delivery from the contractors of the new first-class battle-ship Sans Pareil, which has been built for the Royal Navy by the Thames Ironworks Company. She will be at once completed for sea. She is ordered to be equipped with two 110-ton, one 30-ton, and twelve 6-in. 5-ton breechloaders; twenty-one quick-firing 3- and 6-pounders, eighteen Whitehead torpedoes, and an equipment of machine-guns. The San Pareil has a displacement of 10,470 tons, and is fitted with engines of 12,000-horse power. She and her sister-ship, the Victoria, are the most powerful vessels ever built for the Royal Navy, with the exception of the Nile and Trafalgar. The total cost of the Sans Pareil, when fully equipped and ready for sea, is estimated at £814,000.

The availability by the Brighton and South Coast Railway of ordinary return tickets to and from the seaside, &c., will be extended as usual over the August Bank Holiday, and this will also include the special cheap Saturday to Monday tickets. On Saturday a fourteen-day excursion to Paris, by the picturesque route via Dieppe and Rouen, will be run from London by a special day service, and also by the ordinary night service. Special Saturday to Tuesday tickets will also be issued from London to Brighton, Portsmouth, and the Isle of Wight; and on Bank Holiday, Monday, Aug. 6, day excursions will be run to Brighton, Worthing, Portsmouth, the Isle of Wight, Lewes, Newhaven, Eastbourne, Bexhill, St. Leonards, and Hastings. For the Crystal Palace holiday entertainments extra trains will be run to and from London, as required by the traffic. The Brighton Company announce that their West-End offices—28, Regent-circus, Piccadilly, and 8, Grand Hotel-buildings, Trafalgar-square—will remain open until ten p.m. on the evenings of Friday and Saturday, Aug. 3 and 4, for the sale of the special cheap tickets and ordinary tickets to all parts of the line, at the same fares as charged at London Bridge and Victoria.

MR. LOWELL ON INTERNATIONAL COPYRIGHT.

A dinner in honour of the American men and women of letters now in this country was given on July 25 at the Criterion Restaurant. The President of the Society of Authors, Professor James Bryce, M.P., presided, and there was a very distinguished literary company.

The toast of "The Queen and the President of the United States" having been proposed and duly honoured, after a reply by Mr. Waller, the president proposed "Literature." He said this was the first time that American *littérateurs* had been entertained in this way. He hoped, however, it was only the precursor of many similar gatherings at which literary people from both sides of the Atlantic would meet together. There had never been a time since 1776 when there was so much cordiality between the two countries as at present, and he trusted and believed that that cordiality would long exist. The toast, which was received with much enthusiasm, was coupled with the name of Mr. James Russell Lowell.

Mr. Lowell said he could not resist an occasion like this, when the good feeling that existed between the two countries was so strongly emphasised, and seemed so likely to deepen and to increase. If he looked back to anything in his life with satisfaction, it was that he had contributed to that good feeling. He must confess that, having first appeared in print some fifty years ago, he would hardly like to be answerable for his own literature, much less for that of other people. Washington Irving and Fenimore Cooper were the first two American authors who were known in Europe, and particularly in England. And it was noticeable that they were the only American authors at that time who were capable of earning their bread by their pens. Another singular thing was suggested to him as he looked back. It was no longer with the *littérateur* a case of "toil, envy, want, the patron, and the jail," but where once forty dined for one, now one dined for forty. Mr. Lowell protested that the chairman had done him more than justice in attributing to him so much influence in respect to international copyright. All American authors had long been in favour of it, on the ground of simple justice to English writers. He thought, however, a little injustice had been done to their side—the American side of the question; and he was not so sure that the American publishers were so much more wicked than their English brethren would have been had they had the chance. He could not accept the proposition that there was anything in the American form of government that produced a lower form of morality than existed in other countries. He thought it was the stupidity of our ancestors in making a difference between literary and other property that had been the cause of all the difficulty. Books had always been looked upon as *feræ naturæ*. His friend and neighbour, Longfellow, once asked him to come and eat a game-pie with him. That game-pie was the only honorarium that he had ever received from this country for reprinting his works. He could not help feeling that there was something monumentally interesting in a meeting like this—the first time that English and American authors had come together in anything like numbers to fraternise, and, if he might be allowed to say so, to *sororise*. He sympathised with the remarks of the chairman in regard to the greater love of his countrymen for the old country, and contrasted the state of things existing now with those in the days of De Tocqueville, sixty years ago.

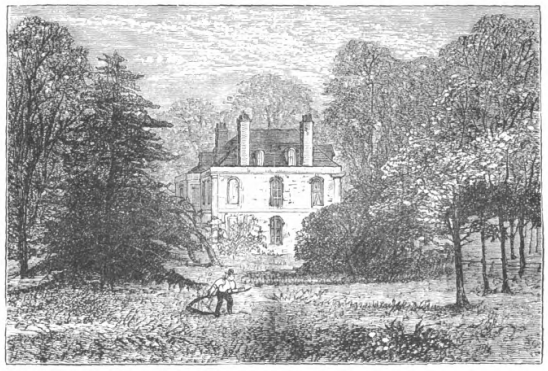
The other toasts were "The Incorporated Society of Authors"; "American Men and Women of Letters"; "Historians and the Chairman."

Signor G. Focardi, the sculptor of "You Dirty Boy," has executed a bust of Mr. John R. Whitley, the Director-General of the Italian Exhibition. It is a speaking likeness and is now on view in the vestibule of the main building, having been cast in plaster-of-Paris. Signor Focardi's other pieces on view in the Italian Exhibition include "Happy Age," "You Ragamuffins!" "Daddy's Clothes," "Sweet Rest," and "Allegro." There are more than 500 pieces of sculpture in the Exhibition.

The Academical Board of Trinity College, London, has awarded the following exhibitions and prizes, which have been competed for:—The Benedict Pianoforte Exhibition to Maud Carter; the Sims Reeves' Vocal Exhibition to Florence Verey; the College Organ Exhibition to James Shaw-Ford; the College Violin Exhibition to Herbert Goom; the Gabriel prize to William Packham, A. Mus.; and the National Practical prize to Mary Boothroyd (Bedford centre).

Many large landowners, including the Duke of Northumberland, Sir T. Grove, Bart., Mr. G. P. Fuller, M.P., and Mr. Floyd Kinnear, M.P., have saved their hay again this season by the use of hay-dryers. As the loss to the country from a wet hay harvest ranges from six to twenty millions, Mr. Gibbs, of Gillwell Park, Chingford, states that in order to help in averting such losses in future, he will arrange to have for next season these machines supplied on the three years' purchase system, so as to place them within reach of tenant-farmers and of the men who loan steam-engines. It has been publicly stated by those who possess these machines that their first cost is recouped in from one to three seasons, hence with such an arrangement they will have repaid the investment before the last payment falls due. It appears that when grass is once partly made it is unfit for conversion into ensilage, hence there seems need for some other resource in wet harvests.

A correspondent (R. F.) writes from Douglas, Isle of Man, as follows:—At a time when public feeling is once more awakened to the great historic event which saved England from one of the most terrible efforts ever made to crush her, the following item may prove interesting. On July 25, while one of the trawlers belonging to Mr. J. Coole, of Douglas, Isle of Man, was coasting the southern part of the island known as the Calf, the fishermen secured, at the almost total sacrifice of one of their largest deep-sea nets, an old anchor, which unquestionably belonged to one of the ships of the unfortunate Armada. There is strong evidence that one of the vessels foundered here. Many traces of the wrecks of two great vessels of the Armada have been found close to this—whence the name Spanish Head which is given to the adjoining headland to this day. The anchor now lies at the Tongue, in Douglas Harbour, and is an object of considerable curiosity to the visitors crowding the island at this time.



The Board of Trade have awarded a piece of plate to Captain H. M. Hayward, master; a gold shipwreck medal to Mr. Frank William Hart, first officer; and a silver shipwreck medal and a sum of £2 each to Johan Barpark, Harry Erving, William Allen, and Thomas Driscoll, seamen, of the American steam-ship Mariposa, of San Francisco, in recognition of their services in rescuing the crew and passengers of the barque Henry James, of Glasgow, which was wrecked off Palmyra Island, an uninhabited islet in the South Pacific, on April 16 last. The Mariposa was off Tululia, Samoa, bound for San Francisco with mails and passengers, when news arrived there of the wreck of the Henry James. Captain Hayward, without any hesitation, proceeded to the assistance of the castaways, taking upon himself the risk of a heavy fine in the event of breach of contract, and successfully effected the rescue in one of their boats and one of the Mariposa's, manned by the first officer and the seamen above named

NOVELS.

The Mystery of Mirbridge. By James Payn. Three vols. (Chatto and Windus).—A long series of novels by Mr. Payn attests his faculty, which is again shown in this story, of conceiving an original plot, and his grasp of a dramatic situation. The exercise of these talents cannot fail to produce an interesting work of fiction; but little sympathy is excited by the chief characters in this rather uncomfortable story of elaborate dissimulation and selfish domestic intrigue. Lady Trevor, who comes back, after nearly twenty-five years' absence, with her invalid husband and two sons, pretending to be a stranger and a Frenchwoman, in the neighbourhood from which she had disappeared as Letty Beeton, the disgraced daughter of a rustic, and mother of an illegitimate child, is the most important person in the story. Who and what she is, the reader is allowed to know almost from the time of her arrival. The tenderness and fidelity of the mutual affection between her and poor Sir Richard, who had married her as soon as he could, and had lived with her quietly in France, might seem amply to make amends for the indiscretion or sin of their youth. As neither of them ever cared for the dull society of English county gentry, which is here depicted in a very unflattering light, Sir Richard and Lady Trevor had no obvious reason for exposing themselves to the danger of her identification with the erring girl who was believed to have died. The only motive that could have induced her to enter on such a miserable course of deception is the design she entertained of getting her favourite elder son, Hugh, instead of Charles, her second son, born in lawful wedlock, to be acknowledged as the lawful heir to the baronetcy and the Mirbridge estates. A lady of imperfect education might, perhaps, be ignorant, but the knowing novelist, a man of the world, must surely be aware that Hugh could hardly, in any case, enter into possession of a large entailed property and an hereditary title, at his father's death, without producing the certificates of his own birth and of his parents' marriage previous to his birth. The disregard of this legal condition is a signal flaw in Mr. Payn's delineation of the central position in the story. Nobody thinks of tampering with registers or forging certificates, and Lady Trevor's conduct, though unjust and fraudulent, is not absolutely criminal; but such deceit would evidently be futile. Passing over this manifest defect in the plot, we are much interested in her ladyship's severe ordeal of bitter reminiscences, her feelings of shame and continual fear of discovery, the difficulty of maintaining false appearances, in the household and in the village, among her old neighbours, and of eluding the curiosity of other ladies, such as Mrs. Westrop and Lady Jodrell, who have long memories and a keen appetite for scandal. These scenes of her victorious conflict with embarrassing social acquaintance, and that of a bold encounter with Morris, the dishonest land-steward, who suspects her and threatens to expose her, are highly dramatic; while the struggles and sufferings of a clever woman in that situation, who is really not very wicked, demand our compassion, if not deserving of admiration for the fortitude with which they are borne. Her principal antagonist, however, Miss Clara Thorne, the beautiful, cold-hearted, selfish, ambitious daughter of the Rector of Mirbridge, is a thoroughly detestable character, incapable of the softer passions, austerely dignified in her behaviour, despising love and contemning the male sex as fools, cowards, and liars for the most part, yet willing to sell herself in marriage for worldly rank and fortune. Hugh Trevor, the supposed heir to such advantages, is soon fascinated by her charms, and the opposition raised by his mother to this unequal match brings about a fierce contention between the strong wills of the two unscrupulous women, hastening the crisis of the story. There is some ingenuity in the device of enabling Clara to identify Lady Trevor with Letty Beeton through the corresponding date in the parish register of births and the inscription on a locket recording her Ladyship's birthday. Having thus gained possession of half Lady Trevor's secret, but still not knowing that her elder son is illegitimate, Clara proceeds relentlessly, by a menace of its disclosure, to vanquish the mother's repugnance to Hugh's marrying herself; the illness of Sir Richard, who is slowly dying, leaves the matter in Lady Trevor's hands. The wedding takes place, but Hugh, a surly vicious brute, makes Clara desperately wretched during the honeymoon; and she presently discovers the other half of the secret—that her odious husband is base-born, and has no right to the Mirbridge estate. Sir Richard, however, dies without making any valid sign or testimony of the true state of affairs. Hereupon, the reader is asked to believe that Clara and her mother-in-law, now acting in co-operation with each other, manage to keep possession of the property, sending its nominal inheritor, now entitled Sir Hugh Trevor, Bart., out of the way, and to bestow a large portion of its revenue on Charles Trevor, his amiable brother, who takes Clara's sweet sister, Lucy, for his wife. When Hugh has died of drinking brandy, the baronetcy and the broad acres of Mirbridge at length come into the undisputed possession of his brother Charles, who has never had an inkling of the secret in which his father and mother and himself were so deeply concerned. It is only the two ladies who survive in conscious private knowledge of "the Mirbridge mystery"; but Mr. Payn's readers, as they participate in its public exposition, will know as much about it as they can desire.

The Reverberator. By Henry James. Two vols. (Macmillan and Co.).—The experiences of an American family party travelling on the European Continent have often been portrayed by this agreeable novelist. Characters and manners, rather than stirring adventures, make the writings of Mr. Henry James worth reading; and this tale is a good example, though its plot is very slight. Mr. Dosson, an old gentleman from Boston, quiet and simple in his habits, is staying in Paris with his two daughters, Miss Delia and Miss Francie. They have plenty of money, and know little of the world. A young American connected with the newspaper press, named George Flack, makes their acquaintance and gets into their confidence, with an eye to the hand of Francie, who is a sweet, engaging girl. He is the Paris correspondent of the *Reverberator*, an American "society journal," dealing much in personal gossip. A worthier suitor for the innocent young lady's affections is Gaston Probert, half French, half Carolinian, an amateur artist, a gentleman, a man of honour. Flack is a snob, an adventurer, a sneak; he abuses their favour by prying into the domestic affairs of persons in society with whom they are intimate, and by employing them as material for his published letters of scandal. There is an outburst of just and proper indignation, and Flack is dismissed, while Francie is engaged to Gaston. They wish to go and dwell where they would never see any newspapers so long as they live. But the *Reverberator* does not stand for all journalism in America, France, or in England; and Flacks are not everywhere to be met with. There is, however, nothing unlikely in the incidents of this amusing story.

A Cloud on St. Angelo. By Cyril Bennett. Two vols. (T. Fisher Unwin).—The author of "The Massage Case," which was forcible, but harsh and crude, pleases us very much better with this more genial story. Its heroine, in a moderate degree, is Helen Rivette, who was residing with her parents on the shores of Naples, when she saw, during an eruption of Vesuvius, a fateful cloud over the neighbouring mountain of St. Angelo: her father died by an accident in the same hour. She comes to England, is engaged as teacher of foreign languages in a girls' high school, and is soon afterwards engaged, in a different sense, to Mr. Evelyn Pierson, heir to a baronetcy and a large estate, with a mansion called Brackmoor Abbey, haunted by the ghost of an uneasy old Abbot. There is another fine estate, Wyckhams, owned by Mr. Alfred Temple, a gentleman in feeble health, addicted to opium, which presently kills him, when the property goes apparently to Dr. Willoughby, an elderly student living with his daughter, Madie, on the Welsh seacoast. Madie, a delightful merry girl of robust and active habits, and of free-hearted, playful disposition, loves Mr. Howard Daly, the manager of Mr. Temple's estate and his cousin. Mrs. Rivette, being a near relation of Dr. Willoughby and of Alfred Temple, gets a bequest of £10,000 at the death of the latter; but a written statement left by him reveals the shocking fact that his wife, Adelaide Temple, was guilty of putting an end to the existence of his elder brother, Ernest, some years before this time, by tampering with his medicine during a long illness. Mrs. Temple, indeed, is no longer living; and the disclosure of her crime has no other serious effect than to clear Dr. Willoughby's mind of dark suspicions that he had entertained with regard to Alfred Temple. He is, however, with an amusing bluntness and rudeness of manner, the most unworldly and generous of men; he dislikes getting wealth, and feels it a great relief to find a codicil, or a second will, making Daly the heir to Wyckhams, instead of himself. Meantime, his daughter, Madie, having gone to stay with Helen at Ivilsham, is seen by Evelyn Pierson, who weakly and dishonourably transfers his affections to her. But Madie is true to Daly, and true to her friend Helen, who is broken-hearted at the inconstancy of her lover. The two girls are upset in a boat on the river, and Helen is drowned,

RAVENSCOURT PARK, HAMMERSMITH.

leaving the memory of a noble character and of a pathetic end.

In Hot Haste. By Mary E. Hullah. Two vols. (Bentley).—Germany and England, with people of both nations, alternately present the scenes and figures of this novel, which has much interest of emotion and action. Sabine von Vogelheim, an orphan, the granddaughter of a Baron with small property at Rothenfels, in Nassau, being left poor, and having had an English mother, takes a situation as German governess in our own country. She has a cousin, Georg von Vogelheim, an officer serving with the German Army in France, a man of wild and extravagant courses and of ungovernable temper. Declining to become his wife, she marries, somewhat hastily, Kurt von Weide, of Berlin, who had followed her to England, and who has a solid position and character. On their return to Germany, they meet Georg von Vogelheim and the two men quarrel; Sabine is led to believe that Kurt has treated her cousin with harshness and unfairness. The married couple are painfully estranged from each other by the indiscretion of interfering friends. Georg, ruined by gambling and borrowing money, loses his inheritance and his rank in the army; he then forges Kurt's name to a bill on which he obtains a loan; the fraud is detected, and he flies from the police, Sabine aiding his escape out of a garret-window of Rothenfels Castle. He is in hiding in the woods; Kurt, who had been absent, comes home and learns what his wife has done. There is a scene in which the desperate outlaw encounters Kurt, who has gone out to save him, accompanied by Sabine. Maddened with anger, regarding Kurt as the author of his misfortunes, Georg fires a pistol at him, and Sabine is wounded. She happily recovers, and the husband and wife are reconciled, while Kurt generously pays the debts of her cousin. A wicked old usurer, Jacob Lilienthal, who had tempted Georg to commit the forgery, is punished by falling into a well.

The council of the Society of Accountants and Auditors have unanimously re-elected Mr. Reginald E. Emson president, and Mr. Jacob Earnshaw vice-president, for the ensuing year.

By permission of the Benchers, the gardens of Lincoln's Inn are open every evening from 6.30 until eight o'clock, and will continue so up to Sept. 21, after which they will be open from five o'clock until dusk during the Long Vacation. The privilege thus granted is intended for the benefit of the poor children inhabiting the densely-populated neighbourhoods.

The Duke of Sutherland has opened a public park at Longton, North Staffordshire, for which he had given forty acres of land, and which has since been laid out, at a cost of £5000, by public subscriptions headed by Mr. J. Aynsley, the Mayor, who gave £2000. The park, which is named the Queen's Park, is in commemoration of the Jubilee.

RAVENSCOURT PARK, HAMMERSMITH.

By the energy and public spirit of the inhabitants of Hammersmith, one of the most beautiful inclosed parks in the neighbourhood of London has been rescued from the speculative builder, and secured in perpetuity to the public as a place of recreation and enjoyment. Such places, once numerous, are every year becoming rarer, amidst the ever-advancing ranks of new houses. But the people have here obtained a park ready made, containing magnificent trees and open verdant spaces. Ravenscourt Park, having an area of about thirty-two acres, is situated at the western end of Hammersmith, at a short distance from Turnham-green and Chiswick, whose inhabitants will now equally enjoy its sylvan beauties. The house, which is destined to be the home of the new Public Library recently voted by the borough, occupies the site of what was formerly the residence of the celebrated Alice Perrers, of the Court of Edward III. It is a plain brick building, erected about the middle of the last century, in the style of the French architect Mansart. The property has been acquired at a cost of £58,000, half contributed by the borough of Hammersmith, half by the Metropolitan Board of Works. It was opened, without any ceremony, for the enjoyment of the public, and on the last Bank Holiday was thronged by thousands of visitors.

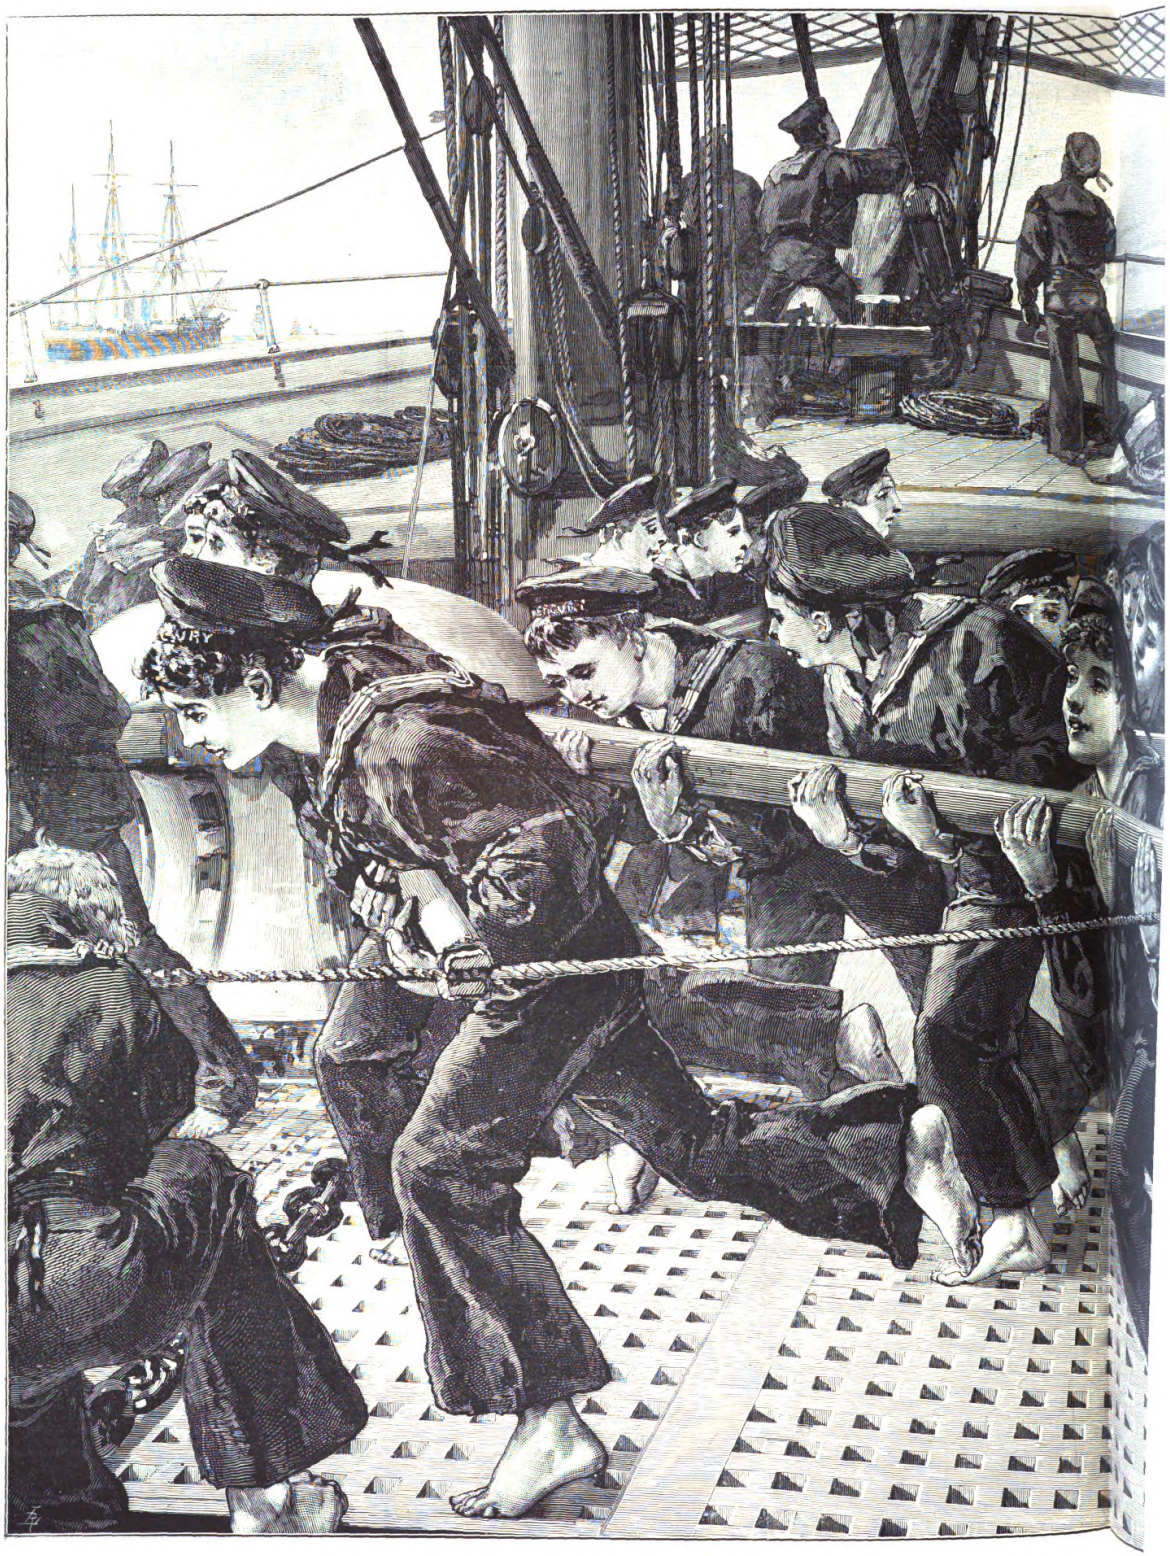
DISTRIBUTION OF PRIZES AT THE ROYAL ACADEMY OF MUSIC.

Lord Coleridge distributed the awards to the successful students of the Royal Academy of Music at St. James's Hall on July 25. The Charles Lucas medal, from a design by T. Woolner, R.A., in memory of Charles Lucas, for the composition of an air and variations for string quartet, was awarded to Dora Bright. The Parepa Rosa gold medal, for the singing of pieces selected by the committee, was awarded to Kate Norman. The Sterndale Bennett prize, for the playing of a pianoforte composition by Sir W. S. Bennett selected by the committee, was awarded to Edith L. Young. The Llewellyn-Thomas gold medal, for declamatory English singing, exemplified in pieces chosen by the committee, was awarded to Kate Norman. A number of other medals and certificates were also distributed.

Previous to the distribution, Schubert's setting of the 23rd Psalm was beautifully sung by certain of the female students; and Dr. A. C. Mackenzie (the principal) made an address pointing out to the prize-winners and others the necessity of earnest and continued study for the furtherance of the art rather than for the object of winning medals and rewards.

Lord Coleridge observed that if he had had the slightest idea of the audience he was to meet and the ceremony he was to take part in, he would have been tempted to decline the honour which was offered to him, and he would, if possible, now take refuge in a well-known formula, and desire that his speech might be taken as read. Before entering the hall, he had been reminded of what he had entirely forgotten—that sixteen years ago, on the same spot where he was then standing, he had had to make a short speech on a most interesting occasion, when a testimonial was presented to the great English master of those days, Sir William Sterndale Bennett. That was a name which no Englishman, whether he knew much about music or not, could hear without a glow of gratitude and pride, because, although the last sixteen years had undoubtedly made a difference in that respect, yet sixteen years ago he was able to say that Sir William Sterndale Bennett had almost this unique distinction—that, although we had had great musicians, men in whose works English men took great delight, yet no one since the days of Purcell to those of Sterndale Bennett had crossed the seas and had acquired not only an English, but a European reputation. He was happy to think that that statement could not now be made with truth; but it was a comfort to think that in the sixteen years that had elapsed, which had turned the middle-aged advocate into an old Judge, one thing at least remained the same—delight in music, and honour to the great masters of it. He urged those students who had not succeeded in obtaining awards not to be discouraged. They could not all succeed. He hoped at the same time that they all rejoiced in the success of their friends. There was very often, in every profession—certainly in the profession he knew most of—a hand-to-hand and personal conflict, which made it extremely difficult to maintain perfect good-fellowship, perfect absence of jealousy, perfect true goodfeeling one with the other; but which, nevertheless, he maintained, was the highest triumph, he was going to say of religious, but, at all events, of moral training; and it was one of the objects which every man engaged in a profession which implied competition should set before himself steadily to pursue. The advantage of those who cultivated their profession in harmony could hardly be overestimated.

The Scriveners' Company have promised £100 to the Endowment Fund of the Polytechnic in Regent-street.



The Earl of Shrewsbury has intimated to his Cheshire tenantry his intention of returning them 10 per cent on their rentals.

The production of the pastoral play, "Le Baiser," by Lady Archibald Campbell and her friends, at Cannizaro Wood, Wimbledon, has been postponed to Tuesday, Aug. 7, owing to the inclement weather.

Mr. H. Cozens Hardy, Q.C., M.P., distributed on July 27 the prizes gained by the students at the University College School, Gower-street. Professor Erichsen, principal of the college, presided, and was supported by several members of the council.

A memorial tablet bearing a medallion of the late Mr. Forster was unveiled in Westminster Abbey on July 27, in the presence of many friends of the deceased statesman. At a meeting held in the Jerusalem Chamber tributes to Mr. Forster's high character were paid by the Dean of Westminster and Lord Knutsford.

The fifty-sixth annual report of the Commissioners of Public Works in Ireland has been issued. During the past year the Commissioners made 1321 loans for public works, amounting to £829,766, showing a diminution in number of thirty-seven, with an increase in the money allocation of £206,366, which is entirely due to increased operations under the Labourers' Acts; 444 loans for an aggregate sum of £36,575 were made to tenants to purchase their holdings, against 736 loans for £60,955 in the previous year, the falling off being due partly to the unsettled state of the land question, and more searching inquiry into the security offered by the tenant. The amounts sanctioned under the Labourers' Acts have been on a much larger scale than in any former year.

OUR FUTURE BLUEJACKETS: A SCENE ON B[illegible]
FROM A SKETCH

ON BOARD THE TRAINING-SHIP MERCURY, AT RYDE.
FROM A SKETCH BY LOUIS WAIN.

WILLS AND BEQUESTS.

The will (dated Nov. 15, 1886), with two codicils (dated Oct. 8, 1887, and March 29, 1888), of Mr. Joseph Allen Piggot, late of Bedford, who died on May 30 last, was proved at the Northampton District Registry on June 26 by Mrs. Mary Jane Houlton Piggot, the widow, and Horatio Piggot, the brother, the executors, the value of the personal estate in the United Kingdom amounting to over £140,000. The testator gives £2000 and all his household furniture, pictures, plate, books, and effects to his wife; his residence and the dividends and interest of £20,000 railway debenture stock to her, for life; and legacies to his nephews and nieces, and to his executors. As to the residue of his real and personal estate he leaves one fourth to his said brother Horatio; one fourth, upon trust, for Jane, the wife of his brother John Sampson Piggot, for life, and then for Emily, the only daughter of his said brother; one fourth, upon trust, for Sarah, the wife of his brother James Algernon Piggot, for life, and then for all the children of his said brother; and one fourth, upon trust, for the children of his brother Adolphus.

The will (dated April 26, 1888) of Miss Georgiana Johanna Austin, late of No. 77, Oxford-terrace, Hyde Park, who died on June 2 last, was proved on July 20 by the Hon. Henry Arnold Lawrence, the Hon. Charles Napier Lawrence, and Hugh McPherson Cumming, the executors, the value of the personal estate amounting to over £112,000. The testatrix bequeaths £1000 each to the Bishop of London's Fund, the National Refuge for Homeless and Destitute Children, and St. Alphege Mission (Southwark); £600 for promoting the objects of the Church Extension Mission (Kilburn Park-road); £500 each to the Cancer Hospital (Brompton), the Society for the Propagation of the Gospel in Foreign Parts, and the Hospital for Consumption (Brompton); £250 to the Hospital for Sick Children (Great Ormond-street); £200 to the Society for the Relief of Destitution in the Metropolis; £150 to St. Mary's Hospital (Paddington); £125 to the Royal National Sea-Bathing Infirmary (Margate); £60 to the Bible and Domestic Mission; £5000 to the said Hon. Henry Arnold Lawrence; her plate and plated articles to Constance Charlotte Lawrence and Gwendoline Anne Bryans; her furniture, pictures, books, household effects, and wines to Mrs. Elizabeth Pauline Davies; and other bequests. As to the residue of her real and personal estate, she leaves one third, upon trust, for George Herbert Davies; one third, upon trust, for the said Constance Charlotte Lawrence; and one third, upon trust, for the said Gwendoline Anne Bryans.

The Irish Probate, granted at Dublin, of the will (dated April 7, 1885) of the Hon. Bowes Daly, late of Killough Castle, Tipperary, who died on May 20 last, to the Hon. Skeffington Daly and the Hon. Robert Daly, the brothers, the executors, was resealed in London on July 19, the value of the personal estate in England and Ireland amounting to upwards of £96,000. The testator leaves Killough Castle and the estate adjoining, with all the furniture, plate, pictures, books, effects, live and dead stock, and implements, to his nephew, James Frederick Daly; £5000 each to his nieces, Florence Daly and Elinor Daly; £250 each to the Irish Society and the Church Education Society for Ireland; and £200 each to the City of Dublin Hospital (Upper Baggot-street), St. Mark's Ophthalmic Hospital (Lincoln's-place, Dublin), the Convalescent Home (Stillorgan, Dublin), and the Hospital for Incurables (Donnybrook-road, Dublin). The residue of his property he gives to his said two brothers, Skeffington and Robert.

The will (dated Feb. 22, 1887), with a codicil (dated March 1, 1888) of Mr. Julius Levis, late of No. 21, Mincing-lane, and of No. 6, Lower Berkeley-street, Portman-square, who died on June 25 last, at St. Leonards-on-Sea, was proved on July 14 by Carl Meyer, Albert Kahn, and Ernest Joseph Cassel, the executors, the value of the personal estate amounting to upwards of £72,000. The testator bequeaths £1000 to his daughter Cecile Minna; and £200 to his daughter who shall have charge of his household at the time of his death. The residue of his real and personal estate he leaves, upon trust, for all his children in equal shares.

The will (dated May 4, 1886), with a codicil (dated June 29, 1887), of General Frederick Darley George, C.B., Colonel of the Cheshire Regiment, late of No. 67, Brunswick-place, Hove, Sussex, who died on June 2 last, was proved on July 24 by Mrs. Mary Ann George, the widow, John Fox George, the nephew, Frederick Willis Farrer, and William Joseph Jarrett, the executors, the value of the personal estate amounting to upwards of £68,000. The testator bequeaths £1000, the balances at his bankers and army agents, all his furniture and effects (except certain plate and books of which she is to have the use only for life), and an annuity of £900 to his wife, in addition to what is secured to her by their marriage settlement; an annuity of £200 to his said nephew, John Fox George; and legacies to servants and others. The residue of his property he leaves, upon trust, for the four children of his late nephew, Thomas Barry George.

The will (dated May 4, 1883) of Mr. Frederick Duke, late of The Woodleighs, Warningcamp, near Arundel, Sussex, who died on June 18 last, was proved on July 18 by Richard Holmes, Richard Holmes, jun., and George Cosens, the executors, the value of the personal estate amounting to over £60,000. The testator gives his freehold house and lands at Warningcamp, with the furniture, plate, pictures, effects, carriages, live and dead stock, and £5000, to his wife, Mrs. Ruth Duke; and £50 to each of his executors. The residue of his real and personal estate he leaves, upon trust, to pay £1000 per annum to his wife, for life, and subject thereto for his three daughters, Laura Graburn, Annie Duke, and Marion Cosens, in equal shares.

The will and four codicils of Mr. Frederick Champion Robinson, late of No. 25, Mark-lane, who died on May 30 last, at No. 30, Wyndham-street, Bryanston-square, were proved, on July 11, by Henry Mapleton Chapman, and Edward Thirkettle, the executors, the value of the personal estate amounting to upwards of £29,000. The testator bequeaths £5000 to the London Hospital (Whitechapel); £2000 each to the Commercial Travellers' School (Pinner), the Commercial Travellers' Benevolent Institution, St. Thomas's Hospital (Lambeth), and the Bishop of London's Fund; £1500 each to the Convalescent Hospital (Walton-on-Thames), and the Hospital for Women (Soho-square); £1000 each to the Boys' Refuge (Commercial-road, Whitechapel), St. Bartholomew's Hospital, and Guy's Hospital (Southwark); £500 each to the Little Boys' Home (Farningham) and the Children's Hospital (Paddington); £500 to Christ's Hospital, to found a scholarship to be called the Rokeby Bequest, in grateful remembrance of the benefits conferred on his father, George Robinson, and his uncle, Joseph Robinson, who were both scholars at the Blue-Coat School; he also bequeaths to Christ's Hospital a further sum of £50, and fifteen memorial addresses of the old Patriotic Fund, written by his father, who was a scholar from 1796 to 1802, and the prizes won by his father at the said school, and he wishes them to be exhibited together in some room of the said Hospital as specimens of high-class penmanship.

The will (dated March 8, 1888) of Mr. Leone Levi, of No. 5, Crown Office-row, Temple, barrister-at-law, and of No. 31, Highbury-grove, who died on May 7 last, was proved on July 17 by Adam Young, John Neill Lloyd, and James Ritchie, M.D., the executors, the value of the personal estate in the United Kingdom amounting to upwards of £10,000. The testator directs that the gold medal presented to him by the Emperor of Austria, the gold medal presented to him by the late King of Prussia, the gold, silver, and bronze medals presented to him by the late Emperor of the French, the insignia of the order of Cavaliere of the Crown of Italy and St. Mauritius and Lazzarus, his book entitled "Honours, Diplomas, &c.," and three volumes presented to him by her Majesty Queen Victoria, with her autograph, be delivered to the Italian Ambassador in London, to be transmitted to the Sindaco of Ancona, he undertaking, on behalf of the Municipality, to preserve them and keep them on view in the Library founded by him in Ancona for promoting technical education. He leaves his household furniture and effects to his wife; and the residue of his property, upon trust, for her, for life; then, as to one half, for her nephews and nieces, and the other half for his nephews and nieces.

OUR FUTURE BLUEJACKETS.

The British Navy, in all branches of its administration, designing and constructing ships of different classes, equipment, repairs, and armament, is the topic most anxiously discussed just now by persons competent to understand those details; and we believe that no subject more urgently demands public attention. Lord Brassey's volume of "The Naval Annual," published this year, has been noticed by us as an invaluable repertory of authentic information on all such matters to the date of official reports for 1887, and we expect again to have to refer to it shortly for particulars of much practical importance. The manning of the Royal Navy, for which 44,850 officers, seamen, and boys are required—not including the Marines, the Royal Naval Reserve, the Marine Pensioners, and the Naval Artillery Volunteers—is discussed in a chapter of Lord Brassey's work. It appears that ours is the only Navy in which the ships are manned with a body of men all of whom have been specially trained to the service from boyhood, and it costs £300 to train the boy entered for the fleet into the finished seaman. The system of instruction for boys in the stationary training-ships, of which there are many at various ports, "has been brought to ideal perfection;" and the sea-going squadron of training-ships, in two or three cruises made by each ship every year, continues this instruction; but much injury is too often done to the morals and discipline of young seamen by keeping them in "receiving-ships," in the home ports, exposed to the bad influences of the shore. For the supply of good material of youthful manhood, such an institution as the training-ship Mercury, which is maintained at Ryde by the voluntary efforts of a philanthropic and patriotic association of subscribers, seems to be of real service. There are now about eighty boys on board. A large number have already been entered into the Royal Navy, and others are ready to join either the Navy or the Mercantile Marine. We have no doubt that the scheme is susceptible of development, and we hope it will be liberally supported. Our large Engraving, from a sketch taken by our Artist, Mr. Louis Wain, on board the Mercury, represents the exercise of working at the capstan connected with the anchor. It may be noticed by persons acquainted with seamanship that the boys nearest the capstan are pushing with their hands only; this is because they are not able to stoop to it without risk of being thrown on deck, and for these boys it would be too dangerous to attempt it when the anchor is away. As shown in this drawing, the boys are running round, and two boys are hauling in the slack cable; the anchor is away, and in that case two boys alone could send the capstan going, so that there is no need for any of the boys to push with the chest. Only those boys on the outer circle, therefore, get into the proper position. In going over the hatchway and cable, some of the boys swing over on the bars when they are not looked after. These circumstances will be considered in reference to our Illustration of the scene.

Lord Wolseley has unveiled the memorial to the late Major General Sir Herbert Stewart, K.C.B., in St. Paul's.

Mr. Edward Benn, barrister, has been appointed Lecturer in Conveyancing to the Liverpool Board of Legal Studies, in succession to Mr. T. Cyprian Williams.

Mr. A. J. Balfour, Chief Secretary for Ireland, and Sir Frederick Leighton, President of the Royal Academy, have been presented with the freedom of the Grocers' Company.

At a meeting of the Royal Botanic Society, held on July 28, Mr. J. P. Gassiot in the chair, Mr. H. E. Hunt was elected a Fellow. The chairman announced that the anniversary meeting would take place on Friday, Aug. 10.

The annual exhibition of works of art, for which medals and prizes have been awarded at the National Competition in connection with the Science and Art Department, are open to the public at the South Kensington Museum.

Lieutenant-General Newdigate has been appointed Governor and Commander-in-Chief of Bermuda, in succession to Lieutenant-General Goldwèy and in place of Lieutenant-General Sir Gerald Graham, who has been permitted to decline the post.

The Archbishop of Canterbury has announced his wish to subscribe £100 towards the South London Polytechnic Institutes, his subscription to be appropriated to the "Vic.," which is part of the general scheme. Messrs. Wigans and Cosier have also promised £500 towards the general fund.

A memorial-window to the late Sir Robert Phillimore, late Dean of Arches, has been placed in Shiplake Church, Berkshire, depicting Moses the Lawgiver and Solomon the just judge. Mr. and Mrs. Gladstone, Sir W. and Lady Phillimore, and the Dowager Lady Phillimore were present at the unveiling.

Chief-Inspector Walker has retired from the police, after a service of fifty-one years. He was attached to her Majesty's household for fifteen years, and on the marriage of the Prince of Wales was appointed to Marlborough House, and has continued in that office up to the present time.

Mr. E. Brodie Hoare, M.P., presided at the annual meeting, on July 25, of the Sailors' Orphan Girls' School and Home at Hampstead; and Mrs. Brodie Hoare distributed the prizes and rewards to the pupils and to former scholars now in service. The home has now eighty-two inmates, orphans of merchant seamen, fishermen, and Royal Navy men; and more could be received if funds permitted.

A general court of the governors of the Orphan Working School was held on July 25, at the Cannon-street Hotel, under the presidency of Mr. W. S. Gard (chairman of the election committee), when ten girls and twenty-two boys were elected to the benefits of the senior school, and three girls and five boys to the junior school. This institution, which is under the patronage of the Queen, has now in the school at Haverstock-hill 316 boys and 152 girls; and at the Alexandra Orphanage there are 108 boys and 54 girls: bringing the total number of children supported by the charity up to 630.

MUSIC.

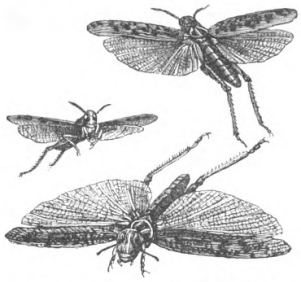
The musical activity of London will be well maintained by the series of Promenade Concerts at Covent-Garden Theatre, which will begin on Saturday, Aug. 11; again under the lesseeship of Mr. W. Freeman Thomas, and with Mr. Gwyllym Crowe as conductor. The opening night has been postponed for a week in consequence of the prolongation of Mr. Augustus Harris's season at the Royal Italian Opera, which (as already recorded) was continued until July 21—a fortnight beyond the original intention—in consequence of the success of the performances. Mr. Thomas's arrangements for his new series (the seventh) of the Covent-Garden Promenade Concerts include the re-engagement of Mr. J. T. Carrodus as leading and solo violinist—this and the conductorship being thoroughly satisfactory appointments. The arrangements altogether are of a kind that promise an unusually brilliant season, and one that will provide amply and worthily for musical tastes of various kinds during the interval between the close of the opera season and the commencement of the autumn and winter serial concerts. Mr. W. F. Thomas's list of solo vocalists includes the names of Mesdames Valleria, Scalchi, Patey, and Stirling; Mdlle. Nikita; Misses Anna Williams and A. Whitacre, Mesdames Rose Hersee and C. Samuell, Mr. Sims Reeves, Mr. E. Lloyd, Mr. H. Piercy, Mr. C. Banks, Mr. O. Harley, Mr. Santley, Signori Foli and Novara, Mr. B. Foote, Mr. Ludwig, and others. A grand orchestra of about one hundred and fifty performers will occasionally be reinforced by the band of the Coldstream Guards.

Signor Bottesini's concert, which took place recently at St. James's Hall, deserves some further recognition than it has already received. The concert-giver's unrivalled mastery of the double-bass was displayed in several pieces of his own composition, including an effective duet for contra-bass and violin, the latter instrument skilfully sustained by Signor Passini, who also contributed solo pieces, as did Signor T. Mattei, the eminent pianist. Vocal performances were features of the concert, Mr. Sims Reeves, Madame Stirling, Miss A. Marriott, Mr. F. King, Mr. De Lara, Mr. Maybrick and others having appeared, among them having been Miss Erni, a new-comer, who displayed a voice of agreeable quality, sufficient power, and extensive upper compass, and was favourably received in her execution of Rode's air with variations.

The Royal Academy of Music gave a students' orchestral concert recently at St. James's Hall. In instrumental performances and in composition especially good proofs were afforded of the excellent results arrived at by the system of tuition pursued at the institution. A manuscript pianoforte concerto, composed and performed by Miss Dora Bright, was a prominent feature of the programme, both as to the merits of the work and the excellence of its rendering. Other commendable pianoforte performances were contributed, and special effect was produced by Mr. G. Walenn's skilful execution of the first portion of Beethoven's violin concerto, and skill as a flautist was evidenced by Mr. F. W. Griffiths in two movements from Molique's concerto. Among the vocalists, Miss Martha Davies and Mr. M. Humphreys are entitled to commendation. The concert was conducted by Dr. Mackenzie, Principal of the Academy. The institution now referred to held, on the following day, its annual award of prizes, which were distributed by Lord Coleridge, by whom and by the Principal appropriate addresses were delivered.

The recent orchestral concert by students of the Royal College of Music, at Alexandra House, also showed good results from the course of instruction pursued by the Kensington establishment. Schubert's great symphony in C and other orchestral pieces, Schumann's concertstück with Miss M. Osborn as pianist, and vocal pieces, testified to the efficiency of the institution. Professor Villiers Stanford conducted.

The annual prize festival of the Royal Normal College and Academy of Music for the Blind, at Upper Norwood, was recently held at the Crystal Palace, Viscount Middleton having presided. The awards were made by Lady Playfair. An excellent concert included the co-operation of the Crystal Palace orchestra, conducted by Mr. Manns and Mr. W. H. Cummings; the programme having included effective performances by students of the college.



The concert of Signor Tito Mattei, which recently took place at the residence of Mr. and Mrs. Sassoon, Belgrave-square, included skilful pianoforte performances of the concert-giver, some of his own compositions having been included in a programme that was contributed to by several eminent vocalists and instrumentalists.

The Irish concerts, given under the direction of Mr. Ludwig, in the new concert-hall adjoining the Irish Exhibition, have proved so successful that they are being continued. Popular vocalists (including Mr. Ludwig) contribute to attractive programmes of a distinctly national character, and the performances are such as must be welcome to large numbers in the surrounding neighbourhood.

Our previous notice of the Chester Festival was necessarily incomplete, most of the performances having taken place too late for record until now. The only novelty occurred in the Thursday's programme, July 26, on the morning of which day was produced Mr. Oliver King's setting of the Psalm, "By the Waters of Babylon," a composition of somewhat mixed character and unequal merit; the later portions of which are by far the best, particularly the very effective concluding chorus, "Remember the children of Edom." The incidental soprano solo passages were well sung by Miss Anna Williams; some of the choral singing (owing, perhaps, to the forced harmonic treatment) having been less satisfactory than in other works during the festival. Verdi's "Requiem" was a specialty at the morning performance now referred to, the soloists having been Madame Nordica, Miss Damian, Mr. Lloyd, and Mr. Brereton. The performance of Sir Arthur Sullivan's cantata "The Golden Legend," at the first of the two miscellaneous concerts in the Music-Hall (on July 25) needs merely a recognition of the repeated success of a work that has been received with deserved favour in numerous localities since its first production at Leeds, in 1886. The soloists at Chester were Madame Nordica, Miss Damian, Mr. Lloyd, and Mr. Grice—the last named a young baritone of much promise. The other evening concert (on July 26) consisted of miscellaneous items requiring no comment. The closing day (July 27) included Beethoven's oratorio—or, rather, cantata—"The Mount of Olives," as adapted and Englished, under the title of "Engedi"; the solo vocalists having been Miss Anna Williams, Mr. E. Lloyd, and Mr. Grice. The work was preceded by Schubert's unfinished symphony in B minor; and the remainder of the day's programme was devoted to Mendelssohn's "Hymn of Praise," with Miss Williams, Madame Belle Cole, and Mr. Lloyd as solo vocalists. The evening of the date just referred to closed the festival with a performance of Gounod's oratorio, "The Redemption," in which the principal solo vocalists were Madame Nordica, Miss Damian, Mr. W. Nicholl, Mr. Brereton, and Mr. Santley. The festival performances have been generally efficient, the orchestra having been Sir Charles Hallé's celebrated band led by Herr Strauss; and the chorus of proportionate strength and importance. Dr. J. C. Bridge, organist of Chester Cathedral fulfilled the office of conductor with care and zeal.

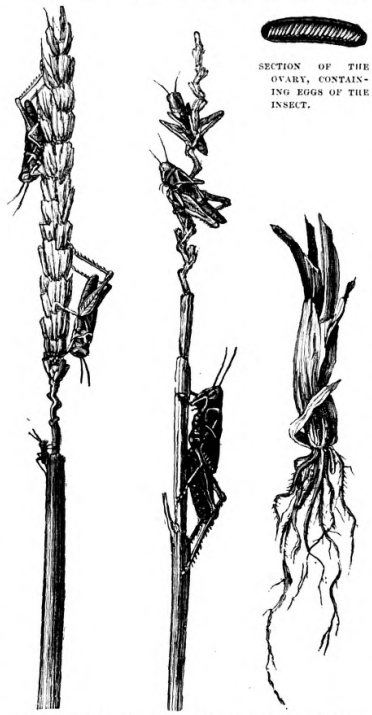
THE PLAGUE OF CRICKETS IN ALGERIA.

The lamentable visitation of destructive insects by which the whole province of Constantine, in the French dominion of Algeria, has this year suffered enormous damage to its crops of every kind of grain, was at first attributed to locusts, supposed to resemble those of ill-fame, ancient and modern, in the countries of Western Asia and the Levant. It has since

ADULT WINGED CRICKET (STAURONOTUS MAROCCANUS), MALE AND FEMALE.

been ascertained that the present enemy is neither the locust nor the migratory grasshopper, but a native species of cricket, known to scientific entomologists as the *Stauronotus Maroccanus*, which is bred on the dry and bare highlands above the Tell of Algeria, and elsewhere on the slopes of the Atlas mountain range, and which has been observed, during the past three years, descending into the cultivated region of Algeria, towards the shores of the Mediterranean. Its ravages have been experienced in Morocco, it is said, on several former occasions.

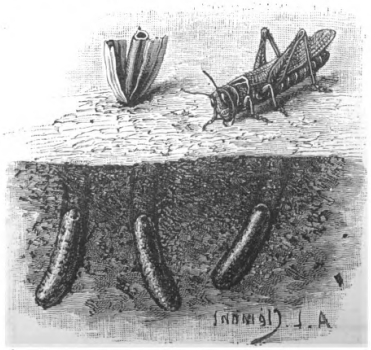
The locust, the cricket, and the grasshopper belong to different families of the Saltatoria, or leapers, a section of the order of orthopterous insects. The famous or infamous migratory locust of Asia and Africa is a big insect, two inches or two inches and a half long, with strong hind legs of nearly the same length, making prodigious jumps, and is therefore a rapid traveller. Woe to the country over which it travels! "They consume as a fire, and the land is utterly burned up." The prophet Joel gives a terrible, but exact, description of the locusts in Judea. When in the wingless condition, in May and June, their arrival is more to be dreaded than after they begin to fly; because, in the latter state, vast clouds of them may be driven aside by the wind. Through such a cloud in the sky overhead, the sunlight is yellow, as through a smoky fog. Where they have descended, every blade of grass, every leaf of a tree—the very bark, if tender, of many trees—with all fruit and grain, will presently disappear. They are not stopped by the water of a shallow pool or stream, for the bodies of those who first enter it soon form a bridge, over which the mighty



EAR OF BARLEY, INTACT.

CRICKET ATTACKING THE CORN.

host can pass. Cold rainy weather may kill them, but human effort can do comparatively little; though in Cyprus, seven years ago, by order of the British Government, and by the digging of ditches, with the sides lined so that they could not climb out, 250 tons of dead locusts were obtained, and their weight is above ninety million insects to the ton. Where huge heaps and banks of their rotting bodies have remained on the ground, the pestilential stench has been smelt a hundred miles away. They supply, however, an inexhaustible store of food to many



CORN HALF-EATEN BY CRICKETS. CORN-STALK ENTIRELY STRIPPED. RELIC OF HUSKS.

SECTION OF THE OVARY, CONTAINING EGGS OF THE INSECT.

kinds of birds, to some beasts, and to all sorts of worms and reptiles.

The *Stauronotus Maroccanus* is a very noxious creature. The female, which is the larger, measures three-quarters of an inch to an inch and a quarter in length, and the male commonly about three-quarters of an inch. Its colour is russet or reddish brown; the corselet on the back is marked with an oblique cross, and there are vertical bands of alternate light and dark hues along the lower part of the body. The pair of adult insects, male and female, furnished with powerful wings, of which we give an Illustration, are parents of this pernicious race. The female seeks to lay her eggs about the end of June, or at the beginning of July. She chooses dry and sterile ground, in a situation not likely to be disturbed; and uses a natural apparatus, a valvular sucking tube, at the extremity of her abdomen, to lift and remove the grains of sand, boring a hole in the earth, about an inch deep. In this hole she deposits the ovary, a cylindrical case or shell of hardened mucilage, three-quarters of an inch long, containing all her eggs, some forty in number, very neatly packed together; then she covers them by filling up the hole. They are slowly hatched by the heat of the sun in the earth, where they remain nine months, until the new-born insect emerges, in the spring of next year, a little white caterpillar, which speedily becomes a cricket, and is then quite ready to attack and devour the graminaceous plants for which it has a predilection. They swarm in millions all over the land, and by a mysterious instinct are guided to distant corn-fields, advancing in vast and dense columns with a wide front, keeping the closest possible array, to conquer and despoil the agricultural industry of mankind. While on the road through the wilderness, or in a pastoral region, they will eat grass or any green herb; but, as soon as they enter a field of wheat or barley, it is a wonderful sight to observe their passionate alacrity. They rush at every cornstalk, five or six of them climbing up it at once, and presently gain the top, which bends under their weight. Then, with the sharp-edged shears of their upper-jaw mandibles, two strong horny hooks moving horizontally, crossing each other like the blades of a pair of scissors, they quickly cut the ear of grain to pieces, feeding on its farinaceous part, while they disdain the husks and the stalk. In attacking an ear of barley, they of course begin operations by stripping off the spikelets of its beard, which they do not eat; the husk of every grain is also torn off and thrown away. The business-like precision and skill with which these insects go to work, in their foraging among the corn, may be appreciated by the aid of our Illustrations showing the different stages in their treatment of the unfortunate plant. Any crumbs of farina that the busy plunderers aloft may let fall to the ground will be eagerly seized by the vast multitude below, which cannot find an unoccupied stalk to ascend; but, unless they happen to be famished by a very long march over bare ground, they despise the husks and straw. The insect army, gorged with a plenteous repast, and perhaps exulting in its victorious prosperity, marches on to fresh fields and pastures new. The agriculturists of the neighbouring village are ruined. It is all over in a few hours. The *Stauronotus Maroccanus*—a tremendous name for a terrible tiny foe—has conquered and devastated the country in a very brief campaign more effectually than would have been done by a barbarous human invader.

CRICKET, WITH ITS OVARIES BURIED IN THE EARTH.

These ravages, in the part of Algeria where they have most prevailed, already extend over a territory three or four hundred miles in length, and the estimate of the damage at six or seven million francs, which was made some weeks ago, has probably been much exceeded. The aspect of the country this summer is dismal and distressing; the cultivators are in despair, and the attempts to kill or drive away the insects have been quite unsuccessful. It seems impossible to stop them on the march, or to do anything with them afterwards, when they have taken wings to themselves; the only plan to be recommended is that of searching, in the autumn and winter, for the places where they have laid their eggs, and either destroying the vitality of these by some chemical application, or watching for the appearance of the caterpillars, in March or April, and killing them before they can do any mischief.

Locusts, in most parts of the north of Africa, have always been dreaded as the most formidable natural enemy. The Arabs, however, eat locusts, as John the Baptist did; and one would not object to them boiled, with wild honey, or stewed in butter. Among the numerous accounts of them, in different countries, is that of Mr. Barrow, who visited a territory where, he says, they covered an area of 2000 square miles. They had reached a broad river; and, in endeavouring to get at the reeds growing along its banks, such enormous quantities of the insects had been drowned that the whole river was filled with their dead, so that its water remained scarcely visible when he was there. On the sea-shore, when the winged insects came there, a strong wind drove them into the sea, which afterwards cast their bodies up on the beach, forming a bank 3 ft. or 4 ft. high, for a length of fifty miles along the coast. It is a mercy to southern Europe that they cannot travel across the Mediterranean.

PUBLIC ELEMENTARY EDUCATION.

The report of the Committee of Council on Education for the year 1887 has been issued. It states that on Aug. 21, 1887, there were 19,267 day schools under separate management on the list for inspection and claiming annual grants, and these schools had accommodation for 5,311,662 scholars. The number of scholars on the register was 4,660,301, and the average attendance was 3,544,564. 19,154 schools were inspected in 1887, while the increase of the population during the year was estimated at 1·35 per cent, the accommodation had increased by 133,700 school places, or 2·6 per cent. The local effort which has resulted in this improvement might be measured by the continued support derived from voluntary contributions, these reaching the sum of £743,727, against £742,597 last year, and by an advance in the contributions from rates to the maintenance of Board schools from £1,169,150 to £1,194,900. The Committee were sorry to find that the education of so many children of ten years of age and upwards was discontinued as soon as by passing the presented standard they were freed from the obligation to attend schools and became entitled to go to work.

The Duke of Cambridge presented the prizes and commissions on July 26 to the cadets at the Royal Military Academy, Woolwich. It was stated that none of the competitors had failed in qualifying for a commission.

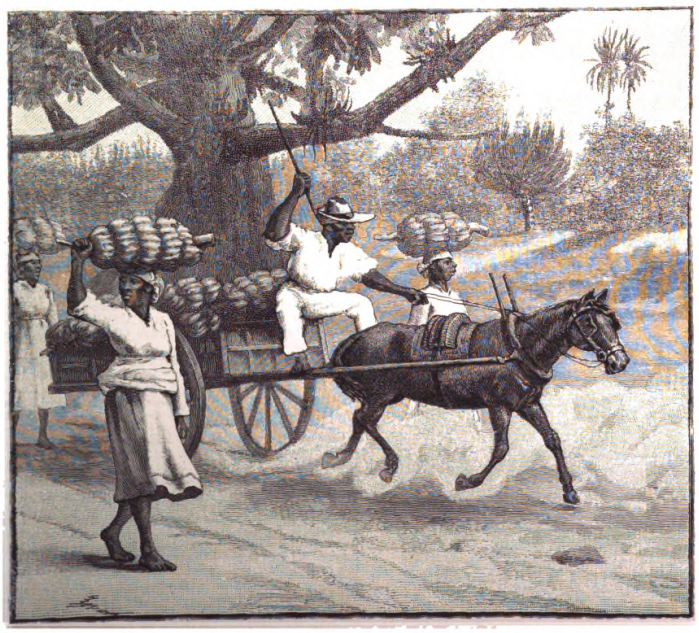
The annual exhibition of the Surrey Floricultural Society was opened on July 25 by Mr. J. Blundell Maple, M.P., in the grounds of Casino House, Herne-hill, lent for the purpose by Mr. Sutton Gover. The exhibits were of an exceptionally high order of merit, but the bad weather was greatly against the success of the show. The exhibition remained open next day.

Lord Herschell presided on July 26 at the annual distribution of prizes at the hall of the Middle Class Schools Corporation, Cowper-street, City-road. He was supported by several members of the Council and Governors of the Corporation, and a large company attended the ceremony. The report of the examiner, Mr. Arthur Gray, was of a congratulatory character.

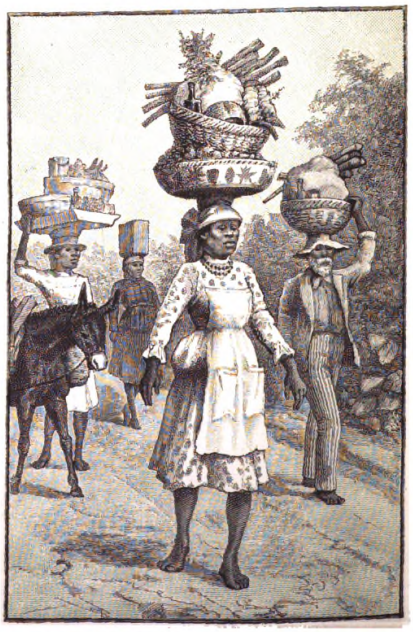
A deputation from North London waited on July 26 upon Mr. Austie, one of the Charity Commissioners, and asked for assistance in the establishment of technical and recreative institutes in that district. The Commissioner said he regretted that in North London public opinion was not so unanimous as it was in the South. They should first decide upon suitable sites, and then see what assistance could be obtained locally.

Lord Lansdowne was, on July 26, entertained by Lord Northbrook at dinner, previous to his departure to assume the Viceroyalty of India. An address from Indian residents in this country was afterwards presented to the Marquis, who, in reply, alluded to the material progress made in India during the Queen's reign, and rejoiced that they had come to rely more on the sympathy and goodwill of the people, and less upon physical force.

For the August Bank Holiday the Great Eastern Railway Company announce cheap excursion bookings on Saturday, Aug. 4, from London (Liverpool-street), viâ their new line and the cathedral cities of Ely and Lincoln, to Huddersfield, Ashton, Manchester, &c. A special booking-office will be opened at the Liverpool-street Station to Aug. 4 for the issue of ordinary tickets, and of fortnightly and Friday or Saturday to Tuesday cheap tickets to the seaside, for use on forward dates. A special midnight train will leave Liverpool-street on Sunday night, Aug. 4, for Norwich, Yarmouth, and Lowestoft, viâ Ipswich, calling at the principal intermediate stations. On Bank Holiday, excursion-trains will leave St. Pancras and Liverpool-street for Yarmouth, Cambridge, and Ely, and Liverpool-street for Clacton, Walton, and Harwich. Excursion tickets will be issued by all trains to Epping Forest, Broxbourne, and Rye House.—Cheap tickets will also be issued by this company viâ the Harwich route, enabling passengers to visit the Brussels Exhibition, the Ardennes, and Holland. Passengers leaving London and the North on Friday or Saturday can reach Brussels the next morning and return on Monday, arriving in London and the North on Tuesday. The company has arranged, in conjunction with the General Steam Navigation Company, a special excursion to Hamburg at single fares for the return journey.



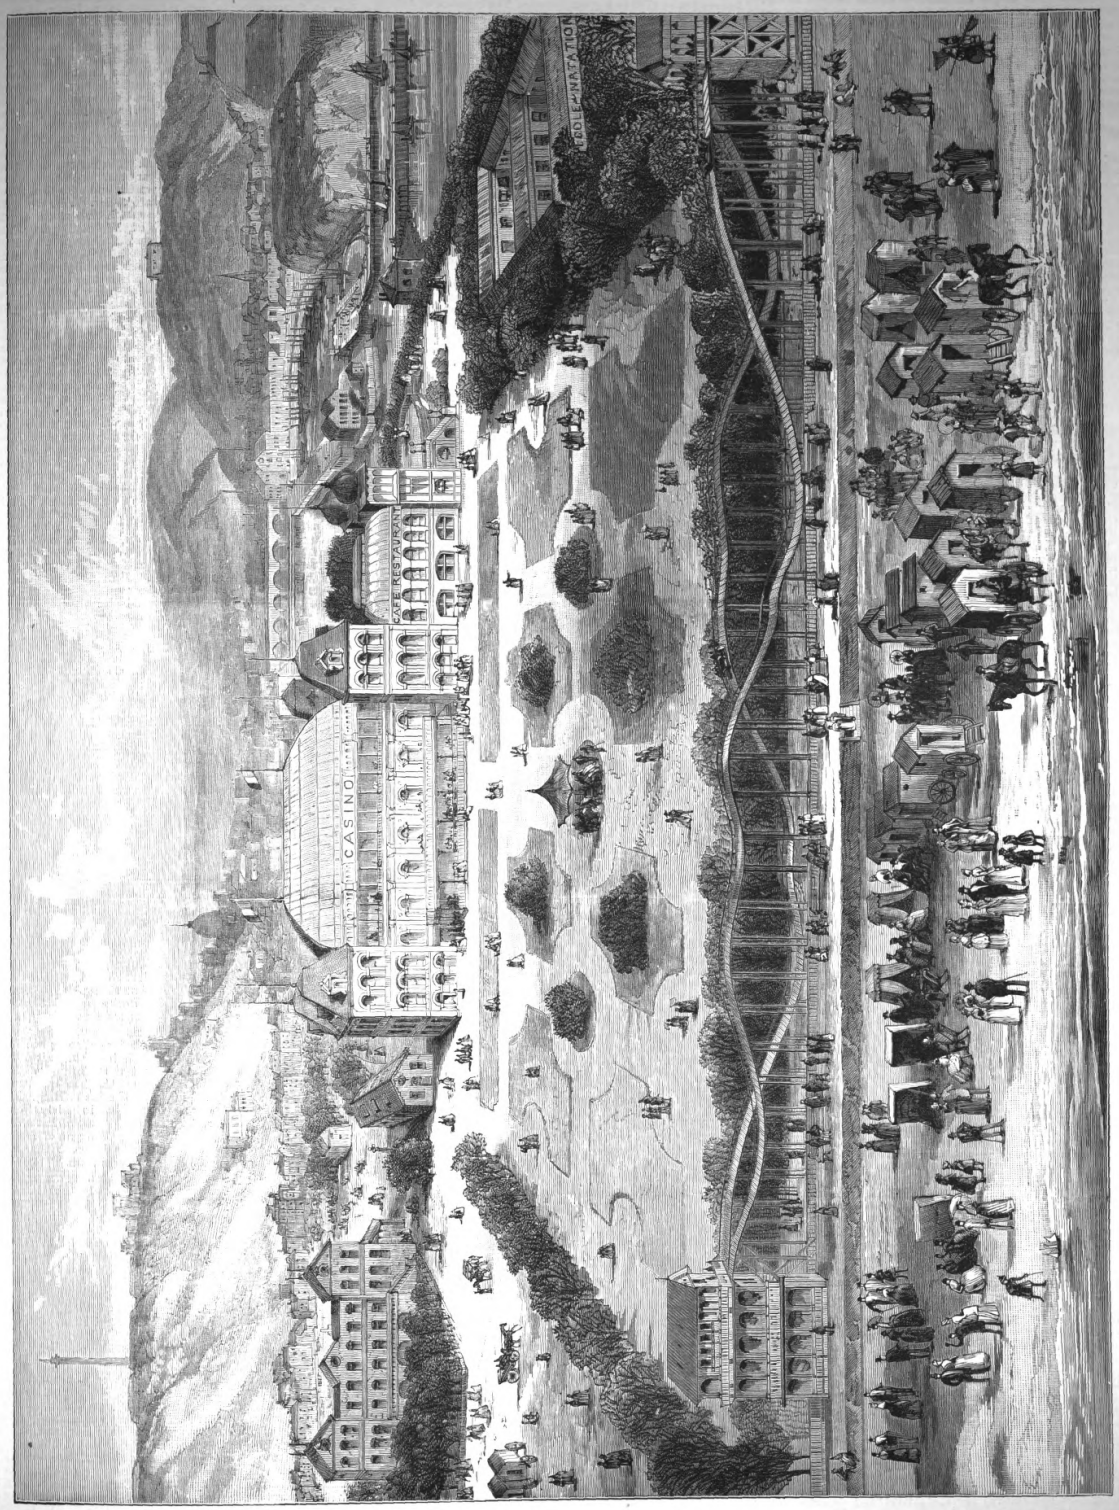
COLLECTING AND COUNTING BUNCHES OF BANANAS IN JAMAICA.



Our Special Artist, Mr. Melton Prior, whose sketching mission "Across Two Oceans" has already contributed much that we hope was acceptable to the readers of this Journal, visited other islands of the British West Indies besides those which have supplied the subjects of Illustrations hitherto published. Jamaica, the largest of them, and not the least interesting, though not the most prosperous, was, of course, included in his route. As a field of sugar-planting industry, from various causes it has been obliged to yield the repute of superiority to Trinidad and Demerara; but few countries in those latitudes are endowed by Nature with such a variety of soils and climates, and capable of such diversity of marketable products; and in the upland districts, where the temperature is moderate at all seasons, Englishmen could live and work as happily as in the south of Europe. Fruit-growing, of almost every kind, with a good market in the United States of America, may be recommended to settlers in Jamaica as a promising enterprise; and the following notes on that subject give correct information:—

"The export of bananas from Jamaica to America has of late years become important. The Atlas Steam-ship Company, trading between Jamaica and New York, carries at least 50,000 bunches of bananas every month, besides other steamers trading with Kingston. The Atlas steamers call for this favourite fruit at Kingston, Port Morant, Morant Bay, and Annatto Bay. The other companies' vessels carry from 8000 to 10,000 bunches per month. Besides this large quantity of bananas, there are from 10,000 to 15,000 barrels of oranges exported from the island to New York, Baltimore, Boston, Philadelphia, and other ports.

"The banana-tree bears but one bunch in its life; and when this is cut, the tree dies, leaving, however, numerous suckers, which soon come up, and thus replace the old tree. The growth is very fast; it is going on all the year round. Some bunches weigh as much as 150 lb., the average being from 80 lb. to 90 lb. The average number of bananas on each bunch is about 200.



CARRIAGE OF BANANAS FROM THE FIELD TO THE WHARF, ANNATTO BAY, JAMAICA.

ON THE WAY TO MARKET, KINGSTON, JAMAICA.

ACROSS TWO OCEANS: THE WEST INDIES.—SKETCHES BY OUR SPECIAL ARTIST, MR. MELTON PRIOR.

THE CASINO, BOULOGNE-SUR-MER, WITH THE SWITCHBACK RAILWAY, THE TOWN, QUAY, FLOATING DOCK, AND SWIMMING BATHS.

The fruit is very delicate, and requires much care in cutting, transit, and shipping. Too much heat in the hold of the ships will ripen it too quickly, so that often a whole shipload may arrive in New York worthless and rotten. On the other hand, an excess of cold will chill the fruit, so as to make it unfit for the market. The proper temperature should be from 50 deg. to 60 deg. in the hold. The best fruit-steamers trading in the West Indies are especially ventilated for the purpose.

"In the first Sketch, women, who are the principal workers in the field, are to be seen carrying the bunches on their heads, from the tree to an open spot, where they are packed in carts, to be taken down to the store at the seacoast. In their working dress, as in most parts of the West Indies, the women tie a string round themselves, and then, drawing the dress up through it, succeed in arranging the dress short enough, so that they may not be prevented from walking freely.

"The carriage of the fruit to the shore is undertaken by both sexes, the men driving mule and pony carts (and many quiet races take place on the road), and the women carrying bunches on the head—young girls coming in for their share of the work. The fruit is then carefully packed in large sheds to await the arrival of the steamer, which has, of course, either been telegraphed, or is known to be due on a certain day. On board the Ailsa steam-ship, the bananas arrived quite green, but in five days they were ripening in quite an alarming manner. This shows what judgment is necessary for the proper picking and packing to insure the arrival of the fruit in America in good condition.

"Immediately on the arrival of the vessel in the port or bay the process of loading small boats is begun. This is done, of course, again by women; the only men to be seen about are the overseers and contractors. The boats, when full, are rowed alongside the steamers, and the fruit is carefully packed away in the hold. The steamer I was on actually took on board 15,000 bunches, which seemed to change but very little on the voyage. It is a favourite fruit in America, and is continually advancing in public taste.

"There is a market in Kingston, Jamaica, every day; but Tuesdays and Saturdays are the busy days. The Gordon Town road, from a very early hour, presents a curious sight, with the native villagers coming into town to sell their produce. They bring innumerable baskets, full of yams, bananas, peppers, beans, and home-made cakes, piled up one on top of the other, each basket on a woman's head. They come a great distance, many of them twenty or twenty-five miles, and return the same day or night, most of them preferring to do the walk home at night when it is cool. One cannot go far in the West Indies without seeing a rum-shop, and I send a sketch of one with the market people halting there and refreshing; bread is also to be bought at the same shop. I have no doubt that the poor donkeys, which, I think, are badly used, are very glad of the rest."

BOULOGNE-SUR-MER.

Our Illustration presents a general view of this agreeable and very accessible watering-place on the shore of France, a visit to which will be a very pleasant change for holiday seekers who crowd the Kentish coast. Almost within sight, and to be reached in a hundred minutes by steam-boat, they will find a picturesque foreign city with an animated port and pier, and one of the finest bathing-stations and Casinos in France. At Boulogne, too, there is inexhaustible accommodation for visitors. A stay in Boulogne is now rendered more attractive by the Grand Casino, in which Mr. Hirschler, the spirited proprietor, has done more in four years than did the previous administrators in forty. At the Casino will be found a newly-arranged hydropathic establishment; swimming-baths, continually renewed with fresh sea-water, and professors to teach the art of swimming; and several hundred bathing-machines, the most commodious and best administered in Europe.

On these sands, free from shingle or rock, families can bathe, and children can paddle the livelong day, while the boats of the Humane Society are constant in their attendance for the prevention of accidents. The bathing here is considered healthy and safe at any time of the tide or day, provided that a couple of hours be allowed for digestion; whereas bathing in England finishes at noon or at one o'clock, after which time it is either contrary to the "bye-laws" of the town or declared by the faculty to be injurious to health.

There is no lack of social and intellectual amusement at Boulogne. At the Casino there is a band of sixty musicians, performing twice daily, in the delightful garden. The theatrical entertainments are either comedy, vaudeville, or opéra comique by some of the leading Paris artists. There are children's balls and balls for adults at frequent intervals. The ball-rooms, theatre, and drawing and reading rooms, the restaurant, café, and billiard-rooms, are lighted by electricity, and thousands of fête and illumination lamps in the gardens are furnished in like manner.

A new feature has been added to the Casino: the old skating-rink and lawn-tennis grounds have been abolished, and in their place have sprung up flower-beds, parterres, and shrubberies. A music kiosque has been erected, with a fountain, tents, lounging-seats, and tables, and an outdoor café service. A continual source of amusement is the switchback railway, which has been erected on the grounds during the recess. On the same premises will be found a fencing-saloon and a shooting-gallery, and the swimming-school; the hot and cold baths are close by. The Casino is well and worthily recommended, as is also the first-class restaurant, with a celebrated chef from Paris, at which Government and other public official banquets are frequently held. The subscription to the Casino is very moderate, and its diverse entertainments can be shared at an outlay not exceeding that paid for inferior entertainments elsewhere.

Within a short distance of the town are the falaises or cliffs with the Napoleon monument. It was on these cliffs that Napoleon III., in 1855, assembled an army, a grand review of which took place on the east sands, in the presence of Queen Victoria. The cathedral, in the Haute-ville, with its interesting crypt, is worth a visit. In the Basseville is the Municipal College: on the quay a handsome monument has been erected to the memory of Dr. Jenner, the discoverer of vaccination; another statue is that of Frédéric Sauvage, a Frenchman, said to be the inventor of the screw propeller.

There is an excellent "Guide to Boulogne and its Environs," published by Merridew, of the English Library. The view from the sea, shown in our Engraving, displays the grounds and buildings of the Casino, with the town behind, the cathedral, the cliffs, and the Napoleon monument; as also the quay and floating-dock and railway for the arrival and departure of passengers viâ Folkestone, Boulogne, and Paris. The journey to Paris is within four hours, as the trains of the Chemin du Nord are about as fleet as the express-trains on our own lines. When in Paris, we would remind our countrymen that the Palace and Forest of Fontainebleau invite one of the most beautiful and delightful excursions. The journey occupies little more than an hour, and is accomplished by the trains of the Paris, Lyons, and Mediterranean Company, the directors of which have brought Rome within two days' reach of London.

MAGAZINES FOR AUGUST.

National Review.—The political philosophy of Mr. Goldwin Smith has a singularly refined standpoint: while looking to the extinction of hereditary monarchy and aristocracy, he disapproves of French and American democracy, and contemns the Revolution of 1789 as a great disaster. The infusion of Asiatic spiritual despair and moral apathy into European thought, by the influence of German metaphysical pessimism, and of Neo-Buddhist speculations, is deplored by Mr. H. G. Keene, who points to a remedy in the encouragement of cheerful popular poetry. Some unpublished letters, from 1677 to 1680, in which the Duke of York, afterwards King James II., and his Duchess, Mary of Modena, comment on the attempts to exclude him, as a Roman Catholic, from the succession to Royalty, are brought to light by Mr. Francis Radcliffe, having remained in the keeping of his family. Mr. H. R. Farquharson, M.P., earnestly advocates "More Tillage" for the benefit of "farm labourers"; but would it be to the profit of the farmers? Mr. W. J. Courthope's idyll of "the Chancellor's Garden," in Spenserian stanzas and in the archaic language affected by Spenser, is rather pleasing. A vigorous and very opportune appeal to Unionists to abolish the Irish Lord-Lieutenancy, with a view to the consolidation of the United Kingdom, by Mr. St. Loe Strachey, deserves the attention of practical politicians. The Rev. J. Hudson, following another clergyman who wrote last month in *Blackwood*, exposes the bad taste, the morbid sentimentality, and the questionable theology of certain Church hymns. Mr. J. Theodore Bent's notices of various incidents in the existing domestic life of the rural population of the Greek islands have some interest derived from comparison with instances mentioned by Homer. The educational and sanitary benefits of learning a handicraft, which is good both for mind and body, are exhibited by Sir James Crichton Browne, M.D., a high authority on the prevention, as well as the treatment, of mental disease.

Universal Review.—The third monthly number of this new periodical, edited by Mr. Harry Quilter, and adorned with many fine engravings, sustains its pretensions as an important vehicle of original criticism on matters of art. But it seems injudicious to give the leading place to such a piece of mere political squabbling as Mr. T. P. O'Connor's reply to Mr. Frank Hill's remarks on the alliance of the Gladstonians with the Parnellites—a controversy most uncongenial to the devotees of taste and culture. The editor continues his review of pictures in the Paris Salon, and Mr. J. Raymond Solly gives an account of the teaching of young men and women to be actors and actresses at the Paris Conservatoire. "The Lesson of the Master" is the first part of a short story by Mr. Henry James. A student, thinker, and humourist of original character, Mr. Samuel Butler, author of "Erewhon," complains in the "Quis Desiderio" tone of missing a favourite volume in the British Museum Library. The Rev. J. Llewellyn Davies offers a few wise suggestions on the relief of poverty, and Mr. T. A. Welton shows the utility of well-conducted statistical inquiries. "On a Certain Deficiency in Women"—that of the faculty of coherent impersonal thought—"George Fleming" has a good deal to say. Mr. H. Arthur Smith, in answer to Mr. Grant Allen, upholds the mental endowments of the Teuton, compared with the Celt. The translation of Alphonse Daudet's "One of the Forty," which describes the French Academy, proceeds along with its publication in French. There are two short poems; one, by Mr. Wyke Bayliss, accompanying a view of St. Mark's at Venice.

Macmillan's Magazine.—This is a very good number. The "Ballad of the Armada," by Mr. Rennell Rodd, whose name we have not before met with, comes up more nearly to the ideal style and tone of an English narrative poem, on a glorious martial exploit of our nation, than any other composition in verse on this subject. It is written in those rhymed couplets of long fourteen-syllable lines, often adding one or two unaccented syllables in the changes of a lilting movement, with a varying incidence of rhythmic beats in each line, which are peculiarly congenial to the English language, and are most suitable, we think, to the telling of such an animated story. Mr. Harold A. Perry contributes a valuable article on Gibraltar, concisely describing the singular position of that fortress, narrating the transactions which concerned its acquisition and retention by our own Government, and refuting a Spanish writer, Don Antonio Fernandez y Garcia, who complains of England on this account. It is clearly shown that Gibraltar was taken, and has been held by us, in no spirit of hostility to the Spanish nation, but as an instrument for the protection of Spain against France; and, though some opinions have been expressed in favour of our exchanging Gibraltar for Ceuta, a harbour on the opposite African coast, there is much force in Mr. Harold Perry's view of the importance of keeping the former, as the best means of preserving the shores of Morocco, especially Tangiers, from becoming a prey to foreign ambition, by which the interests both of England and of Spain would be seriously injured. If his remarks on this question should chance to be read by any Spaniard, we trust they will be received in the same friendly and candid spirit in which they are presented. Meanwhile, the defence of Ceuta, which belongs to Spain, appears to be the needful complement of British preparations to make use of Gibraltar for commanding the Straits, and for securing the safety of our traffic in the Mediterranean during any war with a great naval Power. The real interests of Spain and of Great Britain are so far identical, and they might probably be allies, finding our custody of Gibraltar advantageous both to the one and to the other. Among the remaining contents of this magazine are Mr. Goldwin Smith's argumentative strictures on the vague project of "Imperial Confederation"; Lord Coleridge's personal reminiscences of the late Principal Shairp; the continuation of Mr. Walter Pater's biographical romance of the French Renaissance, "Gaston de Latour"; the commencement of "Cressy," a Californian story, by Bret Harte; articles on gardening, on the late Sir Francis Doyle's poetry, and some hitherto unpublished letters of Keats.

Murray's Magazine.—A plan for the organisation of a naval volunteer force to protect our commercial shipping at each of the British mercantile ports, is ably set forth by Admiral Colomb, who urges that it is not sufficient to fortify and defend the ports, but that the vessels approaching or leaving them, to the aggregate number of about 1700 daily, valued with their cargoes at many millions sterling, will require active defence near at hand. The value of those entering the Thames and going out of it, for instance, every twenty-four hours, is estimated at nearly two millions; and the Mersey, the Clyde, the Tyne, the Humber, the Bristol Channel, and many other ports, have masses of floating wealth always within a short distance at sea. Admiral Colomb shows how, in every port, seafaring men could be trained and drilled as volunteers, and suitable steam-vessels could be hired, on board of which, at very small cost, light quick-firing guns for shell practice might be placed, which would enable them to run out and engage the enemy's armed cruisers. We recommend this suggestion to the Admiralty and the Board of Trade, and to British shipowners and merchants, who might contribute a share of the expense. The South-Eastern Railway, and the London, Chatham, and Dover Railway, are described in their turn by Mr. W. M. Acworth, giving precise details of the working traffic arrangements, and of the conveyance of mails and passengers to or from the Continent. Turkish administrative corruption, and the intrigues of European contractors or speculators seeking lucrative official jobs at Constantinople, are satirised in a lively piece of historical fiction. The past history of English music is being related, and this chapter is devoted to Purcell. Mr. Morley Roberts tells a thrilling tale of suffering from thirst and want of food in a solitary journey in Australia. The method of training pupils of the dramatic art in the Paris Conservatoire is described by A. Strobell, whose account may be compared with that of another writer, in the *Universal Review*. The story of "The Reproach of Annesley," is continued, and Paul Cushing's "Just for the Fun of it," comes to an end.

Blackwood's Magazine.—Two sonnets by the Earl of Rosslyn, on the death of the German Emperor Frederick III., are here published by the Queen's command. The various collections in the British Museum, and its library and reading-room, constitute a suggestive theme of observation and reflection, which is thoughtfully and agreeably treated. Mr. W. W. Story, the American sculptor of Rome, presents a fine study of the character and genius and works of Michel Angelo, which claims and rewards attentive perusal. There is a pleasant article on John Evelyn's country life at Wotton, and on his knowledge and skill in laying out gardens and planting trees. "A Night in a Scotch Swamp" is the tale of a tourist's adventure in the Isle of Arran. "Wanderings and Wild Sport beyond the Himalayas" is a title that speaks for itself. Several chapters of "A Stiffnecked Generation" are added.

The Woman's World.—Mr. Oscar Wilde's editorship of this handsome magazine for ladies is conducted with tact and taste. The frontispiece is an engraving of Gerard's portrait of the Empress Josephine, of whom Miss Mabel Robinson writes a memoir. "Social Scares," by Miss Mabel Sharman Crawford, refers to the old prejudiced onteries against innovations, such as coaches, umbrellas, and railways, in former times, and now the admission of women to the higher studies and professions. Miss Fanny Currey describes the quaint Irish seaport town of Youghal. Useful hints on cookery are supplied by Mrs. Lebour-Fawssett. There is another chapter of "George Fleming's" tale, "The Truth about Clement Ker." The finding of a dead little mermaiden on the seashore, by two little human girls, is the subject of a drawing by Miss Dorothy Tennant, and of a poem by "Violet Fane." A Russian lady painter, Marie Bashkirtseff, lately deceased, has an interesting memoir of her written by Miss Mathilde Blind. Those who approve of Girton, Newnham, and Somerville will like the account of Vassar College for ladies, in America, established twenty-six years ago. Miss Louise Bevington presents her observations on the position of women in Germany, while Mrs. Conyers Morrell discourses of wedding presents. The fashions for August are described.

English Illustrated Magazine.—A Boston story by Mr. Henry James, called "The Patagonia," which is the name of a steam-ship going to Liverpool, is commenced this month. There is a pleasant description, with sketches, of Rugby, the town, school, and neighbourhood; a short story, entitled "Family Portraits"; an account of the Post-Office telegraphs and parcels' departments; further chapters of "The Wanderings of Ralph Hardelot," Professor W. Minto's historical romance; and two short pieces of verse.

Other reviews and magazines for August remain to be noticed. Mr. Clement Scott's *The Theatre*, containing much that specially concerns the class of actors and actresses, and the amateurs and admirers of their performances, is adorned with good photographs of Miss Julia Neilson and Mr. F. H. Macklin. Ladies will find many things useful and agreeable to them in *Myra's Journal*, in "Myra's" threepenny *Journal of Dress and Fashion*, and the *Lady's Magazine*, including the *Moniteur de la Mode*, and *The Season*, with patterns for articles of dress and fancy work.

Surgeon George Ridley has been appointed to take charge of the troops at Tullamore, in succession to his brother, the late Dr. James Ridley.

In Rochester Cathedral, on July 28, the Dean, Dr. Hole, held a short service in the nave. Over 500 members of the Church of England Working Men's Society attended with their banners, and, preceded by a cross, formed a procession round the edifice. Prior to and after the service public processions were made through the streets of Rochester and Chatham. About 600 persons sat down to tea, under the presidency of the Dean, in the Corn Exchange.

The annual distribution of medals for gallantry and good-conduct on the part of the men of the Metropolitan Fire Brigade took place on July 28, when the members of the Metropolitan Board of Works visited the head-quarters in Southwark Bridge-road, and inspected the fine building. After drills, in which engines were turned out in thirty seconds after receiving the calls, the members assembled in the drill-ground, and Mr. Wetenhall, as the late Chairman of the Fire Brigade Committee, presented silver and bronze medals to those men who had been selected to receive them.

The Lord Mayor has received the following among other donations towards the Mansion-House Fund which has been recently opened in connection with the holding of the National Agricultural Show in Windsor Home Park next year in celebration of the fiftieth anniversary of the Royal Agricultural Society of England—viz., the Queen £100 (in addition to £200 already contributed by her Majesty to the Windsor Town Fund), the Prince of Wales £50 (in addition to £100 given to the latter fund), Messrs. N. M. Rothschild and Sons £250, Mr. F. Shoolbred £105, Messrs. W. and A. Gilbey £105, Mr. Walter Gilbey £105, the Nitrates Railway Company (Limited) £105, Lord Revelstoke £100, Lord Hillingdon £100, and Mr. J. Stewart Hodgson £100.

The Royal Humane Society has conferred its rewards upon the undermentioned persons for gallantry in saving or endeavouring to save life:—Silver medals to Lieutenant J. W. Pochin, her Majesty's ship Garnet; John Robinson, assistant engineer to the Bengal and North-Western Railway, India; and W. Bradley, pier-keeper, at Southend. Bradley has altogether saved nineteen persons from drowning, and, besides the National Life-Boat Institution's silver medal, has also the bronze medal and clasp of the Humane Society. Bronze medals have also been conferred upon Colour-Sergeant T. Tierney, 3rd Inniskilling Fusiliers; Lance-Corporal Done, Royal Lancaster Regiment; John Geddes, ferryman, of Glasgow; James Fursland, Patrick Durkan, Alfred D. Burton, Christopher Ward, G. Endicott (signalman in the Royal Navy), Maurice Murphy, W. Howell (a lad of fifteen), Llewellyn Bowen (dock pilot at Cardiff), Frederick T. Joyce (journalist), and Police-Constable Lucas (Metropolitan Police). Testimonials have also been awarded to W. Herling, Private Harding, R.M.L.I., T. Englefield, J. J. Devereux, George B. H. Hirst, Police-Constable D. M'Intosh, S. Holden, W. Williams, E. Johns, J. Louis, E. Coco, L. Detort, J. Parker, G. Brereton, W. T. Lee, and J. Shirtcliffe.

HOLIDAY RAMBLES.

(By our Paris Correspondent.)

BERLIN.

The Berliners call their city with pride the "Kaiserstadt"; their greatest pleasure is a military parade; their chief and almost only amusement is drinking a peculiar white beer of local manufacture. There are, therefore, three features of Berlin which particularly strike the foreigner: the innumerable beer-shops and beer-gardens, the omnipresent military element, and the infinite variety of the portraits of the Imperial family. In most cities you will find in the photograph-shops views of the monuments and sights of the town conspicuously displayed: in the Berlin photograph-shops you see nothing but Kings, Emperors, Princes, and Princesses of the Hohenzollern family, beginning with Queen Louisa, the great beauty of the house, who is photographed, from a painting, in the act of teaching the future Kaiser Wilhelm how to play with a wooden cannon. Then we see the first Kaiser in civilian dress, wearing an open waistcoat and a gaudy striped cravat, and looking for all the world like some dandified old banker; Kaiser Friedrich in health, in sickness, on his death-bed, and, finally, lying in state; the new Kaiser Wilhelm, surrounded by his family; also portraits of the Crown Prince, a dot of a boy of five years of age, dressed in military uniform, and saluting with his sword. Here are scores of portraits of Moltke and Bismarck and other military notabilities, portrait-groups of officers, instantaneous photographs of military manœuvres. "But where are the photographs of Berlin itself? Have you no views of the city?" one asks the shopman. "Ja, mein Herr, ja wohl!" And he brings forth from the drawer a bundle of views. "Here is the front view of the Kaiser's palace, showing the historical window where Kaiser Wilhelm used to come to show himself daily to the crowd gathered on Unter den Linden; here is the palace of the Crown Prince; the monument of Frederick the Great; the cannons on the Castanien Platz brought from Mont Valerian; the Imperial Guard House, showing the arrival of the new guards; the Arsenal; the inside of the Arsenal, showing the flags captured from the French in 1870; the Sieges Denkmal, in commemoration of the defeat of the French in 1870-71." "But have you no views of other sights of Berlin besides these military and imperial subjects?" "Ja wohl, mein Herr, ja wohl!" and the ponderous shopman brings forth in triumph a photograph of Kroll's beer-garden!

Kaiser, war, and beer—such are the preoccupations of the modern Berliners, and such are the features that strike the visitor with a force and frequency that end by disgusting him with this vast and monotonous city of stucco decoration, outside show, military glory, and beer-gardens. The Kaiserstadt has all the disagreeable points of the parvenu: it has not yet become accustomed to its greatness; it is like a pretentious provincial man who, suddenly transported into a metropolitan sphere, puts on knowing airs, and would appear more courtly than the courtliest. Like the towns of America and Australia, Berlin has nothing really old in it. Its growth, again, has been too rapid for reasoned development, and so we find splendour and paltriness side by side, no uniform plan of street pavement, no system of drainage, mere scattered efforts after grandeur and true civilisation.

As I was leaving Berlin I bought at the station a book by Julius Rodenberg, a distinguished German writer, "Bilder aus dem Berliner Leben," in which there are many pages that confirm my impression of Berlin, notably one in which the author revels in the splendour of the Belle Alliance Platz—yet another military monument in commemoration of the victories of 1814. Fifteen years ago he saw this Platz all neglected and buried in sand, and a poor wooden bridge hard by. Now he sees there marble and granite, a handsome stone bridge bedecked with statues, and a park with marble images of War, Bravery, Glory, and of heroes who died for the fatherland. "Were we not the modern Spartans before we sought to win the renown of being the modern Athenians?" asks Julius Rodenberg. "From the column of the Belle Alliance Platz to the Königs Platz (where is the Sieges Denkmal column in memory of the Franco-German war) is a long way. But we have made that way, and it is one long war-street. Military laurels lighten, or darken, everything here: the race that grows up between these two points must be warlike, and a race of soldiers. And are there not trophies on all sides? It is through war that we have become what we have become. We used to be a society of humble folks; we used to live in old-fashioned, uncomfortable, ugly houses, whereas now we have stylish, mighty, colossal houses with marble steps, satin wall-hangings, electric-bells and telephones. . . . And what is the source and origin of all these things? War! The war of 1864, 1866, and 1870."

Herr Julius Rodenberg chuckles with truly German heaviness over the electric-bells and satin wall-hangings; but what he says is doubtless quite true, and it explains, at any rate, the conceit of the Berliners and the domineering "swagger" of the officers who swarm in the streets and cafés on Sundays, and promenade up and down Unter den Linden, leaving no room for ordinary mortals.

I quitted Berlin leaving two enigmas unsolved. One is: Where do the German officers get the money to buy their dress uniforms, which always look quite new? The second is: Can Unter den Linden be compared in length, breadth, magnificence of architecture, and general splendour of aspect with Euclid-avenue, Cleveland, U.S.A.?

T. C.

A young whale, measuring twenty feet in length, has been captured at Bennington, near Boston.

At Liverpool the annual meeting of the Royal Liver Friendly Society has been held. The premium income for the year 1887 amounted to £382,606, or an increase of £13,336 over 1886, and the claims paid to £216,393. The report was adopted, and a committee was appointed to revise the rules.

Dr. Thomas Wilkinson was on July 25, at the College of Ushaw, Durham, consecrated Roman Catholic Bishop-Auxiliary of the See of Hexham and Newcastle. The ceremony, which lasted nearly four hours, was chiefly performed by Bishop Hedley, who also preached the sermon. The head of the new Bishop was anointed by assistants, and the consecrating Bishop presented him with the ring and pastoral staff.

The Duke of Cambridge, who was accompanied by the Prince of Wales, made his annual inspection of the Brigade of Guards in Hyde Park on July 25. The troops inspected were the 1st Battalion Grenadier Guards, the 1st Battalion Coldstream Guards from Wellington Barracks, the 2nd Battalion Grenadier Guards, and the 2nd Battalion Scots Guards from Chelsea Barracks. The three bands of the brigade were in attendance, and the evolutions were witnessed by a large and fashionable company. The troops presented a fine appearance, being in full dress, whilst the officers wore their gold sashes. During the absence of the Foot Guards, the guard duty at the West-End was performed by men of the Northamptonshire regiment from the Tower. Their Royal Highnesses were loudly cheered on leaving the ground.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

T MAN (New York).—Your inquiry about the "Bohemian Collection" and the solutions referred to have not reached us. Solution of No. 2308 acknowledged below.

DELTA.—Your game with Falkbeer shall appear next week. The Sicilian is not forgotten either.

R F N BANKS.—Why is the Pawn required at K Kt 2nd?

A SCHLECHTER (Zeestraat, The Hague).—If Black play as you suggest, Q to K 5th mates. We cannot answer by post.

P DALY (Clapham).—Problem shall be reported on in due course. De la Rue can supply your wants in adhesive characters.

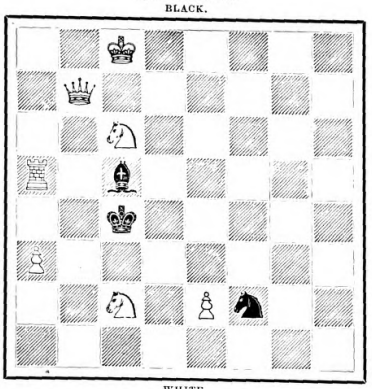
T B ROWLAND (Dublin).—Your forthcoming work shall be noticed shortly. Thanks for Mrs Rowland's problems, which, owing to a large supply of two-movers, cannot appear immediately, but shall not be overlooked.

PROBLEMS received, with thanks, from B G Laws, J Daly, Mrs Rowland, L Cond, and E Crane.

CORRECT SOLUTION OF PROBLEM No. 2308 received from J W Shaw (Montreal), J Mann, Isonomy, and M Uphill; of No. 2309 from Fairholme, C E P, and J Dunn; of No. 2310 from C E P, Fairholme, J A Schmucke, Columbus, and J D.

CORRECT SOLUTION OF PROBLEM No. 2311 received from L Desanges, Sergeant James Sage, G J Veale, W Hillier, Jupiter Junior, Howard A E Phillips, Fairholme, E Casella (Paris), J Ross, Dr F St. J Dyson, Shadforth, E E H, Alpha, C E P, F Lucas, J Hepworth Shaw, J A Schmucke, Thomas Chown, W R Baillien, Dr G Waltz, Dame John, Bernard Reynolds, R F N Banks, Dawn, T G (Ware), R H Brooks, Rev. Winfield Cooper, J D Tucker (Leeds), Mermite, Julia Short, T Roberts, J R N (East Sheen), G T Addison (York), Major Prichard, Lillie Harris, R Worters (Canterbury), and F Ryder.

SOLUTION OF PROBLEM No. 2309.



WHITE.	BLACK.
1. K to Kt 8th	P to Q 4th
2. Kt to R 8th	P takes Kt
3. Q mates.	

If Black play 1. K takes P, then 2. Q takes P; if 1. K to Q 6th, then 2. Kt to K B 4th (double ch), &c.

PROBLEM No. 2313.

By J. PIERCE, M.A.

BLACK.

WHITE.

White to play, and mate in three moves.

GAMES BY CORRESPONDENCE.

Game in the Fraser International Tourney between Mr. W. H. GUNSTON, of Cambridge, and H. F. CHESHIRE, of Hastings; notes by Mr. Fraser.

(Ruy Lopez.)

WHITE (W. H. G.)	BLACK (H. F. C.)	WHITE (W. H. G.)	BLACK (H. F. C.)
1. P to K 4th	P to K 4th	Black evidently cannot retreat to K 2nd without getting into difficulties.	
2. Kt to K B 3rd	Kt to Q B 3rd	17. Q takes K P	B to Q 3rd
3. B to Kt 5th	Kt to B 3rd	18. R to Q sq	P to K Kt 4th
4. Castles	Kt takes P	19. B to K 3rd	Q to R 4th
5. P to Q 4th	P to Q B 3rd	20. Q to Q 4th	Q takes R P
6. B takes Kt	Q P takes B	21. P to Q B 4th	K to B sq
7. Q to K 2nd	B to K B 4th	22. Q takes P	R to Q sq
8. P to K Kt 4th		23. B takes P	Q to Kt 6th
A somewhat novel manner of proceeding with the attack. Though the loss of a Pawn follow, White has ample compensation in the fine position obtained within the next few moves.		24. R takes B	
		White plays very cleverly throughout.	
8.	B to Kt 3rd	24.	P takes R
9. Kt takes P	Q takes P	25. B takes R	K takes B
10. Kt takes B	R P takes Kt	26. Q to Q 4th	P to B 4th
11. Kt to B 3rd	P to K B 4th	27. Q takes P (ch)	K to K sq
12. B to B 4th	Castles	28. Q to K 6th (ch)	K to B sq
13. Q R to Q sq	Q to Kt 5th	29. Q to K 2nd	P to Kt 4th
14. R takes R (ch)	K takes R	Black obviously has no resource left.	
15. Kt takes Kt	P takes Kt	30. P takes P	P takes P
16. P to Q B 3rd	Q to B 4th	31. K to Kt 2nd, and wins.	

Game played between Mr. W. T. PIERCE and Mr. F. S. PILLEAU.

(Pierce Gambit.)

WHITE (F. S. Pilleau.)	BLACK (W. T. Pierce.)	WHITE (F. S. Pilleau.)	BLACK (W. T. Pierce.)
1. P to K 4th	P to K 4th	19. Q takes P	K Kt to K 2nd
2. Kt to Q B 3rd	Kt to Q B 3rd	He is now pretty safe from all danger.	
3. P to B 4th	P takes P	20. Q to B 4th	B to Q 5th (ch)
4. Kt to B 3rd	P to K Kt 4th	21. K to R sq	Kt to B 4th
5. P to Q 4th		22. R to B 4th	
These moves constitute the gambit.		To prevent Kt to Kt 6th (ch), &c.	
5.	P to Kt 5th	22.	Q takes P (ch)
6. B to B 4th	P takes Kt	A finishing stroke.	
7. Castles	P to Q 3rd	23. K takes Q	Kt to K 8th (ch)
8. Q takes P	B to K 3rd	24. K to R sq	Kt takes Q
9. B takes B	P takes B	25. R takes P	B takes Kt P
10. B takes P	Q to B 3rd	26. R to K Kt sq	
11. P to K 5th	Q to Kt 3rd	If R to Q Kt sq, Kt to Q 5th wins the exchange.	
This is, probably, Black's best move.		26.	Kt to Q 3rd
12. P takes P	P takes P	27. K R to K Kt 4th	Kt to K 2nd
13. Q to K 5th		28. P to B 4th	K to Q 2nd
P to Q 5th is a stronger move.		An error by which he loses his chance of winning the game; he should have played K to Kt sq, ensuring the gain of the Kt.	
13.	B to Kt 2nd		
14. Kt to Kt 5th	P takes B		
White scarcely can afford to sacrifice two more pieces for the sake of the Rook.		29. P to B 5th	Q Kt to B 4th
		30. R to Q Kt sq	R takes Kt
15. Kt to B 7th (ch)	K to Q 2nd	31. R takes B	P to Kt 3rd
16. Kt takes R	P to K 5th	32. P takes P	P takes P
17. Q to Q Kt 3rd	K to B sq	33. R takes P	R takes P
Black still had to exercise considerable care to avoid complications.		34. R to K Kt 2nd, and the game was drawn.	
18. P to Q 5th	P takes P		

Pierce Gambit, Chess Papers and Problems. By James Pierce, M.A., and W. Timperley. Pierce Trübner and Co.—The authors of this volume have already made a name for themselves in chess literature, and they have but for something more lasting by standing sponsors to a new opening. Without attempting in our limited space any examination of the analysis they submit for criticism, we may say it is a variation of the Vienna Opening, one form of which has already given us the Steinitz Gambit and another the Hampe Allgaier. Like the last named, the Pierce Gambit is a combination of two forms of attack, the Muzio being, as the authors phrase it, "grafted to the Vienna stem." It undoubtedly leads to a powerful onslaught in the hands of a player familiar with its pitfalls for the defence; but the inherent unsoundness of the sacrifice remains, and it will probably never come in high-class play. Messrs. Pierce fully justify, however, their claim to have introduced a most interesting addition to the attacking openings. The other contents of the book comprise papers—mainly critical—on chess questions, such as the relative value of pieces, the element of chance in the game, the standard of merit for problems, &c., all of which are discussed with much clearness of thought and expression. Some poems of real merit, with, as might be expected from the dedicatee, a marked Tennysonian ring, follow, and 134 problems complete the work. Altogether, it is one upon which the authors are to be complimented, for it may be safely said that so much talent and versatility are rarely seen in a work exclusively relating to chess. We select for publication above a problem by Mr. J. Pierce, and a game illustrative of the opening, with the author's own notes.

PIN-PRICKS.

It may safely be asserted that half the wretchedness in the world is caused by trifles; or, rather, not so much by the trifles themselves as by the exaggerated dimensions we persist in attributing to them. In things that concern our interests, our ambition, our self-love, or our vanity, we are morbidly sensitive; we look at them through magnifying-glasses, until the merest pin-prick expands into a wound as "wide as a church-door." Some small annoyance, some petty vexation, ruffles our self-esteem or disturbs our confidence; and immediately we proceed to make the most of this accidental or fugitive pin-prick—to aggravate and irritate it until it becomes a permanent sore. Then we go out into the highway, complaining of our troubles and demanding sympathy; not infrequently quarrelling with our best friends because they will not yield to the deception we have imposed upon ourselves. And when we have the grace to forbear this exposure to the world, and neither invite the condolence of our friends nor provoke the ridicule of our enemies, we nurse our grievances all the more zealously in secret, and caress them and make much of them, and vow that we are bleeding inly, when, in truth, we have received only a scratch or two on the epidermis. And so the evil process goes on, till our peace of mind is poisoned, the temper grows soured and suspicious, the better feelings of the heart are kept under, our capacity for good is weakened, and the higher life shut out from us by a hypochondriacal delusion. That is the mischief of these petty anxieties: they develop all that is meanest in our nature. A great sorrow, on the contrary, elevates and purifies; in passing through the furnace, whatever is coarse and worldly is burnt off from us. But these pin-pricks! How humiliating and debasing becomes their influence, if we suffer our minds to rest upon them, until, like the Afreet in the tiny vase, they grow with startling rapidity into gigantic figures which seem to defy control!

When you come to think of it, Byron's misshapen foot was but a pin-prick, compared with all the rare physical and mental endowments he had received; yet he contrived to exaggerate it into so great a grievance, that it threw a dark shadow over his whole life. Napoleon, at St. Helena, seems to have felt much less the heavy pressure and burden of captivity than the denial of certain forms and ceremonies which he considered due to his Imperial dignity. His sensitiveness under these pin-pricks I have always considered a clinching proof that, at bottom, he was not a great man. The revelations of the domestic economy of Carlyle and his wife show, in a very striking manner, the immense unhappiness that may spring from microscopic worries if we insist on representing them to ourselves as colossal evils. There is Oliver Goldsmith, with that happy genius of his, that fine talent for humour, that bland ripe wisdom, and the fame of having written one of the best poems, one of the best plays, and one of the best fictions in our literature—and yet how he suffered from the pin-pricks which his vanity felt so keenly! But in many cases the pin-pricks are even more superficial. A glance at the pages of Horace Walpole or Charles Greville discovers the paltriness of the trials which humanity sometimes sighs over. One man is plunged into an abyss of despair because his rival obtains the Garter which he has calculated upon for his own knee; another reviles the gods because he has been put off with an Earl's coronet when he hoped for the strawberry-leaves. Lady Blank sulks for weeks because Lady Dash wore more diamonds than she did at the Drawing-room; and it is only too obvious that of pin-pricks so slight as these come envy, hatred, malice, and all uncharitableness. As one reads, one is lost in wonder at the littleness of that humanity which has all earth and sea and heaven for its enjoyment, and, beyond these, eternal life, and yet narrows and confines its vision to so low a level and so limited a sphere!

How ridiculous some of these pin-pricks are! How strange it is to see sensible men and women—who would probably bear real, and even terrible, anguish with heroic fortitude—permitting themselves to be depressed and sore at heart at some passing slight or disappointment! But a grain of sand in the eye may blind us to a flash of lightning. That Smith should have a larger house than ours, and sit higher in the synagogue; that Brown should figure in public subscription-lists for double your own modest offering; that Jones should turn out with a carriage and pair, when you are limited to a chaise and a pony; that Robinson should be elected to the Criterion when we are "pilled"; that, in a word, your neighbours should enjoy a little more of the world's sunshine than you do—what sources are these of daily, nay, hourly, heart-burning, anger, jealousy, and spite! The smaller the pin-pricks, the greater seems the pain. Do not let it be supposed that their effect is transitory. The worry which they involve wears out the higher and better energies of the soul; so that a man becomes incapable of impartial judgment—incapable of sincerity, of frank and honest dealing with his fellows—incapable of sympathy, of a generous appreciation of motives, of that tender allowance for the faults and failings of others, of which he himself will not fail to stand in need. It is in this way that cynics are made, and satirists, and selfish pseudo philosophers, who are always railing at the life which is much too large and beautiful a thing for them to understand.

A man bravely silent under a heavy sorrow—ah! that is a sight to command our admiration! But a man whining and pulling at the smart of a pin-prick—how can we look upon such an one except with contempt and disgust! What a pother he makes about his little troubles—calling upon heaven and earth to bear witness to them—and protesting that they are not as the troubles of other men, but something forged by Fate for his particular detriment and hurt! After all, one is sometimes tempted to believe that the alleged affliction is, in reality, a joy and a boon; for see how he hugs it, and makes much of it, and rubs the wound carefully, so as to keep it open! Some people do not seem happy unless they have a pin-prick to talk about; it feeds their vanity and nourishes their sense of self-importance; just as you may see a person with a physical ailment regarding it as a distinction, and impressing upon his neighbour that he is not, like him, a commonplace individual in rude health, but that grand character, a Man with a Malady! The more mysterious it is, the greater is his satisfaction. But these pin-pricks, these small trials of ours, what are they when compared with the larger anxieties of life? How they dwindle away into nothingness when we look around and see the victims of civilisation perishing in the sweating-dens and starving in the byways of our cities! One feels ashamed of the prominence one has given to them, when one sees the agony of the poor woman standing, pale and breathless, at the brink of the coal-mine just shattered by explosion, and waiting in dreary helplessness until the dead body of the father of her children is brought to the surface. In the presence of a sorrow like *that*, let us be silent—let us carry our pain and irritation into the solitude of our chamber, and seek consolation where alone, our heart tells us, at such times, is consolation to be found; let us not go out into the market-place and heap dust and ashes on our heads before an unsympathising crowd. It is only when men are smarting under their pin-pricks, as I have said, that they seek to take the world into their confidence; but the world smiles and passes on.

W. H. D.-A.

THE LATE REV. CHARLES RHIND,
MISSIONARY TO THE DEAF AND DUMB.

THE LATE MR. CLARENCE STEWART LINDSAY,
KILLED IN THE EXPLOSION OF THE DE BEERS MINE, KIMBERLEY.

THE LATE REV. CHARLES RHIND.

The Rev. Charles Rhind, who died on July 7, at the age of seventy-four, had devoted no less than fifty-eight years to the service of the deaf and dumb. As a young man, he was appointed Principal of the Ulster Institution for the Deaf and Dumb, at Belfast; and, on resigning that post, set to work to found a Cambrian Institution for the Deaf and Dumb at Aberystwith—since removed to Swansea—of which he became the first Principal. Scotland next benefited by Mr. Rhind's labours, as he accepted the position of Principal of the Institution for the Deaf and Dumb, at Edinburgh; and, on leaving Edinburgh, in 1860, he became a missionary of the Royal Association in Aid of the Deaf and Dumb, in London. In ministering to the deaf-mutes of the metropolis, Mr. Rhind was very successful; and so highly were his services valued by the committee of the Association, that, with the object of rendering them of still more value, they applied to the late Bishop of London to ordain him. The Bishop, having satisfied himself of the importance of the work done by Mr. Rhind, complied with the committee's request, and ordained Mr. Rhind deacon in 1878, admitting him to priest's orders in the following year. On the death of the Rev. Samuel Smith, in January, 1883, Mr. Rhind was appointed chaplain of St. Saviour's, Oxford-street; and there he laboured, until within three months of his death, with honour to himself, and greatly to the advantage of that class, so much to be pitied, in whom he had all his life evinced an active and unceasing interest.

The Duke of Norfolk opened the fourth wing of the Jaffray Hospital at Gravelly-hill, Birmingham, on July 25.

LATE MR. CLARENCE STEWART LINDSAY.

The untimely death of this gentleman, among those who perished in the disastrous conflagration at the De Beers diamond mine, near Kimberley, in South Africa, on July 11, has excited deep regret in Sunderland and Newcastle, and in all the mining districts of Durham and Northumberland, where he was widely known and highly esteemed. He was son of Mr. James Lindsay, superintendent registrar of births, deaths, and marriages at Sunderland, and was twenty-eight years of age. Having been educated for the profession of mining engineer, as a pupil of Mr. John Daglish, of Tynemouth, he was first employed at the Marsden Colliery, where he distinguished himself in some remarkable operations; and five or six years ago he was appointed by Sir Charles Mark Palmer manager of the Usworth Colliery. The feat he performed on the occasion

"BY a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately-flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that

EPPS'S (GRATEFUL, COMFORTING) COCOA

a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.

GOLDSMITHS' ALLIANCE
(LIMITED),
JEWELLERS, WATCH AND CLOCK MAKERS,
11 & 12, CORNHILL, LONDON, E.C.

The Stock of Jewellery is the largest and choicest in the City of London, and contains the newest and most approved designs.
GOODS FORWARDED INTO THE COUNTRY ON APPROBATION.
Illustrated Pamphlets of Prices sent, gratis and post-free, to all parts of the world.

HAXELL'S HOTEL,
WEST STRAND, LONDON.

MR. HAXELL begs most respectfully to inform the Visitors to his Hotel that it has been ENTIRELY RECONSTRUCTED.

1. The narrow Staircases removed; continuous passages made through every floor.
2. Dressing-Rooms added to all the Family Rooms.
3. Withdrawing-Room made on the First Floor.
4. Electric Bells.
5. The Electric Light, by T. H. WHITE and CO., is introduced into every Room, Staircase, and Passage, doing away with the necessity for Candles, the most fertile source of Fire.
6. The Old Decorations and Furniture are all swept away, and replaced by Furniture of the newest design, by Messrs. Shoolbred and Co.
7. A new Bath-Room has been made.
8. The Sanitary Arrangements are all new, of the most perfect construction, are ventilated by air-shafts through the roofs, and their water-supply absolutely distinct from that used for other purposes, which is doubly filtered.
9. New Lavatories, &c., in the basement for Gentlemen, and, upon the Second Floor, for Ladies, all of the most perfect construction.
10. The construction of a new Kitchen, with all modern appliances.
11. Increased Exits in case of need.

Notwithstanding the great outlay attending these changes, the old Tariff will remain unaltered, WITH THIS REDUCTION, THAT LIGHTS & SERVICE WILL BE SUPPLIED FREE OF CHARGE.

TAYLOR'S CIMOLITE is the only thoroughly harmless SKIN POWDER. Prepared by an experienced Chemist, and constantly prescribed by the most eminent Skin Doctors. Post-free. Send 14 or 36 penny stamps. TAYLOR, Chemist, 13, Baker-street, London, W.

GOLDEN HAIR.—Robare's AUREOLINE produces the beautiful golden colour so much admired. Warranted perfectly harmless. Price 5s. 6d. and 10s. 6d., of all principal Perfumers and Chemists throughout the world. Agents, R. HOVENDEN and SONS, 31 and 32, Berners-st., W.

"THE MILL STREAMS THAT TURN THE CLIPPERS OF THE WORLD ARISE IN SOLITARY PLACES."—HELPS.

PLATO MEDITATING BEFORE SOCRATES, THE BUTTERFLY, SKULL, AND TOPPY.
(The Portrait of Plato is copied from an exquisite gem of high antiquity in the British Museum.)

WHO are
THE Really Great
AND Successful Men
OF the World?
PROFESSOR HUXLEY says:
"Those who take honours in Nature's University, who learn the laws which govern men and things and obey them, are the really great and successful men in the world. Those who won't learn at all are plucked, and then you can't come up again. Nature's pluck brooks extermination."
THE simple meaning is—
WHEN ailing pay no attention to the regulation of your diet, exercise or occupation,
ATTEMPT no conformity
TO the laws of Life;
OR when you have drawn an overdraft on the Bank of Life, &c.,
AVOID the use of
ENO'S "FRUIT SALT" and
ENO'S "VEGETABLE MOTO,"
AND don't read the Rules for Life, given with
ENO'S "VEGETABLE MOTO,"
AND you will be surprised to learn of the body
WHAT a Frail and Fickle Tenement it is,
WHICH, like the brittle glass that measures Time,
IS often broke ere
HALF its sands are run.

BENSON'S WATCHES
ARE THE BEST TIMEKEEPERS.

PURCHASERS IN ALL PARTS OF THE WORLD using these Watches under most trying conditions testify to their strictly accurate timekeeping qualities.

Silver Cases, £15 — BENSON'S "FIELD" — Gold Cases, £25

J.W. Benson SOLE MAKER,
THE STEAM FACTORY: 62 and 64, LUDGATE-HILL, E.C.;
And at 28, ROYAL EXCHANGE, E.C.; and 25, OLD BOND-STREET, W.

of the explosion there, in 1885, was a gallant attempt to save the lives of a couple of miners, who, along with himself, formed a rescue party, and who succumbed to the after-damp. He preserved his own life by chewing rusty nails, which counteracted the effect of the deadly gas which he had inhaled. In a half unconscious condition he dragged these men a considerable distance through the workings, and the act of heroism which he performed, though unavailing, attracted the attention of the whole country at the time. Mr. Lindsay could not, at the time of his death, have been more than a full week at the mine, since he had not long arrived in South Africa, being appointed manager of four great diamond mines, of which the De Beers is one. As proof of the estimation in which he was held by the profession, on the occasion of the visit of the Institute of Mining and Mechanical Engineers to Newcastle, he was appointed to inspect and report upon the various methods of ventilation in mines in this country and on the Continent.

SKETCHES IN CORNWALL.

A county so remote and sequestered, by its geographical position, from the rest of England, as is the extreme western peninsula—Cornwall exhibits few or no traces of Roman, Saxon, or distinctly Norman influences, but had an ancient civilisation of its own, and was, probably, long before the Roman invasion, frequently visited by foreign commerce. The inhabitants of some districts are still of a comparatively unmixed Celtic race, who received Christianity at a much earlier period than its introduction among the Anglo-Saxons, and others. The native language, which was nearly allied to the Cymric of Wales, ceased to be commonly spoken about one hundred years ago, but among the peasantry, miners, and fishing-folk, there are curious traditions and customs peculiar to Cornwall. Their household management, furniture, cookery, and some fashions of wearing apparel, may attract the notice of an observant visitor; and the odd aspect of the interior of a bake-house, represented in one of our Sketches, is an instance of this condition in the nooks and corners of the most westerly part of Great Britain.

FOREIGN NEWS.

M Floquet on July 29 unveiled the statue of General Meusnier at Tours. A banquet was given in the evening.—July 30 was the annual prize-day of the Paris *lycées*, and a large and fashionable company assembled in the afternoon at the Sorbonne. The event of the proceedings was an excellent address from M. Lockroy, the Minister of Public Instruction, on the relative merits of the ancient and modern classics.—The progress of the Exhibition works in the Champ de Mars has met with an unexpected check, a large number of navvies engaged on the works having struck work for higher wages. In a conflict with the police, who drew their swords, ten men have been wounded. Recent storms in France have done great damage. The Department of the Lozère has been visited by a terrific cyclone, which has uprooted gigantic oaks of ancient renown, as well as any number of chestnut-trees and poplars. The mother of the Curé of Pin-Mories was struck by lightning in the rectory, death being instantaneous.

Signor Crispi has issued a circular to the Powers, notifying the occupation of Massowah by Italy.

The King and Queen of Portugal left Lisbon on July 30 on their foreign tour. A proclamation of the Crown Prince announces the assumption by him of the Regency of the country during the King's absence.

A salute of seventy-two guns at Berlin, on July 27, announced that the German Empress had given birth to a son. Her Majesty and the child are doing well.—The Emperor has ordered that the anniversaries of the birthdays of the Emperors William and Frederick, as also of the days on which they died, shall be celebrated in all Prussian schools as memorable days in German history.—The Emperor William arrived at Stockholm on July 26. He was received on landing by King Oscar, the Crown Prince and Princess, and the principal officials. An enormous crowd loudly cheered his Majesty. In the evening a banquet was given at the castle, covers being laid for 150 guests. His Majesty, accompanied by Prince Henry, spent the next day in visiting several places of interest in and around Stockholm; and on Saturday, July 28, his Majesty sailed from Stockholm in the Hohenzollern for Copenhagen. The Emperor William and Prince Henry were met at sea on the morning of July 30 by the King and Crown Prince of Denmark. The German Emperor afterwards landed at Copenhagen, where the whole of the Danish Royal family welcomed him. The King and the Emperor visited the Exhibition, and were well received. In the evening a State banquet was given in the Emperor's honour at the palace, and shortly after midnight his Imperial Majesty left; arriving late on Aug. 1 at Friedrichsruh, where he was received by Prince Bismarck.

THE LATE MR. FRANK HOLL, R.A.

REPRINTED FROM THE "ILLUSTRATED LONDON NEWS" OF JULY 20, 1878.

The centenary celebration of the birth of King Ludwig I. of Bavaria was inaugurated at Munich on the morning of July 30 by the ringing of bells and the playing of bands stationed on the towers of the churches, in all of which there was an early morning service. The principal service, held in the basilica of St. Boniface, was attended by the Prince Regent, all the members of the Royal family, the deputations from the different cities, the Papal Nuncio, and the Diplomatic Body. Several wreaths were placed on King Ludwig's tomb in the basilica. In the evening a marble bust of Ludwig I. was unveiled in the Hall of Heroes, in the presence of all the members of the Royal house, the Diet, and a vast concourse of visitors, the total number of spectators being estimated at 100,000. Subsequently there was a firework display, at the conclusion of which the crowd sang "Die Wacht am Rhein" and the National Anthem. During the celebration on July 31 some elephants in the procession were frightened by the noise of a steam-car and broke away. Many people whom they trampled upon were seriously injured.

Prince Gregory Ghika of Roumania died on July 30, at Klausenburg, in Transylvania.

The King of Greece has arrived at St. Petersburg.

The ninth centenary of the introduction of Christianity into Russia has been celebrated throughout the Empire, but especially at Kieff.

The Cape Parliament has passed a resolution declaring that the separation of the offices of High Commissioner and Governor of Cape Colony would be fraught with danger to the interests of South Africa.

The opening of the Melbourne Centennial Exhibition took place on Aug. 1. All the colonies sent large contingents of visitors and the city was crowded, the gathering of leading Australians being immense and never before equalled. The whole city was en fête.

The marriage of M. de Geyer, Secretary to the Swedish Legation, Constantinople, with Miss White, the daughter of the British Ambassador, took place on July 31. The ceremony was celebrated by Monsignor Bonetti, the Apostolic Archbishop, in the Cathedral of the Holy Spirit. The bride received numerous costly presents, among which was a splendid tiara of diamonds sent by the Sultan.

THE LATE MR. FRANK HOLL, R.A.

The death of this eminent artist, at the early age of forty-three, and at the height of his professional success, is deeply regretted. It took place on Tuesday, July 31, at the well-known house which he had built for himself, called "The Three Gables," in Fitzjohn's-avenue, Hampstead. He had been unwell since last May, and had gone to Spain for a holiday; but returned after a fortnight in rather worse health. Mr. Frank Holl was a son of the engraver Francis Holl, A.R.A., and was born on July 4, 1845, at St. James's-terrace, Kentish-town. He went to University College School, but at the age of fifteen was entered as a probationer in the Royal Academy Schools. There he soon made his mark, obtaining a silver medal in 1862, and the gold medal and a scholarship in the following year. In 1864 he began to exhibit, and from that time contributed regularly to the exhibitions. In 1868 he gained the Two Years' Travelling Studentship. He devoted himself to subject pictures, generally of a pathetic cast, such as "No Tidings from the Sea" (1871), "Leaving Home" (1873), "Deserted" (1874), "Want," and "The Emigrant's Departure." In 1878 he was elected an A.R.A. Nine or ten years ago, however, he painted his first portrait, that of the veteran engraver Samuel Cousins. It proved the great talent of Mr. Holl as a portrait painter. Mr. Holl was at once overwhelmed with commissions, so that from that time till the day of his death he may be said to have scarcely had a single day, except during his annual holiday, free from sitters. A list of them would include a number of the most eminent contemporary Englishmen, while not a few Americans took advantage of a visit to London to have themselves painted by Mr. Holl. His very last work, completed since the opening of the Academy Exhibition, was a portrait of Mr. Cornelius Vanderbilt. Among the most successful, we may mention portraits of Signor Piatti; Dr. Graham; the late Registrar-General; Captain Sim, a naval veteran of ninety years old; Dr. Cradock, the late principal of Brasenose; Dr. Bellamy, President of St. John's; Sir Henry Rawlinson; Sir Frederick Roberts; Vice-Chancellor Bacon; Lord Wolseley; Mr. Chamberlain; Lord Overstone; Mr. Bright; the Duke of Cleveland; the picture of Lord Spencer, which will probably be reckoned the painter's masterpiece; and that of Mr. Gladstone, which was given to its subject as a golden-wedding present. Besides these half-lengths, there are the two full-lengths of the Prince of Wales, painted for the Middle Temple and for the Trinity House, and that of the Duke of Cambridge in the uniform of a Field-Marshal. Mr. Holl was made a R.A. in 1884, and his rank among the very best of modern English portrait-painters is beyond dispute.

Mr. Frank Holl had a seizure soon after his return from Madrid, and Sir William Jenner forbade him to undertake more than one sitter a day. This moderate amount of work seemed not too great for his strength, but while staying with a friend, he had a second seizure, and since that time his doctors—Dr. Broadbent and Mr. William Adams—regarded his case as anxious, though they by no means despaired of curing him. But he was again seized with cardiac disease, and died in a moment.

The Portrait is from a photograph by Mr. Fradelle, of Regent-street, which we engraved ten years ago.

The inaugural meeting in connection with the visit of the University Extension students to Oxford was held at the new Examination Schools on July 31, when about 1000 persons were present. Mr. J. G. Talbot, M.P., presided, and heartily welcomed the visitors. The inaugural address was given by Mr. A. H. Dyke-Acland, M.P.

By the will of Mr. Henry Edward Southouse, late of Clifton-terrace, Brighton (dated May, 1861), with codicils (of recent dates), of which probate has been granted, the Pope is left residuary legatee of the testator's property, real and personal. The personalty is declared at £36,116. There are several bequests to relatives and others; but their amount will not probably exceed £7000 or £8000.

On the opening day of the Goodwood Meeting Mr. J. Gretton won the Craven Stakes with Apollo, Lord Dudley the Charlton Welter Handicap Plate with Monsieur de Paris, the Duke of Portland the Ham Stakes with Donovan, Mr. T. Cannon the Stewards' Cup with Tib, Mr. T. Jennings, jun. the March Stakes with Corbeille, Mr. Rose the Richmond Stakes with Gulliver, Mr. W. M. Redfern the Halnaker Stakes with Yard Arm, and Lord Ellesmere the Gratwicke Stakes with Estafette. On the second day Prince Soltykoff's Love-in-Idleness won the Bognor Plate of 500 sovs., Lord Calthorpe's Beadroll being second; the Drayton High Weight Handicap was won by Mr. M'Calmont's Castlenock, Mr. Kenyon's Binfield coming in second, and Mr. R. Crest's Edlington third. Mr. Manton's Zanzibar came in first for the Sussex Stakes, Lord Ellesmere's Estafette being second, and Prince Soltykoff's Sheen third.

SCENES AND INCIDENTS ON BOARD A CUNARDER FROM LIVERPOOL TO NEW YORK.

Of all the great Atlantic steamship lines the Cunard still stands without a rival in popularity. Its steamers are not only the fastest, but excel all in comfort and general attendance. Life on board one of these floating palaces is not, as some may suppose, one of dull routine, but full of incidents; acquaintances are quickly made, friendships are established of which many interesting tales are told in after years. A late United States Consul at one of the English ports relates the following:—"On my last voyage from England, on one of the Cunard steamers, I noticed one morning, after a few days out of port, a young man hobbling about on the upper deck, supported by crutches and seeming to move with extreme difficulty and no little pain. He was well dressed and of exceedingly handsome countenance, but his limbs were emaciated and his face sallow, which bore traces of long suffering. As he seemed to have no attendant or companion, he at once attracted my sympathies, and I went up to him as he leaned against the taffrail looking out on the foaming track which the steamer was making. 'Excuse me, my young friend,' I said, touching him gently on the shoulder, 'you appear to be hardly able or strong enough to trust yourself unattended on an ocean voyage, but if you require any assistance I shall be glad to help you.' 'You are very kind,' he replied, in a weak voice, 'but I require no present aid beyond my crutches, which enable me to pass from my state-room up here to get the benefit of the sunshine and the sea breeze.' 'You have been a great sufferer, no doubt,' I said, 'as I judge that you have been afflicted with rheumatism, whose prevalence and intensity seem to be on an alarming increase both in England and America.' 'You are right,' he answered; 'I have been its victim for two years, and after failing to find relief from medical skill, have lately tried the springs of Carlsbad and Vichy; but they have done me no good, and I am now on my return home to Missouri to die, I suppose. I shall be content if life is spared me to reach my mother's presence. She is a widow, and I am her only child.' There was a pathos in this speech which affected me profoundly, and awakened in me a deeper sympathy than I had felt before. I had no words to answer him, and stood silently beside him, watching the snowy wake of the ship. While thus standing, my thoughts reverted to a child—a ten-year-old boy—of a neighbour of mine, residing near my consulate residence, who had been cured of a stubborn case of rheumatism by the use of St. Jacobs Oil, and I remembered the steward of the ship had told me the day before that he had cured himself of a very severe attack of the gout in New York, just before his last voyage, by the use of the remedy. I at once left my young friend and went below to find the steward. I not only found him off duty, but discovered that he had a bottle of the Oil in his locker, which he had carried across the ocean in case of another attack. He readily parted with it on my representation, and, hurrying up again, I soon persuaded the young man to allow me to take him to his berth and apply the remedy. After doing so, I covered him up snugly in bed, and requested him not to get up until I should see him again. That evening I returned to his state-room, and found him sleeping peacefully and breathing gently. I roused him, and inquired how he felt. 'Like a new man,' he answered, with a grateful smile. 'I feel no pain, and am able to stretch my limbs without difficulty. I think I'll get up.' 'No, don't get up to-night,' I said, 'but let me rub you again with the Oil, and in the morning you will be much better able to go above.' I then applied the Oil, again rubbing his knees, ankles, and arms thoroughly, until he said he felt as if he had a mustard poultice all over his body. I then left him. The next morning when I went up on deck, I found my patient waiting for me with a smiling face, *and without his crutches.* I don't think I ever felt so happy in my life. To make a long story short, I attended him closely during the rest of our voyage—some four days—applying the Oil every night, and guarding him against too much exposure to the fresh and damp spring breezes; and on landing at New York he was able, without assistance, to mount the hotel omnibus and go to the Astor House. I called on him two days later, and found him actually engaged in packing his trunk, preparatory to starting for his home that evening. With a grateful smile he welcomed me, and, pointing to a box carefully done up in thick brown paper, he said:—'That is a dozen bottles of St. Jacobs Oil, which I have just purchased from Hudnut, the chemist across the way, and I am taking them home to show my good mother what has saved her son's life and restored him to her in health. If you should ever visit Sedalia, in Missouri, I will show you a bottle of St. Jacobs Oil enshrined in a silver and gold casket, which we shall keep as an ornament, as well as a memento of our meeting on the Cunard steamer.' We parted, after an hour's pleasant chat, with mutual good-will and esteem, and a few weeks afterwards I received a letter from him telling me he was in perfect health, and containing many grateful expressions of his affectionate regards." The curative powers of St. Jacobs Oil are simply marvellous. It is wholly an outward application. It conquers pain quickly and surely. It acts like magic. It penetrates to the seat of the disease. It cures, even when everything else has failed. A single trial will convince the most incredulous. It has cured thousands of cases of rheumatism and neuralgia, which had resisted treatment for the greater part of a lifetime. It has cured people who have been crippled with pain for more than twenty years. After the most thorough and practical test, St. Jacobs Oil has received Six Gold Medals at different International Exhibitions, for its marvellous power to conquer pain. It is used extensively in the leading Hospitals and Dispensaries of the Metropolis and provincial cities, and also on board her Majesty's Troop-ships, and on all the ships of the Cunard Steam-ship Company's magnificent fleet. Put up in white wrappers for human use, and in yellow wrappers for veterinary purposes.

NEW MUSIC.

CHAPPELL and CO.'S POPULAR MUSIC.

DEAR HEART.
By TITO MATTEI.
This enormously popular Song
Published in three keys.

HEAVEN AND EARTH.
By PINSUTI.
Sung by Madame Enriquez.

GLASGOW EXHIBITION.
SUMMER SERVICE OF TRAINS BY THE WEST COAST ROYAL MAIL ROUTE.

LONDON AND NORTH-WESTERN AND CALEDONIAN RAILWAYS.—The following ADDITIONAL and ACCELERATED TRAIN SERVICE is now in operation; 1st, 2nd, and 3rd Class by all Trains:—

	A	B
Leave London (Euston)	a.m. 10.30	p.m. 8.0
Arrive Edinburgh	5.15	7.12
Glasgow (Central)	5.45	7.40
Arrive Greenock	6.30	8.25
Perth	7.35	9.30
Dundee	7.45	9.40
Aberdeen	10.20	12.15
Inverness	12.40	2.35

The 7.35 p.m. Express from Euston to Perth will run from July 26 to Aug. 30, inclusive, Saturday and Sunday nights excepted. The Train will be composed of Sleeping Saloons, first and second class, for Perth and the Highlands, and sleeping and ordinary carriages for Perth and Inverness, but will not pick up passengers for Perth. By this means an undisturbed journey will be secured, and the earlier arrival at Perth will secure ample time for breakfast, &c., before going forward to the Highlands.
The Highland Railway Co. have agreed to run the 7.35 p.m. Express through to the district Stations in advance, shall advise of the same, and postal trains.
The 10 a.m. Express from the 12 night train will run every night except Saturdays.
A—Will run every night, but on Sunday mornings its arrival at Dundee will be 9.5 a.m.; Inverness, 1.30 p.m., and it will have no connection to Oban (Saturday nights from London). It will run every night, but will have no connection to the North on Saturday night.
On Saturday's passengers by the 10 a.m. Train from London are not conveyed beyond Perth by the Highland Railway, and only as far as Aberdeen by the Caledonian Railway.
Carriages with lavatory rooms are run on the principal express trains between London and Scotland, without extra charges.
Improved sleeping-saloons, accompanied by an attendant, are run on the night trains between London, Edinburgh, Glasgow, Greenock, Stranraer, and Perth. Extra charge, 5s. for each berth.
A special train will leave Euston (Saturdays and Sundays excepted) at 8.55 p.m. from July 11 to Aug. 30, inclusive, for the conveyance of horses and private carriages only to all parts of Scotland.
Additional trains from Birmingham, Liverpool, Manchester, and other towns will connect with the above trains.
For particulars of improved train service from Scotland to London see the Companies' timetables.
G. FINDLAY, General Manager; L. & N. W. Railway.
A. THOMPSON, General Manager, Caledonian Railway.
August, 1888.

GREAT EASTERN RAILWAY.—SEASIDE.
AN ACCELERATED and IMPROVED SERVICE of FAST TRAINS is now running to Yarmouth, Lowestoft, Cromer, Sheringham, Hunstanton, Aldeburgh, Felixstowe, Southwold, Harwich, and Cromer.
TOURIST, HOLIDAY, and WEEK-END or SATURDAY to TUESDAY TICKETS are issued by all trains.
On SATURDAY, AUG. 4, additional Fast Trains will run from London to Yarmouth, &c.
WM. BIRT, General Manager.

The Trade supplied by G. VICKERS, Angel-court (173), Strand; and H. Williams, 68, Old Bailey, London.

MONTE CARLO
AS A SUMMER RESORT.
For a summer stay, Monte Carlo, adjacent to Monaco, is one of the most quiet, charming, and interesting of spots on the Mediterranean sea-coast. The Principality has a tropical vegetation, yet the summer heat is always tempered by the sea-breezes. The beach is covered with the softest sand; the Hotels are grand and numerous, with warm sea-baths, and there are comfortable villas and apartments, replete with every comfort, as in some of our own places of summer resort in England.
Monaco is the only sea-bathing town on the Mediterranean coast which offers to its visitors the same amusements as the Establishments on the banks of the Rhine—Theatre, Concerts, Venetian Fetes, &c.
There is, perhaps, no town in the world that can compare in the beauty of its position with Monte Carlo, or in its special fascinations and attractions—not only by the favoured climate and by the inviting scenery, but also by the facilities of every kind for relief in cases of illness or disease, or for the restoration of health.
As a WINTER RESORT, Monaco occupies the first place among the winter stations on the Mediterranean seaboard, on account of its climate, its numerous attractions, and the elegant pleasures it has to offer to its guests, which make it really the rendezvous of the aristocracy of world, the spot most frequented by travellers in Europe; in short, Monaco and Monte Carlo enjoy a perpetual spring. Monte Carlo is only thirty-two hours from London and forty minutes from Nice.

ST. GOTHARD RAILWAY,
SWITZERLAND.
The most direct, rapid, picturesque, and delightful route to Italy. Express from Lucerne to Milan in eight hours. Excursions to the Rigi by Mountain Railway, from Arth Station, of the Gothard line. Through-going Sleeping-Cars from Ostend to Milan. Balcony Carriages, Safety Brakes. Tickets at all corresponding Railway Stations, and at Cooks' and Gaze's Offices.

AIX-LES-BAINS, SAVOY. Thermal Station. Most important of Continental Sulphurous Spas. Eleven hours from Paris. Sciatica, gout, and catarrh of the larynx, lungs, and nasal passages efficaciously treated. The most celebrated doctors attend this luxurious and curative station.

DINNEFORD'S FLUID MAGNESIA.
The best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and safest aperient for delicate constitutions, ladies and children. Of all Chemists.

LETTER-WRITING.

The art of letter-writing is most successful when the writer forgets that it is an art. A number of fine qualities, intellectual and moral, are needed in order to compose a good letter, but they should be exercised unconsciously. Any laborious effort to say fine things in correspondence will inevitably destroy its charm. This was Pope's blunder. So proud was he of the sentiments expressed in his letters, and of his literary craft as a letter-writer, that in the effort to win fame in this direction he missed the mark altogether, and lost his character to boot. So elaborate were the artifices to which he resorted in order to publish his letters that if his little plots had not been unravelled it would be difficult to credit them. And the result of all his trickery was failure. His letters belong to the history of the time, and will therefore be read by the student; but how gladly will he turn from them to those of Swift, who says in the simplest language what he has to say! This was the great Dean's force in all his writings, and it is the special charm of his racy correspondence, in which there is no visible sign of effort. He was quite aware of his friend Pope's "schemes of epistolary fame," and observes that when a letter is written with a view to publication, it ceases to be a letter, and becomes a *jeu d'esprit*. Swift was too sensible to sin in this way, and there is no portion of the nineteen volumes which form his works that can be read with such unmixed pleasure as the letters known as the "Journal to Stella."

It is the custom to praise the poet Gray as a letter-writer, and, in some respects, with justice. "His letters," said Rogers, "have for me an inexpressible charm; they are as witty as Walpole's, and have, what his want, true wisdom." After lately reading again the whole series of these letters, one hundred and eighty-six in number (what did Mr. Matthew Arnold mean by saying that Gray "never spoke out"?), we confess we cannot quite agree with Rogers's criticism. Some passages, no doubt, are exquisitely tender; some show, as all readers know, a passion for Nature unusual at that period. And yet Gray seldom lets you forget that he is a scholar first, and a man afterwards. He does not unbend sufficiently.

Walpole's correspondence is more amusing than Gray's, from its variety. It is far fuller of matter, but without the poet's refinement and grace. Any idle moments may be filled up agreeably with Walpole, himself the greatest of literary idlers; but we do not turn to Gray's letters for pastime—a word, by-the-way, about which Bishop Butler has something serious to say in one of his famous sermons. Lord Macaulay has hit the mark when he says that the charm of Walpole's writings consists in the art of amusing without exciting, and that he keeps the mind of the reader constantly attentive and constantly entertained.

Of all the letter-writers of the last century Cowper stands in the first place. The shyest and most retiring of men, living in a rural village, and cut off from society by his painful malady, when he takes the pen in hand and writes to "Sister Anne" or to his "dearest Cox," Lady Hesketh, he becomes the liveliest of companions. The humour of these letters is only exceeded by their tenderness; his "divine chit-chat," as it has been called, makes us familiar with the man at once. He has no reserve now, and comes out bravely into the sunshine as if ready to face the world. Never was poet more blessed in his "womankind." Mrs. Unwin possessed the solid virtues and the most faithful affection. Lady Austen had the vivacity of a Frenchwoman. "She laughs and makes laugh," the poet wrote, "and keeps up a conversation without seeming to labour at it"; and Lady Hesketh, his "pride and his joy," who is said to have been a brilliant beauty in her prime, had a true woman's heart for the poet, sympathising alike in his sorrows and in his gayer moments. Writing to her on one occasion he says, "When I read your letters I hear you talk, and I love talking letters dearly." It was just such letters that Cowper wrote in his happiest moments, with his heart in every line of them. They are full of a delightful humour, reminding us that the writer was the author of "John Gilpin," and are occasionally shadowed by the pathos that has its deepest expression in "The Castaway."

It will be remembered that Cowper and Burns were contemporaries. The classical scholar, when he wrote in prose, used far simpler language than the immortal ploughman. In pure English verse Burns is rarely seen at his best, but in letter-writing he appears to labour at every line. Thus, in one of his amatory epistles to Mrs. Maclehose, he writes:—

"O, Clarinda, shall we not meet in a state, some yet unknown state, of being where the lavish hand of plenty shall minister to the highest wish of benevolence, and where the chill north-wind of prudence shall never blow over the flowery field of enjoyment!" And many a passage might be quoted from the poet's letters equally high-flown and ridiculous.

Charles Lamb stands first among the letter-writers of our century. The greatest essayist of the age, his correspondence is very nearly as delightful as his essays. His humour is broader and richer than Cowper's, and he gives way at times to the wildest extravagances and "fibs" to an extent that would have shocked the recluse of Olney. There is a Christmas-Day letter to his friend Manning that is quite a masterpiece in this way. To Manning, indeed, a man of learning and mathematics, and sober as such a man should be, Lamb writes in a madcap spirit of mirth. There is something in contrariety. Even undertakers have their jokes. Elia cannot restrain his when he is writing to Wordsworth, who, if he had been blessed with humour, would have been better able to distinguish simplicity from childishness. Wordsworth's letters, though weighty, are just a little dull; not so Southey's, who writes his character upon every page of his immense correspondence, and relates, far better than his biographers can, the story of his life.

In literature, as in life, women, when they do not claim equality with men, often show that they are superior. They are generally better letter-writers from their playfulness and ease and truth to Nature. We can believe, too—though, unfortunately, one's personal experience in this way is limited—that their love-letters are delightful. This assuredly is not too high praise to give to the charming letters written by Dorothy Osborne to Sir William Temple two centuries ago. We are inclined to doubt a little whether Sir William was quite worthy of such love; but perhaps no man is altogether worthy of a good woman's affection, and it is to his credit that he appears to have loved Dorothy as much after the ravages of the smallpox as when she was in the pride of her beauty. Between Dorothy Osborne and Jane Carlyle there is no point of semblance, save that both women were good letter-writers, and in those hours—infrequent it is to be hoped—when one feels inclined to kick at life, and even to satirise friends, what better book can be taken up than "Mrs. Carlyle's Letters." They make one believe that, with the pen as with the voice, she was a match for her husband. To print such letters, written to a confidential friend, was a crying outrage. The public blamed the naughty act, but they read the letters, and, considering now frail human nature is, are hardly to be blamed for doing so. Is it wrong to profit just a little by a neighbour's faults?

J. D.

ART MAGAZINES.

The *Magazine of Art* for the current month opens with another paper on the "Language of Line," by Mr. Walter Crane, illustrated with many beautiful examples of the work of that eminent designer, who has always done so much to raise the handicraftsman to the level of an artist. Miss Mabel Robinson contributes an account of that munificent art-patron and brilliant Roman Emperor, Hadrian, whose many and remarkable gifts have won him a conspicuous place in the pages of history, and who must always be an interesting personality to artists as the friend of Antinous, the deified type of young male beauty. Mr. Henry Herman has written an interesting paper on "Art in the Theatre," in which he criticises in most emphatic terms the sacrifices of archæological truth to spectacular effect, to be seen at our best-managed theatres. Contemporary art is represented by Mr. Claude Phillips's article on the Paris Salon, illustrated by engravings after Bouguereau, Collin, Dagnan-Bouveret, and Adam; and the frontispiece to the magazine is a photogravure of a particularly beautiful picture by Gustave Courtois, one of the most successful of M. Gérôme's pupils, representing the Virgin with the Infant in her arms, the strong grave face of the mother contrasting wonderfully with the childish happy one pressed close to hers.

In the *Art Journal* of August Mr. Prideaux carries the reader with him and his camera up the Thames, from Lechlade to Oxford, pointing out on the way the many beauties of the lovely river. Mr. Lewis Hind introduces us to a very different—though, in its way, equally picturesque—neighbourhood, Christ's Hospital, in Newgate-street, where, a hundred years ago, Coleridge, Lamb, and Leigh Hunt wore the curious coat and yellow stockings of the Blue-Coat boys. Notes on "Japan and its Art Wares" are continued from last month by Mr. Marcus B. Huish; and Mr. P. Villars continues his "Tour of a Foreign Artist and Author in England," the friends having now reached the historic and picturesque city of York.

The Lord Mayor opened the Fire Rescue Exhibition, Portman Rooms, Baker-street, on July 30.

Sir John W. Reid has been awarded the good-service pension of one hundred pounds a year for Inspector-General, in the room of the late Inspector-General Domville.

Prize-day on H.M.S. Worcester, on July 27, proved an exceptionally interesting occasion. The cadets were honoured by the presence of Captain J. S. Webb, the Deputy-Master of the Trinity House, and from his hand received the valuable prizes which had been awarded them, and, at the same time, words of counsel and encouragement, which, it is hoped, they will not willingly let die. Sir G. H. Chambers presided. Cadet Adley received the Queen's Gold Medal annually awarded to the Worcester cadet likely to make the finest sailor, and he also received the valuable sextant presented by the Elder Brethren of the Trinity House to the winner of the Queen's prize. The gold watch annually presented by the P. and O. Company to the cadet standing second in the gold-medal competition, was awarded to H. C. Robinson. Cadet Metcalfe received the Naval Cadetship given by the Admiralty, and he also was presented with a handsome binocular-glass awarded by the Queen, and £35. A second Naval Cadetship was specially granted this year to Percival Jones. Lady Florence Dixie presented her own prize of £10 to Cadet Mead for general smartness. It was enclosed in a silver case in the form of a medal. Congratulatory addresses were given by several of the visitors.

MAPLE and CO., Manufacturers of DINING-ROOM FURNITURE. The largest assortment to choose from, as well as the best possible value. Three more houses have just been added to this important department. Half a century's reputation.

MAPLE and CO.'S NEW SPECIMEN DINING-ROOMS, decorated and fully appointed with furniture in pollard oak, brown oak, Chippendale mahogany, antique carved oak, American walnut, and other woods, are now open to the public, and should be seen by all intending purchasers.

THESE ROOMS are not only helpful as showing the effect of the furniture when arranged in an apartment, but also most suggestive as regards decorative treatment, as well as a guide to the entire cost of furnishing in any selected style.

THE SEVILLE LAD,'S EASY CHAIR,
In Saddlebags of rich Persian design and colourings, mounted on velvet, £3 15s.

DINING-ROOM FURNITURE.

MAPLE and CO. devote special attention to the production of high-class DINING-ROOM FURNITURE that will afford permanent satisfaction in wear. The numerous recommendations with which Messrs. MAPLE and CO.—BED-ROOM SUITES. The SCARBOROUGH SUITE, in solid ash or walnut, including wardrobe with plate-glass doors, and new-shaped washstand, £12 15s.; or, with bedstead and spring bedding, £17 10s. Designs and full particulars free.

MAPLE and CO.—BEDSTEADS.

MAPLE and CO. have seldom less than Ten Thousand BEDSTEADS in stock, comprising some 600 various patterns, in sizes from 2 ft. 6 in. to 5 ft. 6 in. wide, ready for immediate delivery—on the day of purchase, if desired. The disappointment and delay incident to choosing from designs only, where but a limited stock is kept, is thus avoided.

POSTAL ORDER DEPARTMENT. Messrs. MAPLE and CO. beg respectfully to state that this department is now so organised that they are fully prepared to execute and supply any article that can possibly be required in Furnishing, at the same price, if not less, than any other house in England. Patterns sent and quotations given free of charge.

THE BEAUTY OF THE SKIN
ENHANCED BY
POUDRE D'AMOUR.
PREPARED BY PICARD FRERES.

Ladies will find this delightful and refreshing TOILET POWDER invaluable as an application for the skin, reducing a too ruddy complexion and heightening a pallid skin to a beautiful tint. Its application absorbs all moisture, and induces that coolness and comfort to the skin so desirable in the ball-room, theatre, or in the open air. Price 1s. per box; per post, free from observation, 1s. 3d. In three tints; Blanche, for fair skins; Naturelle, for darker complexions; and Rachel, for use by artificial light. Of all Chemists and Perfumers.
Depôts: R. HOVENDEN and SONS, 31 and 32, Berners-street, W.; and 91-95, City-road, E.C., London.

THE SILENT MEMBER.

The Prince of Wales entered the House of Lords on the Twenty-seventh of July in time to hear the lively debate on a matter which has caused much vexation of spirit. The difficulty of finding a substitute for Wimbledon Common as the site of our national rifle meeting is essentially a question, for the impartial consideration of which a "cross-bench mind" is indispensable. Yet it so happened that next the Prince on the front cross-bench sat the Duke of Cambridge, the personage principally interested; whilst that devoted champion of the Volunteers, the Earl of Wemyss, was in a white heat on the bench behind the Commander-in-Chief. Hence so much of the "cross-bench mind" as found expression on this occasion was manifestly prejudiced.

Our crack-shots are quitting Wimbledon with extreme regret. There is no doubt on that point. To allay the irritation occasioned by the order to "move on," the Government would do well to incur no delay in deciding upon the fresh site. Residents in or near Richmond, and the comparatively few who delight in the picturesqueness of Richmond Park, are naturally up in arms against the proposal of Lord Wantage and the National Rifle Association to set up targets even in the most secluded portion of the park near Roehampton. I have enjoyed many a pleasant ramble in the corner of the park it is desired to set apart for the Volunteers for a very few weeks in the year, and I must confess, much though I might regret being deprived even for a short interval of a favourite walk, the part reaching from the Robin Hood gate to Roehampton gate is so little used that the public would suffer next to no loss by its temporary occupation by the National Rifle Association in July, together with the private enclosure Lord Wantage referred to. The Duke of Cambridge resolutely set his face against the retention of Wimbledon and the removal to Richmond Park, on the score of public danger; but frankly added, with regard to Wimbledon, he did not see why he should not look after his own interests. In view of the rapid growth of the suburbs, he recommended the riflemen to go further a-field. Lord Wemyss dwelt on the desirability of choosing a ground near London. The Marquis of Salisbury, in his reply, seemed to discountenance the Richmond project; but said it was for the Government, not the noble Duke, to settle the point at issue. It is earnestly to be hoped the matter will be decided promptly, and with a due regard to the manifest desire of the majority of our marksmen as conveyed through the medium of the National Rifle Association, whose valuable services were deservedly recognised by the Prime Minister.

The chief Ministerial measure of the Session, a monument of Mr. Ritchie's skill as an administrator and a legislator, has reached the House of Lords, and met, save for one remarkable exception, with general approval. Lord Balfour of Burleigh, in moving the second reading on the Thirty-first of July, gave a lucid explanation of its scope. As the noble Lord remarked, it is to be hoped the functions of the new County Councils will be recognised by everyone as duties which the ablest men in the community may be proud to perform. It was in the diligent performance of such public functions, be it remembered, that Mr. Chamberlain acquired those high administrative and debating faculties which distinguish him. To the Earl of Carnarvon, of all persons in the world—to the ex-Viceroy who lent a not unfavourable ear unto Mr. Parnell's views on Irish local self-government—was it left to carp at this liberal measure of the Government for granting County Councils to England and Wales. Lord Carnarvon's petty objections, however, were easily removed by Lord Salisbury, who would not for a moment acknowledge they were rolling in a vehicle downhill, with the reins hanging about the heels of the horses. The noble Marquis believed the gentry would maintain their legitimate high standing in the councils, and that an improvement in the management of local affairs might be reasonably anticipated. The Bill was read the second time. Its progress through the remaining stages will, doubtless, be proportionately quick. The Prime Minister and the Lords believe in dispatch. Would that the Commons did likewise!

The harassed and careworn Leader of the Lower House needs a period of rest and recreation more than many members. Mr. W. H. Smith has reason to complain of personal worry and pertinacious baiting. To him the proposed adjournment at the close of the week ending the Eleventh of August must be particularly welcome. Whether by rigid economy of time at the commencement of the Session the reassembling in November for an Autumn Session might not have been avoided is best known to the right hon. gentleman.

Personalities in abundance have cropped up in the course of the heated debates on the Commission to inquire into the accuracy or inaccuracy of the momentous charges of connivance at murder contained in the *Times*' pamphlet on "Parnellism and Crime." Mr. Sexton's motion, on the Thirtieth of July, that the number of Judges should be increased from three to five, was negatived, but only by a narrow majority. The names of Sir James Hannen and Mr. Justice A. L. Smith were accepted without a dissentient voice. But strong exception was taken to Mr. Justice Day's appointment on the Commission; Mr. John Morley barbing his shaft by a passage from a letter sent him by a Mr. Adams to the effect that, "Mr. Justice Day is a man of the seventeenth century, a Catholic strong as Torquemada, a Tory of the old high-flyer and non-juror type. . . . He nightly railed against Parnell and his friends. He regards them as infidels and 'Reds' who have led astray the Catholic nation," &c. Discussion on this point waxed very hot. Mr. Gladstone strongly objected to the appointment, as did Mr. Parnell; but the Government defended it, and the name of Mr. Justice Day was retained by a majority of 89. Mr. Parnell, later in the evening, accused Mr. Chamberlain of making use of the Irish Party on his entrance into the House to serve his own ends, and of betraying Cabinet secrets when he became a Minister. Mr. T. P. O'Connor capped this by calling the right hon. gentleman, "Judas Chamberlain," a term which he withdrew by direction of the Chairman. From the answer Mr. Chamberlain made to Mr. Parnell the following evening—the right hon. member for West Birmingham preserving his characteristic calmness throughout—it was clear that Mr. Chamberlain had an interview with Mr. Parnell on the morrow of the lamentable Phœnix Park assassinations, and also held communications with him in 1885 concerning the projected National Council in Dublin. But there appeared to be nothing at all underhand, as alleged, in these communications. As for the determined contention of Mr. Parnell that the allegations against him and his colleagues should be clearly defined and restricted to criminal charges, and not be allowed to ramble over the political question, the Ministry firmly resisted the limitation, as being likely to hinder the elicitation of the full truth. But the Judges on the Royal Commission will, no doubt, exercise their own common-sense on this debateable point.

BIRTH.

On July 26, at Mount Felix, Walton-on-Thames, the wife of the late Walter Herbert Ingram, of 11, St. George's-place, S.W., of a daughter.

MARRIAGE.

On July 25, at St. Michael's parish church, Arlecdon, Cumberland, by the Rev. W. F. Ives, Vicar, assisted by the Rev. Richard Taylor, Vicar of Bromfield, Joseph Hugh, second son of Henry Jefferson, of Springfield, J.P. and D.L. Cumberland, to Elizabeth Ann, only daughter of the late Thomas Dixon, of Rheda, J.P. Cumberland.

DEATHS.

On July 23, at Vienna, Margaret Turner (*née* Rolland), widow of Thomas Marriott Tatlock, aged 75 years. Friends please accept this intimation.

On July 27, suddenly, at Bushey, Herts, Lorenz Herkomer, beloved father of Professor Hubert Herkomer, in his 74th year. Friends please accept this, the only intimation.

On Friday, July 27, 1888, at 25, Argyll-road, Kensington, London, W., Ann, wife of Alexander John Ellis, Esq., F.R.S., F.S.A., of Brooklands, Alcombury, Huntingdon, and second daughter of the late John Clervaux Chaytor, Esq., of Spennithorne Hall, Bedale, Yorkshire.

DR. DE JONGH'S

KNIGHT OF THE ORDER OF LEOPOLD OF BELGIUM

KNIGHT OF THE LEGION OF HONOUR

LIGHT-BROWN COD LIVER OIL

Incontestably proved by Thirty Years' Medical Experience to be

THE PUREST, THE MOST PALATABLE, THE MOST DIGESTIBLE, AND THE MOST EFFICACIOUS

IN CONSUMPTION, THROAT AFFECTIONS, AND DEBILITY OF ADULTS AND CHILDREN.

SELECT MEDICAL OPINIONS.

Dr. PROSSER JAMES,

Lecturer on Materia Medica, London Hospital.

"DR. DE JONGH'S Oil contains the whole of the active ingredients of the remedy, and is easily digested. Hence its value, not only in Diseases of the Throat and Lungs, but in a great number of cases to which the Profession is extending its use."

JOSEPH J. POPE, Esq., M.R.C.S.,

Late Staff-Surgeon, Army, India.

"The value of 'hydro-carbons' in all debilitated states of the system is now becoming thoroughly recognised. DR. DE JONGH'S Oil places in everyone's reach a reliable and valuable remedy."

Dr. THOMAS NEDLEY,

Physician to the Lord Lieutenant of Ireland.

"The most uniformly pure, the most palatable, and the most easily retained by the stomach, is DR. DE JONGH'S Light-Brown Oil. I have habitually prescribed it in cases of Pulmonary Consumption, with very beneficial results."

LENNOX BROWNE, Esq., F.R.C.S.E.,

Senior Surgeon, Central London Throat Hospital.

"The action of DR. DE JONGH'S Oil has proved, in my own experience, particularly valuable in many cases of Weakness of the Singing and Speaking Voice, dependent on Bronchial or Laryngeal Irritation."

Sold ONLY in Capsuled Imperial Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; by all Chemists and Druggists.

THE NAVAL MANŒUVRES ON THE COAST OF IRELAND: SKETCHES BY OUR SPECIAL ARTIST WITH THE BLOCKADING SQUADRON, BANTRY BAY.

OUR NOTE BOOK.

BY JAMES PAYN.

It is a sad thing to contemplate, but it is almost certain that novelists who write their stories for serial publication will not live to finish their last one. A very few indeed conclude their work before the publication is begun, and are so far independent of fate; but the common practice is the other way. The hands of the popular author are too full of work to allow him to take such a precaution. I knew a magazine publisher of prudent habits who would never permit his editor to accept a serial that was not finished; "I dinna care how beautifully it is written," he used to say; "the man may dee." His remark has been only too well justified by results. Thackeray, Dickens, Mrs. Gaskell, all died leaving their last serial unfinished. This is one of the things, one would imagine, that not only can't be helped, but can't be remedied. The resources of civilisation, however, in literature, as in everything else, are greater than they used to be. Attempts to finish what another hand has begun have, indeed, been often made and failed. "Christabel," for example, is not supposed to have been so satisfactorily terminated by a living poet as it was commenced by a dead one; but there are signs that this difficulty may eventually be surmounted. At all events the plot of a famous novelist, which his hand was not permitted to evolve, has been of late discovered and disclosed by another author. "The True History of Edwin Drood," by Mr. Proctor, is the first satisfactory attempt with which I am acquainted, to rescue a literary secret, as it were, from the very tomb. It is a very commendable little work, this "loving study of Dickens' half-told tale," and written in a very different spirit from that which generally belongs to such productions; and from the success that will no doubt attend its publication there is much to be hoped—and also feared. To the sensitive author it will certainly add a terror to death to reflect that his last book is going—in however workmanlike a style—to be finished for him; but, on the other hand, his readers will be released from the tenterhooks of expectation, to which they would otherwise have been condemned for ever; and (since his "deeing" will not now be of such importance) his publisher will be gratified. I foresee the advent of a new industry: there will be literary persons who will not go "beyond their lasts" by pretending to be novelists proper, but (as in the regular boot trade) will be "finishers" only. Just at first they may take a little more time than is quite convenient—we can't expect to see "novels finished while you wait," as heels and soles are promised in the shoe-shops—but the inconveniences now resulting from the demise of a novelist "in harness," with his plot only half disclosed and his characters undeveloped, we may reasonably hope will be remedied.

The attempt to conciliate bullies and scoundrels is a great folly, and arises from our ignorance of human nature. They never attribute it to any other cause than our own weakness, and every fresh indulgence only convinces them we are more and more afraid of them. Yet in these modern times we are always falling into this error. The last example of it has occurred in Finland, where the representative of a "County family," after a life (to put it mildly) of great laxity, has left all his property to the Devil. The "intention of the testator" was only too obvious (he wanted to make friends with the person he feared), but the bequest is objected to by his relatives. Among all the queer records in our Doctor's-commons there is nothing so strange as this. What legends in years to come will not this will give rise to! How very much haunted that otherwise "eligible" landed property is sure to be! It is not very likely that the sayings of Douglas Jerrold were familiar to this Finnish (but far from finished) gentleman, yet one of them may well have suggested this eccentric disposition of his property. A spendthrift was boasting to the wit, of the property he had once possessed, but which he had so magnificently dissipated. "I had thirty thousand pounds at one time," he said, "but it 's all gone to the Devil." "Ah, then you 'll get it again," was the dry reply.

Not content with establishing a Home for the Ugly, the Great Republic, in the person of one of its female citizens, has taken it in hand to do away with ugliness in her own sex altogether. Ladies go to her to be made plump or slim; to obtain rounded charms; to get rid of rounded shoulders; and when their eyes, or the surroundings of their eyes, are (like young Bailey's) "a leetle redder than they could wish," to get that little matter remedied. She asserts that there is no excuse for a woman being ugly if she will only follow her regimen. This is all very well, but why has she not a word of advice for us poor men? Madame De Staël, indeed, said of a very plain gentleman, "that he abused man's privilege of being ugly" as if, as a general rule, it didn't signify how we looked: but this is surely not so. Beauty even in a male has been found to be of considerable value. Parthenopæus was so charming to look upon that if his helmet was up in battle no man (worthy of the name) would strike at him: a considerable "pull" in an age when everybody was fighting. Antinous had such an agreeable expression that the Emperor Adrian (who himself was wanting in that respect) caused the current coin to be stamped with his effigy instead of his own—a financial advantage which can hardly be over-estimated. Spurina was so very much "run after" by the fair sex that he destroyed his beauty on account of the endless "rows" that it got him into with husbands and fathers; and everyone knows how Edward IV., at fourteen years of age, got a double subsidy out of a rich widow for his wars in France, on account of his promising personal appearance. Under these circumstances—which could be corroborated, no doubt, by modern instances—I don't see why plain and "weedy" men should not have something done for *them*. What is sauce for the goose should be sauce for the gander; the same remedies could surely be used for both sexes. The ladies, it seems, have to wear braces instead of corsets, so we have something in our favour to start with; the too pale lady has a bottle of claret per diem, which would also suit us very well. "Sassafras tea" and "Iceland-moss lilies" do not seem quite so much in our line; but I don't see why some of us should not be made at least more presentable than at present. What a sensation we should make at the club after a week or two with a "beauty-doctor"!

Of the advantages of the type-writer, no one who has tried it can have any doubt; it is gradually taking its proper place in business houses, and will eventually cheapen even law. It seems strange, indeed—if we did not know that Government was a milch cow which no one thinks of sparing—that in the office of the Solicitor to the Treasury there are maintained at a considerable charge no less than ten copyists. The very best type-writing machine costs but £20, and can produce any amount of copies, infinitely more legible than any lawyer's clerk can make them. I would also respectfully call the attention of literary aspirants to the fact that writing difficult to read is not a passport to the favour of editors, and that MSS. (always "invaluable" when lost) can be duplicated by this simple process at a very small expense. The intelligence of those concerned in the production of the type-writer has discovered a single line wherein every letter of the alphabet occurs save one (and none twice), which is of great use to them in detecting anything amiss in the working of the machine—"A quick brown fox jumps over the lazy dog." The leaving out the h is probably a pretty compliment to the Londoner.

Lord Wolseley's admirable article on "Courage" has set people talking of that virtue. There have been as many disquisitions about what constitutes it as about what makes a true gentleman, and the difficulty in each case arises from

THE LATE SIR FRANK SOUTER, C.S.I., COMMISSIONER OF POLICE, BOMBAY.

moral considerations. The courage with which a man defends his own life cannot, for example, be compared with that with which he defends that of a woman or a child. The greatest villains on earth have "sold their lives dearly," and, indeed, quite at a fancy price. That we should find something to admire in their so doing is a proof perhaps (as Thackeray ventures to put it) that all men have something of the coward in them. It is difficult otherwise to explain the approbation that is bestowed upon some brutal ruffian for "dying game." We do not appreciate it in animals; the tiger is careless of danger, and difficult to kill, but the Hindoo villager (who knows most about him) does not applaud him on that account. Still, there is a natural tendency in us all to admire the man who holds lightly what is dearest to most of us, his life, and risks it, even if it be for no higher motive than his own gain. Only, he must be quite sure that he is conscious of his danger; if he were drunk, or mad, the spectators would feel no admiration for him. The Irish gentleman who sat on the very branch he was sawing from the tree, fell, we are all conscious (no matter what was the height) very far short of the hero. Only a few people, let us hope, of the thousands who throng to see the aeronaut at the Alexandra Palace drop a thousand feet from his parachute are actuated (like the Englishman in "The Wandering Jew," who attended the wild-beast tamer wherever he went) by the hope of a catastrophe. For courage of the baser sort, there has certainly been no public exhibition to compare with it; for the man is fully aware of his peril, and his peril is extreme. No ordinary danger is to be mentioned in the same breath. The risk of belonging to a forlorn hope is slight in comparison with it, and even the taking up a live bombshell and throwing it into somebody else's neighbourhood—a favourite amusement during sieges—mere child's play. If the motive were not "gate money," but some unselfish object (such as the endowment of a hospital) the feat would be almost heroic. It is deplorable, of course, from all moral points of view; but the attempts to belittle it are discreditable. Think of the man coming down the first hundred feet like a stone, because his umbrella wouldn't open! This has happened to many people in heavy rain, and given them a moment of supreme excitement; but there was not, in their case, a drop fall of nine hundred feet to come. Gracious goodness!

It is interesting to get at the back of the mind of a fellow creature, be it ever so dull: and I should like to know why the man killed the Bell-bird in the Zoological Gardens. This kind of mischievous idiot is rather rare, though not so rare (nor so valuable) as the Bell-bird. My impression is that fame—or notoriety, which is its substitute in such cases—was the motive, and not that mere idle brutality which caused the Ancient Mariner (old enough to know better) to kill the albatross. He had read (for he could read) that the bird was the only specimen in England, and in killing it, he thought he should be associated with its rarity, and get into the papers. The man who smashed the Portland Vase was actuated by the same feeling. In both cases, only a fine could, apparently, be inflicted; in the former one, most curiously—for from an artistic point of view the loss was little short of a national one—we are told, "A gentleman who was present in the police-court paid the fine." It seems, therefore, that there are not only "destructives" of this amazing kind, but sympathisers with them.

In Dr. Burgon, Dean of Chichester, we lose one of the most vehement of controversialists, and one of the kindest of men. If there needed an example to show that the *odium theologicum* is something quite extraneous to a man's nature, and can exist side-by-side in it with the tenderest feelings, his was a case in point. Though a celibate himself, his love of children was excessive, and was, of course, returned; and to see the little ones playing about that gigantic ecclesiastic was a spectacle at once pathetic and ludicrous. One of the last stories told of him was of his lying in wait—in full vestments, and on his way to the cathedral—to "jump out" upon some juvenile playmate whom he had seen coming, but who somehow got exchanged, on the way, for quite another person, with the most embarrassing results. Never was a good man more full of fun, nor dignitary more careless of convention. He had almost as large and humorous a collection of ecclesiastical anecdotes (for I have had the pleasure of hearing both narrators) as Dean Ramsey himself. One of the pleasantest—and an incident, I believe, which happened to himself—was in connection with the christening of an agricultural male child which its sponsors wished to be called "Vanus." "Venus!" he exclaimed, indignantly. "How dare you ask me to call it any such name? In the first place, it is not a man's name at all, but that of a most wicked and abandoned female." "Please, Sir, the child's grandfather was christened 'Vanus,'" exclaimed the godmother, very much alarmed. "What! do you mean to say he's got a grandfather called 'Venus'? Where *is* his grandfather?" The christening was suspended till he came—a poor old fellow bent double with rheumatism, years, and toil, and looking as little like Venus as can possibly be imagined. "Do you mean to tell me, my good man, that you were christened 'Venus'?" "Well, no, Sir," he coughed and stammered; "I was christened '*Syl*vanus,' but folks always *called* me 'Vanus.'"

THE LATE SIR FRANK SOUTER, C.S.I., C.I.E.

A meeting was recently held at the Northbrook Indian Club under the presidency of the Right Hon. Sir James Fergusson, M.P., for the purpose of raising a memorial fund in recognition of the services of the late Sir Frank Souter, Commissioner of Police, Bombay. A committee was appointed, with Sir Richard Temple, M.P. as chairman, to co-operate with the committee already founded in India for the same purpose; and at the close of the meeting about £350 were subscribed. Sir Frank Souter, who died at Ootacamund, Madras Presidency, on June 4, had gained a deservedly high reputation for his police administration in Bombay during twenty-four years, and was popular both among Europeans and natives. To persons from this country who visited India, his courtesy and hospitality were well known. In November, 1875, he received the honour of knighthood at the hands of the Prince of Wales. He repeatedly received the commendations of the Bombay Government for his services; and was specially thanked by the Government of India for his able conduct in investigating the charges against Mulhar Rao, Gaikwar of Baroda, in 1874, when that Prince was accused of instigating an attempt to poison the Resident, Colonel Phayre. Before coming to Bombay, Sir Frank Souter had greatly distinguished himself during the Mutiny, particularly in the capture of the Chief of Nurgoond, and of the notorious outlaw, Bhagoji Naik. On the latter occasion, he was officially reported to have been "first in and last out of the fight, and his escape was almost miraculous. His horse fell, pierced almost simultaneously with three bullets, and his tunic was also cut through with a sword, while engaged in one of the hand-to-hand combats." Sir Hugh Rose stated that his bravery fully entitled him to the distinction of the Victoria Cross. It may be said to have been hereditary, as his father, Captain Souter, of the 44th Regiment, saved the colours of that regiment in the first Afghan War. Sir Frank Souter died suddenly of heart disease at Ootacamund, where he had gone on short leave to recruit his health. The Governor of Madras, Lord Connemara, attended his funeral as chief mourner, accompanied by his staff and the principal members of Government. All classes in Bombay united in mourning for his death.

The lugger Seagull, of Lowestoft, went down on Aug. 4 off Scarborough in a gale, and her crew, nine in number, were all lost, although vigorous efforts to save them were made by the captain of a smack who witnessed the catastrophe.

The fifty-fourth High Court meeting of the Ancient Order of Foresters—the largest friendly society in the world—commenced, on Aug. 7, its week's deliberations, in the Townhall, Reading. There was a procession of friendly societies through the principal streets on Aug. 6, and in the evening a fête took place in honour of the High Court meeting.

Miss Letitia A. Walkington, Master of Arts of the Royal University, Ireland, has the distinction not only of being the first lady graduate in arts, but also the first to take a degree in laws, having passed most creditably, after private study, the examination for LL.B. just held at Dublin. About a dozen Irish ladies have passed the examinations for the degree of B.A.

The heavy rain of Aug. 1 greatly increased the floods in the low-lying parts of London and the Lower Thames Valley. The Great Eastern Railway suffered greatly, and traffic was much interfered with. The floods were especially severe at Romford.—The Lord Mayor has opened a fund for the relief of the distress in the Isle of Dogs and Poplar caused by the floods. About £5000 is required. The Court of Common Council has subscribed 100 guineas.

THE SILENT MEMBER.

Her Majesty's Ministers, in crossing the Solent to attend the Queen's Council at Osborne, will, in refreshing their sight with glimpses of the rich woodland verdure of the Isle of Wight, have a pleasant foretaste of holiday relaxation. The Recess is necessary to soften political asperities, and regain health and vigour. Envied by members of the Government was Mr. Gladstone, who anticipated the adjournment of Parliament by a week, and renewed his youth by breathing the pure air of Hawarden Park on the August Bank Holiday.

The Marquis of Salisbury, jaded more by Foreign Office interviews with the Ambassadors of the Great Powers than by lounges on the Ministerial bench in the House of Lords, is to seek the waters of recuperation, if not of Lethe, at Royat. And it is to be hoped that the hue of health will presently be restored to the worn and blanched faces of Mr. W. H. Smith, Mr. John Morley, Sir Richard Webster, and Mr. Joseph Chamberlain, by rest and recreation.

It is a notable fact that, whilst "the masses" and their eloquent advocate were revelling to their hearts' content in Bank Holiday fashion on the Sixth of August, "the classes" represented in the House of Lords were immersed in public business of the highest importance. Their Lordships were engrossed in the Local Government Bill, in the Committee stage of which Lord Salisbury exercised his powers with accustomed lucidity and emphatic force. Once again, let it be said, this admirable County Councils Bill of the Government is, though far from perfect, a measure the Ministry may well feel proud of, and be particularly thankful to Mr. Ritchie for having so skilfully steered it through the shoals of the Lower House. It will not only be of incalculable service to England and Wales and Parliament, which it will relieve of much local work which should be done in the localities concerned; but it paves the way for a reasonable settlement of the Home Rule grievances of Ireland, and likewise of Scotland, for Scotland also calls for Home Rule, if the drily, very drily, humorous Dr. Wallace may be accepted as the Parnell of North Britain.

The Members of Parliament Commission Bill—the measure to inquire into the charges brought by the *Times* newspaper against Mr. Parnell and his colleagues in the "Parnellism and Crime" pamphlet—has mainly occupied the time, and tried the patience, of the Lower House during the opening days of August. The Irish Nationalist members made a tough fight of it to restrict the investigation by the three Judges to the allegations directly laid at their doors; and on more than one occasion prolonged the sitting to close upon dawn. These protracted all-night sittings, revival of a custom that the Closure was supposed to have extinguished, will make the holiday interval that is to elapse between now and the autumn Session all the more welcome to the fagged Ministers of the Lower House, of whom Mr. Arthur Balfour continues to be the most serenely phlegmatic and philosophic, having a firm belief in the efficacy of his policy of restraint in Ireland.

FASHIONABLE MARRIAGES.

At St. George's Church, Hanover-square, on Aug. 1, the marriage of Lieutenant Horace Francis Kays, of the 74th Highlanders, with Miss Emily Colvin, youngest daughter of Sir Auckland Colvin, was solemnised in the presence of a large assembly. The ceremony was performed by Bishop Tufnell, Canon of Chichester, assisted by the Rev. Simon Fraser, uncle of the bride, and the Rev. Prebendary Moore, Chaplain in Ordinary to the Queen. Owing to the absence of Sir Auckland Colvin in India, the bride was conducted to the altar by her uncle, Mr. Bazett Colvin, late of the Indian Civil Service, and was given away by her sister, Mrs. Wollaston Groome. The bridesmaids were—Miss Colvin and Miss Ethel Colvin (cousins of the bride), Miss K. Elin, and Miss G. Oakes. The bride was also attended by two smart pages—Master Auckland Wollaston Groome (nephew of the bride) and Master John Crosbie (nephew of the bridegroom). Captain Frank Maxwell, of the 74th Highlanders, officiated as best man.

The marriage of Mr. David Dale to Miss Alice Milbank, daughter of Sir Frederick Milbank, took place on Aug. 2, at the parish church of Well, near Bedale, Yorkshire. The Bishop of Ripon officiated, and the bride was given away by her father.

The marriage of Mr. Adrian C. F. Hope, eldest son of Colonel Hope, V.C., and Miss Laura Troubridge, second daughter of the late Colonel Sir Thomas St. V. Hope Troubridge, Bart., C.B., A.D.C., took place on Aug. 2, at Hopton, Great Yarmouth. The bride was attended by six bridesmaids—Misses Amy, Violet, and Helen Troubridge, her sisters; Misses Evelyn and Olive Orde, her cousins; and Miss Laura Hope, sister of the bridegroom; and was given away by her brother, Captain Sir T. Troubridge, 60th Rifles. The bridegroom's best man was the Hon. Spencer Hylton-Jolliffe.

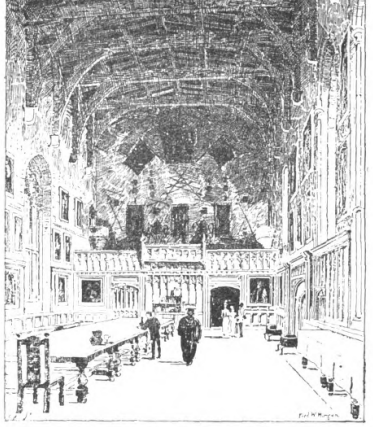
We are informed that a marriage has been arranged between Lord Robert Cecil, third son of the Marquis of Salisbury, and Lady Eleanor Lambton, third daughter of the late Earl of Durham, and sister of the present Peer.

Mr. Frederick William Maitland, M.A., has been elected Down Professor of Law at Cambridge University, in succession to the late Professor Birkbeck, Master of Downing College.

The Queen has conferred the appointment of Companion to the Order of the Bath on Lieutenant-Colonel and Colonel (having the local and temporary rank of Brigadier-General) Alexander Temple Cox, Madras Staff Corps.

The Elcho Challenge Shield, won by the Irish Eight at the late Wimbledon meeting, was handed over, on Aug. 4, at Olympia, to the executive of the Irish Exhibition, as its custodians, preliminary to its transfer to Dublin.

Under the presidency of Professor Gairdner, the fifty-sixth meeting of the British Medical Association, which now numbers upwards of 12,600 members, and has forty-five branches in the United Kingdom, India, and the Colonies, began in Glasgow on Aug. 7.



It was announced at the Wesleyan Conference at Camborne that the denomination had issued 7,507,337 publications during the year, from the profits of which the following grants were made:—The Annuitant Society, £3000; Home Missions, £500; Ireland, £100; Auxiliary Fund, £100; additional to Ireland, £100; and Auxiliary Fund, £100. The representative sessions for financial business began on Aug. 6.

Although the weather was not by any means favourable for out-door amusements on Aug. 6, very large numbers of Londoners turned out to enjoy the Bank Holiday. The places of resort outside London had numerous visitors, those close to town being to a large extent driven homewards early in the afternoon by rain. The various museums and exhibitions in town were well filled during the day, and in the evening the theatres were thronged.—About midnight on Bank Holiday a disastrous collision occurred at Hampton Wick Station, on the London and South-Western Railway, by which four persons were killed and many others more or less severely injured, of whom two have since died.

THE COURT.

The Queen drove out on Aug. 3 accompanied by the Hereditary Grand Duke and Princess Alice of Hesse. Fräulein Von Fabrice, General Gardiner, C.B., and Major-General Dennehy, C.I.E., had the honour of being included in her Majesty's dinner-party. Her Majesty went out on the 4th with Princess Beatrice and Princess Alice of Hesse. The Queen drove out on the 4th accompanied by Princess Louise (Marchioness of Lorne) and Princess Beatrice. Viscountess Melgund, Earl Cadogan, General the Right Hon. and the Hon. Lady Ponsonby, and Commander Poore (of her Majesty's yacht Victoria and Albert), had the honour of dining with the Queen and Royal family. On Sunday morning, the 5th, her Majesty and the Royal family, and the members of the Royal household, attended Divine service. The Hon. and Rev. F. Byng, M.A., Chaplain in Ordinary to her Majesty, officiated. In the afternoon the Queen drove out accompanied by Princess Beatrice and Princess Alice of Hesse. Earl Cadogan and the Hon. and Rev. F. Byng had the honour of dining with the Queen and the Royal family. Her Majesty, accompanied by Princess Beatrice, the Hereditary Grand Duke and Princess Alice of Hesse, drove to Kent House on Aug. 6 to congratulate the Marquis of Lorne upon his birthday. The Prince and Princess of Wales, with Princesses Louise, Victoria, and Maud of Wales, and Princess Louise (Marchioness of Lorne), and the Marquis of Lorne, visited the Queen and remained to luncheon. Her Majesty drove out in the afternoon accompanied by the Hereditary Grand Duke and Princess Alice of Hesse. Lieutenant-General Sir George Willis, K.C.B., arrived at Osborne, and had the honour of dining with the Queen and the Royal family. Captain the Hon. North and Mrs. Dalrymple had also the honour of being invited. Her Majesty went out on the 7th accompanied by her Royal Highness Princess Beatrice. Lieutenant King-Harman and Sub-Lieutenant Lees (of her Majesty's yacht Victoria and Albert) dined at Osborne, and had the honour of being received by the Queen in the evening.

Prince Albert Victor, who promised to visit Huddersfield on Aug. 7, on the occasion of the Yorkshire Agricultural Show, was unable to go, being confined to his room with a bad foot and forbidden to travel.

THE DINING-HALL OF DURHAM CASTLE, WHERE THE BISHOP OF DURHAM ENTERTAINED THE AMERICAN, COLONIAL, AND MISSIONARY BISHOPS.

The forty-fourth birthday of the Duke of Edinburgh was observed at Windsor on Aug. 6 by the ringing of the bells of St. George's Chapel and the firing of Royal salutes in the Long Walk.

Princess Mary Adelaide and the Duke of Teck, and Princess Victoria and Prince Francis, have returned from visiting the Marquis and Marchioness of Abergavenny at Bridge Castle, Sussex.

The Duchess of Albany visited the People's Palace in the Mile-end-road, on Aug. 4, to open a loan exhibition of paintings and to inaugurate an extensive autumn fête. Her Royal Highness presented the prizes awarded at the late competition of members of the People's Palace gymnasium.

The Duke of Cambridge left Gloucester House, Park-lane, on Aug. 7, for Kissingen, where he will stay for a few weeks.

MUSIC.

At present there is scarcely anything to record of London musical performances; the close of the season, and the termination of Mr. Augustus Harris's first lesseeship of the Royal Italian Opera, having left a comparative vacuum in London music—one, however, of brief duration, Covent-Garden Theatre reopening (as previously recorded) on Saturday evening, Aug. 11. We have already given an outline of the extensive arrangements made by Mr. W. Freeman Thomas, the lessee, for his seventh annual series of Promenade Concerts, the opening of which must be noticed by us hereafter.

The Irish Ballad Concerts (in the new Concert Hall adjoining the Irish Exhibition, Olympia) have been successfully continued under the direction of Mr. Ludwig.

The Alexandra Palace directors announced the first Baden-Baden concert for Aug. 2; the Crystal Palace having arranged a grand promenade concert for the Bank Holiday, the orchestra of the institution, conducted by Mr. Manns, and three military bands co-operating in the programme. Concerts were also announced, on the afternoon and evening of the same date, in association with the Anglo-Danish Exhibition, at the Royal Albert Hall.

The next important specialty to claim attention will be provincial, not metropolitan—the Birmingham Triennial Festival, which will open on Aug. 28, Dr. Hans Richter being (as at the celebration of 1885) the conductor. Further details of the arrangements may be more accurately given on the nearer approach of the festival, some changes having already been made from previous announcements.

The 165th festival of the Cathedral Choirs of Hereford, Gloucester, and Worcester will open on Sept. 11, the special services taking place on Sept. 9. Here also we reserve details until the nearer approach of the celebration, and the issue of the latest programmes.

At the opening of the Centennial Exhibition at Melbourne, on Aug. 1, Mr. F. H. Cowen's "Song of Thanksgiving" was produced, conducted by himself. The work, which was composed specially for the occasion, is to be given on the third day of the forthcoming Hereford Festival, Sept. 13.

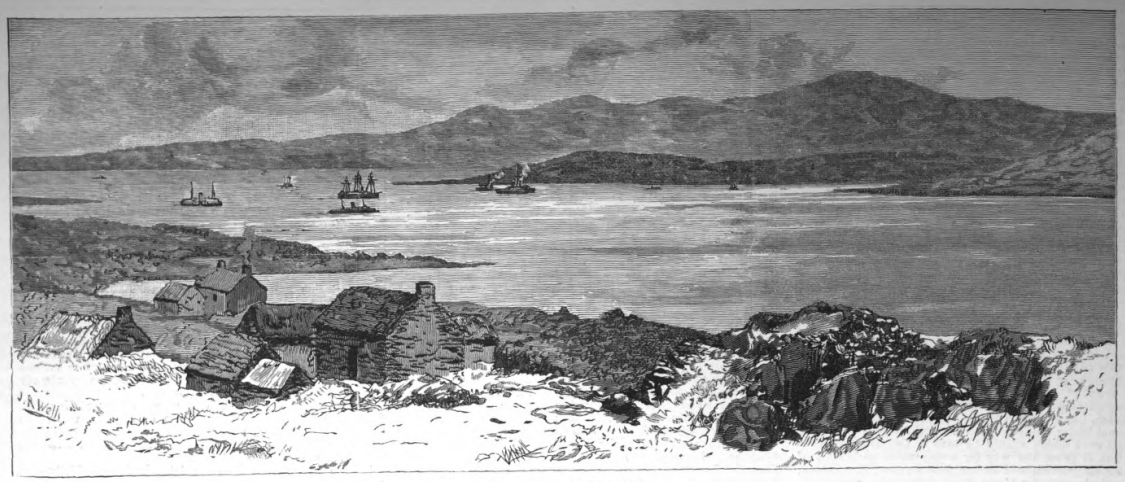
The distribution of prizes to students of the London Academy of Music took place recently, at St. George's Hall, Langham-place. The presentation was made by Signor Bevignani, the eminent conductor. Dr. Wylde, Principal of the institution, delivered an appropriate address to the students, and drew special attention to the successes obtained by former pupils of the Academy—Miss M. Macintyre, on the stage of the Royal Italian Opera; and Miss Maggie Okey (now Madame De Pachmann), as a pianist of the first rank. The proceedings of the day included a concert of vocal and instrumental music, in which pupils of the Academy contributed effective performances.

Mr. Henry Baumer, who died recently at the age of fifty-three, gained distinction at the Royal Academy of Music, and became favourably known as a pianist and teacher of his instrument, for which he produced some successful compositions.

AMERICAN AND COLONIAL BISHOPS AT DURHAM.

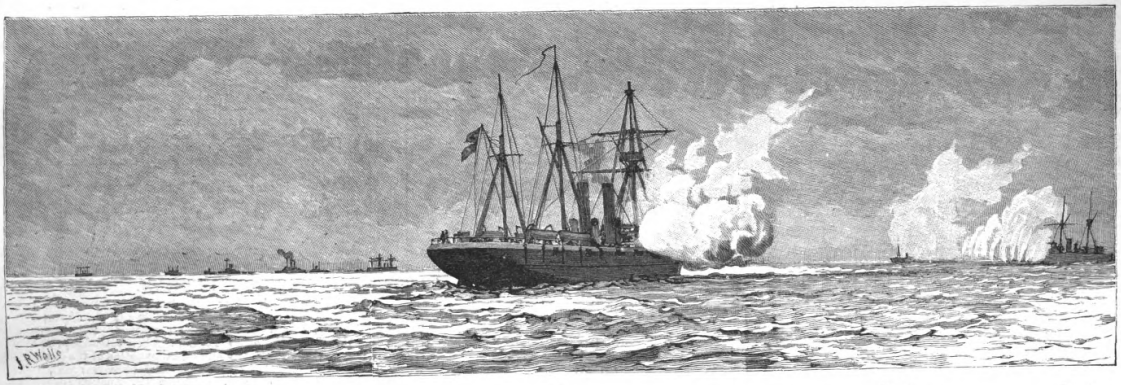
After the late Pan-Anglican ecclesiastical Congress at Lambeth, Durham, by an invitation from the Bishop of the diocese (Dr. Lightfoot), was visited by about sixty of the American, Colonial, and Missionary Bishops. They attended a special service at the Cathedral; and, at a Convocation of the Northern University, a number of distinguished prelates received the honorary degree of D.D. One was Dr. Austin, Bishop of Guiana and "Metropolitan of the West Indies," who has laboured in that colony forty-six years. Another was Dr. Crowther, Bishop of the Niger, the first Bishop of the Negro race. Rescued, when a youth, from the grip of the slave-trader by a British man-of-war, he became the earliest student in the College of Fourah Bay, and a clergyman of the Church of England. The right reverend prelate, who is above four-score years of age, was very cordially welcomed by the whole assembly. In the evening, the American and Colonial visitors, and many of the clergy of the diocese, dined in the hall connected with University College, Durham, where Convocations are usually held. Our View of this fine room, which is 101 ft. long and 36 ft. wide, is from a drawing made by Mr. Fred. W. Morgan.

At a meeting of the Sheffield Cutlers' Company, on Aug. 7, Mr. S. E. Howell, of the firm of Howell and Co., Brook Steel Works, Sheffield, was elected Master Cutler.



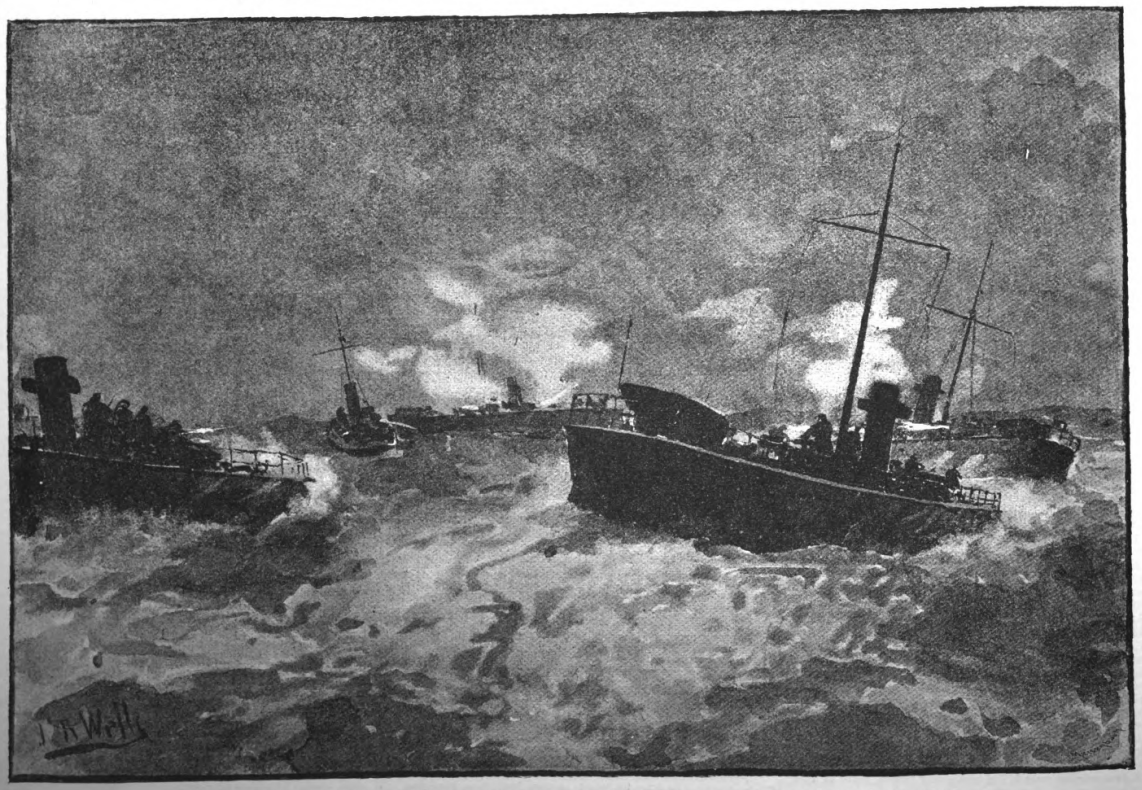
The Rev. R. P. Browne, second master of King William's College, Isle of Man, has been elected head-master of Kendal New Grammar School, in place of the Rev. W. J. Constable, who has obtained a mastership at Uppingham.

The Queen's swankeeper and the officials of the Vintners' and Dyers' Companies finished on Aug. 4 their annual voyage up the Thames for the purpose of marking the swans between London Bridge and Henley. The trip occupied several days, and resulted in the capture and "nicking" of 343 old and young birds, 178 of which are claimed by her Majesty, 94 by the Vintners' Company, and 71 by the Dyers' Company.



The trial of eight youths, named Gellatly, Elves, Cole, Lee, Graefe, Henshaw, Govier, and Duling, charged with the wilful murder of Joseph Rumbold, in Regent's Park, was continued at the Central Criminal Court, before Mr. Justice Hawkins, on Aug. 2. Gellatly, who is but eighteen years of age, was found guilty, with a recommendation to mercy, and was sentenced to death. The other prisoners, who had pleaded guilty to riot and assault in connection with the murder, were brought up on Aug. 4 and sentenced to terms of imprisonment varying from fifteen to six months.

It is announced in the *Gazette* that the Queen has appointed Lieutenant-General Sir Henry D'Oyley Torrens, K.C.B., to be Governor and Commander-in-Chief of the Island of Malta and its Dependencies. The appointments of Mr. Henry Dudley Barnham, now British Vice-Consul at Smyrna, to be her Majesty's Consul for Eastern Soudan, to reside at Souakim, and of Mr. George Pollard Devey, now British Vice-Consul at the Dardanelles, to be her Majesty's Vice-Consul at Van, are gazetted.



A Memorandum issued by Lord Wolseley from the War Office states that the Commander-in-Chief has recently had before him reports on field-firing at home, in India, and the Colonies, "and is satisfied with the improvement manifested, particularly in India, in carrying out these practices. His Royal Highness is of opinion, however, that with the facilities that at present exist in many stations and commands (this applies more especially to the United Kingdom) much more may still be done by introducing into the field-firing certain features incidental to the attack and defence of positions, in order to give greater air of reality to the practice than has hitherto been the case." The general ideas for future guidance are indicated in detail, and it is pointed out that, when possible, the three arms should be employed, the Artillery firing blank if shell cannot be used with safety.

BEREHAVEN, BANTRY BAY.

THE IRIS AND SEVERN, OF THE "B SQUADRON," ENGAGING A BLOCKADING SCOUT OUTSIDE BEREHAVEN.

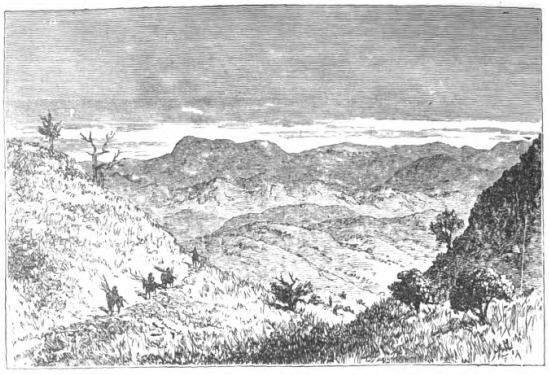
SCHLOSS BRAUNFELS, THE ANCESTRAL RESIDENCE OF THE PRINCES SOLMS, GERMANY.

FESTIVITIES AT MUNICH.

The Munich Centenary Jubilee Festival, celebrating the birth of King Ludwig I. of Bavaria, has recently taken place. The ceremonies and sights extended from the display of fireworks, on the evening of July 30, to the illumination of the city, on the evening of July 31; they culminated in the grand procession on the morning of the second day. Numerous extra trains had brought in a great many strangers from distant parts. The fireworks were arranged by the Roman pyrotechnist, Cavaliere Luigi Papi, and by the architects Cavaliere Gioachino Ersoch and Virgilio Ribacchi. They were very splendid, and interesting by the luminous illustrations of the architectural creations of King Ludwig II., especially the Walhalla and the Hall of Fame, near Ratisbon or Regensburg. One of the sights of the evening was also the multitude parading the streets with Chinese lanterns. The procession on the 31st continued from nine o'clock till half-past one. It presented two features of interest—the progress of the arts of peace from early times to our own, with illustrations from various countries, especially Oriental; and illustrations of the architectural and other designs of King Ludwig I.

It would be impossible in a few words to convey an idea of this vast procession, as seen from a window at the Bureau of the Gendarmerie in the Odeon's-platz. Of course, the art-element predominated. The triumphant cars, some of great beauty, had been designed by Munich artists; also the costumes, primitive, rococo, and Oriental. Another feature was the absence of militarism and the large representation of the industrial and agricultural elements. The soldiers were only represented by their bands, and there was a large sprinkling of dress-coats, white neckties, and cylinder hats, that showed the civilian element. There was, however, a great variety of tasteful costumes, in the students' uniforms of different corps, the wild attire of Huns and ancient Germans, the graceful maidens in tasteful fancy dresses, and the Orientals, adding a Mikado effect to the scene.



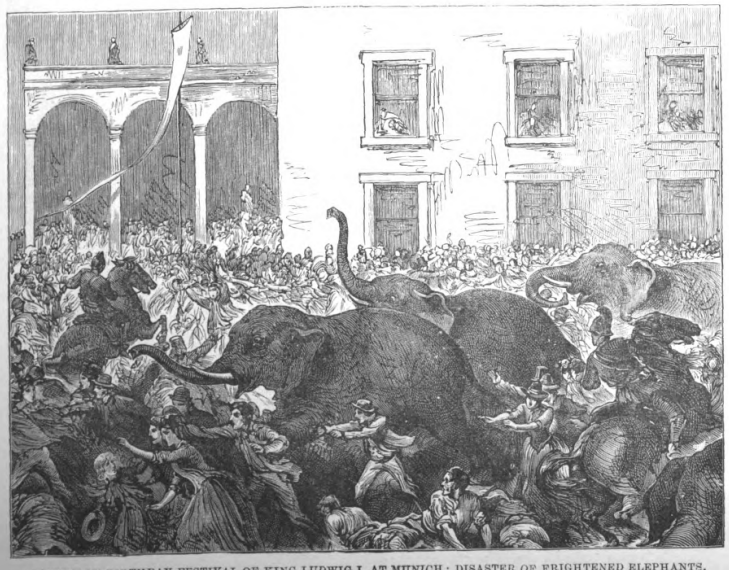
One of the most interesting features was the car bearing the golden cradle of King Ludwig I., heralded by one hundred singing children in white, mounted and escorted by a number of blooming maidens, many draped in the elegant attire of the time of Louis XVI. of France. This car was the real Jubilee Car of the procession; but many others, representing the Arts and Sciences and the Art-creations of the King, were highly poetical in conception and finished in execution.

Another very striking adjunct of the procession was the representation of mechanical art and iron-working, with a monstrous dragon covered with many-coloured scales and ejecting smoke and steam from its mouth. Unfortunately, this really clever device was the cause of a catastrophe that marred the peaceful course of this day's pageantry. The procession marched from the Karl's-Thor, by the Residenz, to the Ludwig's-strasse, down which it doubled back into the Odeon's-platz, and went by the Brienner-strasse to the Maximilian's-platz. Eight elephants, some recently arrived from Ceylon, belonging to Hagenbeck's menagerie, were enlisted and marched with their keepers in the Oriental department. In doubling back in the Ludwig's-strasse, these elephants unfortunately came opposite the steam-dragon, and, taking alarm, broke their chain bindings, and under the impression of terror dashed through the panic-stricken crowd, which increased the mischief by striking and throwing at the elephants thus driven into uncontrollable fright. The animals backed into the Wittelsbacker-platz, rushed down the Brienner-strasse, on to the Hof Theater, and to the Mint, upsetting people and cabs, breaking through doors, and dashing into all manner of strange places. One boy of sixteen was seized by the trunk of an elephant, and hurled into the river Isar, with no further injury. An old gentleman in a small house, hearing the elephants breaking into his premises, got on the roof and kept shouting "Help! help! the elephants are at me!" At length, about five o'clock, most of the beasts, having got into a cellar, being perhaps keen after beer, like their Bavarian pursuers, were eventually secured. It is said that if the people had kept cool, and had not driven the animals wild by an onslaught on them, little misfortune would have occurred. As it was, thirteen persons were seriously injured and four are dead, including a circus-rider, a young lady named Wagner, who was thrown from the palanquin of an elephant and broke her neck.

The first international chess tournament ever held in the provinces began on Aug. 6, at Bradford, under the auspices of the British Chess Association, in co-operation with the amateurs of Yorkshire. The eighteen competitors in the Masters' Tournament were received by Alderman Morley, the Mayor of Bradford, at the Alexandra Hotel.

THE BRITISH TROOPS IN ZULULAND.

The necessity for again sending military reinforcements to South Africa, at the disposal of the High Commissioner of the British Government, has arisen from a civil war among the Zulu nation, formerly ruled by King Cetewayo. The native feudal chiefs, or petty Kings, between whom that portion of the country was divided which was not annexed to the immediate British dominion, soon lost their authority, except one, named Usibepu, who professed loyalty to the British protectorate, and with whom Dinizulu, the son of Cetewayo, obtaining the assistance of certain Dutch Boers by ceding to them land for a pretended new Dutch Republic, waged a war costing many lives and much distress to the people. Usibepu has latterly been worsted, and the British Government—not that of Natal but the Imperial High Commissioner—has ordered General Leicester Smythe, commanding her Majesty's forces, to put down the usurper Dinizulu, treating him as a rebel. The British camp, on June 19, was established at a place called Entonjaneni, overlooking the plain of Ulundi, the scene of Cetewayo's final defeat by Lord Chelmsford's army in 1879, and the valley of the White Umvolosi river. A correspondent, Major C. H. Atchison, R.A., has favoured us with a Sketch of the view from near the camp, which will remind our readers of some other views of Zululand published during the memorable Zulu war nine years ago. Entonjaneni is distant fifty-four miles from Etshowe, near the eastern seacoast, which place was held at that time, with great fortitude, by a small garrison of British soldiers and sailors under Colonel Pearson (now General Sir Edward Pearson), closely beleaguered by an immense force of the enemy, and suffering from want of provisions and ammunition. It is now the basis of military operations in Zululand. The troops first assembled at Entonjaneni were drawn from the garrison of Pietermaritzburg, in the adjacent colony of Natal; and the detachment of Royal Artillery, commanded by Major Atchison, performed the distance, 195 miles, in eleven marches. There is an advanced post of the British force at Nkonjani, twenty-two miles further to the north-east. It is said that Dinizulu is now at Cesa, on the northern frontier of Zululand, with only two thousand followers, mostly belonging to alien tribes. He certainly does not command the general support of the Zulu nation, and may either take flight or surrender, instead of putting the British expedition to the trouble of pursuing him.



VIEW FROM BRITISH CAMP AT ENTONJANENI, ZULULAND.

The match at Hastings between the Australians and an Eleven of England terminated on Aug. 4 in a victory for the colonists by an innings and 27 runs.—At Lord's a match was played by the M.C.C. and Ground, who scored 71 and 66, against a Scarborough Eleven, who made but 29 and 50 in their two innings.

In commemoration of the freedom of the Scheldt, fêtes will be held at Antwerp from Saturday, Aug. 11, throughout the following week. On the night of Tuesday, Aug. 14, a Venetian water-fête upon the Scheldt has been organised by the Chamber of Commerce of Antwerp, comprising a naval procession and general illumination of the river. In connection with these celebrations return tickets have been arranged by the Great Eastern Railway at reduced rates, via the Harwich route, available from the opening to the close of the festival.

The annual meeting of the Royal Yacht Squadron was held on Aug. 6, at the Castle, Cowes. The Prince of Wales, the Commodore, presided, and there were over sixty other members present.—The Cowes week opened with a couple of races in connection with the Royal London Yacht Club, whose Solent station is on the Cowes Parade. The roadstead was studded with a magnificent fleet of sailing and steam yachts, which were dressed from stem to stern in honour of the Duke of Edinburgh's forty-fourth birthday.—The Royal Yacht Squadron race for her Majesty's cup took place on the 7th off Cowes, when Moina (Captain Bainbridge's cutter) won.

CENTENARY BIRTHDAY FESTIVAL OF KING LUDWIG I. AT MUNICH: DISASTER OF FRIGHTENED ELEPHANTS.

SCHLOSS BRAUNFELS.

Braunfels, the seat of the Princes Solms, is one of the most ancient and picturesque castles in Germany. It is scarcely two hours' journey by rail from either Coblenz, Ems, or Frankfurt. Tourists in the Rhineland may take the Lahn Valley route, by Ems, Braunfels, and Giessen, to Frankfurt, and may return by the Rhine.

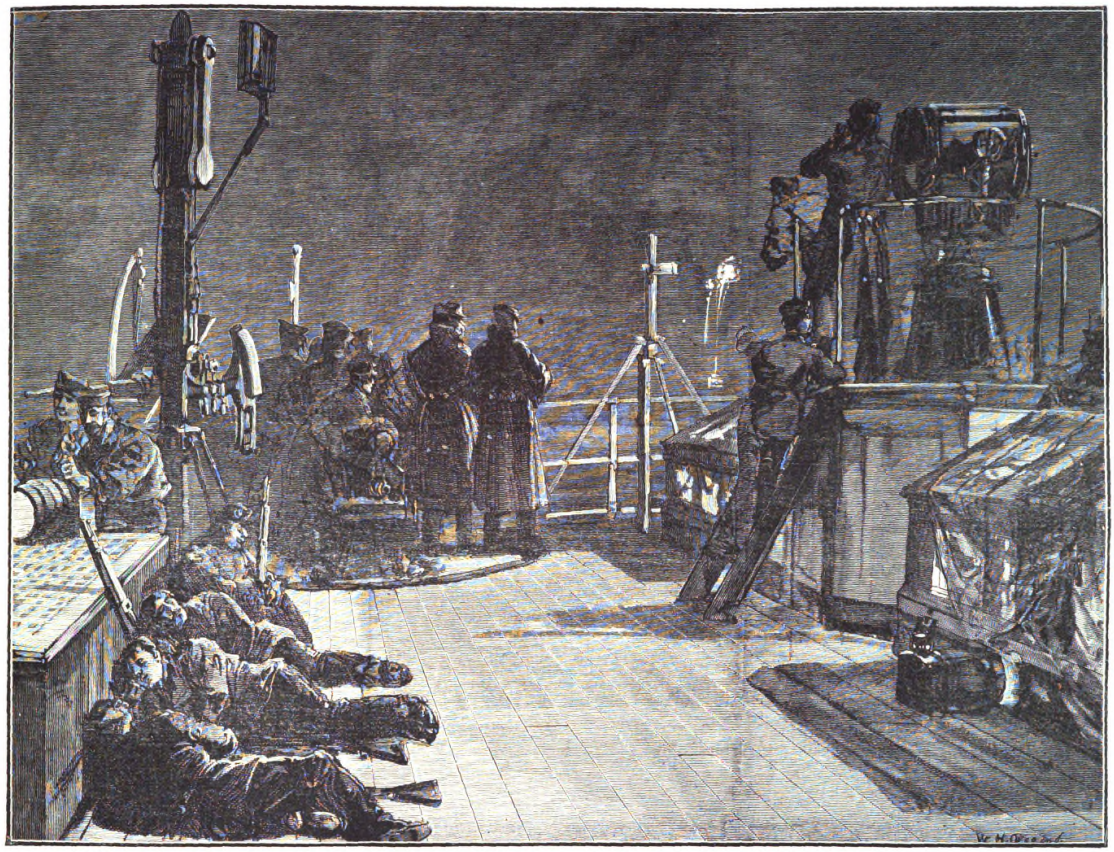
The residence of the ancient family of Solms has much historical interest, especially to English people. So far back as 1269 we find the English Earl of Cornwall, elected King of Germany in 1257, connected with this house by his marriage with the beautiful Countess Beatrix of Falkenstein. The talented Countess Amalia Solms, daughter of Count John Albert, was grandmother of King William III. of England, being the wife of Prince Henry of Orange. But it is to the deeds of Count Henry Solms that the family can refer with pardonable pride. He landed with Prince William of Orange at Torbay, in 1688, and was among the Prince's trusted captains for many years. He was present at the relief of Derry; and, at the head of his famous regiment of infantry—Solms' Blues, 2000 strong—was the first to attack the enemy at the battle of the Boyne, on the morning of July 1, 1690. Although repeatedly requested by William to take service in the English Army, he steadfastly refused, and was killed in action, as General in the Dutch service, at the battle of Neerwinden, on July 19, 1693.

The almost total destruction of the castle by fire in 1679, and of its ancestral archives, was a serious loss to the family; but copies of these documents had been preserved. The rebuilding was commenced immediately, and was continued at intervals between the feudal wars of those times; but it was left for the present head of the house, Prince George Solms, to restore the Schloss to its former grandeur. The completion of this task only took place in 1885. The original plan of Schloss Braunfels was adhered to; and it now stands, on its foundation of "brown rock" (the origin of the name), a faithful copy of the castle before its destruction in the seventeenth century.

The view of the castle, as seen from the beautiful road leading through the deer-park from the station, is most effective. It is beheld at a distance, standing out against the skyline, with the gabled roofs of a small part of the old town, beech and oak forests surrounding them. Arrived at the castle, and standing on the old ramparts, the visitor sees beneath him and close around him woods of gnarled oak, beech, and waving pine-trees; and, in the distance to the north, the Westerwold; to the south, the Taunus mountains, with their peaks ranging one above the other, which make a background such as Nature alone, in her wild grandeur, can supply. Within the building, however, a visitor to Braunfels, or one merely passing through, will find more to interest him. The numerous rooms and halls are arranged in exquisite taste, showing the styles of different periods, with fine old delicately carved oak, china, many-coloured tapestries, antique silver, curiously patterned laces and embroideries; amongst the latter is the wedding-dress of St. Elizabeth of Thüringen, made at the nunnery of Altenburg, a few miles distant from Braunfels, and the property of the Solms family. The Baronial Hall, with its weird arched roof, and the collection of the old armour adorning its walls, demands a careful inspection. The picture galleries are worth much attention, containing, besides many other portraits, those more intimately connected with the history of England, such as the picture of Count Henry Solms and his twelve trusty Captains. There are various modern works of art, among which are the realistic paintings of wild animal life by Deiker.

One of the reasons, perhaps, why Braunfels is, or, rather, was, so little known to travellers was the want of good accommodation in the town. But now a first-class establishment, the Schloss Hotel, with every modern comfort for a lengthened sojourn, has been erected. This place is recommended for its bracing air, calculated to restore one's health; while the beautiful walks through the woods, and excursions to the interesting places in the neighbourhood within pleasant driving distance, will occupy the time, with some excellent fishing on a stream many miles in length, and other sport, which can easily be obtained. Prince Albert Solms's kennels are within walking-distance, and people interested in dogs should not fail to visit them. They are probably the largest on the Continent, and contain as fine a collection of sporting and other dogs of the purest strains, nearly all noted prize winners, as can be seen anywhere in England. Braunfels, with all these attractions, should have many English visitors in the present and future seasons.

The Earl and Countess of Aberdeen entertained on Aug. 6, at Dollis Hill, 350 residents of the Homes for Working-Girls in London. Dr. George Macdonald, Mr. John Shrimpton, and Captain Sinclair were also present.



During the past seven months 173,961 emigrants of British origin left the kingdom, of whom 124,182 went to the United States, 25,353 to British North America, and 16,123 to Australasia. In the first seven months of 1887 the number was 169,555, of whom 124,311 were for the United States, 21,141 for British North America, and 17,922 for Australasia. During the past month the number was 19,134, as compared with 29,938 in July, 1887, 2,524 of this decrease being in the emigration to the United States.

THE NAVAL MANŒUVRES.

Our Special Artists, Mr. W. H. Overend and Mr. J. R. Wells, respectively accompanying, on board H.M.S. Northumberland and H.M.S. Hercules, the "A squadron," under command of Vice-Admiral Baird, and the "B squadron," commanded by Rear-Admiral Sir George Tryon, have supplied us with many sketches of the contest in manœuvres and tactics of naval warfare, on the south-west coast of Ireland. It has been explained to our readers that the "B squadron" represents an enemy's fleet which has occupied the western and northern ports of that island, especially Bantry Bay, in the county of Cork, and Lough Swilly, in Donegal, with the intention of attacking Great Britain, and of destroying British vessels at sea. The "A squadron," at the beginning of hostilities on July 24, blockaded the enemy's ships in both these harbours; the operations on the north coast being conducted by Rear-Admiral Rowley, with his division of the "A squadron" from the Isle of Arran, Firth of Clyde, investing the position of Rear-Admiral Fitzroy, who was in Lough Swilly with his division of the "B squadron." Our present Illustrations, however, are confined to the blockade of Bantry Bay by the main division of the "A squadron," immediately commanded by Admiral Baird, and Sir George Tryon's defence of his position with the "B squadron," first division, stationed at Berehaven, where it is sheltered by a small island near the north shore of Bantry Bay, called Bear Island. That shore extends to a promontory fifteen miles further westward, opposite Dursey Island, in the open Atlantic; its most southerly point is Black Ball Head, well outside of Bantry Bay. The mainland shores of Cork, again deeply penetrated by Dunmanus Bay, terminate to the south at Brow Head, near the little fishing-port of Crookhaven, and within sight of Cape Clear, which is not part of the mainland, but another small island, well known to American mail steam-ships on their way to Cork Harbour. An enemy's fleet, once permitted to get out of Berehaven with impunity, might cover the whole south-western coast of Ireland, secure the harbours of Kinsale, Cork, and Queenstown, and possibly Waterford, to place troops where they would be available for an invasion of the West of England and South Wales, or to force an entrance up the Severn. The blockade of Berehaven is, therefore, in the case supposed, a necessary part of British defensive operations.

War was declared at noon on July 24. At that time the "A squadron," first division, was off the entrance to Bantry Bay. Several of the enemy's positions of observation had been seen at various points along the coast, as at Brow Head, between Bantry Bay and Cape Clear. The Admiral gave orders to the Active, Commodore Markham, to form an inner blockading squadron at the outbreak of hostilities, consisting of the Active, Rover, Mersey, Archer, and Collingwood. This squadron was reconnoitring the western entrance to Berehaven, when, as soon as war was declared, the ironclads steamed at full speed into Bantry Bay. Two of the enemy's cruisers, the Iris and the Cossack, were soon discerned on the look-out. As the squadron advanced in column of divisions, line ahead, the Admiral leading, the port line fire was opened with quick-firing guns on the enemy, who held his ground, but did not return the fire. After a brief cannonade the squadron reversed its course, forming columns of divisions in quarter line. The Iris and her consort proceeded to follow at a respectful distance. In the afternoon the ironclad squadron again stood inwards to reconnoitre, the enemy's cruisers still remaining on the watch. The flag-ship advanced far enough to see the mastheads of several of the enemy's ships over the low ground of Bear Island. The Iris and Cossack then retired within the protected anchorage, having advanced as far as was considered prudent. Admiral Baird now made a signal to alter the course to seaward. As this manœuvre was being performed, two second-class torpedo-boats were observed making towards the fleet from the east. Fire was opened upon them with rifles and quick-firing guns from the whole squadron, and in less than two minutes they retired out of range.

The conditions of warfare laid down by the Admiralty

THE NAVAL MANŒUVRES: BLOCKADE OF BEREHAVEN.—SIGNAL BY TWO ROCKETS FROM THE INSHORE SQUADRON TO THE ADMIRAL OUTSIDE.
FROM A SKETCH BY ONE OF OUR SPECIAL ARTISTS.

seem to place the blockading squadron at a great disadvantage. The Iris and Cossack could not in actual war have remained for so long as they did within range of the ironclad squadron without being destroyed; yet Admiral Baird was powerless to put them out of action, because the rules require that, in order to do this, he must remain for one hour continuously within 3000 yards of an enemy's ship. In the evening Admiral Baird's fleet was divided into two squadrons; the inner squadron, under Commodore Markham, taking up a position as near as was prudent to the enemy's anchorage, while the ironclad squadron remained some miles outside, both squadrons steaming slowly backwards and forwards across the mouth of Bantry Bay.

Next day, at eleven in the forenoon, the enemy—the "B squadron"—was observed steaming out with four battle-ships, the Hercules, Warspite, Ajax, and Hero; and three cruisers, the Severn, Iris, and Volage. The blockading squadron immediately began to manœuvre for the purpose of preventing his escape. As he steamed along outside Bear Island, the enemy opened fire from his broadside guns at a distance estimated on board the Northumberland as at least 7000 yards, but as this was 3000 yards beyond the limit fixed by regulations for the conduct of an action, his fire was not returned. Simultaneously with this somewhat futile display the Volage, supported by the Severn and Iris, was observed near the western entrance to the strait of Berehaven, evidently endeavouring to slip out if she could. The Mersey was at once sent to prevent her escape, and, if possible, to cut off her retreat. The former object was soon accomplished, as the Mersey opened fire as soon as she got within range, and the Volage was forthwith recalled by Admiral Tryon, who by this time was steaming back with his whole fleet to his anchorage at Berehaven. This position is in the narrow strait between Bear Island and the north shore of Bantry Bay. The eastern entrance was protected by a boom within which the Rupert, with torpedo-nets in position, was anchored head and stern. Outside the boom was an extensive mine-field. At the western entrance, but slightly eastward of Castletown, another line of mines was laid down, but there appeared to be no boom. The main body of the enemy's fleet was stationed in two lines about midway between the two mine-fields, the Hercules, Ajax, and Severn being next the mainland, and the Hero, Warspite, and Iris under Bear Island. The Volage, with the Cossack, Sandfly, and several torpedo-boats, occupied a position under Bear Island, near the western mine-field, and the Rupert was also supported by torpedo-boats stationed near the boom.

One of our Sketches is that of the officers on board Admiral Baird's flag-ship, on the night of July 24, observing a signal of two rockets apparently made from Commodore Markham's inshore squadron, to warn the Admiral that two of the enemy's torpedo-boats and one ironclad were coming out. This signal was afterwards believed to have been a feint made by the enemy, to harass and disturb the blockading fleet; as no ironclad did come out, but one torpedo-boat furtively approached H.M. Collingwood, of the inshore squadron. On being challenged, the reply from this torpedo-boat was "A friend," giving a false number, but without the pass-word; the Collingwood then opened fire, and the nocturnal intruder made off very quickly.

The torpedo-boats on both sides have been very active during the blockade. We have not space to relate all their achievements and encounters with each other; but our Artist with Sir George Tryon's "B Squadron," Mr. Wells, furnishes a sketch of the capture of two of Admiral Baird's torpedo-boats, on Friday night, July 27, off Black Ball Head, by four torpedo-boats running out from Berehaven. It seems, however, that Admiral Baird has denied the reality of this capture.

At length, on Saturday, Aug. 5, after various movements and counter-movements, the account of which may be deferred to form an explanatory narrative with the Sketches to appear in a future publication, the blockade of Bantry Bay suddenly came to end. It was broken through, on the preceding night, by Sir George Tryon's squadron, which was thereupon free, and might attempt either to enter St. George's Channel, the Severn, or the British Channel or to join Admiral Fitzroy to the north.

In the north of Ireland, also, the blockade maintained by Admiral Rowley at Lough Swilly has not been so effective as to prevent the ships from the squadron of Admiral Fitzroy escaping his vigilance, and running over to attack the Scottish coast. It seems that one of the "B Squadron," H.M.S. Calypso, which had eluded the blockade at Lough Swilly, captured Oban on Friday night, Aug. 3, and laid the town under contribution, destroying the telegraph, or rather giving all concerned notice that they were to consider themselves unable to resist pillage and destruction. On Sunday, Aug. 5, another of Admiral Fitzroy's squadron, the Spider, came up the Clyde and bombarded Greenock sufficiently to destroy the town and captured the coastguard cutter. She afterwards paid a similar compliment to Ardrossan, where Captain Hegarth, in command of the battery, claims to have beaten her off. A bombardment of several towns on the British coasts was to be expected. On Monday, four of Admiral Fitzroy's ironclads, H.M.S. Devastation, H.M.S. Rodney, and two others, which had passed from Lough Swilly round the north of Scotland into the German Ocean, bombarded Aberdeen early in the morning, captured two forts, and proceeded to the Firth of Forth, where they engaged and silenced the Inchkeith batteries, and went up to the Forth Bridge, but did not molest Leith and Edinburgh. Berwick-on-Tweed was visited by the enemy on the same evening.

FOR FAITH AND FREEDOM.*

BY WALTER BESANT,

AUTHOR OF "DOROTHY FORSTER," "CHILDREN OF GIBEON," "THE REVOLT OF MAN," "KATHARINE REGINA," ETC.

CHAPTER XI.

BEFORE THE STORM.

BEFORE the storm breaks there sometimes falls upon the earth a brief time when the sun shines in splendour from a clear sky, the air is balmy and delightsome, the birds sing in the coppice, and the innocent lambs leap in the meadows. Then, suddenly, dark clouds gather from the north; the wind blows cold; in a minute the sky is black; the lightnings flash, the thunders roll, the wind roars, the hail beats down and strips the orchard of its promise, and silences the birds cowering in the branches and drives the trembling sheep to take shelter in the hedges. This was to be my case. You shall understand how for a single day—it was no more—I was the happiest girl in all the world.

I may now without any shame confess that I have always loved Robin, from my earliest childhood. That was no great wonder seeing what manner of boy he was, and how he was always kind and thoughtful for me. We were at first only brother and sister together, which is natural and reasonable when children grow up together; nor can I tell when or how we ceased to be brother and sister, save that it may have been when Robin kissed me so tenderly at parting, and told me that he should always love me. I do not think that brothers do generally protest love and promise continual affection. Barnaby certainly never declared his love for me, nor did he ever promise to love me all his life. Perhaps, had he remained longer, he might have become as tender as he was good-hearted; but I think that tenderness towards a sister is not in the nature of a boy. I loved Robin, and I loved Humphrey, both as if they were brothers; but one of them ceased to be my brother, while the other, in consequence, remained my brother always.

A girl may be ignorant of the world as I was, and of lovers and their ways as I was, and yet she cannot grow from a child to a woman without knowing that when a young man who hath promised to love her always, speaks of her in every letter, he means more than common brotherly love. Nor can any woman be indifferent to a man who thus regards her; nor can she think upon love without the desire of being herself loved. Truly, I had always before my eyes the spectacle of that holy love which consecrates every part of life. I mean, in the case of my mother, whose waking and sleeping thoughts were all for her husband, who worked continually and cheerfully with her hands that he might be enabled to study without other work, and gave up her whole life, without grudging—even reckoning it her happiness and her privilege—in order to provide food and shelter for him. It was enough reward for her that he should sometimes lay his hand lovingly upon her head, or turn his eyes with affection to meet hers.

It was in the night of June 12, as I lay in bed, not yet asleep, though it was already past nine o'clock, that I heard the trampling of hoofs crossing the stream and passing our cottage. Had I known who were riding those horses there would have been but little sleep for me that night. But I knew not, and did not suspect, and so, supposing that it was only one of the farmers belated, I closed my eyes, and presently slept until the morning.

About five o'clock, or a little before that time, I awoke, the sun having already arisen, and being now well up above the hills. I therefore arose softly, leaving my mother asleep still, and, having dressed quickly, and prayed a little, I crept down the stairs. In the house there was such a stillness that I could even hear the regular breathing of my father as he slept upon his pallet among his books; it was chill and damp (as is the custom in the early morning) in the room where we lived and worked. Yet, when I threw open door and shutter and looked outside, the air was full of warmth and refreshment; as for the birds, they had long since left their nests, and now were busy looking for their breakfast; the larks were singing overhead, and the bees already humming and droning. Who would lie abed when he could get up and enjoy the beauty of the morning? When I had breathed a while, with pleasure and satisfaction, the soft air, which was laden with the scent of flowers and of hay, I went indoors again, and swept and dusted the room. Then I opened the cupboard, and considered the provision for breakfast. For my father there would be a slice of cold bacon with a good crust of home-made bread (better bread or sweeter was nowhere to be had) and a cup of cider, warming to the spirits and good, for one who is no longer young, against any rawness of the morning air. For my mother and myself there would be, as soon as our neighbours' cows were milked, a cup of warm milk and bread soaked in it. 'Tis a breakfast good for a grown person as well as for a child, and it cost us nothing but the trouble of going to take it.

When I had swept the room and laid everything in its place I went into the garden, hoe in hand, to weed the beds and trim the borders. The garden was not very big, it is true, but it produced many things useful for us; notably onions and sallet, besides many herbs good for the house, for it was a fertile strip of ground and planted in every part of it. Now, such was the beauty of the morning and the softness of the air that I presently forgot the work about which I had come into the garden, and sat down in the shade upon a bench, suffering my thoughts to wander hither and thither. Much have I always pitied those poor folk in towns who can never escape from the noise and clatter of tongues and sit somewhere in the sunshine or the shade, while the cattle low in the meadows and the summer air makes the leaves to rustle, and thus alone suffer their thoughts to wander here and there. Every morning when I arose was this spectacle of Nature's gladness presented to my eyes, but not every morning could my spirit (which sometimes crawls, as if fearing the light of day and the face of the sun) rise to meet and greet it, and to feel it calling aloud for a hymn of praise and thanksgiving. For, indeed, this is a beautiful world, if we could always (which we cannot for the earthliness of our natures) suffer its loveliness to sink into our hearts. I know not what I thought this morning; but I remember, while I considered the birds, which neither reap nor sow, nor take any thought of to-morrow, yet are daily fed by Heaven, that the words were whispered in mine ear: "Are ye not much better than they?" And this, without doubt, prepared my heart for what should follow.

While I sat thinking of I know not what, there came footsteps—quick footsteps—along the road; and I knew those footsteps, and sprang to my feet, and ran to the garden-gate, crying, "Robin!—it is Robin!"

Yes; it was Robin.

He seized me by both hands, looking in my face curiously and eagerly.

"Alice!" he said, drawing a deep breath, "Oh! but what hath happened to thee?"

"What should happen, Robin?"

"Oh! Thou art changed, Alice! I left thee almost a child, and now—now—I thought to catch thee in my arms—a sweet rustic nymph—and now—fain must I go upon my knees to a goddess."

"Robin!" Who, indeed, would have expected such language from Robin?

"Alice," he said, still gazing upon me with a kind of wonder which made me blush, "do you remember when we parted four years ago—the words we said? As for me, I have never forgotten them. I was to think of thee always; I was to love thee always. Truly I may say that there is never a day but thou hast been in my mind. But not like this"—— He continued to look upon me as upon some strange creature, so that I began to be frightened and turned away.

"Nay, Alice, forgive me. I am one who is dazzled by the splendour of the sun. Forgive me; I cannot speak. I thought of a village beauty, rosy-checked, sweet and wholesome as an August quarander, and I find"——

"Robin—not a goddess."

"Well, then, a woman tall and stately, and more beautiful than words can say."

"Nay, Robin, you do but flatter. That is not like the old Robin I remember and"—— I should have added "loved," but the word stuck.

"I swear, sweet saint—if I may swear—nay, then I do affirm, that I do not flatter. Hear me tell a plain tale. I have travelled far since last I saw thee; I have seen the great ladies of the Court both of St. James's and of the Louvre; I have seen the famous beauties of Provence, and the black-eyed witches of Italy; but nowhere have I seen a woman half so fair."

"Robin—you must not! Nay, Robin—you shame me!"

Then he knelt at my feet and seized my hand and kissed it. Oh, the foolishness of a man in love! And yet it pleases us. No woman is worth it. No woman can understand it; nor can she comprehend the power and might of man's love, nor why he singles out her alone from all the rest and fills his heart wholly with her, so that all other women are henceforward as his sisters. It is wonderful; it is most wonderful. Yet it pleases us. Nay, we cannot choose but thank God for it with all our heart and with all our soul.

I would not, if I could, set down all the things which Robin said. First, because the words of love are sacred; next, because I would not that other women should know the extravagance of his praise. It was in broken words, because love can never be eloquent.

As for me, what could I do, what could I say? For I had loved him from my very childhood, and now all my heart went out from me and became his. I was all his. I was his slave to command. That is the quality of earthly love by which it most closely resembles the heavenly love, so that just as the godly man is wholly devoted to the will of the Lord in all things great and small, resigned to His chastisements, and always anxious to live and die in His service, so in earthly love one must be wholly devoted to the person whom one loves.

And Robin was come home again, and I was lying in his arms and he was kissing me and calling me all the sweet and tender things that he could invent, and laughing and sighing together as if too happy to be quiet. Oh! sweetest moments of my life! Why did they pass so quickly? Oh! sacrament of love, which can be taken only once, and yet changes the whole of life and fills it with memory which is wholly sweet! In all other earthly things there is something of bitterness. In this holy joy of pure and sacred love there is no bitterness—no; not any. It leaves behind nothing of reproach or of repentance, of shame or of sorrow. It is altogether holy.

Now, when my boy had somewhat recovered from his first rapture, and I had assured him very earnestly that I was not, indeed, an angel, but a most sinful woman, daily offending in my inner thoughts (an assurance which he received, indeed, with an appearance of disbelief and scorn) I was able to consider his appearance, which was now very fine, though always, as I learned when I saw him among other gentlemen, with some soberness as became one whose upbringing inclined him to plainness of dress as well as of speech and manner. He wore a long wig of brown hair, which might have been his own but for its length; his hat was laced and cocked, which gave him a gallant and martial appearance; his neckcloth was long and of fine lace; beside him in my russet gown I must have looked truly plain and rustic; but Robin was pleased not to think so, and love is a great magician to cheat the eyes.

He was home again; he told me he should travel no more (yet you shall hear how far he afterwards travelled against his will); his only desire now was to stay at home and live as his grandfather had lived, in his native village; he had nothing to pray for but the continuance of my love—of which, indeed, there was no doubt possible.

It was now close upon six o'clock, and I begged him to go away for the present, and if my father and Sir Christopher should agree, and if it should seem to his Honour a fit and proper thing that Robin should marry a girl so penniless as myself, why—then—we might meet again after breakfast, or after dinner; or, indeed, at any other time, and so discourse more upon the matter. So he left me, being very reluctant to go; and I, forgetting my garden and what I had come forth to do, returned to the house.

You must understand that all these things passed in the garden divided from the lane by a thick hedge and that passers-by—but there were none—could not, very well, have seen what was done, though they might have heard what was said. But if my father had looked out of his window he could have seen, and if my mother had come down-stairs she also might have seen through the window, or through the open door. Of this I thought not upon, nor was there anything to hide—though one would not willingly suffer anyone, even one's own mother—to see and listen at such a moment. Yet mother has since told me that she saw Robin on his knees kissing my hands, but she withdrew and would not look again.

When I stepped within the door she was at work with her wheel, and looked up with a smile upon her lips, but tears were lying in her eyes. Had I known what she had seen, I should have been ashamed.

"Daughter," she said softly, "thy cheek is burning red. Hast thou, perchance, been too long in the sun?"

"No, mother, the sun is not too hot."

"Daughter," she went on, still smiling through her tears, "thine eyes are bright and glowing. Hast thou a touch of fever by ill chance?"

"No, mother, I have no fever."

"Child, thy lips are trembling and thy hands are shaking. My dear, my dear, what is it? Tell thy mother all."

She held out her arms to me, and I threw myself at her feet and buried my head in her lap as if I had been again a child.

"Mother! mother!" I cried, "Robin hath come home again, and he says he loves me, and nothing will do but he must marry me."

"My dear," she said, kissing and fondling me, "Robin hath always been a good lad, and I doubt not that he hath returned unspotted from the world; but, nay, do not let us be too sure. For, first, his Honour must consent, and then Madam; and thy father must be asked—and he would never, for any worldly honour—no, never—suffer thee to marry an ungodly man. As for thy lack of fortune, I know not if that will not also stand in the way; and as for family, thy father, though he was born in New England, cometh of a good stock, and I myself am a gentlewoman, and on both sides we bear an ancient coat-of-arms. And as for thyself, my dear, thou art—I thank God for it!—of a sweet temper and an obedient disposition. From the earliest thou hast never given thy mother any uneasiness, and I think thy heart hath been mercifully disposed towards goodness from thy childhood upwards. It is a special grace in this our long poverty and oppression; and it consoles me partly for the loss of my son Barnaby." Here she was silent for a space, and her eyes filled and brimmed over. "Daughter," she said earnestly, "thou art comely in the eyes of men; that have I known for long. It is partly for thy sweet looks that Sir Christopher loves thee; Mr. Boscorel plays music with thee partly because his eyes love to behold the beauty of woman. Nay, I mean no reproach, because it is the nature of men to love all things beautiful, whether it be the plumage of a bird or the shape of a woman's head. Yes; thou art beautiful, my dear. Beauty passes, but love remains. Thy husband will perchance never cease to think thee lovely if he still proves daily thy goodness and the loveliness of thy heart. My dear, thou hast long comforted thy mother; now shalt thou go, with the blessing of the Lord, to be the solace and the joy of thy husband."

CHAPTER XII.

HUMPHREY.

Presently my father came in, the Bible in his hand. By his countenance it was plain that he had been already engaged in meditation, and that his mind was charged as with a message.

Alas! to think of the many great discourses that he pronounced (being as a dog who must be muzzled should he leave the farm-yard) to us women alone. If they were written down the world would lift up its hands with wonder, and ask if a prophet indeed had been vouchsafed to this unhappy country. The Roman Church will have that the time of Saints did not end with the last of the Apostles; that may be, and yet a Saint has no more power after death than remains in his written words and in the memory of his life. Shall we not, however, grant that there may still be Prophets, who see and apprehend the meaning of words and of things more fully than others even as spiritually minded as themselves? Now, I say, considering what was immediately to befall us, the passage which my father read and expounded that morning, was in a manner truly prophetic. It was the Vision of the Basket of Summer Fruit which was vouchsafed to the Prophet Amos. He read to us that terrible chapter—everybody knows it, though it hath but fourteen verses:

"I will turn your feasts into mourning and all your songs into lamentation. . . . I will send a famine in the land; not a famine of bread or a thirst of water, but of hearing the words of the Lord."

He then applied the chapter to these times, saying that the Scriptures and the prophecies apply not only to the Israel of the time when Amos or any other prophet lived, but to the people of God in all ages, yet so that sometimes one prophet seems to deliver the message that befits the time and sometimes another. All these things prophesied by Amos had come to pass in this country of Great Britain, so that there was, and had now been for twenty-five years, a grievous famine and a sore thirst for the words of the Lord. He continued to explain and to enlarge upon this topic for nearly an hour, when he concluded with a fervent prayer that the famine would pass away and the sealed springs be open again for the children of grace to drink and be refreshed.

This done, he took his breakfast in silence, as was his wont, loving not to be disturbed by any earthly matters when his mind was full of his morning discourse. When he had eaten the bread and meat and taken the cup of cider, he arose and went back to his own room, and shut the door. We should have no more speech of him until dinner-time.

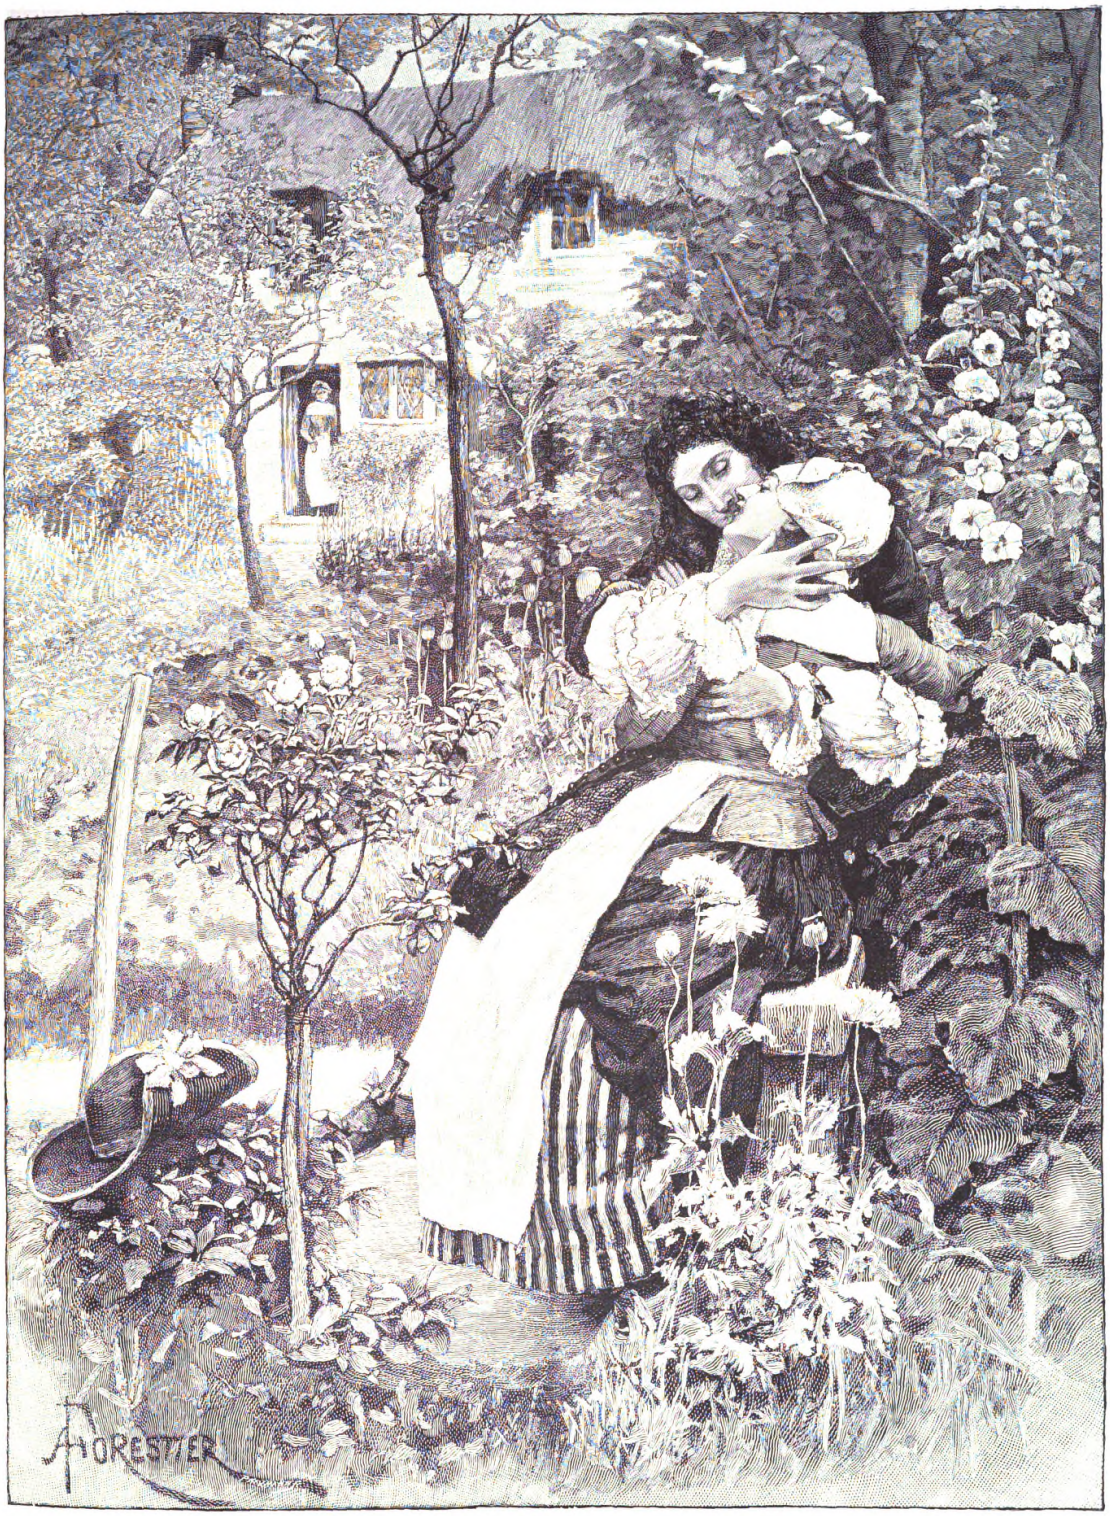
"I will speak with him, my dear," said my mother. "But not yet. Let us wait till we hear from Sir Christopher."

"I would that my father had read us a passage of encouragement and promise on this morning of all mornings," I said.

My mother turned over the leaves of the Bible. "I will read you a verse of encouragement," she said. "It is the word of God as much as the Book of the Prophet Amos." So she found and read for my comfort words which had a new meaning to me:—

"My beloved spake and said unto me, 'Rise up, my love, my fair one, and come away. For, lo! the winter is past, the rain is over and gone; the flowers appear on the earth; the time of the singing of birds is come, and the voice of the turtle is heard in our land! The fig-tree putteth forth her green figs, and the vines with the tender grape give a good smell. Arise, my love, my fair one, and come away.'"

And again, these that follow:—



"Set me as a seal upon thy heart, as a seal upon thine arm; for love is strong as death; jealousy is cruel as the grave; the coals thereof are coals of fire, which hath a most vehement flame. Many waters cannot quench love, neither can the floods drown it. If a man would give all the substance of his house for love it would utterly be contemned."

In these gracious, nay, these enraptured, words, doth the Bible speak of love; and though I am not so ignorant as not to know that it is the love of the Church for Christ, yet I am persuaded by my own spiritual experience—whatever Doctors of Divinity may argue—that the earthly love of husband and wife may be spoken of in these very words as being the type of that other and higher love. And in this matter I know that my mother would also confirm my judgment.

It might have been between nine and ten that Humphrey came. Surely he was changed more than Robin; for the great white periwig which he wore (being now a physician) falling upon his shoulders did partly hide the deformity of his wry shape, and the black velvet coat did also become him mightily. As for his face, that was not changed at all. It had been grave and serious in youth; it was now more grave and more serious in manhood. He stood in the doorway, not seeing me—I was making a pudding for dinner, with my sleeves rolled up and my arms white with flour.

"Mistress Eykin," he said, "are old friends passed out of mind?"

DRAWN BY A. FORESTIER.

And Robin was come home again, and I was lying in his arms and he was kissing me.

"FOR FAITH AND FREEDOM."—BY WALTER BESANT.

"Why," my mother left her wheel and gave him her hand, "'tis Humphrey! I knew that we should see thee this morning, Humphrey. Is thy health good, my son, and is all well with thee?"

"All is well, Madam, and my health is good. How is my master—thy husband?"

"He is always well, and—but thou knowest what manner of life he leads. Of late he hath been much disquieted; he is restless—his mind runs much upon the prophecies of war and pestilence. It is the news from London and the return of the Mass which keep him uneasy. Go in and see him, Humphrey. He will willingly suffer thee to disturb him, though we must not go near him in his hours of study."

"Presently; but where is my old playfellow—where is Alice?"

"She is behind you, Humphrey.'

He turned, and his pale face flushed when he saw me.

"Alice?" he cried. "Is this truly Alice? Nay, she is changed indeed! I knew not—I could not expect—may, how could one expect"——

"There is no change," said my mother, sharply. "Alice was a child, and is now a woman; that is all."

"Humphrey expects," I said, "that we should all stop still while Time went on. You were to become a Bachelor of Medicine, Sir, and a Fellow of All Souls' College, and to travel in Italy and France, and to come back in a velvet coat, and a long sword and a periwig over your shoulders; and I was to be a little girl still."

Humphrey shook his head.

"It is not only that," he said; "though I confess that one did not make due allowance for the flight of Time. It is that the sweet-faced child has become"——

"No, Humphrey," I said. "I want no compliments. Go now, Sir, and speak with my father. Afterwards you shall tell me all that you have been doing."

He obeyed, and opened my father's door.

"Humphrey!" My father sprang to his feet. "Welcome, my pupil! Thou bringest good news? Nay; I have received thy letters: I read the good news in thy face—I see it in thine eyes. Welcome home!"

"Sir, I have, indeed, great news," said Humphrey.

Then the door was closed.

He stayed there for half an hour and more; and we heard from within earnest talk—my father's voice sometimes uplifted, loud and angry, but Humphrey's always low, as if he did not wish us to overhear them. So, not to seem unto each other as if we were listening, mother and I talked of other things, such as the lightness of the pudding and the quantity of suet which should be put into it, and the time it should boil in the pot, and other things as women can whose hearts are full, yet they must needs be talking.

"Father hath much to say to Humphrey," I said, after a time; "he doth not use to like such interruption?"

"Humphrey's conversation is no interruption, my dear. They think the same thoughts and talk the same language. Your father may teach and admonish us, but he can only converse with a scholar such as himself. It is not the least evil of our oppression that he hath been cut off from the society of learned men, in which he used to take so much delight. If Humphrey remains here a little while you shall see your father lose the eager and anxious look which hath of late possessed him. He will talk to Humphrey, and will clear his mind. Then he will be contented again for a while, or, at least, resigned."

Presently Humphrey came forth. His face was grave and serious. My father came out of the room after him.

"Let us talk more," he said—"let us resume our talk. Join me on the hill-side, where none can hear us. It is, indeed, the Vision of the Basket of Summer Fruit that we read this morning." His face was working with some inward excitement, and his eyes were full of a strange light as of a glad conqueror, or of one—forbid the thought!—who was taking a dire revenge. He strode down the garden and out into the lanes.

"Thus," said my mother, "will he walk out and sometimes remain in the woods, walking, preaching to the winds, and swinging his arms the whole day long. Art thou a physician, and canst thou heal him, Humphrey?"

"If the cause be removed, the disease will be cured. Perhaps before long the cause will be removed."

"The cause—oh! the cause—what is the cause but the tyranny of the Law? He who was ordered by Heaven itself to preach hath been, perforce, silent for five-and-twenty years. His very life hath been taken from him. And you talk of removing the cause!"

"Madam, if the Law suffer him once more to preach freely, would that satisfy him—and you?"

My mother shook her head. "The Law," she said, "now we have a Papist on the throne, it is far more likely to lead my husband to the stake than to set him free."

"That shall we shortly see," said Humphrey.

My mother bent her head over her wheel as one who wishes to talk no more upon the subject. She loved not to speak concerning her husband to any except to me.

I went out into the garden with Humphrey. I was foolish. I laughed at nothing. I talked nonsense. Oh! I was so happy that if a pipe and tabor had been heard in the village I should have danced to the music, like poor Barnaby the night before he ran away. I regarded not the grave and serious face of my companion.

"You are merry, Alice," said Humphrey.

"It is because you are come back again—you and Robin. Oh! the time has been long and dull—and now you have come back we shall all be happy again. Yes; my father will cease to fret and rage; he will talk Latin and Greek with you; Sir Christopher will be happy only in looking upon you; Madam will have her son home again; and Mr. Boscorel will bring out all the old music for you. Humphrey, it is a happy day that brings you home again."

"It may be a happy day also for me," he said; "but there is much to be done. When the business we have in hand is accomplished"——

"What business, Humphrey?" For he spoke so gravely that it startled me.

"'Tis business of which thy father knows, child. Nay; let us not talk of it. I think and hope that it is as good as accomplished now before it is well taken in hand. It is not of that business that I would speak. Alice, thou art so beautiful and so tall"——

"Nay, Humphrey. I must not be flattered."

"And I so crooked."

"Humphrey, I will not hear this talk. You, so great a scholar, thus to speak of yourself!"

"Let me speak of myself, my dear. Hear me for a moment." I declare that I had not the least thought of what he was going to say, my mind being wholly occupied with the idea of Robin.

"I am a physician, as you doubtless know. I am Medicinæ Doctor of Oxford, of Padua, Montpellier, and Leyden. I know all I may fairly say, and without boasting that may be learned by one of my age from schools of medicine and from books on the science and practice of healing. I believe, in short, that I am as good a physician as can be found within these seas. I am minded, as soon as tranquillity is restored, to set up as a physician in London, where I have already many friends, and am assured of some support. I think, humbly speaking, that reasonable success awaits me. Alice—you know that I have loved you all my life—will you marry me, crooked as I am? Oh! you cannot but know that I have loved you all my life. Oh! child," he stretched forth his hands, and in his eyes there was a world of longing and of sadness which moved my heart. "My dear, the crooked in body have no friends among men; they cannot join in their rough sports, nor drink with them, nor fight with them. They have no chance of happiness but in love, my dear. My dear, give me that chance. I love thee. Oh! my dear, give me that chance?"

Never had I seen Humphrey so moved before. I felt guilty and ashamed in the presence of this passion of which I was the most unworthy cause.

"Oh! Humphrey, stop—for Heaven's sake stop!—because I am but this very morning promised to Robin, who loves me, too—and I love Robin, Humphrey." He sank back, pale and disordered, and I thought that he would swoon, but he recovered. "Humphrey, never doubt that I love you, too. But oh! I love Robin, and Robin loves me."

"Yes, dear—yes, child—yes, Alice," he said in broken accents. "I understand. Everything is for Robin—everything for Robin. Why, I might have guessed it! For Robin, the straight and comely figure; for Robin, the strength; for Robin, the inheritance; for Robin, happy love. For me, a crooked body; for me, a feeble frame; for me, the loss of fortune; for me, contempt and poverty; for me, the loss of love—all for Robin—all for Robin!"

"Humphrey—surely thou wouldst not envy or be jealous of Robin!" Never had I seen him thus moved, or heard him thus speak.

He made no answer for a while. Then he said slowly and painfully,

"Alice, I am ashamed. Why should not Robin have all? Who am I that I should have anything? Forgive me, child. I have lived in a paradise which fools create for themselves. I have suffered myself to dream that what I ardently desired was possible and even probable. Forgive me. Let me be as before—your brother. Will you forgive me, dear?"

"Oh, Humphrey! there is nothing for me to forgive."

"Nay, there is much for me to repent of. Forget it, then, if there is nothing to forgive."

"I have forgotten it already, Humphrey."

"So"—he turned upon me his grave, sweet face (to think of it makes me yearn with tenderness and pity)—"So, farewell, fond dream! Do not think, my dear, that I envy Robin. 'Twas a sweet dream! Yet, I pray that Heaven in wrath may forget me if ever I suffer this passion of envy to hurt my cousin Robin or thyself!"

So saying, he burst from me with distraction in his face. Poor Humphrey! Alas! when I look back and consider this day, there is a doubt which haunts me. Always had I loved Robin: that is most true. But I had always loved Humphrey: that is most true. What if it had been Humphrey instead of Robin who had arisen in the early morning to find his sweetheart in the garden when the dew was yet upon the grass?

(To be continued.)

ROYAL NATIONAL LIFE-BOAT INSTITUTION.

At a meeting of this institution, held on Thursday, Aug. 2, at its house, John-street, Adelphi, rewards amounting to £101 were granted to the crews of life-boats of the institution for services rendered during the past month. The Portrush life-boat rendered assistance to the distressed brigantine Sunshine, of St. John, N.B.; the Dunwich life-boat assisted to save the schooner Leeds, of Goole, her crew of five persons, and the master's wife, after the vessel had been seriously damaged by collision with another ship; and the Barmouth life-boat saved the yacht Petrel, of Barmouth, with two men on board, which was in danger during a strong north-east gale. A reward was also granted to the crew of a shore-boat for saving three persons whose boat had been capsized in Carlingford Lough. Payments amounting to £217 were ordered to be made on the 293 life-boat establishments of the institution. Among the contributions recently received were £1000 from Mrs. Stoker, of Hull, towards the cost of the Littlehampton and Blyth new life-boats; £700 from the Huddersfield branch to meet the expense of the Huddersfield new life-boat, recently placed at Hasborough; £75 annual subscription from E. F. White, Esq., and Miss White; and £13, proceeds of concert, per Newbiggin branch.

The annual contest for Doggett's Coat and Badge took place from London Bridge to Chelsea on Aug. 1, and resulted as follows:—C. R. Harding, of Chelsea, 1; Frederick Bryant, of Shadwell, 2; F. W. Robinson, of Putney, 3.

Lady Bandon on Aug. 1 presented the 3rd Battalion Royal Munster Fusiliers, at present stationed at Kinsale undergoing their annual training, with new colours, at the Kinsale Barracks. The Rev. Canon Patterson, Protestant Chaplain of the Cork district, assisted by the Rev. W. Darling, Rector of Kinsale, consecrated the new colours. In the evening the officers of the regiment gave a ball, for which upwards of 600 invitations were sent out.

At a meeting of the Leeds Town Council on Aug. 1, a committee was appointed to report on the feasibility of holding an international exhibition at Leeds in 1890. The Mayor stated that Mr. Lee Bapty, manager of the International Exhibition at Brussels, had been in communication with him on the subject. It was stated that the only exhibition ever held in Leeds of any great importance was in 1875. That exhibition realised £32,000, the profits on which were over £7000. Since the year 1875, the population of the borough had increased by 60,000 or 70,000, and there had been a corresponding increase in the population of the surrounding districts.

The Earl of Aberdeen presided on Aug. 1 at a special conference on the subject of co-operation, held at the Irish Exhibition, Olympia. In his opening address he said he thought it would be beneficial to keep in view the question of how far members of working-men's co-operative societies were prepared to share losses as well as profits in their undertakings. Mr. Benjamin Jones (hon. sec. to the southern section of the Central Co-operative Board) read a paper on "Co-operation as a means of improving the condition of Irish Industries." He expressed his conviction that the peculiar circumstances surrounding the Irish people made the application of co-operative principles a more likely means of improving their condition than the ordinary commercial methods. It would interfere less with their present habits and ideas, and better utilise their energies than by the establishment of private works or factories. The co-operative method, also, would ensure that surplus labour should be organised for its exclusive and mutual benefit. A paper on "Irish Co-operative Woollen Industries" was read by Mr. B. O'Callaghan, and a general discussion ensued, in which Mr. G. J. Holyoake and other speakers took part. The delegates were afterwards conducted over the Exhibition and shown the principal objects.

DIRGES.

With Dirges through the night, with the thousand voices rising strong and solemn,
With all the mournful voices of the Dirges pour'd around the coffin.
The dim-lit churches and the shuddering organs. . . .

So journeys a hero to his grave, in the great death-song of the last of our poets: and the "tolling, tolling bells' perpetual clang" makes music to the chant.

It is no wonder that in our wild and deep-delving English poetry there is scarcely anything finer than the dirges: the funeral hymns that the gloomy Northern nations have always loved to sing. Behind all our great poems is the reality of Life and Death ever close at hand. This is the essence of our humour as of our gloom. It is in Merry England that Hood the punster sings of the Bridge of Sighs; and that Lamb amid his quaint conceits comes back ever and again to the old theme of mortality—sees through the green and the daisies to the mould and its worms beneath.

Dirges—"the very word is like a knell": a solemn, sullen-swinging word, with a heavy toll of sadness that well befits its meaning. How it hangs over Poe's line—

'Till the Dirges of his hope the melancholy burden bore
Of "Never—never more!"

And in our poetry we have them of all natures: touched with a gracious sadness that has more of beauty than of gloom, or ringing with a hollow agony; heavy as with the falling earth, or echoing from a sea-burial across the water—like those two by Webster and Shakspeare of which Charles Lamb so finely speaks. In his earth song Webster sings—

Call unto his funeral dole
The ant, the field-mouse, and the mole
To rear him hillocks that shall keep him warm
And (when gay tombs are robb'd) sustain no harm;
But keep the wolf far thence, that 's foe to men,
For with his nails he 'll dig them up again.

"I never," says Lamb, "saw anything like this funeral dirge, except the ditty which reminds Ferdinand of his drowned father in 'The Tempest.' As that is of the water, watery; so this is of earth, earthy. Both have that intenseness of feeling which seems to resolve itself into the element which it contemplates."

Strangely enough, this sea-dirge is the brightest and most fanciful in English poetry. Strangely, because a funeral-song by our Northern ocean brings up thoughts of shipwreck, of dark mourners by a rocky coast, with howling winds and winter raging in the waves. But, you must remember it was by a fairy Southern sea that Ariel sang to the Prince of his lost father, who was not lost indeed—

Full fathom five thy father lies:
Of his bones are coral made;
Those are pearls that were his eyes:
Nothing of him that doth fade,
But doth suffer a sea change
Into something rich and strange;
Sea-nymphs hourly ring his knell:
Hark! now I hear them—
Ding, dong, bell.

Scarcely more of gloom, only as it were a sweet and sunny sorrow, is in the famous hymn which keeps "Cymbeline" fresh in the minds of readers who read little: the song of the shepherd-princes over the fair boy who lies at rest by the leaf-strown mountain cave—

Fear no more the heat o' the sun
Nor the furious winter's rages;
Thou thy worldly task hast done,
Home art gone and ta'en thy wages.
Golden lads and girls all must,
As chimney-sweepers, come to dust.

I have always felt that one song of death in Shakspeare—not strictly a dirge—stood out amid all his writings with, as it were, a simpler, a more homely air: a beauty more personal and peculiar than one generally gets in impersonal, dramatic Shakspeare. There is something of this touch, no doubt, in several of his country-songs; but it is most keenly felt in that sweet, antique ditty, of an exquisite sadness, that the Clown sings in "Twelfth Night" (Perhaps it got this special, indescribable ring from being written to a melody that was running in the poet's head, as from the beat of the rhythm you feel that it must have been.)—

Come away, come away, Death,
And in sad cypress let me be laid;
Fly away, fly away, breath;
I am slain by a fair, cruel maid.
My shroud of white, stuck all with yew,
O prepare it!
My part of death no one so true
Did share it.

And in the second verse there is even more of this strange personality, and of this marked, wild rhythm.

Enough, however, of Shakspeare the much-quoted; for right through English poetry, as one follows it down to our own day, there runs this dirge-element, as a philosophic German might call it. In the stately procession of Lycidas it is a classic chant, "after the high Roman fashion"; later, the sad, natural voice of Cowper speaks; then the wild, aerial lament of Shelley, Byron's passion, bitter even in grief, and the sensuous singing of Keats—almost in love with death, it is so full of poetry. And in our own time the melodies of death ring from the clear harp of Tennyson, whose tender chords accompany such eager questioning, to the rolling organ of a wild humanity, Walt Whitman.

A book might be written on those strange poets of ours in whose work there is a strain of madness—Blake, Poe, even, as some would say, Shelley; and in this book there must needs be special mention made of the fascination that death has for such minds. Poe and his wild fantasies we know, Shelley everyone knows; but there is a wonderful little dirge of Blake's, unknown, perhaps, to many—it is, I think, the most perfectly Shaksperian thing out of Shakspeare in the language. Here is one verse—

Bring me an axe and spade,
Bring me a winding-sheet;
When I my grave have made
Let winds and tempests beat:
Then down I 'll lie, as cold as clay.
True love doth pass away!

It takes us, of course, to the Gravedigger, in "Hamlet"; and so, as I said, we get humour with our melancholy, cheek by jowl.

This is a thing that puzzles critics of the Latin races: how, here in the North, we make friends with Death, and play with him, like Constance the Queen. We do not try to wreathe his head with flowers, but sit and chat face to face, our hand on the bony knees, our sad smile answering his vacant grin. It is not so in the South, where they flee from thought or speech of him: not so in France, where they dwell only on the absence of the one that is gone away, as if on an endless journey—and sometimes grieve rather over the quick forgetfulness that follows less than over the loss itself. This, indeed, is the first theme of a poem as beautiful, surely, as any hymn of mourning in any language: De Musset's immortal stanzas to the memory of Malibran. "Dead a fortnight," he cries, "and already what remains?"—

Une croix! et l'oubli, la nuit et le silence!
Écoutez! c'est le vent, c'est l'Océan immense;
C'est un pêcheur qui chante au bord du grand écueil.
Et de tant de beauté, de gloire et d'espérance,
De tant d'accords si doux d'un instrument divin,
Pas un faible soupir, pas un écho lointain!

E. R.

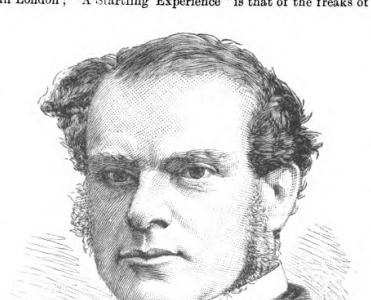
MAGAZINES FOR AUGUST.

SECOND NOTICE.

Nineteenth Century.—"Who owns the Churches?" is an historical question, raised but not answered by the Rev. Dr. Jessopp; who denies, at any rate, the right of clergymen, amateurs, and architects to alter or rebuild the ancient sacred buildings at their own caprice. Miss Beatrice Potter enters into the discussion of industrial conditions at the East-End of London, with reference to labour contractors, middlemen, and "sweaters." The statistics of different intellectual faculties, represented by distinguished natives of the various districts of Great Britain and Ireland, are an interesting topic of inquiry, superficially treated by Dr. Conan Boyle. Proposed cures for excessive corpulency are examined by Dr. Burney Yeo. The life of Madame De Pompadour, the heartless and grasping mistress of Louis XV., is reviewed by Mademoiselle Blaze De Bury. Mr. T. Kebbel shows cause for his opinion that the English system of party government cannot be maintained with a democratic constitution of Parliament. Popular songs among rural peasantry, Gaelic and foreign, are compared by Miss Laura Smith. The description, by Mr. W. Maitland, of a mountain vineyard in Southern California is bright and pleasant. Mr. Goldwin Smith, continuing his portraits of American statesmen, presents those of Daniel Webster, Calhoun, and President Jackson. On the personal conditions of our Government Civil Service, with reference to the rules of retirement and the non-effective list, Sir Arthur Stevenson Blackwood speaks from official experience. Mr. W. S. Lilly contemplates with regret the advance of Agnosticism and other scepticism, but relies on the spiritual efficacy of Christianity to hold its own.

Contemporary Review.—The progress of Presbyterian Churches all over the world is reviewed by Dr. De Pressensé, of Paris. Mr. Justin M'Carthy, M.P., as an Irish Home Ruler, states his view of the position of the late Mr. W. E. Forster in the office of Chief Secretary. The sea-birds of the Farne Isles, on the coast of Northumberland, afford to Mr. T. Digby Pigott a pleasing subject of study for a naturalist. "The New Dogmatism" of physical science, as opposed to theology, meets an opponent in Mr. Lewis Wright. Colonel F. Maurice further expounds his ideas of military and naval policy for our nation. Mr. John Rae examines the bearing of doctrines of political economy on the projects of State Socialism rife in our time. The defective working of the Church parochial system, and the growth of virtual Congregationalism within the Establishment, engage the attention of Mr. Augustus Buckland. Dr. Francis Underwood's historical sketch of the growing social, educational, religious, and literary activity of the New England States is gratifying to friends of America. An account, by Mr. H. W. Felkin, of the comprehensive and elaborate system of Government insurance, lately established in Northern Germany, may be set against the scruples of the old school of political economists. Professor Sayce notices recent explorations and discoveries of Oriental history. General Sir John Adye exposes the chaotic administration of the War Department.

Fortnightly Review.—Mr. Algernon Swinburne's ambitious poem on the defeat of the Spanish Armada is framed in varying forms of versification; but the predominating type is that of triplets, sometimes interwoven, but not in "terza rima," of long rolling lines, with seven or more strong accents to each line, to read which properly demands a skilful ear and tongue. The sentiments and style are too high-flown, the language is too violent and bombastic, for English taste; and we prefer Mr. Rennell Rodd's spirited and straightforward poetical narrative in *Macmillan's Magazine*. Mr. L. Jennings, M.P., brings into a disagreeable array the numerous examples of jobbery and other flagrant abuses in our public offices. The recent death of President Brand, head of the Orange Free State in South Africa, gives a special interest to Mr. J. C. Bodley's personal reminiscences of that able and upright statesman. Sir Samuel Baker's observations after revisiting India this year are likely to be regarded with attention. The completion of Baron Hirsch's lines of railway connecting Stamboul with Europe by the route through Eastern Roumelia, Bulgaria, and Servia, is a promising event, and Mr. Theodore Bent's description of the railway is instructive. Mr. Grant Allen discourses of "Genius and Talent." Three or four pages of exquisite French, by Pierre Loti, relate a mystic dream, with the vision of an unknown Creole maiden and her mother, only appearing and vanishing he knew not whence or whither. Mr. R. A. Proctor's estimate of the increase of wealth and the decline of culture in America seems rather unfavourable; but it is not based on an intimate knowledge of the social life of the United States. Typographical resources, by giving extra space between the lines, impart to Lord Wolseley's essay on "Courage" a more conspicuous appearance than it would have seemed worth if written by a civilian.



Scottish Review.—A series of private letters written in 1803 by James Hogg, the "Ettrick Shepherd," describing his tour in the Western Highlands and Hebrides, and probably addressed to Sir Walter Scott, are characteristic of the man and the times. The rationalist philosopher Giordano Bruno, who was burnt at Rome for heresy in the last year of the sixteenth century, was examined by the Inquisition at Venice in 1591; here is an account of his examination, to be followed by a narrative of the close of his life. The social and economic changes in the Scottish Highlands during the past half-century are the subject of an instructive article. An interesting narrative, translated from the French, relates the adventures of the Chevalier De Feuquerolles at the battle of Ramillies. The ancient legend of Dr. Faustus, the supposed sorcerer and dealer with evil spirits, which is the groundwork of Marlowe's tragedy and of Lessing's and Goethe's profound dramatic poems, is critically scrutinised. Mr. William Wallace discusses the questionable notion of Home Rule for Scotland, and shows that better management of Scottish affairs can readily be obtained by other means.

Cornhill.—A clever and amusing parody on the Bacon-Shakspeare Cryptogram of Mr. Ignatius Donnelly is presented in the mocking exposition of a similar system of proofs that Mr. Gladstone wrote all Dickens's novels. The pilgrimages of large parties of Catholic visitors to Lindisfarne, a twelvemonth ago, and this year to Iona, are described by one who was there. An interesting narrative of the ascent of the Peak of Teneriffe, a meteorological essay on hot winds, and a lively account of Cavalla, a small town of European Turkey, with its population of Greeks and gipsies, its tobacco plantations, and the site of Philippi, are not bad reading. "A Life's Morning," by Mr. G. Gissing, is continued; there is a short story, "Baldwin's Mistake"; and the "Ballad of the Cleopatra" is a short sea-story in verse.

Longman's Magazine.—The exposure, by Mr. J. H. Yoxall, of the faulty methods of instruction in our Board schools, and the erroneous principles of teaching favoured by the Education Department, demands attention. Dr. B. W. Richardson's lecture on the saving and "storage" of vital power, by a wholesome rule of living, is profitable as a sanitary study. An exciting story, by Mr. Eden Phillpotts, of Norwegian sledge-travellers being pursued by a pack of wolves, and two enemies being reconciled by mutual help in a common danger, will not escape the reader's notice. "Eve" and "Orthodox" are continued.

Temple Bar.—Miss Jessie Fothergill's story, "From Moor Isles," makes further progress: there is a young lady in it who is devoted to studying the Sanscrit and Persian languages. A memoir of the late Professor Bonamy Price does justice to his character and intellectual powers. "The Second Armada" is a spirited imaginary narrative, by an old sailor in the year 1918, of a tremendous naval conflict between England and France to be fought in the British Channel; the British merchant steam-ships, assembled in great number, overcome the French ironclad war-ships by ramming. In "A Chapter on Proposals," a young lady describes the different form and style and manner of several "offers" she has received from gentlemen. The Bulgarians, of whom we have heard almost enough, occupy a brief article. Mr. W. E. Norris continues his tale of "The Rogue."

Time.—The series of papers called "Work and Workers" treats now of emigration. Lord Lymington compares past and present times with regard to opportunities of travelling. "Methody Jim," by Miss Blanche Mary Channing, is a capital ballad story of an heroic action of a humble collier. The French village of St. Georges de Didonne, between the forest and the sea, at the mouth of the Gironde, a favourite holiday haunt of Michelet, is described by Miss Matilda Betham Edwards. The queer sect of crazy fanatics at Chatham, calling themselves "Jezreelites," are portrayed by Mr. J. Horton Riley. Mr. W. B. Churchward relates his brief experience of a swindling gold-mining concern in Australia. "The Seven Ages" is an amusing satirical "snarl" at human vanity; "Sad Dogs" is an entertaining collection of canine anecdotes; "In Town" is a notice of antiquarian curiosities in London; "A Startling Experience" is that of the freaks of

SIR JOHN HASSARD,
PRINCIPAL REGISTRAR OF THE PROVINCE OF CANTERBURY.

a kleptomaniac baboon; "Penny Dreadfuls" is an examination of some cheap and silly popular fictions. Mr. Julian Corbett proceeds with his quaint romance of "Cophetua XIII."

Gentleman's Magazine.—"The Hundredth Victim," a rather ghastly story of an old sword with a fatal spell of accidental homicide laid upon it, has a thrilling effect. The French realistic novelist, Gustave Flaubert, the pleasures and difficulties of horticulture, the personal tastes and habits of famous great men, a holiday tour in Devon and Cornwall, the ferocious deeds of Ivan the Terrible, one of the Russian Czars, a night watch in a pheasant preserve with the gamekeeper, some curiosities of English manufactures, and the Irish Exhibition at Olympia, are the subjects of articles in this magazine.

Belgravia.—Short stories, besides the continuation of two long ones, "Under-Currents," and Miss Sarah Tytler's "Blackhall Ghosts," are here provided for amusement; "Lord Dunciman's Dilemma," "Foretold by the Cards," "John Everard's Difficulties," "Nat," "Bon Garçon," and "The Wild Record of Jabez Speed," which last is that of a mad engine-driver running away with a railway-train.

London Society.—As we have already noticed Miss Braddon's last novel, "The Fatal Three," complete in three volumes, the chapters halting so far behind cannot demand our attention. Mrs. Edward Kennard's "A Crack County" has reached its thirty-fourth chapter. "One of Two," "A Girl's Mistake," and "Stolen from a Post-bag," are brief pieces of entertaining fiction. Mr. Percy Fitzgerald's "Travels in London" contemplate objects of architectural and historical interest. Miss Christabel Coleridge expounds the ethical meaning of Goethe's "Faust."

Tinsley's Magazine.—The Hon. Mrs. Armytage, describing some old London mansions and their former mistresses, treats of Mrs. Montague, the estimable and accomplished gentlewoman of the last century, who made her house a congenial resort for people of literary taste. "A Witch of the Hills," by Florence Warden, which is a Scottish Highland story, and "Millicent Phayre," an Australian story, are proceeded with; Mr. Jan Winn tells of an adventure with a raft on Lake Ogaga, somewhere in the United States; and "The Mad Count," a tale by Pauline Roose, has its scene laid in Italy. "The Home of the Vikings," described by Tom Markland, is Sole Bay, near Southwold, on the Suffolk coast.

Atalanta.—In this magazine for well-educated girls, the lady editors, L. T. Meade and Alicia A. Leith, provide a judicious mixture of the entertaining, the useful, the graceful, and the didactic, with many engravings of original design.

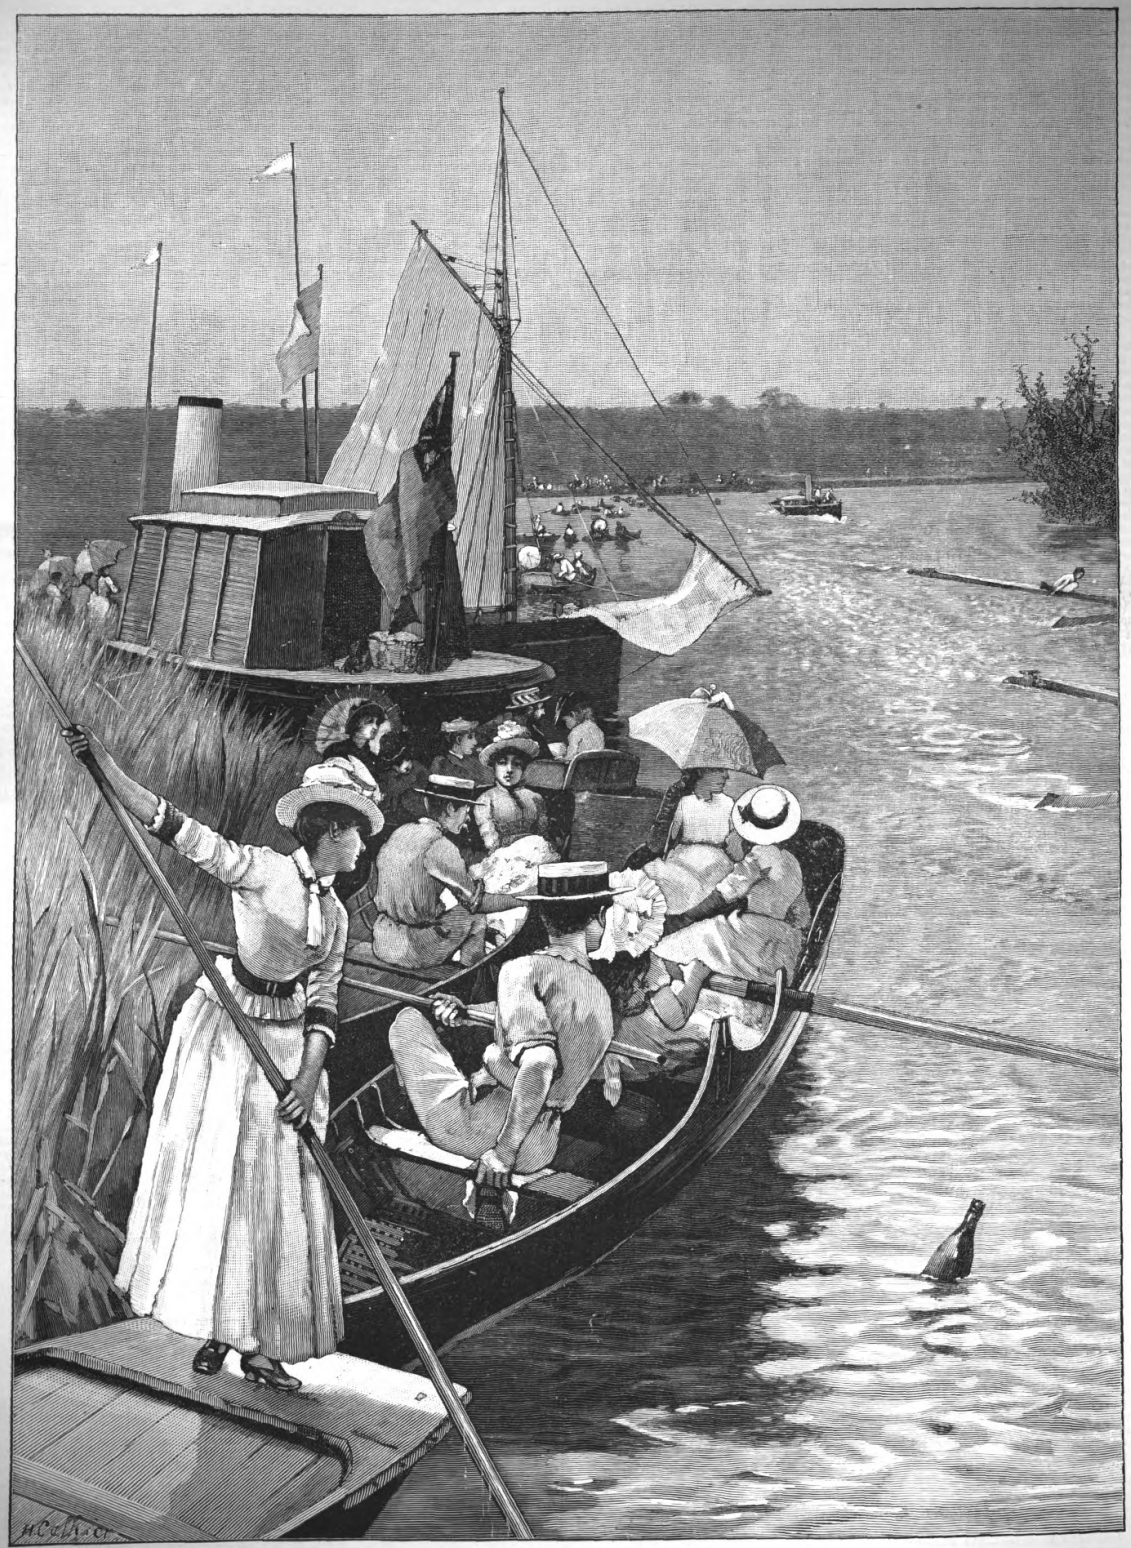
Illustrations.—Under the editorship of Mr. Francis George Heath, this magazine, which contains a variety of engravings and of suitable articles, presents tales by Mrs. Pender Cudlip and other writers, remarks on the opera, music, and painting, an account of the High School at Edinburgh, a biography of the late Hippolyte Carnot, sketches of Epping Forest, and notes concerning the nightingale, peafowl, and the care of a garden.

Colburn's United Service Magazine.—The naval manœuvres of our fleet this summer, and the methods of naval mobilisation, are discussed in one article; the effect of short service on army discipline, in another. Colonel Cooper King relates the strategy of General Washington's Yorktown Campaign in 1781. The Rev. P. H. Ditchfield notices some old songs and ballads of the Spanish Armada. Several writers contribute light sketches of the social life of military men.

Good Words.—The Editor, the Rev. Donald Macleod, D.D., discourses impressively of the lamented death of the late German Emperor. The Dean of Gloucester exhibits the interesting historical associations of his Cathedral, and of the tombs and monuments there. Mr. Rae's account of the late M. Jean Baptiste Godin, and of the great co-operative industrial establishment founded by him, the "Familistère" of the Guise ironworks, merits thoughtful attention. Mr. D. Christie Murray's story, "The Weaker Vessel," and the continuation of "Saved as by Fire," meet the reasonable appetite for fiction.

Leisure Hour.—"The Story of the Armada, told from the State Papers," of which Mr. W. J. Hardy furnishes a third instalment, is a good historical account. Professor Blackie contributes a tender little poem of a sweet little lady who once lived in the Isle of Mull. Windsor Castle and Virginia Water are described by Mr. C. Eyre Pascoe. Sir James Risdon Bennett, M.D., writes of Thomas Linacre, the founder of the College of Physicians. Several recent Italian explorers in Africa, including Gessi, a brave officer under Gordon in the Soudan, are commemorated in an article by Signora Bompiani.

Harper's Monthly.—Any Londoners who happen to be unacquainted with Chiswick may learn much about it from this excellent New York magazine, the writer upon it being Mr. Moncure Conway. "Studies of the Great West," by Mr. Charles Dudley Warner, tell us much about Cincinnati and Louisville, which are places even more important than Chiswick regarded apart from London. The French West Indian Islands, especially Martinique, are made the topic of bright description. Mr. Theodore Child, of Paris, a good art-critic, descants on the admirable Florentine painter, Sandro Botticelli. The Montagnais tribe of Indians, near the Saguenay River in Lower Canada, and the French Roman Catholic Missions among them, are the subject of an interesting paper. Another contributor gives a minute account of the breeding of cattle in Holstein and Friesland. These and other articles are illustrated with a great number of beautiful wood-engravings. There is a series of nine clever drawings to accompany the humorous old English song of "The Leather Bottèl." In the way of fiction, Mr. Rider Haggard's story, "Maiwa's Revenge," one by Mr. W. D. Howells, "Annie Kilburn," and Mr. William Black's "In Far Lochaber," seem to be a very sufficient allowance.



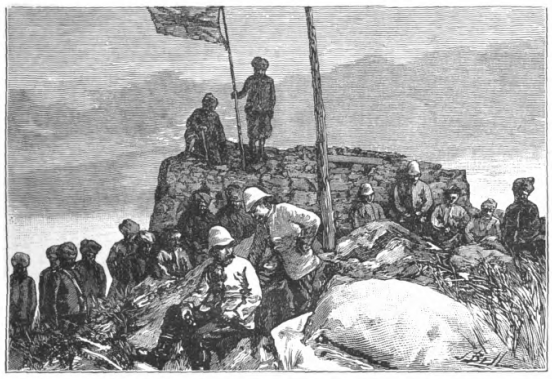
The Century—There is a Trappist monastery in Kentucky; and the life of that silent fraternity, who may scarcely ever speak, except in prayer or confession or worship, or by express permission in case of necessity, contrasts so much with the habits of the American people, that the account of it there is the more remarkable. Mr. George Kennan's ample reports of the situation and character of the Russian political exiles in Siberia, and his description of the scenery of the Altai mountains, add considerably to our knowledge of that region and of those unfortunate people. The authentic political history of President Lincoln's Government and the Civil War of Secession, by Messrs. J. G. Nicolay and Hay, is continued to the date of General Grant's capture of Fort Donelson, in February, 1862. English people who value the old Cathedrals of England are indebted to Mrs. Schuyler Van Rensselaer for her writing, and to Mr. Joseph Pennell, an American artist, for his drawings, by which Lincoln Cathedral is set before the reader. This magazine also contains amusing and interesting stories by popular American writers.

Scribner's Magazine.—Professor Shaler contributes a very instructive study of physical geography and the allied sciences in his treatise on "Rivers and Valleys," finely illustrated by views of the Yellowstone and the Colorado, and of rocky glens in Switzerland and in Norway. The construction of American locomotive engines and railway cars is historically and statistically related, and mechanically explained, by Mr. M. N. Forney. "Otto the Knight" is not a romantic legend of Rhineland, but a tale of those recent quarrels between the artisans and the capitalist employers, in the Western States, from which has sprung an association styled the "Knights of Labour." "First Harvests" is likewise a story of American social life; and "The Fate of the Georgiana" is that of a perilous adventure on the seacoast near Newport. Mr. Henry James, on the contrary, has in hand "A London Life," in which ladies of fashion are concerned. Mr. R. L. Stevenson, in his "Epilogue to an Inland Journey," conducts a lively party of tourists to an interesting part of France.

SIR JOHN HASSARD.

The Queen has conferred the honour of knighthood on Mr. Hassard, Principal Registrar of the Province of Canterbury. He was born in Ireland, in December, 1830, son of Mr. John Hassard, High Sheriff of the county of Cavan; was educated at Clifton, and adopted the profession of solicitor, also reading with a conveyancing barrister. In 1857, Mr. Hassard became private secretary to the Right Rev. Dr. Tait, then Bishop of London, afterwards Archbishop of Canterbury, with whom he remained in close intimacy until his Grace's death in 1882. He was appointed Comptroller at her Majesty's Chapel Royal, Whitehall, in 1862; Registrar of the Diocese of Canterbury in 1872; and Principal Registrar of the Province in 1876. We may observe that Mr. Hassard had the honour of receiving the Prince and Princess of Wales at Whitehall in 1863, and again in 1888, first at the special service held there on their nuptials, and again at their Silver Wedding. The University of Durham conferred an honorary degree of M.A. on Mr. Hassard in 1884. It may be added that Mr. Hassard was private secretary to Baroness Burdett-Coutts from 1867 until 1874. The Portrait is from a photograph by Messrs. Elliott and Fry.

The general report to the Board of Trade on the accidents which have occurred on the railways of the United Kingdom during 1887 has been issued. The total number of persons killed in the working of the railways was 919, and of injured 3590. Of these, 121 persons killed and 1297 injured were passengers; but of these only 25 were killed and 538 injured in consequence of accidents to or collisions between trains. The deaths of the remaining 96 passengers, and the injuries to 759, are returned as due to a variety of other causes, and especially to want of caution on the part of the individuals themselves. Of the remainder, 422 killed and 2075 injured were officers or servants of the railway companies or of the contractors. Of suicides there were 70; of trespassers, 203 were killed and 114 injured; of persons passing over the railway at level crossings, 63 were killed and 35 injured; and of other persons from miscellaneous causes, 40 were killed and 69 injured. In addition there were 58 persons killed and 4157 injured from accidents on their premises not connected with the movement of railway vehicles.



AT THE REGATTA: THE FINAL HEAT.

AT THE REGATTA: A CLOSE RACE.

THE SIKKIM EXPEDITION.

Sikkim is a small tract of mountainous country, lying to the north of Darjeeling between Bhootan and Nepaul and south of Thibet, and is under British protection. It is governed by a Rajah, assisted by the chief Lamas and headmen of the country. The present Rajah is a man of somewhat weak intellect, and of a shy, retiring disposition, owing partly to a hare lip, which greatly disfigures him, and of which he is painfully aware. He has married a Thibetan wife, and his sympathies are decidedly Thibetan. Of late years he has been in the habit of spending the rainy season in Chumbi, which, though only three days' march from his capital, Tumlong, has a dry Thibetan climate. He is bound by treaty with the English to spend half his year in Sikkim; but for the last few years he has lived altogether in Thibet, and, though repeatedly told to come back, has made excuse after excuse, with the result that his allowance from the British Government of 1500 rupees a month has been stopped, and the government of the country has been put into the hands of the Phedong Lama and his brother, the Ransa Dewan, backed by the British Government. At the same time, there is a very strong Thibetan faction, headed by the Pamianchi monks, who give much trouble, leading to many complications. In 1886 the Thibet Mission was organised, and its failure is the occasion of the present expedition. The Thibetans, strongly objecting to any Europeans entering their country, did all in their power to frustrate the mission; which eventually, owing to the representations of China, was recalled, having gone no further than Darjeeling. The Thibetans, who considered this a proof of our fear of them, then entered Sikkim, and erected the fort of Singtu across the high-road. It was to dislodge them from this fort that the present expedition was sent. The troops left India in March, and after two small skirmishes with the enemy, took possession of the fort, which is situated on the top of a mountain, 12,600 ft. above the sea-level, being probably the highest fort in the world. Our troops experienced great difficulty in reaching it, as the snow was very deep and the cold intense; and this, combined with the difficulty of breathing at that altitude, made the ascent extremely arduous. After the capture of the fort the troops marched to Gnatong, a more sheltered place, though still 12,000 ft. high; and there they are encamped. On May 22 they were attacked by a force of about 2400 Thibetans, who came over the Tokala Pass. They surrounded the camp, but after three hours and a half of fighting, were utterly routed, and fled back into Thibet. Since then, there has been no more fighting; but rumours are abroad that the enemy is again collecting in force across the passes. Meanwhile, our troops remain at Gnatong. A military correspondent favours us with Photographs of the camp at Singtu, and of the martello tower at the north end of the fort.

MARTELLO TOWER AT NORTH END OF FORT.

THE CAMP AT SINGTU.

THE SIKKIM EXPEDITION: FROM PHOTOGRAPHS BY AN OFFICER.

The Board of Trade have awarded a binocular glass to Captain Z. Ameline, master of the French schooner Jacques Mathieu, of Cherbourg, in acknowledgment of his humanity and kindness to the shipwrecked crew of the British schooner Vine, of Hayle, which was wrecked off St. Ives on July 2.

The usual monthly meeting of the council of the Royal Agricultural Society of England was held on Aug. 1 at No. 12, Hanover-square. In the unavoidable absence of the Prince of Wales, representing her Majesty, the president, Colonel Kingscote, C.B., was called to the chair. The chief business of the meeting was to pass the accounts of the recent meeting at Nottingham and to fix the date of next year's meeting, which will be held in Windsor Great Park. It was moved by Prince Christian, seconded by Earl Cathcart, and carried unanimously, that the opening date for the meeting be fixed for Monday, June 24, 1889. It was resolved to offer prizes for hops in six classes, for cider and perry, and for jam, and preserved, bottled, and desiccated fruit of English growth. Professor Brown submitted a report showing that during the nineteen weeks ended July 21 there had been 421 attacks of pleuro-pneumonia in England and 340 in Scotland. There had been a considerable increase in the cases of swine fever, though the disease is not now so prevalent as it was during the second quarter of last year.

A quarterly court of the governors of the Consumption Hospital, Brompton, was held at the hospital on Aug. 2, Mr. T. P. Beckwith in the chair. The report of the committee of management, read by the secretary (Mr. Dobbin), stated that since the alterations the whole of the beds had become re-occupied. The plan of sending patients to convalescent homes at the seaside at the expense of the hospital (which was adopted during the alterations as a temporary expedient) having proved so beneficial, the committee propose to continue the arrangement provisionally, within certain limitations. The following legacies have been received since the last court: Sir Robert Loder, £2500; Mr. D. Milner, moiety of residue, contingent; Mrs. Anne Kirkup, £500, reversionary; Lady Buchan, £500; Miss G. Austin, £500, duty free. A donation of 100 guineas has been received from Mr. John Wilson Theobald in order to name a memorial bed. Considerable outlay will be required before the next court, in the cleaning and repair of the south wing, to effect which properly it will be necessary to close the out-patients' department for a week. The committee remind the public that their support is essential to the continued well-being of the charity and the maintenance of the 321 beds in the two buildings, the hospital being unendowed and almost entirely dependent upon voluntary help.

Princess Frederica on Aug. 2 distributed the medals and certificates to the successful students of the Polytechnic classes under the auspices of the St. John Ambulance Association. One hundred and sixty-one ladies and eighty-five gentlemen received certificates.

At the invitation of the Earl and Countess of Meath a meeting to consider the objects of the Incorporated Free and Open Church Association was held at 83, Lancaster-gate. Canon Trench, Vicar of All Saints', Notting-hill, read a paper on "How to Free a Pew-rented Church," in the course of which he expressed the opinion that all were agreed in theory that churches ought to be free, but one of the obstacles to be encountered was to be found in the fact that the question had not been really faced by the people themselves. It was necessary that they should be shown that it was fatal to all true religious progress that the public churches should be less free than the public-houses, or the parish highway to heaven less free than the highways of the parish. At his own parish the system of pew rents had been given up, with the result that the income of the church had been considerably increased, and the salaries of the clergy raised. The Rev. Dr. Patterson, vice-president of the American Free and Open Church Association, who opened the discussion, stated that 75 per cent of the churches in the United States were free, and their incomes in consequence had been increased by two thirds, if they were not actually doubled. The Dean of Devonport (Iowa), Commander Dawson, and others also spoke, and a vote of thanks to the Earl of Meath for presiding was carried, on the motion of General Lowry, seconded by Mr. Rooke. Lord Meath, in responding, expressed his entire concurrence with the objects of the association.

PRIZE DISTRIBUTIONS AT PUBLIC SCHOOLS.

Lord Harris, the Under-Secretary of State for War, distributed the prizes at Dover College on Aug. 1 in the absence of Earl Granville, the president.

The annual exhibition of Beaumont College took place at Old Windsor, on Aug. 1, in the presence of a distinguished company. The Bishop of Portsmouth distributed the prizes, and the Rector afterwards entertained 300 guests in the vinery.

The tercentenary celebration of St. Bee's Grammar School took place on Aug. 1 in the presence of a large assemblage. The Archbishop of York preached in the parish church in the morning, and the Bishop of Carlisle afterwards distributed the prizes to the successful students.

Speech Day was observed on Aug. 2 at Bradfield College, Reading, and prizes were distributed by Mr. Murdoch, M.P. The annual report of the warden, the Rev. H. B. Gray, stated that the number of pupils attending the college had increased from seventy-one in 1883 to 144 this year, and the preparatory school has also increased its numbers from eight to twenty-three. A touching allusion was made to the recent death of the founder of the college, the Rev. Thomas Stevens.

Mr. T. J. Reeves, the Master of the Grocers' Company, presided on Aug. 2 at the distribution of prizes at the Company's school, Hackney-downs, the wardens and several members of the court being present. Mr. Reeves expressed the satisfaction with which the court had received the report of the school examiners, and characterised the results of the past year as splendid. Out of thirty-eight boys sent up for the Cambridge University examination thirty passed in honours, and only one failed.

Mr. J. G. Talbot, M.P. for Oxford University gave away the prizes at Bruce Castle, Tottenham, in the presence of a numerous company of visitors, on Saturday, July 28. The head-master, the Rev. W. Almack, M.A., gave a good report of the work of the school during the past year, and read a satisfactory list of successes won by past and present Brucians during the year; this included a Whitworth scholarship, a Royal Academy scholarship, two gold medals at the London University, the Chesilden medal and the Treasurer's gold medal at St. Thomas's Hospital, and a sizarship at Trinity College, Cambridge.

Admiral the Earl of Clanwilliam presided on Aug. 1 at the annual distribution of prizes at the Royal Naval School, Newcross. The head-master, the Rev. James White, in opening the proceedings, said the reports of the examiners, Professor Culley and Professor Moriarty, showed that the school was in a very satisfactory state. The Malcolm scholarship at Oxford had been gained by R. H. Donovan, the Clothworkers' scholarship at the same university by Hedley, and a scholarship at Cambridge by H. T. Dufton. Four naval cadetships annually given by the Lords of the Admiralty were awarded to Trousdale, Seymour, Harvey, and Case. The silver medal given by the Royal Humane Society for proficiency in swimming had been gained by H. E. Chapman.

Aug. 1 being Speech Day at Malvern College, a large and distinguished gathering of visitors was attracted to the school. The proceedings opened with a luncheon in a marquee, erected in the quadrangle, to which upwards of 150 guests sat down. After this, the company adjourned to the big school for the prize-giving and speeches. The head-master (the Rev. W. Grundy), in the course of his remarks, said he was happy to announce that five open scholarships and exhibitions at the universities had been gained in the past year, while an old Malvernian (J. M. George) had taken the fourth place in the Indian Civil Service final examination. Another old Malvernian (R. E. Cole) was tenth wrangler this year in the Cambridge mathematical tripos. Lord Beauchamp, who distributed the prizes, congratulated the head-master on the steady increase in the numbers of the school, and spoke in a most hopeful manner of its future prospects. The athletic prizes were given away by Lady Emily Foley.

Mr. Henry O. Forbes, the New Guinea explorer, author of "The Naturalist in the Malay Archipelago," has been selected by the London Commission to succeed the late Sir Julius Von Haast as Director of the Canterbury Museum, New Zealand.

At a meeting held at the Royal Forest Hotel, Chingford, Mr. C. N. Buxton, J.P. and High Sheriff of Essex, in the chair, it was resolved to form a golf club at Chingford, to be called the Epping Forest Golf Club. Particulars may be had from Mr. F. F. McKenzie, hon. secretary, The Warren, Loughton, Essex.

The restoration of St. Michael's Church, Coventry, was practically completed on Aug. 1 by the replacing of the top stone of the steeple, which is the tallest of the three tall spires. The ceremony was performed by Mr. G. Woodcock, a contributor of £10,000 to the fund, who, after fixing the stone, assisted Mr. Thompson, the contractor, in replacing the weathercock, at an altitude of 303 ft. A short religious service was gone through, and there were some brief congratulatory speeches; and when the weathercock swung round with the wind the crowds who had assembled at the various points to witness the ceremony cheered lustily.

The Lord Mayor and Lady Mayoress entertained the Elder Brethren of the Trinity House to dinner at the Mansion House on Aug. 1, and the Duke of Cambridge, replying for "The Army and Reserve Forces," said he looked upon the Army and Reserve Forces as more or less combined in one, and he trusted they were so in sentiment. He was glad to have the opportunity of saying that there was no man in the country who had always had, and especially at the present moment, so high an appreciation of the services of the Volunteers as himself. He could not understand any man who would not wish to develop and improve and increase the Volunteer force.

AT THE REGATTA.

The pleasant scenes on the river, which are shown in our pair of drawings entitled "A Close Race" and "The Final Heat," may be realised whenever—as *must* happen sometimes and somewhere—an exhibition of aquatic sports and rowing-matches is favoured with the fine weather that we naturally expect in summer. Under such propitious conditions, young ladies can enjoy sitting in a boat, or sauntering in the meadow or beneath the trees at the water's edge, to admire the manly prowess and skill of amateur crews, possibly feeling some kind of personal interest in one or another of the valiant oarsmen. As there is no more healthy exercise of strength for the young men, and no contest which more surely brings its reward, even to unsuccessful competitors, in the beneficial use and improvement of their natural powers, there is also no spectacle in which ladies can more gracefully and properly take the part of beholding and encouraging a friendly rivalry. In watching "a close race," in frankly manifesting a certain degree of excitement "at the finish," and in joining with signs of glad applause the general acclamation with which "the winner" is worthily greeted, the presence of these fair visitors at the regatta is the crowning glory of the day.

A new storage reservoir at Ealing, capable of containing more than fifty million gallons, established in connection with the Grand Junction Waterworks Company, was opened on Aug. 3.

The resignation is announced of Mr. T. C. S. Kynnersley, Stipendiary Magistrate of Birmingham since 1856. Mr. Kynnersley, who is eighty-six years of age, was one of the old Commissioners in Bankruptcy.

The Bishop of London writes as follows on behalf of the Children's Country Holiday Fund:—"This fund has been established to enable London children to spend two or three weeks in the country. Last year visitors in various parts of London working in connection with this fund sent over 14,000 children to spend their holidays by the sea or among the fields. The children were received as guests in the cottages of villagers, where they joined in the life of the family and where some lady or neighbour saw to their care and enjoyment. All came home, bringing not only a store of health, but also memories of country life to widen sympathy and enhance good-will. The cost was only 5s. a week, and in each case the parents gave a contribution according to their means. From thirty-three centres in the north, east, south, and west of London, visitors are now selecting pale and ailing children, asking no questions as to views or creeds. May I remind those who are now flying from the weariness of the fairest parts of London, that unless they give to our fund, thousands of children who need the change, and for whom country air and freedom are ready, must spend their holidays in narrow homes and close streets? Donations may be sent to the Hon. Alfred Lyttelton, 10, Buckingham-street, Strand, W.C."

THE LADIES' COLUMN.

The Queen having been repeatedly and warmly pressed by the representative committee of the Women's Jubilee Offering to accept something personal to herself from the fund, the bulk of which her Majesty has presented to found a nursing institute, has at length consented to a portion of the money being expended in the purchase of jewellery for her Majesty's personal use. A diamond necklace, and earrings to match, in the design of which the emblems of the United Kingdom appear, have accordingly been made, and the *parure* was accepted by the Queen on Tuesday, July 31, the Duchess of Buccleuch making the offering on behalf of the subscribers.

One of the most obnoxious features of weeds is the way in which they flourish under circumstances that kill or injure more profitable and desirable growths. There is an irritating perversity about this which is very trying. Never was there a summer so wet and miserably cold as this, and never was there such a summer for poppies!—those most useless of weedy flowers. They are splendidly decorative in their public place of pride, but are unfit for private life by reason of their sickly odour; so that they may be counted as amongst the most worthless weeds that grow. Some other field and hedge flowers, however, are as suitable for country room and dining-table decoration as the cultivated ones that are so hard to come by sometimes in the rural places where they grow, but are not sold. When in straits, turn to hedgerows and the fields, and almost every wild flower but the poppy will be found available. A table decorated entirely with the rich blue of the corn-flower, the delicate star-like white and yellow of the wild marguerite, and the trailing green branches of the hop-bine, all placed gracefully and tastefully in white porcelain vases, was awarded an honourable mention at the recent botanic fête. The most refined effect can be produced with wild flowers by confining oneself to a few varieties. A great posy of every roadside flower that blows has a glory all its own; but it is the robust, unsubdued beauty of the rustic; while by being at the pains of selecting colours as sparingly and carefully in the field as one would do in the green-house, similarly tasteful effects can be obtained.

The fashion of the hour in table-dressing runs to spiky, somewhat straggling effects. No longer are firm, compact masses of bloom displayed. Even a flower like the rose, so firm and solid in the individual blossom that it is almost impossible to prevent a bunch having the like characters, must be carefully deprived of that aspect by commingling with long-stalked or irregularly shaped flowers, such as gladioli, narcissi, clematis, heliotrope, or orchids. Where the last named are available, nothing can equal them for effect. Orchids make themselves visible in the most extraordinary manner. Even when they are sparsely combined with a multitude of other blossoms of somewhat similar shape and tint to the particular orchids used, they yet do not fail to attract the eye; and half-a-dozen "slipper," or "dove," or "standard-bearer" orchids will give the necessary variety and distinction to a great mass of roses, provided the rare blooms are artfully placed so as to project a little above the close-set trusses of the rose.

But not everybody can have even half-a-dozen blossoms cut from orchids. Here, then, are notes of some more simply-dressed tables which have been seen lately. Down the centre of a snowy damask cloth was placed a broad strip of royal blue plush—so broad a strip, indeed, that it must have been imperceptibly joined in the middle. This was not laid all flat, but elevated at regular intervals over three blocks of wood, on each of which pedestals stood a beautiful candlestick of white porcelain, the shape that of a female figure bearing a three-branch light. The wax candles in these were shaded with crimson card on wire supports. The only flowers on the table were pink double-carnations, mixed with a little maiden-hair fern; these were placed in low bowls on the stands round the base of all the candle-bearing figures, and also in large shell-shaped holders at either end of the blue plush strip. Fruit-stands of the same porcelain, but a plain round shape, were placed towards the four corners. Another table, more simple still, had roses plucked from their stems laid on the table-cloth, so as to form half a square at the four corners of the table, exactly the right-angled corners of each design being wide and the points slanted off to a single rose. The other ornaments of the table were china fruit-dishes fitted into each angle of blossoms, and a central basket of wicker-work, with double handles, having something the effect of an Imperial crown in form; the handles were covered completely by being wreathed with roses, and the basket was filled with roses relieved with projecting spikes of Eucharis lilies. Unique decoration for a table was obtained in another case by the combination of water-lilies and forget-me-nots, with sprays of feathery asparagus in place of the more ordinary ferns. Water-lilies lay scattered on a mirror plateau in the centre of the table, and asparagus sprays and forget-me-nots, with one or two lilies, filled slender glass épergnes placed on the mirror; on which also was a large lamp with a drawn muslin and lace shade, lined with pink silk, which formed the centre-piece. Flowers floated in the finger-bowls. Upon yet another table fairy lamps having shades painted by hand with sprays of flowers, and the saucers partly filled with maidenhair and white stephanotis, formed the chief adornment, while the centre-piece was a small tray of sand, completely concealed with flowers all white in tint—stephanotis, Eucharis lilies, gardenia, narcissi, and clematis—and a few ferns, the tinted lamps giving all the colour, except such as came from strawberries, peaches, and Hamburg grapes, at the corners.

Judges constantly perform the traditional feat of driving the coach and four through Acts of Parliament. It is well, perhaps, that the ordinary citizen does not understand how few of the laws that govern him are the product of Acts of Parliament made by his representatives, and how many of them are simply the decisions of two or three old gentlemen, perhaps crotchety, or perhaps having personal feelings about social arrangements which they import into their decisions. How little reverence is really due to a Judge's reading of the law is apparent from the frequency with which judgments given in the lower courts are reversed by the higher ones. Yet when the Court of Appeal has at length spoken, no Judge will afterwards venture to exercise his own intelligence on the words of a statute; but the dictum of the majority of the three fallible and possibly peculiar Judges who sat on that occasion overrides for ever the plain terms of an Act of Parliament. No Act can ever have been drawn in broader terms than the Married Women's Property Act, which begins by declaring that in every respect a married woman and a single one are to be under identical circumstances as regards making contracts, suing and being sued, and property rights and powers generally. Month after month the Judges are introducing qualifications and modifications into that plain, straightforward law. A case just decided is in point. A married woman was sued to complete a contract which she had signed for purchasing a house. Her creditor lost his case, on the ground that he was unable to show that she had any separate property when she made the contract; and, according to a judgment of the Court of Appeal, "it is held that she can only bind herself to the extent of her separate estate, so that if she have no separate property she cannot enter into a contract at all." More than that, the plaintiff in such a case is required to prove that the married woman had separate property when she made the agreement, and not she to prove that she had not any. Now, this is very convenient for married women who may wish to repudiate their contracts; but it is a grave disadvantage to honest women who conduct any business on their own account. To such women, it is of the first consequence to be able to make valid contracts; if it is known that they can repudiate their contracts at will, nobody will wish to do business with them. Single women are not placed at such a disadvantage in their business arrangements, and the intention of the Legislature, which the Judges are over-riding, was to equalise married with single women in property matters.

FLORENCE FENWICK-MILLER.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

MANCHESTER, ARTHUR GIBSONIAN, J. N., and many others, are perplexed over the solution of No. 2308. If Black play, as they suggest, 1. Kt to R 3rd, White replies with 2. P to Kt 8th, becoming a Kt (ch), discovering check, and mating.

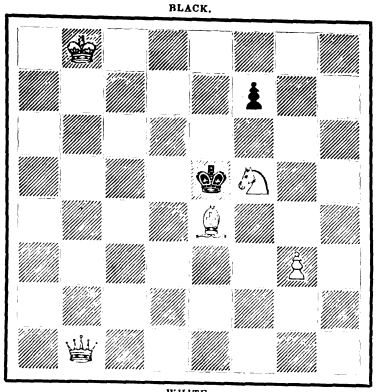
E. CRANE.—Letters received up to Friday morning are acknowledged the following week.

J. L. V. C.—Your anticipation is correct; the problem is hardly up to our standard. Captures on the first move are nearly always objectionable, especially with such simple play as follows in yours.

E. LOUDEN.—We are glad to welcome you back to the ranks of solvers.

J. P.—Too simple and too many checks.

CORRECT SOLUTIONS OF PROBLEM No. 2305 received from W. A. Smith (Bellary, South India); of Problem No. 2306 from W. A. Smith; of No. 2307 from W. A. Smith, J. B, and F. R.; of No. 2308 from Bernard Reynolds and H. P. (Dudley); of No. 2309 from Janet Joseph Pullen, and J. Lister.



CORRECT SOLUTIONS OF PROBLEM No. 2312 received from Thomas Chown, J. Desanges, Dr. F. St., J. D. Tucker (Leeds), J. G. Banken, G. J. Veale, E. Louden, R. Worters (Canterbury), Joseph T. Pullen, Dawn, Howard A. E. Phillips, Jupiter Club, C. E. P., J. M. Kelly, E. E. H., E. J. Gibbs, Percy R. Gibbs, A. M. V., T. Roberts, Rev. Rook, T. G. (Ware), John Short, Dane John, J. Hepworth Shaw, Bernard Reynolds, Sergeant James Sam, Shadforth, Percy Rees, G. T. Addison (York), (Shoulder's Hill), W. R. Hallam, J. Hall, Major Prichard, Dr. Waltz (Heidelberg), Heaward, E. Crane, and D. Partington.

SOLUTION OF PROBLEM No. 2310.

WHITE.	BLACK.
1. B to R 3rd	K to Q sq
2. Kt to Q 5th	P moves
3. R to R 8th. Mate.	

If Black play 1. K to Q 3rd, then 2. P to Q 8th (a Kt) and mates next move.

PROBLEM No. 2314.
By B. G. LAWS.
BLACK.

WHITE.
White to play, and mate in three moves.

CHESS IN LONDON.

Game played in the British Chess Club handicap between Messrs. POLLOCK and BIRD.
(Sicilian Defence.)

WHITE (Mr. P.)	BLACK (Mr. B.)
1. P to K 4th	P to Q B 4th
2. P to Q 4th	P takes P
3. K Kt to B 3rd	Q Kt to B 3rd
4. K Kt takes P	P to K Kt 3rd
5. Kt takes Kt	Kt P takes Kt
6. Q to Q 4th	P to K B 3rd
7. Kt to B 3rd	B to K Kt 2nd
8. B to B 4th	Q to Kt 3rd
9. Q to Q 3rd	Kt to R 3rd
10. Castles	Kt to Kt 5th

The advance of this Kt is too hazardous; Kt to B 2nd or P to Q 3rd is preferable.

11. Q to Kt 3rd	P to Q 3rd

Here again Kt to K 4th, with a view of playing P to Kt 3rd and Castling, seems to afford Black a more open position.

12. P to K R 3rd	Kt to K 4th
13. B to Kt 3rd	B to R 3rd
14. B to K 3rd	Q to Kt 2nd

Q to B 2nd is a better defensive move.

15. P to B 4th	

Very much played, as the full effects of the sacrifice are not immediately apparent.

15.	B takes R
16. P takes Kt	B to R 3rd
17. P takes Q P	R to Q sq
18. B to B 5th	P takes P
19. B takes Q P	B to B sq
20. P to K 5th	B takes B
21. P takes B	K to B sq

Necessary to prevent the check with R and R to K 7th.

22. Kt to K 4th	

R to K sq is sounder.

22.	Q to Kt 3rd (ch)
23. K to R sq	Q to Q 5th
24. R to K sq	K to Kt 2nd
25. P to B 3rd	Q to K 4th

After this White regains the exchange and the game is virtually over.

26. Q takes Q	P takes Q
27. Kt to B 5th	B to B sq
28. R to Q sq	B to Q 2nd
29. B to K 6th	B takes B
30. Kt takes B (ch)	K to B 3rd
31. Kt takes R	R takes Kt
32. P to B 4th	P to B 4th
33. R to Q 5th,	and wins.

The International Congress of the British Chess Association and Yorkshire County Chess Club commenced its operations at Bradford on Monday, Aug. 6. After a public reception of competitors and visitors, a start was made with the various items of the programme, particulars of which we have already published. Interest, of course, centered in the masters' tournament, in which many of the leading players of Europe and America are engaged. To judge from the list of entries, no new reputation is likely to be made on this occasion; but the old hands will give each other plenty of fight before the contest is over.

A new compilation by Mr. and Mrs. T. B. Rowland, entitled "The Chess-players' Annual and Club Directory," is announced for publication at the end of the year. It will contain a series of articles by various writers; 100 prize-problems of British tourneys during 1887-88; a directory to date of all European chess clubs, associations, and periodicals; a list of first-class players; and much other information of a useful character to chess-players. The price to subscribers is 2s. 6d. and their names may be sent to 9, Victoria-terrace, Clontarf, Dublin.

With Captain Mackenzie amongst the competitors the result of the contest for the championship of Scotland was this year a foregone conclusion. Mr. D. Y. Mills, last year's winner of the cup, made a creditable effort to maintain his position, and succeeded in drawing his game with the redoubtable Captain. He had, however, to share the honours of second place with Mr. G. E. Barbier, who is making steady progress as a match-player, and is now one of the strongest in Scotland.

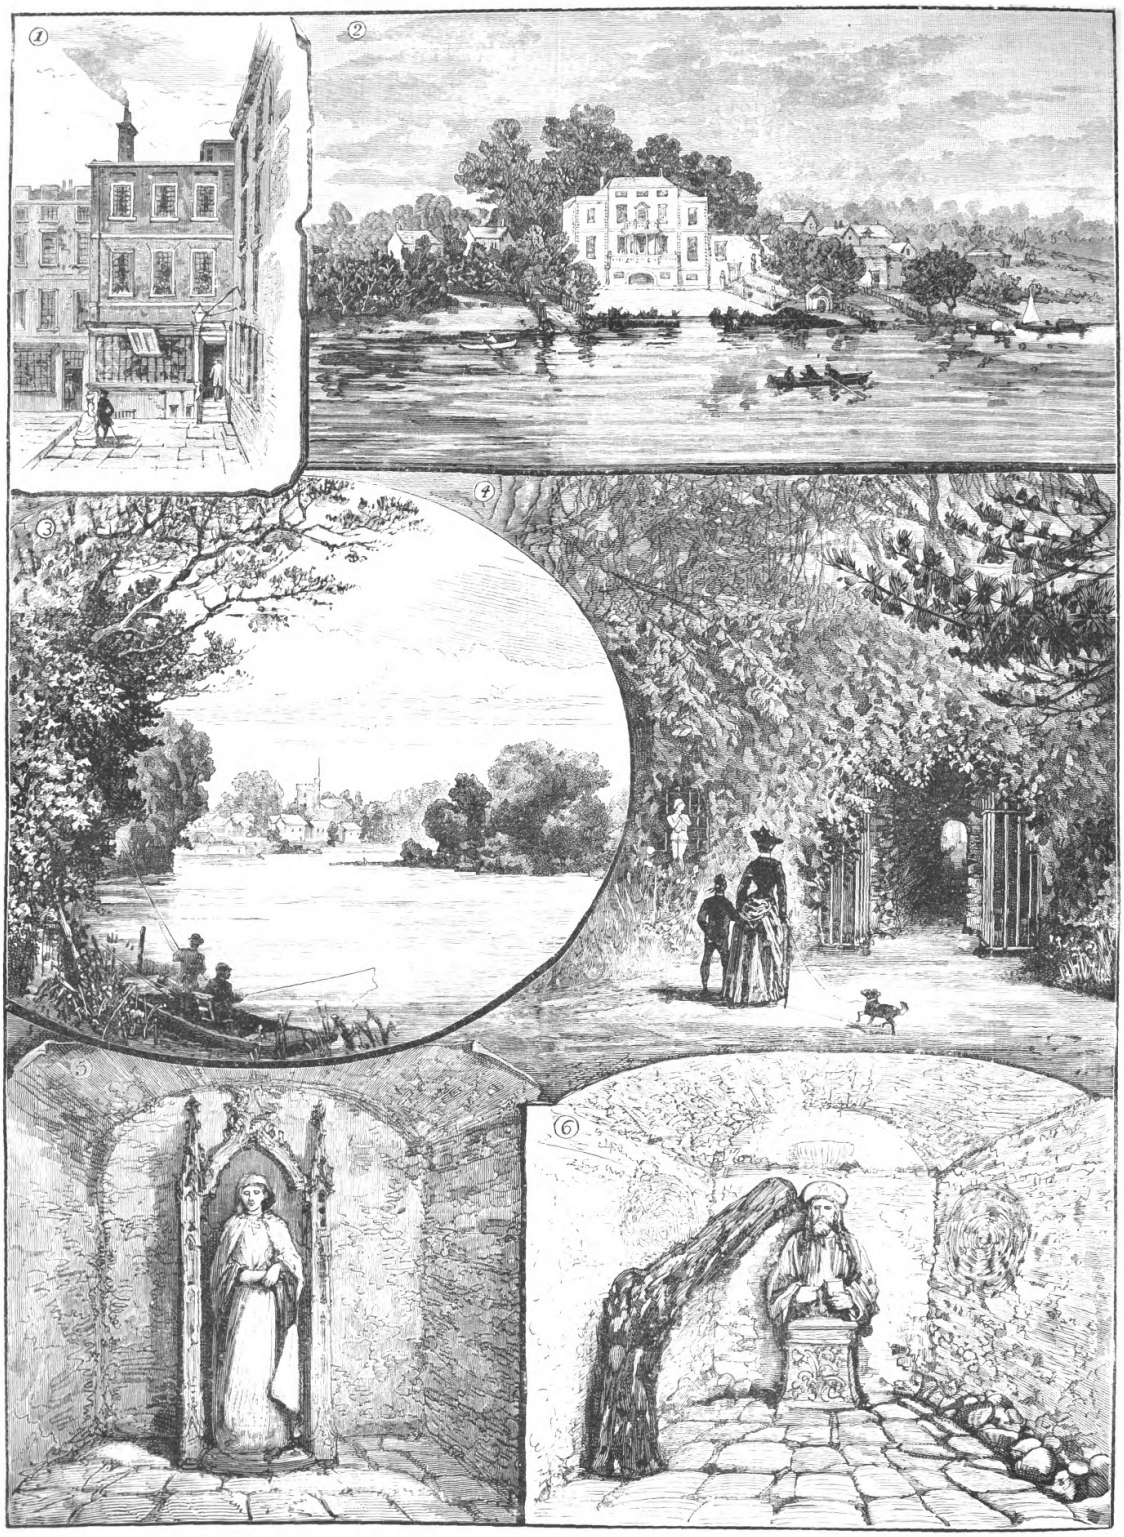
Five Lords of the Council, assisted by five Bishops as assessors, heard on Aug. 3 an appeal from the refusal of the Archbishop of Canterbury to allow a prosecution to be instituted against the Bishop of Lincoln for illegal ritual. The Court ordered the matter to be remitted to the Archbishop.

WILLS AND BEQUESTS.

The will (dated Feb. 10, 1885), with two codicils (dated Jan. 7, 1886 and Nov. 8, 1887), of Mr. William Ewing, formerly of No. 95, Gloucester-place, Portman-square; but late of No. 26, Upper Brook-street, Grosvenor-square, and of Bridley Manor, near Guildford, a retired Major of the Royal Tower Hamlets Militia, who died on April 22 last, at Paris, was proved on July 25, by Sir Archibald Orr Ewing, Bart., the brother, William Orr Ewing, the nephew, and Theodore Judkin Du Bois, the executors, the value of the personal estate amounting to upwards of £246,000. The testator gives his town residence, with the furniture, plate, pictures, books, jewellery, household effects, horses and carriages, and £500 to his wife; he also gives her the interest and dividends of £60,000 for life; and there are legacies to his executors, butler, coachman, and valet. The residue of his real and personal estate he leaves, upon trust, for all his children, but his daughters are not to receive more than £50,000 each. In default of children there are considerable bequests to nephews and nieces, brother, sisters, and sister-in-law; and the ultimate residue is to be divided between his nephews and nieces, the children of his said brother, Sir Archibald Orr Ewing.

The will (dated June 20, 1887), with a codicil (dated Oct. 22, 1887), of Mr. James Tabor, J.P., D.L., late of Earl's Hall, Prittlewell, Essex, who died on June 26 last, was proved on July 26 by Samuel George Savill and John English Tabor and Charles Albert Tabor, the nephews, three of the executors, the value of the personal estate amounting to upwards of £165,000. The testator leaves an annuity of £400 to Catherine Agnes, the widow of his late son, James Albert Clement Tabor; annuities of £500 each to his daughters, Mrs. Mary Collison Tabor Green, Mrs. Susannah Hailey Tabor Wardrop, and Mrs. Emma Victoria Tabor Savill; annuities of £600 each to Albert Maitland Tabor and John Clement Tabor, the two youngest sons of his said late son; and annuities to his other grandchildren all charged upon parts of his real estate. He gives his books, pictures, and jewellery to his grandson, James Tabor, the eldest son of his said late son; and there are bequests to his executors, and to his housekeeper and cook. Subject as aforesaid, he settles all his real estate, and the residue of his personal estate, upon his grandson, the said James Tabor; and on his coming into possession there is a special provision for his next eldest brother taking a further annuity.

The will (dated July 27, 1877), with a codicil (dated Nov. 9, 1886), of Mr. John Hibbert, J.P., late of Braywick Lodge, Maidenhead, Berks, who died on March 28 last, was proved on July 23 by Mrs. Charlotte Elizabeth Hibbert, the widow, Robert Lambert Turner Irton, and Samuel Ircham, the executors, the value of the personal estate exceeding £70,000. The testator bequeaths £1000, and all his personal estate and effects (except leasehold estate and chattels real, stocks, shares, credits, and securities), to his wife; £100 to the Windsor Infirmary; £500 to Frederick Mansel Turner: £300 to each of his executors; an annuity of £300 to his sister, Lydia Jane Hibbert; an annuity of £150 to Mary Watkins; annuities to his butler, coachman, and gardener; and £600, to be distributed by his executors, at their discretion, among his servants and labourers. He appoints certain real and personal estate, under his marriage settlement, on the death of his wife, to his cousin, Edgar Paul Tichborne Hibbert. The residue of his real and personal estate he leaves, upon trust, for his wife, for life, and then for his said cousin.



The will (dated Aug. 17, 1885) of Count Carlo Angiolini Clericetti, formerly of No. 39, Devonshire-street, Portland-place, but late of No. 58, Montpellier-road, Brighton, officer of the Order of the Crown of Italy, who died on May 2 last, was proved on July 27 by Henry Mann, Robert Ruthven Pym, and Henry Burnley Heath, the executors, the value of personal estate amounting to upwards of £46,000. The testator bequeaths legacies amounting to £11,500 to various charitable institutions at Milan, Rome, and Turin. He also bequeaths £1600 to the Italian Benevolent Society in London; £1000 to the Sussex County Hospital; £500 to the Sunday and Day School for Italians in London at Saffron-hill; £500, a painting on glass by Agneni, a mahogany book-case with books, a bronze statuette by Marochetti, and a pair of bronze candlesticks to the Brighton Free Library and Museum; £400 to the Asylum for the Blind, Eastern-road, Brighton; £300 to the Brighton, Hove, and Preston Provident Dispensary; £200 to the Sussex Eye Hospital, Queen's-road, Brighton; and legacies to servants and others. The residue of his property is to be realised and invested in Italian Rentes, and the revenue periodically distributed by the Municipality of Milan among the deserving poor of both sexes, natives of and domiciled in Milan.

The will (dated March 26, 1888) of Mr. Thomas Cox, late of Glanelly, Great Malvern, Worcestershire, who died on May 27 last, was proved on July 21 by Mrs. Elizabeth Cox, the widow, Thomas Edward Lucy, John Percival Balmer, and Shelston Kench, the executors, the value of the personal estate amounting to upwards of £31,000. The testator bequeaths £400, a certain sum of £1000 bequeathed to her by her father's will, and all the furniture, plate, pictures, and effects at his residence, to his wife; £100 to his sister, Emily Cox; £100 to each of his executors, Mr. Lucy, Mr. Balmer, and Mr. Kench; and £1000 to each of his children. The residue of his real and personal estate he leaves, upon trust, for his wife, for life, and then for his children.

The will (dated July 13, 1881), with two codicils (dated June 5, 1885, and Dec. 8, 1887), of Miss Florence Mary Georgina Cole, late of No. 66, Eaton-place, who died on May 21 last, was proved on July 12 by James Henry Cole, the brother, the sole executor, the value of the personal estate amounting to over £21,000. The testatrix bequeaths £3500 to her sister-in-law, Mrs. Elizabeth Frances Cole; £1000 to her niece and god-daughter, Florence Kate Lowry Cole; £1500 to her said brother, James Henry; and £1000 each to her two sisters, Frances Maria Frederica Virginia Cole and Henrietta Anne Pauline Cole. The residue of her money, stocks, funds, and securities she leaves, upon trust, for her said two sisters, for their lives, and on the death of the survivor to go with the personal estate of her late brother, Colonel Arthur Lowry Cole. The ultimate residue of her property she gives to her said two sisters.

The will (dated May 20, 1886) of Lieutenant-Colonel Henry Beckwith Sawrey, late of Clairville, Reigate, who died on May 23 last, was proved on July 25 by Mrs. Gertrude Mary Sawrey, the widow, and Frederick Augustus Manley, the nephew, the acting executors, the value of the personal estate amounting to upwards of £12,000. The testator bequeaths £500 and all his furniture, pictures, household effects (except silver plate), horses and carriages, to his wife; and £500 to Sarah Annie King. The residue of his real and personal estate he leaves, upon trust, for his wife, for life, and then for his children; and, in default of children, for his said nephew, Frederick Augustus Manley.

Daniel Wilson, LL.D., President of the University of Toronto, Canada, has been knighted.

THE POPE CENTENARY COMMEMORATION AT TWICKENHAM.

SEE PAGE 170.

RAMBLING SKETCHES: BALLANTRAE AND ITS NEIGHBOURHOOD.

FROM SKETCHES BY LORD ARCHIBALD CAMPBELL.

THE POPE COMMEMORATION.

Sir Mountstuart Elphinstone Grant-Duff, on Tuesday, July 31, opened, at the Twickenham Townhall, a collection of books, autographs, paintings, drawings, engravings, and personal relics connected with the poet Alexander Pope, now brought together in commemoration of the bi-centenary of the year of his birth. The committee, of which Sir M. E. Grant-Duff is president, includes Mr. W. J. Courthope, Mr. Austin Dobson, Professor Henry Morley, the Rev. L. M. D'Orsey (hon. local secretary), Mr. Henry Tedder (hon. secretary), Mr. Russell Lowell, Mr. Alfred Austin, Mr. Edmund Gosse, Mr. W. Senior, Mr. John Murray, and other well-known persons. Mr. Edward King was the originator of the movement. The collection, to which the contributors number between seventy and eighty, includes the first, second, and several subsequent editions of Pope's works, a number of autograph letters and manuscripts, paintings, miniatures, drawings, and engravings of the poet, of his most prominent contemporaries, and of places with which his life and works were identified, and various articles which belonged to Pope. Amongst the books are the first edition of "The Rape of the Lock," and other scarce editions, lent by Mr. Edmund Gosse, Mr. Austin Dobson, Lieutenant-Colonel F. Grant, Mr. James Montgomery, Mr. Alfred Austin, Mr. J. Dardis Blount, Mr. F. Walker, Mr. W. J. Courthope, and other collectors have placed the treasures of their libraries at the disposal of the committee. Pope's own copy of "The Dunciad," over one hundred pages of which are filled with corrections in the author's handwriting, is lent by Mr. Richard Tangye; and Mr. H. Saxe-Wyndham, Mr. A. Morrison, and Mrs. H. G. Bohn contribute manuscript letters of more or less interest. A very interesting contribution is that of Sir Theodore Martin, who has lent the original manuscript of the Life of Pope by Dr. Johnson, in the "Lives of the Poets"; autograph letters from Pope, Johnson, Mrs. Thrale; drawings of a number of Pope's contemporaries, and other relics—all bound in one superb folio volume. Mr. John Murray sends a bust of the poet by Roubiliac, the autograph of the preface to the first collection of the works, and other documents; and there is a large number of portraits of Pope in oil, water-colour, and line engraving, together with counterfeit presentments of Martha and Theresa Blount, Queen Anne, Lord Cobham, Lady Mary Wortley Montagu, Horace Walpole, Addison, Matthew Prior, Dr. Bentley, and other of Pope's contemporaries. Some score of views of Twickenham and its neighbourhood are included in the exhibition, and the personal relics include a cast of the poet's skull taken when the remains were disturbed some thirty or forty years ago; a Malacca cane with ivory head, which was Pope's walking-stick; a chair which Pope is said to have constantly used; a small china teapot with metal spout, which he gave to his cousin, J. Ward, of Reading; and a casket known as "the feather box," made from the wood of a willow planted by Pope, and with his full-length portrait on the inside of the lid.

BUST OF POPE, BY ROUBILIAC.

THE FEATHER-BOX CASKET, WITH POPE'S PORTRAIT IN LID.

POPE'S CHAIR.

POPE'S TEAPOT.

The opening of the exhibition, which was on view till Saturday, took place in the Townhall, the chair being taken by Sir M. E. Grant-Duff. Among the company were Lady Freake, Lady Grant-Duff, Mr. W. J. Courthope, Mr. Austin Dobson, Mr. Edmund Gosse, Colonel Thompson, Mr. C. J. Thrupp (chairman of the local board), Mr. Vincent Griffiths, Mr. E. King (originator of the commemoration), Mr. H. R. Tedder (hon. secretary, librarian of the Athenæum Club), the Rev. L. M. D'Orsey (local secretary), the Rev. Ashton Gwatkin, the Rev. E. English, and Mr. G. Mackintosh. Professor Henry Morley delivered an address on Pope, in the course of which he said it was surely a sign that there was depth and breadth in the man that there should be to this very day such various opinions held about him. After briefly narrating the leading facts of Pope's youth and progress in literature, Mr. Morley said that the poet was distinctly a product of the French school of criticism, which was prevalent in his youth, and which aimed especially at clearness and sense. The influence of that school was dominant when he began to write. Nevertheless, he was a true poet, and deserved a high place in the history of English literature.

RAMBLING SKETCHES: BALLANTRAE, AYRSHIRE.

The land of Robert Burns, Ayrshire, contains no lovelier valley than that of the Stinchar; and it won a tribute of verse from that poet, as he watched the stream flowing down to the Atlantic at Ballantrae. But in this poem, he changed the name to Lugar, so that a stranger would not know he referred to the district. It is no wonder that a group of well-known Scotch artists should make Ballantrae their favourite headquarters. One of the most successful of these has truly said that nowhere can fine effects of sea and sky be better studied than here. Ballantrae is famous for its glorious sunsets; and the colours of rock and sea are such as cannot be surpassed in beauty. The rocks at each headland flanking Ballantrae are of black, brown, and purple colour; they are "trap" rocks, with endless gigantic fissures and grand clefts and chasms, into whose mysterious depths the Atlantic waves enter foaming, to be stilled in the innermost recesses. But during a strong westerly gale, many spouting caves can here be observed; and such masses of foam lie on the cliffs as to astonish even those who have lived by the Atlantic all their days. Sea-weed, too, lies in the coves or bays, five feet in depth. Such a strange bed of solid seaweed exists between Ballantrae and the town of Girvan, in a small and beautiful bay.

The view from behind the village of Ballantrae is extensive and highly interesting. Loch Ryan lies behind a headland; the coast of Ireland is seen on the left front; between Ireland and Kintyre is the open Atlantic; on the right front towers Ailsa Craig, with the Isle of Arran behind; and the hills of Loch Fyne are well seen on any clear day. The old ruined castles in this neighbourhood are remarkable, perched on commanding crags, and well within bugle-call of each other. The finest of these is Craig Kiel, owned by Mr. MacConnel, who has stopped the barbarism of quarrying limestone, and so undermining the castle. Its aspect would strike even those who have seen all the castles of the Rhine and the Danube. In this castle, at times, dwelt Robert Bruce. The walls are of tremendous strength; even now, though one huge angle has fallen out, undermined by the quarrymen, it bids fair to last for centuries if it be left alone. The right time for visiting this castle is the sunset hour; then wait till the crimson and gold beat in at its windows and loopholes, and presently flood the interior, with its solemn arch and lofty hall of great height. The visitor will remember it as one of the most romantic scenes in Scotland. And Stinchar Castle is just behind Ballantrae; it was a grand castle once. The district is the land of the Kennedys, of whom Lord Ailsa is the head.

The village of Ballantrae is well supplied with delicious fish; and there is an excellent bakery, producing "baps," which are delicious, besides "scones" and many other things. There is also a good village butcher; and last, not least, this village is an abode of quiet and peace. Here, too, the golfer has a glorious bit of turf; while the lawn-tennis player has two courts for his pastime.

FOREIGN NEWS.

The Emperor and Empress of Brazil embarked at Bordeaux on Aug. 5 for Pauillac, en route to Brazil.—M. Carnot unveiled a statue of Mirabeau at Montargis on Aug. 5; thirty thousand persons were present. M. Carnot afterwards held a reception.—Some encounters took place on the 6th between the police and the navvies on strike in Paris in consequence of the latter attempting to prevent men who have not struck from continuing their work. The hairdressers' assistants and the café waiters on strike, on leaving a meeting at the Bourse du Travail, proceeded—the former in the direction of the Place des Victoires and the latter towards the Café de la Paix, which they intended to ransack. The rioters were, however, promptly dispersed by the police. Great excitement prevailed among the men on strike at Amiens, who on the 6th paraded the streets with flags. A disturbance occurred in the afternoon, but order was ultimately restored by the mounted gendarmerie, who made three arrests.—A fatal conflict has occurred between Italian and French labourers at some railway works in France, one man being killed and several wounded. The quarrel arose from the discharge of the Italians, owing to the representations of the French.

Cavaliere Bonacina, President of the Italian Exhibition in London, was received in audience at Rome on Aug. 4 by the King of Italy, when his Majesty expressed his satisfaction at the success of the Exhibition.—The Italian Protectorate over Zula, to the south of Massowah, has been formally proclaimed. The French Foreign Minister has sent a Note to the Powers respecting the Massowah question.—A volcanic eruption occurred on Aug. 3 in the Lipari Isles, the group off Sicily in which the well-known volcano of Stromboli is situated. Immense damage is stated to have been caused.

The Emperor William II., having spent the night at Friedrichsruh, with Prince Bismarck, left shortly after noon on Aug. 1 for Potsdam, which he reached at half-past five, and drove at once to the Marble Palace. He was enthusiastically received.—The Emperor, on the 3rd, received at Potsdam, with all the pomp usual on such occasions, the Extraordinary Mission sent by the Sultan to congratulate his Majesty on his accession to the throne. The audience was followed by a dinner, the guests at which were Munir Pasha and his suite; the Turkish Ambassador, with the other members of the Turkish Embassy; Count Herbert Bismarck, and Prince Radolin. The Emperor continues to devote much attention to his army. On Aug. 6 there was a sham-fight, under the personal direction of his Majesty, near Potsdam, in which the entire garrison and two batteries of Field Artillery of the Guards took part. On the 7th the Emperor was present while the Fusilier Battalion of the 2nd Emperor Franz Regiment of Grenadier Guards went through the new drill on the Tempelhof field, under the command of Major Menges, of the War Office. At the close of the drill, the Emperor lunched with the officers of the regiment, at their barracks.

Terrible floods in Germany, Austria, and Russia are reported.

The First Chamber of the Netherlands States-General have ratified the North Sea Liquor Traffic Convention, and passed the Bill extending the Netherlands Bank Charter for fifteen years.

General Sheridan, so well known for his brave and skilful leadership of the cavalry of the United States during the Civil War, died on Sunday night, Aug. 5, aged fifty-seven, from a failure of the action of the heart. A Bill to provide a pension of 5000 dols. a year for his widow has been introduced in the United States Senate.—A fatal fire occurred on Aug. 3 at a tenement-house adjoining the rear of the People's Theatre, New York. The building was occupied mainly by Polish tailors.

Official advices state that the crop prospects throughout the Dominion of Canada are generally above the average. In Manitoba the prospects are unprecedented.—Sir George Stephen has resigned the presidency of the Canadian Pacific Railroad; the vice-president, Mr. Van Horne, will succeed him.

The Cape House of Assembly has passed the Railway Extension Bill.—The total loss of life, European and native, by the terrible accident at the De Beers Mine is estimated at 250.

The *Daily News* Calcutta Correspondent telegraphs that 1000 Thibetans have entered Sikkim, and threaten Pakyong. Colonel Graham is confident of his ability to resist any attack.

The British ship Star of Greece was wrecked in Aldinga Bay, near Adelaide, on July 13, and seventeen persons, including the captain, were drowned.

The revenue of New Zealand for the quarter ending June 30 last amounted to £768,000, being an increase of £41,000, as compared with the corresponding period of last year. The Customs receipts increased by £15,000.

OBITUARY.

REAR-ADMIRAL CODRINGTON.

Rear-Admiral William Codrington, C.B., died on July 29, at Shrublands, Tunbridge Wells, aged fifty-six. He became Sub-Lieutenant in July, 1853, and served as Mate of the Eurydice, in the White Sea, during the Russian War. His other appointments were—Lieutenant, October, 1855; Commander, July, 1864; Captain, June, 1869; and Rear-Admiral, April, 1886. He was Private Secretary to the First Lord of the Admiralty, 1876 to 1880, and was made a C.B. (civil) in April, 1880. He was Aide-de-Camp to the Queen from 1883 to 1886; Captain-Superintendent of Sheerness Dockyard, 1883 to 1885; Director of Naval Ordnance, December, 1882, to April, 1883; on Parliamentary Committee on the Building and Repair of Ships, 1884; Junior Naval Lord of the Admiralty, June, 1885, to February, 1886; and Admiral-Superintendent of Chatham Dockyard, April, 1886, to November, 1887.

COLONEL RUCK-KEENE.

Colonel Edmond Ruck-Keene, of Swyncombe House, in the county of Oxford, J.P., formerly Major 2nd Dragoon Guards, and Colonel of the Oxfordshire Hussars, died on July 17, aged sixty-six. He was eldest son of the Rev. Charles Edmond Ruck-Keene, of Swyncombe, Fellow of All Souls, by Rebecca Frances, his wife, daughter of Sir George Shiffner, and was grandson of Mr. Benjamin Keene, M.P., by Mary, his wife, only daughter of Mr. George Ruck, of Swyncombe, in the county of Oxford, which Mr. Benjamin Keene was son of Dr. Edmond Keene, Bishop of Ely. Colonel Ruck-Keene was married twice, and leaves issue.

LIEUTENANT-COLONEL SIR A. NEED.

Lieutenant-Colonel Sir Arthur Need, Lieutenant of her Majesty's Yeomen of the Guard, died, at his residence, Fountain Dale, Blidworth, Notts, aged sixty-nine. He served with distinction with the 14th Hussars in the Punjaub Campaign of 1848-49; and took part in the Persian Expedition in 1857, and in the same year served with the Central India Field-Force. He was frequently mentioned in despatches. Sir A. Need was a Magistrate for the county of Notts.

MR. TYRWHITT DRAKE.

Mr. Thomas Tyrwhitt Drake, of Shardeloes, Amersham, Bucks, and St. Donat's Castle, Glamorganshire, J.P. and D.L., High Sheriff of Bucks in 1859, died on July 24, aged seventy-one. The Drakes of Shardeloes, for centuries a very eminent family in the county of Buckingham, represented, for several generations, the borough of Agmondesham in Parliament. The gentleman whose death we record was born July 14, 1817. He married, Aug. 8, 1843, Elizabeth Julia, daughter of Mr. John Stratton, and widow of Colonel Wedderburn, and by her, who died July, 1885, leaves issue.

THE DEAN OF CHICHESTER.

The Very Rev. John William Burgon, Dean of Chichester, died at the Deanery on Aug. 4. Dr. Burgon was a Fellow of Oriel College, Oxford, for thirty years, and was Vicar of St. Mary the Virgin, Oxford, from 1863 to 1876, when he became Dean of Chichester. The published works of the Dean make a very long list, and include "The Life and Times of Sir Thomas Gresham," a "Commentary on the Four Gospels," and the "Portrait of a Christian Gentleman."

We have also to record the deaths of—

Colonel Sowerby, of Putteridge Park, near Luton, on Aug. 2. He was attacked and killed by a stag that used to march at the head of the Durham Light Infantry, of which regiment the deceased was Lieutenant-Colonel.

Mr. G. L. Bassett, of Tehidy, Camborne, Cornwall, the principal mineral owner in the county, on July 25.

Colonel Charles Elliot, C.B., late Madras Artillery, on July 23, at 33, Cranley-gardens, aged sixty-four.

Lieutenant-General FitzRoy Miller Mundy, formerly of the Bengal Staff Corps, on July 12, aged seventy-three.

Lady Wilson (Caroline), wife of Sir Charles Rivers Wilson, K.C.M.G., C.B., and daughter of Mr. R. Cook, on July 13.

Mr. G. E. Skinner, the Deputy Assistant-Paymaster of the Supreme Court, suddenly, on Aug. 2.

Colonel William Scarlett, of Gigha, in the county of Argyll, suddenly, on July 31, aged forty-eight.

The Rev. William Fraine Fortescue, Vicar of Chesterton, Oxon, at Folkestone, on July 27, aged seventy-nine.

Lady Lennard (Julie Maria Frances), wife of Sir John Farnaby Lennard, Bart., and daughter of Mr. Henry Hallam, F.R.S., on July 15, at Wickham Court, Kent.

Harriet, Dowager Lady Gerard, widow of the late Lord Gerard, and daughter of Mr. Edward Clifton, brother of Mr. Clifton, of Lytham, on July 20, at Twyford Abbey, Middlesex.

Colonel Digby St. Vincent Hamilton, formerly of the 78th Highlanders, eldest son of Colonel J. P. Hamilton, K.H., Scots Guards, at Bath, on July 28, aged seventy-two.

Mr. John Edward Bartlett, of Peverel Court, Bucks, J.P. and D.L., High Sheriff, 1882, at Buxton, on Aug. 1, aged sixty-four.

Mr. Robert St. John Cole Bowen, of Bowenscourt, county Cork, M.A., J.P., High Sheriff, 1865, on July 20, aged fifty-seven.

The Marchioness of Ailsa, at Culzean, Ayrshire, on July 26. Her Ladyship was the Hon. Evelyn Stuart, third daughter of Lord Blantyre, was born in 1848, and was married to the Marquis of Ailsa in 1871.

The Rev. Rowland Mosley, Rector of Egginton, Burton-on-Trent, fourth son of Mr. Ashton Nicholas Every Mosley, J.P. and D.L., of Burnaston House, in the county of Derby, on July 24, aged fifty-eight.

Mr. H. C. Rothery (who resigned the office of Wreck Commissioner two months ago, in consequence of failing health), on Aug. 2, at his residence at Bagshot, Surrey, from heart disease, in the seventy-first year of his age.

Dr. Lush, who represented Salisbury in the Liberal interest from 1868 to 1880, suddenly, on Aug. 4, at St. Leonard's-on-Sea, aged seventy-three. Dr. Lush was a Justice of the Peace for Salisbury, and formerly Mayor and an alderman of that city.

Colonel Arthur Wellington Cameron, late 92nd Gordon Highlanders, suddenly, at Dunain House, Inverness, on July 27, aged sixty-one. He was the youngest son of the late Sir Alexander Cameron, K.C.B., K.C.H. Rifle Brigade.

Mr. Algernon Charles Talbot, of Aston Hall, Cheshire, at Forest House, Bournemouth, on July 27, aged twenty-nine. He was the eldest son of Mr. Charles Arthur Talbot, of Aston Hall, nephew of Henry John, eighteenth Earl of Shrewsbury.

Rev. Thomas Edward Crallan, M.A., for seventeen years Chaplain at the Sussex County Asylum, Hayward's-heath, at his residence, Ivy House, Emsworth, suddenly, on July 30, aged sixty-one.

Colonel Reginald John Manningham Buller, late of the Grenadier Guards, at Dilhorn Hall, in the county of Stafford, on Aug. 2, aged fifty-seven. He was the fourth son of Sir Edward Manningham Buller, first Baronet, and was brother of the present Baronet.

Anne Charlotte, Lady Hay, wife of Sir Hector Maclean Hay, Bart., of Alderston, on July 24, in her seventy-eighth year. Lady Hay was daughter of Dr. J. White, 17th Light Dragoons. She married, first, Lieutenant-Colonel William Charles Bird, E.I.C.S.

The Hon. Mrs. Peel Dawson, at Folkestone, on July 30. She was the daughter of Charles, first Lord Lurgan, and widow of the late Colonel Robert Peel Dawson, M.P., of Moyola Park, Castledawson, Lord Lieutenant and Custos Rotulorum of Londonderry. She leaves one daughter, May, married to Lord Spencer Churchill Chichester.

Lieutenant-Colonel Thomas Smith, late 37th Regiment, at Forest-hill, S.E., on Aug. 2, aged seventy-eight. He served with his regiment at the siege of Sebastopol, receiving for his services a medal with clasp and the Turkish medal, and at the siege and capture of Lucknow, for which he received a medal with clasp.

Mr. Octavius Morgan, uncle of the present Lord Tredegar, at his residence in Newport, on Aug. 5, aged eighty-five. Deceased, who represented Monmouthshire in the Conservative interest from 1841 to 1874, was a well-known authority on antiquarian matters, and the author of many works relating to the history of his native country.

Mr. Robert Clayton Browne, at his residence, Browne's Hill, county Carlow, on July 22, having attained his ninetieth year. Mr. Clayton Browne served as High Sheriff, and was Deputy-Lieutenant of the county. He married, in 1834, Harriette Augusta, youngest daughter of Mr. Hans Hamilton, of Abbotstown, county Dublin, and he is succeeded by his eldest son, William, born 1835.

Sir William C. Sargeaunt, K.C.M.G., on July 31, in his fifty-ninth year. He had been Colonial Secretary in Natal, and for a short time Lieutenant-Governor of St. Vincent, and in 1877 was commissioned by Lord Carnarvon to inquire into and report on the financial condition of the Transvaal. Sir William, who was made a C.M.G. in 1875 and a K.C.M.G. in 1882, married, in 1853, a daughter of the Rev. George Gordon, Rector of Muston, Leicester.

Lord Douglas William Cope Gordon, fourth son of Charles, tenth Marquis of Huntly, at his residence in Green Park-chambers, Piccadilly, on Aug. 4. He was born in October, 1851. He was appointed Ensign in the Coldstream Guards in October, 1871, and became Lieutenant and Captain in 1874, but resigned his commission in May, 1880. Lord Douglas Gordon was for some years in the House of Commons. He represented West Aberdeenshire in the Liberal interest from May, 1876, to April, 1880, and was M.P. for Huntingdonshire from April, 1880, to November, 1885.

General Sir James Brind, R.A., G.C.B., on Aug. 3, after a short illness, at the age of eighty years. He obtained his first commission in 1827, and became Captain in 1842. His name was repeatedly favourably mentioned in despatches, and he received the thanks of the Government of India, was made a C.B., and received the brevet of Colonel for his distinguished services. He was promoted to the rank of Major-General in 1867, and General in 1877, and Colonel-Commandant in November following, and was placed on the retired list in 1879. In further recognition of his military services he was promoted to be a Knight Commander of the Order of the Bath in 1869, and was made a Grand Cross of the Order in 1884.

OBSERVE!

I AM

The Spirit of Health,

and my message is to the Wise. I crown, with a fadeless wreath, those who obey my laws and avail themselves of my counsels. The flowers that I give do not wither, and the fragrance of my roses is perpetual. I bring bloom to the cheek—strength to the body—joy to the heart. The talisman with which I work never fails. Vast numbers have felt its power, and testified to its virtues. It is

"THE MILL STREAMS THAT TURN THE CLIPPERS OF THE WORLD ARISE IN SOLITARY PLACES."—HELPS.

PLATO MEDITATING BEFORE SOCRATES, THE BUTTERFLY, SKULL, AND POPPY.
(The Portrait of Plato is copied from an exquisite gem of high antiquity in the British Museum.)

WHO are
THE Really Great
AND Successful Men
OF the World?
PROFESSOR HUXLEY says:
"Those who take honours in Nature's University, who learn the laws which govern men and things and obey them, are the really great and successful men in the world. Those who won't learn at all are plucked, and then you can't come up again. Nature's pluck means extermination."
THE simple meaning is—
WHEN ailing pay no attention to the regulation of your diet, exercise or occupation,
ATTEMPT no conformity
TO the laws of Life;
OR when you have drawn an overdraft on the Bank of Life, &c.,
AVOID the use of
ENO'S "FRUIT SALT" and
ENO'S "VEGETABLE MOTO,"
AND don't read the Rules for Life, given with
ENO'S "VEGETABLE MOTO,"
AND you will be surprised to learn of the body
WHAT a Frail and Fickle Tenement it is,
WHICH, like the brittle glass that measures Time,
IS often broke ere
HALF its sands are run.

ROBINSON & CLEAVER, BELFAST.

THE PLAYHOUSES.

It is only necessary to consult the London hoardings in order to appraise the value of "The Still Alarm." He who runs may easily read. A stalwart young man who has smashed a double-cased window into atoms has flung himself upon the steps of the communicating-ladder provided as a safeguard for fire in New York houses, and is descending to the street in search of his enemy, the villain, in a blinding snowstorm; the comic young lady who has graduated in the American music-halls or variety shows is pouring a kettle of boiling water over the foot of an inebriate, who has caught fire in a drunken fit; a lover of dumb animals is feeding a couple of "milk-white steeds," worthy of Lord Lovell, with appetising morsels of white sugar, and alternately caressing a trained greyhound; an impetuous dare-devil fireman is driving to the rescue of an imprisoned family on an American fire-engine at full gallop, lashing his horses and looking eagerly into the distance. In other words, "The Still Alarm" is the kind of sensation play that suits the popular theatres down Brooklyn way, and is invariably popular in London during the dull and holiday seasons. Country cousins and excursionists and provincial playgoers like nothing so well as one of these realistic dramas that please the eye and do not call the brain into requisition. No one knew this better than Mr. Boucicault, who made a point of producing his "Streets of London" and "After Dark" and *id genus omne* in what once used to be called the "silly season." Mr. Arthur's new American play is a commonplace melodrama with one really admirable scene that attracts attention by its *vraisemblable*. Since "The Flying Scud" at the old Holborn, London has seen nothing so accurate or complete in the way of imitating on the stage scenes of actual life. We see the whole detail of a fireman's working life in New York, his duty, his dormitory, his harmless recreation, his social sing-song, and all the difficulties and dangers of his exciting career. Suddenly there is a call for fire. The wires have been smashed by the villain, but the "still alarm" is sounded through a handy telephone. In less time than it takes to write it, the men are aroused from their slumbers, they jerk themselves down from one floor to another, the horses are harnessed, the dog barks an exciting prelude, the gates fly open, and the engine is off in about a dozen seconds from the time that the alarm is sounded. The scene, such as it is, has the strong merit of accuracy and picturesque force. The start of a fire-engine is always a stirring moment, and it is difficult to see how it could be better done. The art called into question is not of a very elevated kind, but the scene would appear to be precisely the kind that suits a modern audience, careless of the higher duties of the drama and only anxious to be pleased at all hazards. The rest is but leather and prunella. A trite, commonplace story is told with no special point or felicity of language, and the acting is no better than would be found in the palmy days of the old Surrey in the Blackfriars-road. Mr. Lacy distinguishes himself more as a trainer of dogs and horses than as an actor, and it takes the audience some time to become accustomed to his American twang and his artificiality. His voice is good, his enunciation distinct, and in scenes of dramatic movement his quiet style is, no doubt, impressive; but the new-comer can only be considered "a star," because the dogs and horses and fire-engine could not get on very well without him. Miss Fanny Leslie and Mr. Harry Nicholls, both clever and vivacious artists, are thrown away on characters that contain no sparkle of humour or bare suggestion of fun, and Miss Mary Rorke, who is the heroine, has even a worse part than Miss Millward in "The Union Jack." The best bit of acting in the whole play comes from Mr. Harry Parker, who has proved himself to be a very competent and able character-actor. Time would be wasted in picking holes in such an obviously made-up drama as "The Still Alarm."

It was scarcely worth while to make so much stir about Mr. Louis Stevenson's curious little story, "Dr. Jekyll and Mr. Hyde," so far as any stage version of it was concerned. Much money appears to have been wasted, many jealousies aroused, no little bad blood stirred, and plenty of work given to the lawyers, over a work which from the first was considered by the experienced to be undramatic and foreign to the purpose of the stage. Mr. Richard Mansfield, at the Lyceum, has given us a grim and ghastly drama; Mr. Daniel Bandmann, at the Opéra Comique, has excited his audience to immoderate laughter. People will go, so long as the plays last, to one theatre in order to shudder, and to the other to chuckle over this silly travestie of the supernatural. It is Mr. Mansfield's clever and unquestionably powerful presentation of the hideous depravity of Hyde's nature that will be a fruitful subject for discussion; it will be Mr. Bandmann's astounding picture of the excellence of Jekyll's moral nature that will set the pencils of the caricaturists to work. Neither play can hold the stage for a very long period, except as a morbid sensation; for we do not believe that modern audiences seek recreation at the theatre in the contemplation of hideous nightmares and the wild speculations of the psychologist; nor do they care to laugh long at the kind of bogey that Mr. Bandmann has put up to frighten the curious and the lovers of morbid sensations. The clown of the village, who haunts churchyards dressed in a white sheet surmounted by a turnip illuminated by a candle, is never considered a commendable joker, and has been known to receive the reward of his ill-timed jest in the nearest horse-pond. During the silly season there may be a temporary stir of excitement caused by the hideous repulsiveness of the stage Hyde and by the sillier pantomime that surrounds the mouthy Jekyll; but it will all be a nine days' wonder and probably forgotten long before the London playgoer is back from his holiday and prepared to discuss and enjoy more serious work.

From his own point of view, perhaps, Mr. Mansfield was right when he elected to make his first reappearance in London as an actor of note and promise in the play that has caused so much excitement in America. Mr. Stevenson's genius is possibly appraised higher on the other side of the Atlantic than it is here, and it is the fashion to accept him and his wild theories as super-excellent even in a bad play. But in England our judgment is not so biassed, and we can see that the subject will read very well in a book often looks very badly in a play. At any rate, Mr. Mansfield has been fairly criticised and well advertised, and when he has done with his Jekylls and Hydes everyone will be prepared to study him and his art with attention when he appears—as he will, doubtless, do—in the character of the old Baron in the dramatised version of Octave Feuillet's "Roman Parisien"—the play, by-the-way, in which he first made his strong success before an American audience. He is also said to have an entirely new play, called "Nero," ready for production, and this will be seen on the stage lent him, during the holidays, by his friend Mr. Irving. It is to be feared that, like so many novelists, Mr. Louis Stevenson has not the slightest conception of dramatic effect. If he seriously believes that his views have been strictly carried out either at the Lyceum or the Opéra Comique, he can scarcely understand his own clever, but unsatisfactory, story. When read quietly, and without any stage accessories, it sets the brain and intelligence working; when witnessed on the stage it shocks one with its savagery, or makes one laugh with its ludicrous inadequacy and gratuitous misrepresentation. Mr. Mansfield's improvement as an actor is very marked. He is a young man of bright intelligence, and he has done what so few experienced actors could do—created interest in a play that was dead against the sympathies of his audience at every turn. There must be a measure of genius in a man who could excite a Lyceum audience as Mr. Mansfield managed to do. Mr. Bandmann has been round the world, but he has not returned a better actor than when he left England for a more congenial climate. He is the head professor of the old-fashioned, stagey, stilted, and unnatural school, and whilst he has been away we have learned a less tricky method and a truer art.

PANGBOURNE.

Our Coloured Picture Supplement is a view of one of the beautiful river scenes that delight hundreds of summer visitors on the Thames above Reading, though less frequented or less celebrated than the part between Maidenhead and Great Marlow, with the noble hanging woods of Cliefden. The quiet little Berkshire village of Pangbourne, named from a "bourne" or stream, the "Pang," which there loses itself in the river, nine miles beyond Reading by the Great Western Railway, is a favourite resort of anglers, boating-men, and artists. In front of the Old Swan Inn—a rustic tavern where one is sure of a cheerful welcome and a wholesome luncheon, and where Mr. Ashley lets out trim boats, with the most obliging and intelligent of young boatmen, if required, to manage them—lies a piece of water that one might study for long hours with unfailing interest and pleasure. The weir, running obliquely across the river, with a series of powerful cascades, and with a lock having a fall of 4 ft. on the Oxfordshire side, commands a wide and deep pool, continually agitated, the surface of which reflects the endlessly varied movements of glancing light, in some places tinged with green by the foliage of willows and ash-trees overhanging the river. There are, suspended on the walls of a snug little room at the Swan, two or three small oil-paintings and other sketches, proving that artists who have enjoyed its hospitality found it a worthy occasion to depict, as our own Artist has done, the characteristic beauty of the Upper Thames. Similar evidence of the visits of well-known members of the artistic brotherhood, with certain graphic drolleries, will be found at the Elephant, an hotel in the village, nearly half a mile from the river, which affords pretty good accommodation for the night, with most civil attention, being now kept by the former landlord of the French Horn at Sonning. It has a pleasant garden, adjacent to the village church; and bachelor guests will find excellent sleeping-quarters, with good beds, in the zinc huts lately erected on the airy bowling-green. The field-paths near Pangbourne are inviting for a quiet stroll, where the expanse of meadow is bounded to the eye by a winding range of finely wooded hills, really on the other side of the Thames, which from this point is not seen. The old church, with its monuments of the Davises of Bere Court, an Elizabethan knightly family, is of some antiquarian interest. There is nothing of Cockney townish or suburban smartness about Pangbourne; long may it be so! A narrow wooden bridge over the Thames leads to the village of Whitchurch, in Oxfordshire.

LONG TESTED. | By Her Majesty's Royal Letters Patent. | NEVER EQUALLED.

ELECTROPATHIC BATTERY BELT

The only Guaranteed Genuine Galvanic Curative Appliance recommended by the highest Medical and Scientific Authorities.

PAMPHLET AND ADVICE FREE.

If you are suffering from any slight derangement, with the cause of which you are acquainted, you will find that HARNESS' ELECTROPATHIC BELT affords a perfect means for the self-application of Curative Electricity. It is cool and comfortable to wear, produces no shock, and is absolutely certain to do good in every case. The thousands of testimonials in favour of HARNESS' ELECTROPATHIC BELT speak for themselves. A large number of them are published in "HARNESS' GUIDE TO HEALTH" (gratis and post-free); but sufferers are invited to call, if possible, at 52, OXFORD-STREET, London, W., correct of Rathbone-place), and convince themselves by personally inspecting the originals. IF YOU HAVE ANY REASON to fear that your sufferings are serious or complicated, you are recommended to call; or, if you reside at a distance, to write for a private "Advice Form"; which will be sent you by post (with Pamphlet), free of charge.

MR. C. HARNESS, Consulting Medical Electrician (President of the British Association of Medical Electricians), attends daily at 52, OXFORD-STREET, London, W. corner of Rathbone-place), and gives ADVICE FREE OF CHARGE on all matters relating to Health and the application of Curative Electricity.

PAMPHLET AND ADVICE FREE.

All in Search of Health and Strength should try Mr. HARNESS' world-famed

"ELECTROPATHIC" TREATMENT.

Mr. C. B. HARNESS, *CONSULTING MEDICAL ELECTRICIAN,* gives every case his PERSONAL attention, and MAKES NO CHARGE FOR ADVICE, either personally or by letter. The thousands of cures he has effected in the past enable him to POSITIVELY GUARANTEE to successfully treat the most obstinate cases of Rheumatism, Gout, Sciatica, Lumbago, Nervous Exhaustion, Torpid Liver, Indigestion, Sleeplessness, Hysteria, Ladies' Ailments, Kidney Disorders, &c. Residents at a distance, and those unable to call at 52, OXFORD-STREET, London, W., should write at once for particulars of HARNESS' ELECTROPATHIC BELTS.

Mr. HARNESS guarantees that these world-famed Curative Appliances, when worn next to the skin, will produce a mild, continuous, stimulating current of electricity, without any shock or discomfort whatever. The multitude of unsolicited testimonials, published in "Guide to Health" (gratis and post-free), are sufficient evidence of the remedial properties of Harness' Electropathic Belt. The original testimonials may be inspected at 52, OXFORD-STREET, London, W.

HARD FACTS. Every advertised article is not a fraud and a delusion. Thousands of Patients gratefully remember the day they saw our advertisement, and gave the natural and rational system of ELECTROPATHY a trial.

HARD FACTS. The few Testimonials in favour of Electropathy published herewith are not written to order nor by a few personal friends—they are from utter strangers, and are taken indiscriminately from thousands of unsolicited reports received, which may be seen by anyone interested at Mr. C. B. HARNESS' Consulting Rooms, 52, OXFORD-STREET, London, W.

HARD FACTS. Electricity is not simply something to make the muscles contract and jump. The healing powers of Electricity, as exhibited under Harness' world-famed "Electropathic" Treatment, are multifarious.

Mr. HARNESS should be consulted at once, either personally or by letter, by all who suffer from

Nervous Exhaustion.	Kidney Diseases	Spinal Weakness,
Sleeplessness,	Epilepsy,	Liver Complaint,
Brain Fag,	Paralysis,	Consumption,
Rheumatism,	Indigestion,	Female Disorders,
Lumbago,	Constipation,	General and Local Debility,
Sciatica, Gout,	Neuralgia,	Functional Disorders, &c.

HARNESS' ELECTROPATHIC APPLIANCES

Promptly, Absolutely, and Permanently CURE.

MEN AND WOMEN

Who wear HARNESS' world-famed ELECTROPATHIC BELT find that it promptly Restores Impaired Vital Energy, Invigorates the Debilitated Constitution, Stimulates the Organic Action, Promotes the Circulation, Assists Digestion, and Promptly Renews that Vital Energy, the loss of which is the first symptom of decay. Healing Properties are Multifarious; it Stimulates the Functions of Various Organs, increases their Secretions, Gives Tone to Muscles and Nerves, Relaxes Morbid Contractions, Improves Nutrition, and Renews Exhausted Nerve Force. Acting Directly on the System, it Sustains and Assists its Various Functions, and thus Promotes the Health and Vigour of the entire Frame.

THE FOLLOWING ARE A FEW EXTRACTS from the thousands of unsolicited

TESTIMONIALS

received by Mr. Harness. The public are invited to call and inspect the Originals at the Electropathic Consulting Rooms, 52, Oxford-street, W.:—

CONSTIPATION & LADIES' AILMENTS.—"Portmore House, Weybridge.—Dear Sir,—I purchased one of your Electropathic Belts on Oct. 3 last, and since wearing it my health has been better in every way, and I would not like to be without it. Before I wore the Belt I suffered such pain every month from my waist to the knees, which often went on to my head and affected my eyesight for a little time, but I am happy to say these pains have never returned. I tried all sorts of medicine with no good results, but from wearing your Electropathic Belt I am now in the best of health, and cannot thank you too much for it.—Yours truly, H. JONES."

INTERNAL WEAKNESS.—Miss M. HUDSON, Twyford, Derby, writes:—"Seven months ago I purchased one of your Electropathic Belts. I need not describe the symptoms here, but refer you to my previous letter. I have worn the Belt every day since that date. It has been an untold comfort to me. I would not be without one, and cannot say enough in favour of your Belts."

EPILEPSY.—ARTHUR HEWELL, Wood-road, Geddington, Kettering, June 4, 1888, writes:—"I cannot speak too highly of your Electropathic treatment, as I am sure it has been a great boon to me. I used to have the fits several times a day, but now I have none, and the peculiar sensations incidental to this distressing disease entirely left me after wearing your appliances."

SLUGGISH LIVER.—Mrs. M. ANDERSON, Mortimer-street, Herne Bay, Kent, writes:—"I was suffering from a torpid, inactive liver, accompanied by Constipation and Indigestion. After wearing the Electropathic Belt you recommended me, I am very glad to be able to tell you that I am much better in every way; the functions are regular, my appetite has improved, and the wretched depressed feeling I used constantly to have has completely passed away."

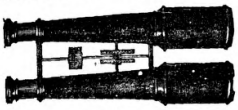
INDIGESTION.—WILLIAM SHEPTON, Lower Wyke, near Bradford, Yorks, writes:—"My general health is a great deal better since wearing your Electropathic Belt. It has done me more good than all the patent medicines I have ever taken."

PARALYSIS.—ROBERT ROTHWELL, 9, Cooke-street, Hulme, Manchester, June 2, 1888, writes:—"The Electropathic Belt my father purchased for loss of nerve power and paralysis has made a new man of him, and it was only the other day that he told me he would have been in his grave long ago if it had not been for your valuable Electropathic treatment."

NERVOUS DEBILITY.—A. A. JAMES, Esq., F.R.H.S., Chapel-road, Lower Norwood, London, S.E., writes:—"I have obtained great benefit from wearing your Electropathic Appliances. The pains in my head have left me, and I feel stronger both generally and locally."

PAINS IN THE BACK.—The Rev. R. ANTHIM, Vicar of Shipton, King's Bridge, South Devon, writes:—"The pain across the loins has quite left me. My nervous energy is greatly augmented since wearing Harness' Electropathic Belt."

DON'T MISS the opportunity of obtaining GRATIS and POST-FREE new pamphlet on the Diseases peculiar to Women, recently issued by Mr. C. B. HARNESS, the Medical Battery Cure Consulting Medical Electrician. Mr. HARNESS offers ADVICE FREE, personally or by letter. Call or write to-day.



This Genuine Electric Belt prevents and cures all nervous disorders and irregularities of the system.

HARNESS' ELECTROPATHIC BELT weighs only a few ounces, produces no shock, is cool and comfortable to wear, and improves the figure.

Annual Rent of Safe, 1 to 5 Guineas; Annual Rent of Strong Rooms, from 8 Guineas.

THE CHANCERY-LANE SAFE DEPOSIT OFFERS FACILITIES SECOND to NONE as REGARDS SAFETY and CONVENIENCE, and HAS the ADVANTAGE of BEING LOCALLY SITUATED. IT PLACES ITSELF BEFORE the PUBLIC with the FULL CONFIDENCE of its ABILITY to SERVE ITS PATRONS in all ITS DEPARTMENTS with the BEST of its KIND. BEFORE the ERA of SAFE DEPOSIT COMPANIES, EVERY PERSON SEEKING a PLACE WHERE HIS VALUABLES WOULD BE SAFE from the INROADS of THIEVES, and from DESTRUCTION by FIRE, was OBLIGED TO LAY OUT LARGE SUMS OF MONEY in so-called BURGLAR-PROOF SAFES. IT WAS NOT LONG, however, before the EXPERIENCED THIEF FOUND the way to ENTER THESE STRONG-BOXES, and PEOPLE are now COMPELLED to SEEK OTHER MEANS of PROTECTION for their WEALTH. THE TIME HAS GONE BY WHEN PRIVATE SAFES IN ONE'S OWN HOUSE or OFFICE can be CONSIDERED ABSOLUTELY TRUSTWORTHY.

THE BOOM PROTECTING THE "B SQUADRON" IN BEREHAVEN.

THE NAVAL MANŒUVRES IN BANTRY BAY: SKETCHES BY OUR SPECIAL ARTIST, MR. J. R. WELLS, WITH THE "B SQUADRON."

OUR NOTE BOOK.

BY JAMES PAYN.

Mr. Grant Allen has had the audacity to state in the *Fortnightly Review* that there is no such thing as a born genius. This has, of course, brought down upon him from persons who are neither born geniuses nor made ones, the observation that Mr. Grant Allen is not in a position to decide that question. He has no doubt said not only a very bold thing, but one contrary to established opinion. It would have been safer to assert that the man of genius is not always up to his own high-water mark, and is often surpassed by the man of talent, who takes more pains. It is a curious mistake of the critics to conceive of a writer of the former class as always belonging to it. They talk of "Scott's works" as though "Count Robert of Paris" was on the same level with "Rob Roy." In the case of poets, I venture to think that Mr. Grant Allen (who, nevertheless, is a man who knows what he is talking about, which is not the case with everybody) is wrong; the "Tears, idle tears," of Tennyson, for example, could never have been written by a man of mere talent, or by one even who had only "the capacity for taking infinite pains"; but as regards prose writers I am inclined to agree with him that the distinction is somewhat fanciful. At all events, one cannot withhold one's admiration from a man of letters who in these days has the courage of his opinions: the point he insists upon has, it is true, been always ruled against him, but not by a Court from which there is no appeal.

Such analogy as can be drawn from the gifts of the dog-world seems to militate against Mr. Grant Allen's theory. The instinct of some dogs not only in degree, but in kind, is so infinitely greater than that of others—acknowledged to be "clever dogs" too—as to almost suggest a parallel superiority to that of genius over talent. It is noticeable that good sporting dogs rarely do tricks, just as a young gentleman who distinguishes himself in orthodox fashion at the public school, or the university, seldom "leaves the metals," or makes a groove for himself. It is not the high-born King Charles' spaniel, with all the advantages of aristocratic surroundings, that delights you with his intelligence and high spirits, but the half-breed from whom one expects nothing. The collie is a dog of great sagacity, and very distinguished in his profession, but for great (if somewhat eccentric) intelligence, we must go to the French poodle. He has also some of the drawbacks that are too often found in connection with genius: he is not a domestic dog (in the moral sense) and has a temper that is charitably called "uncertain," but which can, in fact, be relied upon as an exceedingly bad one.

The Continental Powers have, of late, been trying various breeds of dogs for military purposes: to "relieve sentinels"—not quite in the ordinary way, however, but to keep what at sea are called "dog watches"—to search for the wounded, &c. This novel branch of canine industry has caused several French naturalists to give their attention to the dog. The Russians, M. Jupin tells us, prefer the Caucasian breed for army use; the Austrians, the Dalmatian; and the German, the Pomeranian wolf-dog; but the preference in France is given to the smugglers' dogs, of whatever breed, in the frontier towns, because (*I am sorry to say*) of their immoral, or at all events illegal, antecedents, which give them habits of duplicity. They are quite capable of pretending to belong to the dog-contingent of the enemy, and will probably be shot as spies. M. Robert narrates some unpleasant stories about that "friend of man," the Newfoundland. He not only corroborates the view of his drowning more people than he saves, but adds that he is vindictive. He tells how Alphonse Karr was almost eaten up by one which he had, too, immortalised in fiction; and how another gentleman had his left eye torn out by a Newfoundland which he had awakened rather suddenly by dropping his newspaper on him. In this case the animal, however, is excused on the ground of being "highly nervous," which was also, I should think, the case with his master ever afterwards in respect to Newfoundlands.

The country that is credited with the invention of gunpowder (which it has never known how to use) and of printing (which no one can read) has ideas of the same intelligent class respecting the human form divine. It applies torture without stint, and delights in the spectacle, but it is very solicitous about keeping the limbs intact; decapitation is thought seriously of, not on account of its putting folk to death (which is a trifle to a Chinaman), but because of its mutilating the body. "Amputation is vexation" is the motto even of its mathematicians; and when an operation is performed upon a native of the Flowery Land he literally "keeps the piece," or, if possible, even devours it, under the impression that he has thereby restored it to its rightful owner. The *North China Herald* cites a case of a Chinese gentleman who lost his eye, and disposed of it in this manner, though it could be of no more use to him than "the Pope's eye" in a leg of mutton. When their teeth fall out, the Chinese grind them to powder and swallow them in water. They may be "The Nation of the Future" for all I know, as they have long been the most bepuffed people of the Past; but, judging of them by their "tricks and their manners," they are certainly, for the Present, the most idiotic race under the sun. There is one lesson, however, that the disciples of Confucius are in a position to teach us, and which it would be well for us to lay to heart—that it is quite possible to educate a nation, as well as an individual, beyond its wits.

A good instinct should always be indulged, because it may never occur again, but we should be quite sure of its being good. An Anarchist of Rheims (a professional description that somehow reminds one of those in Mr. Lear's "Book of Nonsense") was suddenly seized the other day with a desire (as Thomas Ingoldsby pleasantly expresses it) "to pink a bourgeois." He had not a small-sword by him, which ought to have given him an opportunity for reflection, but, rather than let the aspiration fade away, he loaded his revolver. The Anarchist has an advantage over the sportsman in not having to go into the country to find his game; what, according to his own account, this gentleman was in search of was "a young, plump, and overfed citizen," and this is to be found in every street. The first bourgeois he "flushed" was in some respects attractive; he was a Magistrate, in comfortable circumstances, but he was aged, and did not, perhaps, satisfy the conditions of "plumpness." "I drew back," said the Anarchist, with dignity, "on finding myself face to face with so venerable a mar." His forbearance was presently rewarded by meeting with a prosperous young wine-merchant, at whom he fired a couple of shots, but in his excitement missed him. For this venial offence, from which, too, no harm resulted to anybody, this unhappy victim of impulse has been sentenced by a bourgeois Judge, without a trace of humour, to twelve years of penal servitude.

A château in Spain may not be very valuable, but a prison in that country appears to possess quite unequalled advantages. A governor of a jail in Madrid (assisted by no less than fourteen subordinates) has been pushing philanthropy (though not, it is conjectured, without a mixture of other motives) almost beyond its limits in permitting prisoners in confinement for theft to go out o' nights on parole. They returned to their cells with honourable punctuality, but the chaplain seems to have neglected his duties, for in the meantime they pursued their professional vocations. One of them, while on leave of absence, murdered his mother, and divided her property with a servant-maid to whom he was tenderly attached. Never had criminal, apparently, so good an alibi; how *could* he have been guilty of even an indiscretion outside the walls of his prison cell? But, somehow or other (to use a Spanish idiom), "the gaff was blown." It is possible that one of the "fourteen officials," feeling that he was doing wrong (or that he was underpaid for it) "rounded" on the Governor, who is now himself in prison. The whole affair has a charming local colouring, and might very well form a new chapter in "Gil Blas."

Even in civilised countries, the language of courtesy in the mouth of Kings is, from a humorous point of view, exceedingly charming. They are "graciously pleased to accept" what, as a matter of fact, they are uncommonly glad to get, such as a present or a subsidy, and "deign" to do things which to the vulgar eye seem rather to involve an obligation than to leave it on the other side. But in the East this Imperial (and imperious) style is much more worthy of admiration. When a Monarch flies in the face of Nature, so far as to bestow something on his people instead of exacting it for himself, words absolutely fail him to express his sense of his own magnanimity. The last proclamation of the Shah of Persia, whatever may be its faults, has certainly no mock modesty about it. After stating that the Creator has "made his [the Shah's] holy person the source of justice and benevolence," he has decreed "in sign of the watchfulness, tempered with justice, of his Sovereign mind," that in future "all his subjects may exercise the right of proprietorship *over their own belongings*." The style of this announcement is unapproachable; but the principle of it reminds one of the cry of the fruit-sellers of Constantinople—"In the name of the Prophet, figs!"

Whatever is is right, and I suppose even teeth are no exception; but there are certainly occasions when one is tempted to envy the gentleman described in the ancient Classics who was born with "two semicircles of ivory above the jawbone, without any separation or division in them whatsoever." Whatever ached in that connection it was not his teeth; he knew nothing of the things that have been justly described as "a trouble in coming, a trouble when they have come, and a trouble in going." It has even been reckoned among the few advantages of extreme old age, that we have then done with our teeth and go to the rhinoceros (or whatever it is) for a fresh supply of quiet ivories warranted not to "jump" or "plunge," and to last for our little "ever." But now it seems even this poor blessing is fraught with danger. Within a very few weeks there have been two cases, and there was last week a third, of a gentleman's false teeth being very literally the death of him, through his swallowing them while asleep, and probably, in the "ivory gate" of dreams. There seems to be something almost demoniacal in the trouble these things give us. There is a Rabbinical legend that our first parents, before the Fall, were made of a smooth hard transparent substance, and that flesh and blood was substituted for it, for their sin, except in the places where we still see it—*videlicet*, the finger nails. Filbert nails, vulgarly supposed to be a mark of good breeding, are thus in reality a proof of a more than usually spiritual nature. For my part, however, I don't believe a word of it.

The novelists have been having (for *them*, poor souls!) quite a good time lately. It has been discovered by the playwrights who steal their plots that the theft is not very successful, since they have been forbidden to steal their dialogue. Though, it is true, only by an indirect action of the law, writers of fiction are placed on the same footing as the modern Persians, who, as we have just read, have actually been allowed the privilege of possessing their own property. They have also been patted on the back by a Bishop. This is rare indeed, for hitherto they have received at the hands of the Church, like the monkeys that are attached to hurdy-gurdies, "more kicks than halfpence." As a rule, there is nothing ecclesiastics resent so much as the discourses of the lay preacher; and the novelists, though they speak to the million, and, moreover, to an audience who can scarcely be got to listen to anybody else, have been hitherto held lower than the "uncovenanted" divines of the street corner. The Bishop of Ripon has taken a juster view of their position and influence, and held out the olive branch, instead of the birch, to his literary brother. If his Lordship had only mentioned names, what an advertisement it would have been for somebody! The dream of the popular novelist (though he never breathes it to anybody, because he wishes people to think he has no more realms to conquer) is to tap a new public.

"ROTTEN YESTERDAYS."

Writing to one of his daughters, Emerson said:—"Finish every day and be done with it. For manners and wise living it is a vice to remember. This day for all that is good and fair. It is too dear, with its hopes and invitations, to waste a moment on the 'rotten yesterdays.'" There is much wisdom in this advice. A girl dreaming idly of the past when the day's work calls for action is not in a healthy state of mind; her regrets are often morbid, and to indulge in them is enervating. Young people, it is well known, are more prone to melancholy than men and women who have been long engaged in practical affairs. They are more intensely conscious of existence than their parents, and far more susceptible to emotion. They are apt to brood over the little span of their past lives, and to see even in slight errors a cause for despondency. The habit is insidious in the leisurely days of youth, and though less common later on in life, it is, unfortunately, by no means rare in these care-breeding days. Don't we all know people who fret themselves over spilt milk and small worries?—who dwell on every trifling mistake they make and wonder why they did not act differently? Why did I do this?—Why didn't I do that?—How could I have acted so like a fool?—these are the questions some people ask themselves again and again, and ask in vain. Life has burdens enough to bear without adding to their weight by mourning over the blunders of the past. It would be scarcely less reasonable to fret over the blunders of our ancestors. Regrets at small follies are altogether idle, and it may be truly said, in the words of Emerson, that it is a vice to remember them. And his advice to his daughter may be given also to people who, from slight fault of their own, have to some extent missed their way in life. The fact that a man failed to gain some desirable object ten years ago, even if that object were a wife or a seat in Parliament, is hardly a sufficient reason for making himself miserable to-day; if a girl was a little wayward with her lover, and lost him in consequence, it is a pity; but why spoil her young life by brooding over the fault? In such cases all energy and hopefulness are destroyed by going back to the rotten yesterdays. Everybody loses some chance; everybody, from Prime Ministers downward, makes blunders. The world, according to Carlyle, consists chiefly of fools. It may be hoped that this was one of the wild utterances in which he indulged so freely; but no doubt the wisest man is liable to act foolishly; and to allow the mistakes of the past to distress and hamper us to-day is the greatest folly of all.

Let us be grateful, then, for Emerson's sane and wholesome counsel, for it is of large application and of practical service. At the same time it is obvious that another view may be taken of our yesterdays, and that it cannot be just in all cases to say it is a vice to remember what we are often unable to forget. "It is impossible," a moralist may exclaim, "to get rid of our faults and follies in the easy fashion suggested by Emerson. The thoughts and aims of days long past are the forces that mould our present lives; how then is it possible to forget them? The ghosts of old sorrows and of aspirations unfulfilled cannot be wholly laid. The road we have travelled is not obliterated by time. We cannot help seeing much of the track still; and if a part of it lay beside green pastures and still waters, through woods gladdened by the song of birds, and over hills bright with sunshine and fragrant with heather, another and, perhaps, a longer part of the journey was through deserts and quagmires and across jagged rocks, over which we stumbled with bleeding feet."

The moralist is right. We cannot, if we would, forget our yesterdays, and we might almost say that every word spoken is an echo from the past. If our days have been spent unwisely they leave a scar behind, and vainly will the wrongdoer strive to escape from the pains of memory—from the sorrow of lost yesterdays. It is a sorrow, however, that has its uses. The recollection of falls and failures makes a man sympathetic and generous, and it is often through the direst error that he reaches a higher life.

There are people sometimes to be met with so joyously happy, so brilliant, and so prosperous, that poor mortals who live in the valley and cannot reach such heights are apt to feel they have little in common with them. Such people are, to quote Wordsworth's felicitous phrase, "men of cheerful yesterdays and confident to-morrows." Looking back they recall nothing but successes, and looking forward anticipate only fresh triumphs. Often, indeed, the appearance of supreme good fortune is an illusion, and men in the full sunshine of fame and wealth shiver at the memory of the past. "I have ever been esteemed," said Goethe, "one of Fortune's chiefest favourites, nor can I complain of the course my life has taken. Yet, truly, there has been nothing but toil and care. In my seventy-fifth year, I may say that I have never had four weeks of genuine pleasure." You see that when the great poet spoke in this melancholy strain he was thinking, and could not help thinking of his "rotten yesterdays."

> O wad some power the giftie gie us
> To see oursel's as others see us

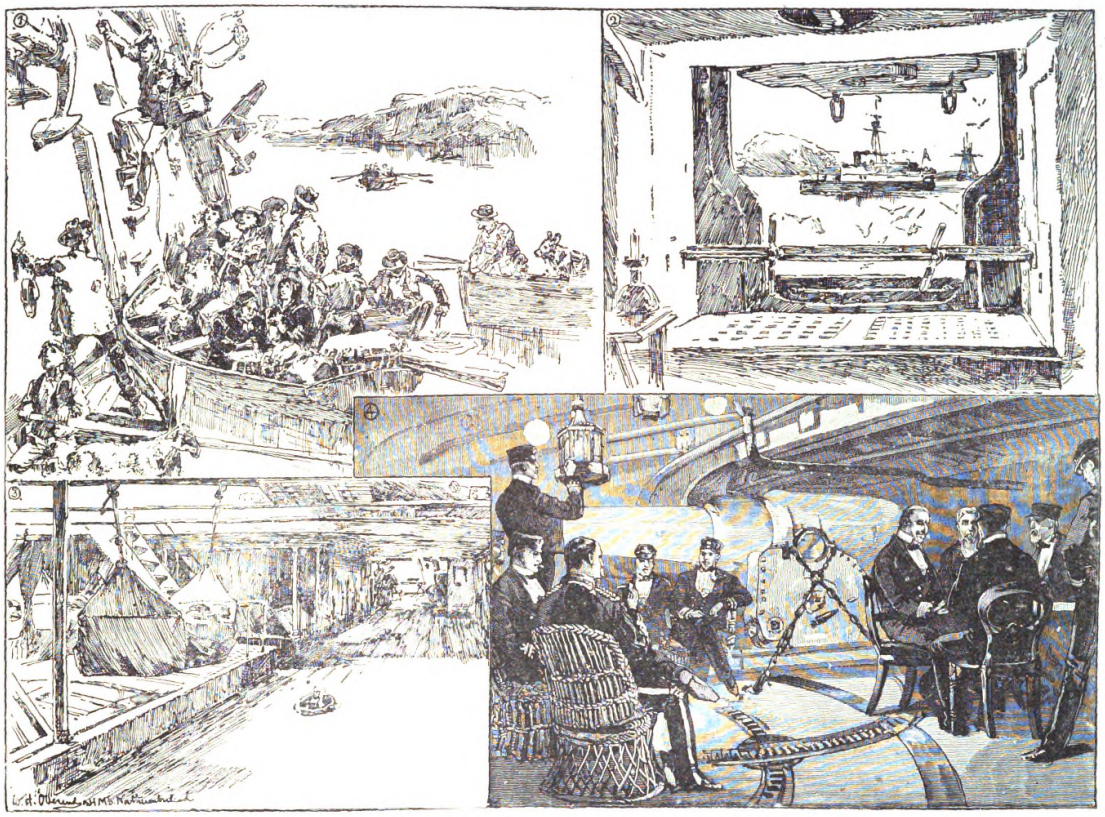
was a wish of Burns' which few men would like fully to satisfy. To some extent, and, perhaps, quite sufficiently, we have this power, since, by the help of our yesterdays, we do occasionally see, with a vividness as dazzling and terrible as forked lightning in the tropics, what we now are. Was it a vision like this that made Macbeth exclaim, in the supreme moment of his fate—

> To-morrow, and to-morrow, and to-morrow,
> Creeps in this petty pace from day to day,
> To the last syllable of recorded time;
> And all our yesterdays have lighted fools
> The way to dusty death.

And now, to descend from tragedy to common life, it is time to draw our little moral from Emerson's text. It has, at least, the merit of brevity. By all means let us remember our yesterdays, if the recollection gives us strength, sympathy, and wisdom for daily action; but in the name of all that makes life worth living, let us take the American philosopher's advice, and account them "rotten" if they awaken only vain regrets which lead to no more result than the activity of a squirrel in a cage.

J. D.

The process of levelling and preparing the piece of waste ground situate at the western side of the Royal Courts of Justice, which it is intended to convert into an ornamental garden, has been begun, and it is anticipated that the work will be completed in about five or six weeks' time. The funds necessary for carrying out the alterations are being found by a gentleman who is desirous that his name shall not be made public.



THE NAVAL MANŒUVRES.

The sudden and startling termination of Admiral Baird's and Admiral Rowley's endeavours, with the two divisions of the "A Squadron," at the entrance to Bantry Bay and Lough Swilly, respectively, to blockade the "B Squadron," commanded by Admiral Sir George Tryon, in Bantry Bay, and Admiral Fitzroy, on the north coast of Ireland, was related last week. The "B Squadron," representing a naval enemy in the Irish harbours, eluded the blockade in both instances simultaneously on the night of Saturday, Aug. 4, and ships of the northern division passed all round the coasts of Scotland, making feigned attacks on Oban, Greenock, Aberdeen, and the Firth of Forth, on the Sunday and Monday. After proving that the shores of North Britain lay at Admiral Fitzroy's mercy, while Admiral Tryon captured the Achilles, the Inconstant, and another vessel of the "A Squadron," and bombarded the North Fort of the Mersey, and the port of Holyhead, the hostile fleet reassembled in Lough Swilly on Sunday, Aug. 12. The Etruria, one of the finest Cunard steam-ships, was also captured near Queenstown, on her way to Liverpool. In the meantime, Admiral Baird retired from the coast of Ireland, returned up the British Channel, was rejoined by Admiral Rowley in the Downs, and formed our defence on Saturday, Aug. 11, at the approach to the Thames.

Our two Special Artists, Mr. W. H. Overend with the "A Squadron," on board H.M.S. Northumberland, Admiral Baird's flag-ship, and Mr. J. R. Wells, on board H.M.S. Hercules, of the "B Squadron," the flag-ship of Admiral Tryon, had sufficient employment on the south-west coast of Ireland while the latter squadron was lying at Berehaven, its fortified anchorage in Bantry Bay. The Sketches of the former, in addition to those already published, include a scene in Dunmanus Bay, where the Northumberland lay to take in fresh provisions from the "bum-boats" of the Irish people alongshore; a View looking out through a port-hole, with H.M.S. Conqueror going forward to bear a flag of truce for a parley with the enemy; a party of gentlemen, after dinner on board, enjoying an hour of repose with cigars and a rubber of whist; and the place on the half-deck where cots were slung for the sleeping accommodation of such guests as the newspaper correspondents and artists of illustrated journals. Another Sketch is that of a reconnaissance in force, executed by the Northumberland, Benbow, Northampton, Hotspur, Archer, and Rattlesnake, in front of the enemy's secure position at Berehaven. The squadron of Admiral Tryon lay in the narrow strait behind Bear Island, under the north shore of Bantry Bay; there were booms and submarine mines closing both the western and the eastern entrance to this strait, and the gently-rising ground of the island protected the squadron from direct fire, as is shown in our Illustration. The Rattlesnake was sent to the eastern entrance, near the boom at that end of the strait, in order to look in behind the island, and to spy the enemy's position, and make signals to Admiral Baird's flag-ship. The enemy's ships, of course, opened fire on the Rattlesnake, and the smoke of their guns is seen rising above the island. The lighthouse of Roan Carrig, marking the channel to enter the strait, is just opposite the position of H.M.S. Archer. Another Illustration represents the attack by boats' crews on the coast-guard station of Crookhaven, which was mentioned in a preceding account. Our Special Artist with the "B Squadron" contributes a View of the boom which formed part of the fortifications of its harbour at Berehaven, and an Illustration of H.M.S. Rupert there defending the eastern entrance, supported by the Hercules, Warspite, and Hero, which could not be dislodged from their position by any direct attack. Another Sketch is that of Admiral Tryon's flag-ship, H.M.S. Hercules, forcing the blockade at night.

The more successful active performances of the supposed enemy in the Irish Sea, after breaking the blockade, now seem to be of greater interest. Sir George Tryon, with the Hercules and four other ironclads, on Thursday, Aug. 9, having passed round the north of Ireland, easily captured the feeble and obsolete "North Fort" on the Lancashire side of the entrance to the Mersey—we lately gave an Illustration of that fort, which is utterly useless—went up the harbour, threatened to bombard Liverpool and Birkenhead, and to destroy all the shipping in the docks and the river, but graciously accepted a ransom of one million sterling, with a merry pledge that the Mayor of Liverpool should dine on board the Admiral's ship, whenever invited, on all future occasions. If he had been a real foreign foe in the Mersey, he would have had, owing to the tide on the bar, several hours to spare for the execution of his dreadful threat.

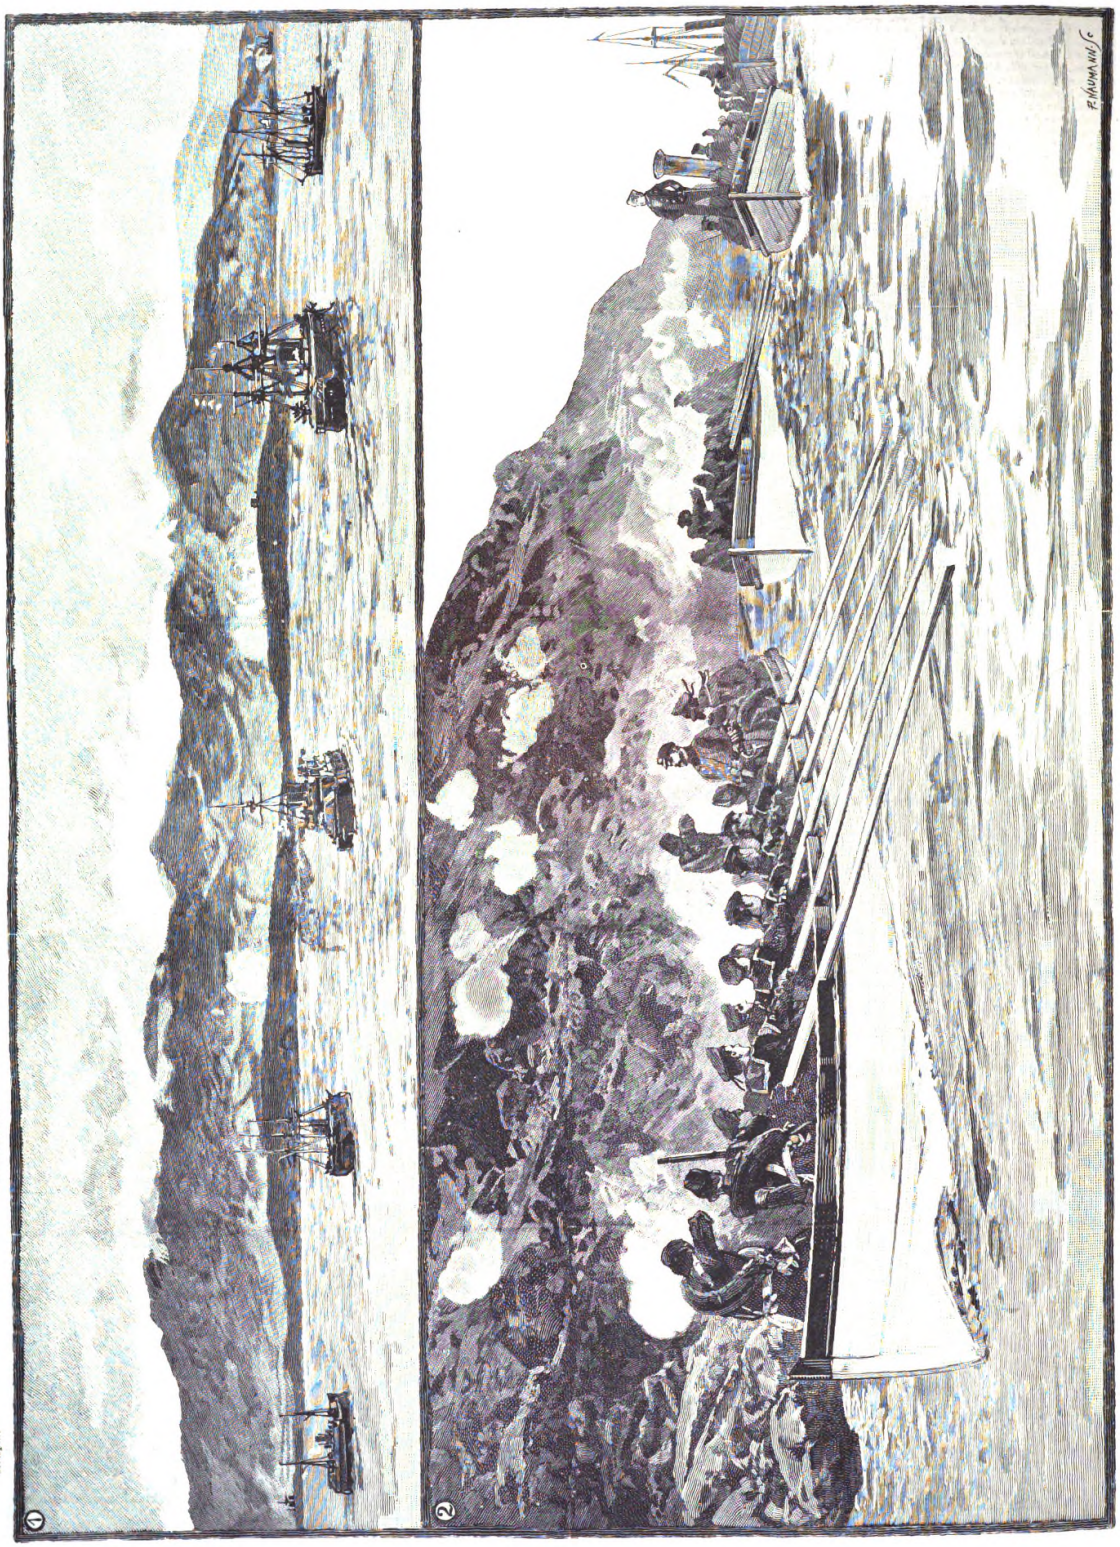
Our Artist furnishes an Illustration of H.M.S. Invincible and H.M.S. Hercules engaging the North Fort of the Mersey.

1. Bum-boats with provisions alongside the ship in Dunmanus Bay.
2. View out of a port-hole: H.M.S. Conqueror going in with flag of truce.
3. Where the Special Correspondents sleep.
4. A Smoke and a Rubber after Dinner.

THE NAVAL MANŒUVRES: SKETCHES ON BOARD H.M.S. NORTHUMBERLAND, BY OUR SPECIAL ARTIST, MR. W. H. OVEREND.

THE SILENT MEMBER.

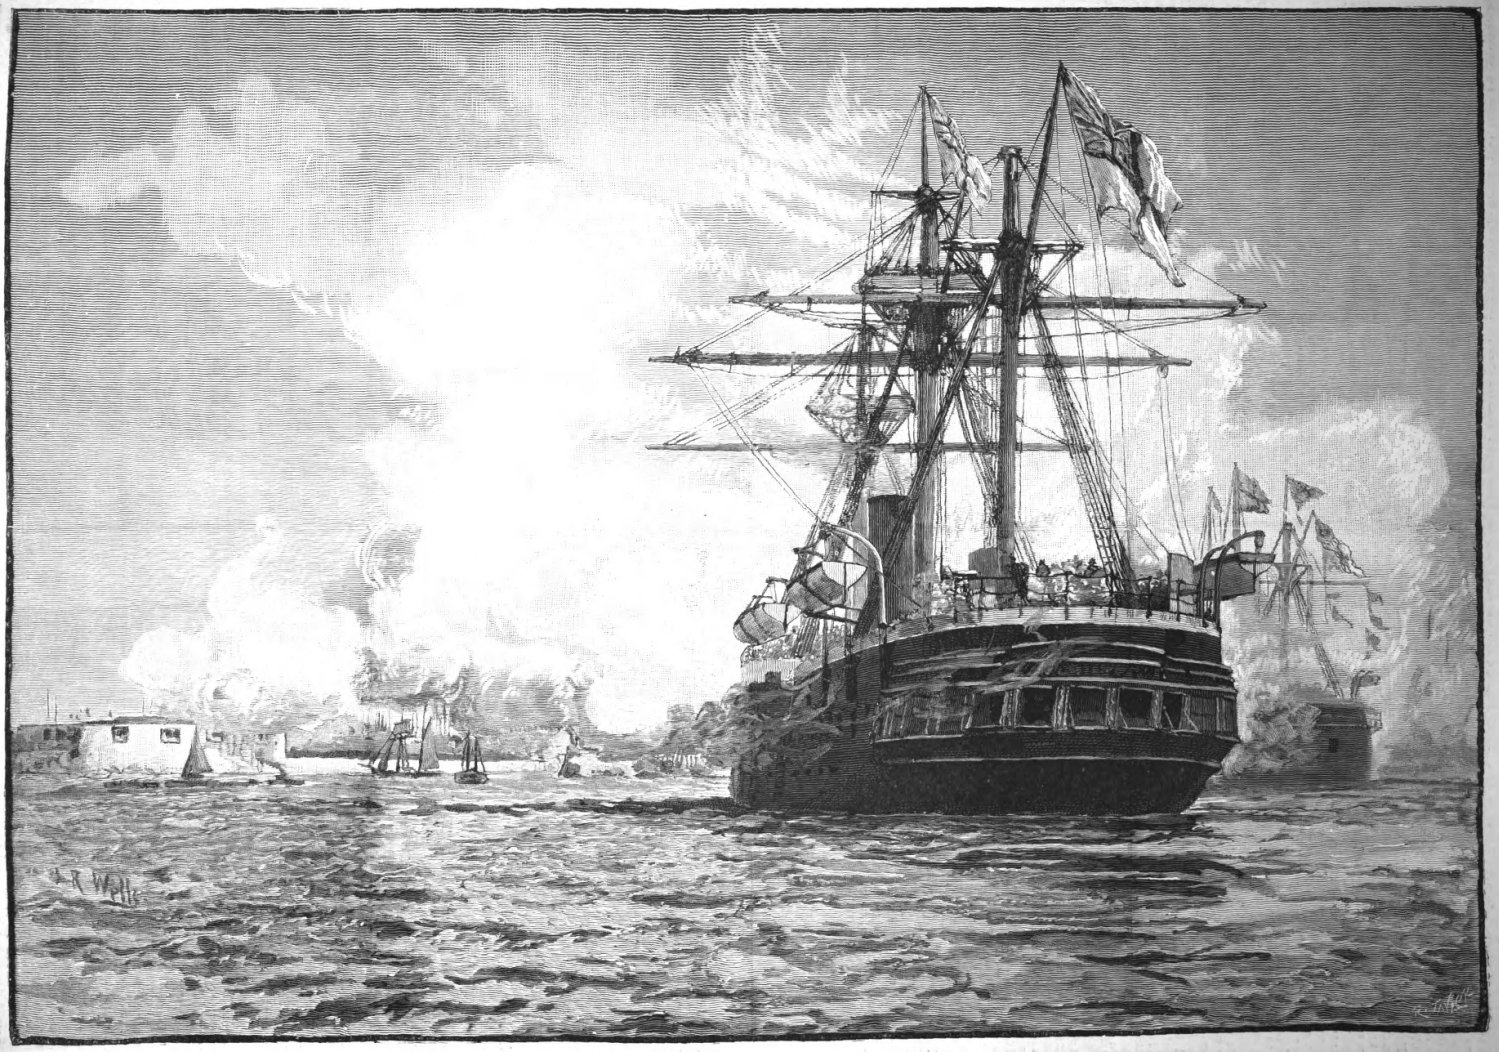
Oh, what a relief! Parliament is up. The Prime Minister's Mansion-House speech gave general satisfaction by showing we are on cordial terms with all the Great Powers. Soon, for the Marquis of Salisbury and Mr. William Henry Smith, all recollections of wordy Westminster will be banished by luxurious lounging at Royat-les-Bains and Aix-les-Bains. Meanwhile, it is to be hoped Lord Salisbury's temporary retention in town will have been sweetened by contact with the Sugar Bounties' Conference.



The salient features of the Session may be briefly summed up. The anomaly in the Commons bids fair to last as long as this Parliament. Buttresses of the Government, the Marquis of Hartington, Mr. Joseph Chamberlain, and Sir Henry James have yet continued to sit in the gangway corner of the front Opposition bench: the trio of Liberal Unionist leaders having often, however, found it most difficult to maintain their places, so squeezed have they been by the preponderant number of Gladstonian Home Rulers on the same bench. Physical discomfort has been borne by Lord Hartington and his colleagues with philosophic smiles; and has not caused them to diminish by one atom the thoroughness of their support to Ministers opposite them.

With respect to personal reputations in the Commons, there has been little to note. When Lord Randolph Churchill has desisted from his favourite pastime of curling the ends of his moustache, and has risen from his corner seat behind the Treasury bench, it has been generally to cast his shield before his late colleagues; but the noble Lord once showed Ministers he could, and would on occasion, smite them hip and thigh on account of their changes of front on the Irish question. I should not be surprised to see Lord Randolph Churchill back in office ere long. He is too powerful a debater to be left long out in the cold; and he has a readiness and sense of humour that are invaluable in the House. Mr. Arthur Balfour has developed into a very smart debater; and has with sublime serenity met the vitriolic attacks of the Parnellite members; but with regard to the right hon. gentleman's administration of Irish affairs, in view of a recent inquest it may be suggested that he should mitigate the severity with which the Crimes Act is being enforced in Ireland on Nationalist members. The Right Hon. Charles T. Ritchie, President of the Local Government Board, has richly merited the warm praise Lord Salisbury bestowed upon him at the Mansion House. Mr. Ritchie has greatly improved his Parliamentary position by the masterly and statesmanlike manner in which he introduced that complicated measure, the County Councils Bill for England and Wales, and by the patient and considerate way in which he carried it through Committee, dropping those clauses which were not generally acceptable, but preserving the essential backbone, and adding to the statute-book an Act which will be of immeasurable advantage to the country and to Imperial Parliament. Whilst the Earl of Rosebery, Lord Herschell, and the Earl of Dunraven have distinguished themselves in the Lords; the Prime Minister may be congratulated upon the conspicuous ability displayed by his junior colleagues, the Earl of Onslow and Lord Balfour of Burleigh, who deserved the gracious compliments of Earl Granville for his tact in conducting the Local Government Bill through the Upper House.

The Tenth of August was memorable for the important debate in the House of Lords on the Parnell Commission Bill. This momentous measure for entrusting to three of her Majesty's Judges a State inquiry into the grave charges brought in the *Times* newspaper against the Irish Home Rule leader and his chief colleagues was recommended in a careful speech by the Marquis of Salisbury. The Premier was answered by Lord Herschell in a speech of remarkable cogency and force—one of the most eloquent and impressive the House has heard for some time. The noble and learned Lord, with all his acumen and lucidity of expression, repeated the objections Mr. Parnell had raised against the mode in which the Bill had been manipulated by the Government. Of course, the Bill passed. But the surprises in connection with the subject did not end there. On Saturday, the Eleventh of August, Mr. Parnell instituted proceedings against certain newsagents in Edinburgh for circulating the alleged *Times*' libels against him. Damages are laid at £50,000, it is said. Moreover, actions for libels against the *Times* have also been commenced by Mr. T. P. O'Connor, M.P., and Mr. J. E. Redmond, M.P. Public opinion rules that it is time these terrible accusations of connivance at murder were made good or disproved.



The scandal of bringing forward the Indian Budget so late in the Session as the Ninth of August was reasonably censured by Mr. Bradlaugh, who is securing quite a good position in the House now the prejudice against him is wearing off. It is to be hoped Sir John Gorst will make his financial statement early another year. The Under-Secretary for India had to admit a deficit in the past, and was not hopeful as to the future of Indian finances. But it is manifestly unsatisfactory that the consideration of so weighty a matter should be left till August, when the minds of hon. members are fuller of grouse than of rupees.

The happy day of release for the Speaker and Mr. Courtney, and the faithful members who clung to duty to the last, came on Monday, the Thirteenth of August. There was a parting flicker of loquacity. Then Mr. Peel shook hands with the hon. members who filed past him, and departed with glad alacrity. Lords and Commons have not to meet again till Tuesday, the Sixth of November, for the Autumn Session.

1. A Reconnaissance in Force at Berehaven, Bantry Bay. 2. Boat-Attack on Crookhaven Coast-Guard Station.

THE NAVAL MANŒUVRES: SKETCHES BY OUR SPECIAL ARTIST, MR. W. H. OVEREND, WITH THE "A SQUADRON."

THE NAVAL MANŒUVRES.—CAPTURE OF LIVERPOOL: H.M.S. INVINCIBLE AND H.M.S. HERCULES ENGAGING THE NORTH FORT AT THE ENTRANCE TO THE MERSEY.

FROM A SKETCH BY OUR SPECIAL ARTIST, MR. J. R. WELLS, WITH THE "B SQUADRON."

FOREIGN NEWS.

The Queen of Portugal left Paris on Aug. 11.—There were disturbances in Paris at the funeral of "General" Eudes on Aug. 8, but they were checked with a stern hand.—As General Boulanger was, on Aug. 12, driving in St. Jean d'Angely in an open carriage, five shots, it is said, were fired at him. The person who fired is M. Perrin, a professor at the Lycée. General Boulanger escaped unhurt, but other persons in the crowd were injured.—A memorial to the brothers Anthony and William Galignani was unveiled at Corbeil on Aug. 12, in the presence of the local authorities and of a throng of people from the town and neighbourhood.

The Emperor of Germany rose at half-past four on Saturday morning, Aug. 11, and, donning a field uniform, rode from barrack to barrack until he had alarmed the whole garrison of Potsdam, whence the regiments marched as rapidly as possible to besiege Spandau. The garrison of the latter fortress sent out troops to meet them, but after a fierce fight, lasting till about eleven o'clock, the Spandau force was beaten. The Emperor, after discussing the operations with the Generals and other high officers, entertained them at luncheon in his tent, while the troops of both parties cooked and ate their dinners on the scene of the sham-fight. The operations were resumed in the afternoon. The Emperor left Potsdam early on the 12th, in order to receive the King of Portugal, who arrived at Berlin soon after half-past seven. On the two Sovereigns meeting at the railway station they cordially embraced each other and then proceeded in an open carriage, surrounded by a guard of honour and loudly cheered by the populace, to the Old Palace, at which rooms had been prepared for the Royal guest. In the afternoon the King of Portugal went to Potsdam to visit the Empress Frederick, and then to the Palace of Potsdam, where the Emperor gave in his honour a dinner of twenty-six covers. This was followed by an excursion on the Havel lakes, on board the Emperor's steamer Alexandra, to the Peacock Island, where at seven o'clock supper was served. There was a review of the Potsdam garrison on the 13th by the Emperor, in honour of the visit of the King of Portugal. After the review the Emperor stayed a short time with the King, and then rode back to the Marble Palace with his suite, enthusiastically cheered by the crowd. At three o'clock there was a dinner of about one hundred covers, in honour of the King, at which all the Royal Princes now in Berlin or Potsdam and many Generals were present. On the 14th the Emperor and the King dined with Prince Leopold of Hohenzollern.—Field-Marshal Count Von Moltke has, by his desire, been relieved of his post as Chief of the Staff of the German Army, and has been appointed President of the National Defence Commission—a post occupied by the late Emperor Frederick while Crown Prince—Count Von Waldersee has been appointed Chief of the Staff.

The maritime fête at Antwerp on Aug. 14 equalled in splendour the Venetian celebrations of olden times. There was a general illumination, with fireworks, while cannon boomed from the fort, and the chimes of the cathedral sounded incessantly. The river was covered with illuminated vessels, and an allegorical procession took place comprising twenty-one groups of ships. The most noteworthy were the craft representing the commerce of Antwerp, Chinese and Egyptian vessels, and a floating-house of Borneo.

The celebration of the Austrian Emperor's birthday commenced on Aug. 14 with a great popular fête on the Kahlenberg, in the environs of Vienna. It was inaugurated by the firing of fifty artillery salutes; after which, there was open-air dancing, to the accompaniment of military bands from Vienna. In the evening, the Kahlenberg was brilliantly illuminated with Chinese lanterns, and there was a display of fireworks.

Sir Francis Montefiore was married on Aug. 14, at Baden, near Vienna, to Mdlle. Marianne Von Gutmann, daughter of the wealthiest ironmaster in Austria. The elder sister of the bride is married to the Duc de Fitzjames.

The Queen of the Hellenes was safely delivered of a son on Aug. 10 at the Russian Imperial Castle of Pawlovsk; and Princess Waldemar of Denmark was safely delivered of a son on the 13th.

The *Odessa Gazette* reports the discovery of the remains of an ancient town on the right bank of the Volga. These remains are traceable over an area about two miles long by three-quarters of a mile in width. A considerable quantity of Arabian, Persian, and Tartar coins has been found there, besides a multitude of other objects which bear witness to the cultivated state of the inhabitants.

Among the ruins of the ancient Greek town of Chersonese, near Sebastopol, some workmen came across the workshop of a Greek sculptor, in which was an oven for baking clay models, and about fifty terra-cotta figures belonging to the third century B.C.

Prince Ferdinand, his Ministers, and a number of guests celebrated by a luncheon in the railway station at Sofia on Aug. 12, the completion of a railway which enables the unbroken journey to be made between Vienna and Constantinople. Prince Ferdinand's first anniversary as Ruler of Bulgaria was, on the 14th, celebrated by a special service in the cathedral at Sofia, and by festivities which concluded with a banquet in the evening.

The funeral services over the body of General Sheridan in St. Matthew's Church, Washington, on Aug. 11, were attended by the President, the Cabinet Ministers, the members of Congress, and many officers of the Army and Navy. Cardinal Gibbons was present at the Requiem Mass. Afterwards, under a military escort, the remains were conveyed for interment to Arlington Cemetery, where the last honours were paid. The President has appointed General Schofield Commander-in-Chief of the United States Army.—Brooks, alias Maxwell, whose case has been before the public for a long time, was executed on Aug. 10 at St. Louis for the murder of Mr. Preller in 1885.—The Catholic Convent of the Sacred Heart in New York, fronting the Hudson River below Riverside Park, was burnt down on Aug. 14. All the inmates escaped uninjured.

Owing to the bursting of a reservoir at Valparaiso, through heavy rains, nearly a hundred houses have been destroyed, and several hundred persons are said to have been drowned.

The Legislative Council of Cape Colony has rejected the Bill for establishing a South African Customs Union.—From Zululand an engagement is reported to have taken place between a British detachment and the rebels near Jouma, twelve of the latter being killed and sixteen wounded.

An Imperial decree has been issued announcing that the Empress Dowager of China will retire from her share of the government in March, when the Emperor will assume sole responsibility.

Grouse-shooting began on Monday, Aug. 13. The reports from the moors show that sport was, on the whole, good, the exception being certain districts in Scotland where there had been heavy rain, and where the birds were weak on the wing. On the English and Welsh moors the birds were strong. Reports concur as to the abundance of game.

THE COURT.

The Queen is at Osborne, and takes drives daily. Her Majesty held a Council at Osborne on Aug. 10 for the purpose of arranging State business before the adjournment of Parliament. The Royal dinner-party included the Prince and Princess of Wales and Princesses Victoria and Maud of Wales, Prince and Princess Henry of Battenberg, the Hereditary Grand Duke of Hesse, and her Grand Ducal Highness Princess Alice of Hesse, the Dowager Lady Waterpark, Prince de Poix, and Lord Rowton. The Ladies and Gentlemen-in-Waiting had the honour of joining the Royal circle in the drawing-room. The Marquis of Salisbury, K.G., arrived at Osborne on Aug. 11, and had an audience of the Queen. Count Robilant also arrived, and was introduced to her Majesty's presence, and presented his credentials as Ambassador from the King of Italy. The Queen's dinner-party included Prince and Princess Henry of Battenberg, the Hereditary Grand Duke and her Grand Ducal Highness Princess Alice of Hesse, the Italian Ambassador, the Dowager Lady Waterpark, the Marquis of Salisbury, General the Right Hon. Sir Henry Ponsonby, K.C.B., and Commander the Hon. Hedworth Lambton, of her Majesty's yacht Osborne. On Sunday morning, Aug. 12, the Queen and the Royal family and the members of the Royal household attended Divine service at Osborne, the Dean of Windsor officiating. The Prince and Princess of Wales, with Princesses Louise, Victoria, and Maud of Wales, visited the Queen to take leave. The Marquis of Salisbury, K.G., and the Very Rev. the Dean of Windsor had the honour of dining with the Queen and the Royal family. Prince and Princess Henry of Battenberg, the Hereditary Grand Duke and Princess Alice of Hesse went to Hythe on Aug. 13, and thence drove into the New Forest, returning to Osborne in the evening. Princess Louise (Marchioness of Lorne) visited her Majesty and remained to luncheon. General Viscount Wolseley had the honour of dining with the Queen and the Royal family; and Lord and Lady Colville of Culross were honoured with invitations. Her Majesty went out on Aug. 14, accompanied by Princess Beatrice and Princess Alice of Hesse. The Queen will leave Osborne in a few days for Glasgow.

The Prince and Princess of Wales received the Italian Ambassador on Aug. 12, on board the Royal yacht Osborne,

STATUE OF LIEUTENANT WAGHORN,
THE PROJECTOR OF THE OVERLAND ROUTE TO INDIA.

on his appointment to the Court of St. James. The Prince and Princess, accompanied by Princesses Louise, Victoria, and Maud, arrived at Marlborough House on the 13th from Cowes. The King of the Belgians visited the Prince and Princess of Wales at Marlborough House on his way to Scotland. On Aug. 14 the Prince presented a gold watch and chain to Chief Inspector Charles Walker, who is retiring from the police after fifty-one years' service. He has been engaged at Marlborough House since the Prince's marriage, and was for fifteen years previously stationed at Buckingham Palace. The Princess added her congratulations and good wishes, and both cordially shook hands with the retiring officer. Prince Adolphus of Teck visited the Prince and Princess to take leave of them previous to his departure for India, where he joins his regiment, the 17th (Duke of Cambridge's Own) Lancers. In the evening the Prince and Princess, accompanied by Princesses Louise, Victoria, and Maud, left for Germany. The Princess has sent the following letter to the children of the Victoria Hospital at Chelsea, who contributed to a Silver Wedding present:—"My dear Little Children,—I am most deeply touched by your kind thought of giving me such a beautiful Silver Wedding present, which I shall always keep and value more than I can express; and that God may bless you all, and soon restore you to health and happiness, is the most sincere wish and prayer of your friend, ALEXANDRA." The Princess has consented to become patroness of the Children's Country Holiday Fund, 10, Buckingham-street, Strand.—Prince Albert Victor has consented to act as president of the Great Northern Central Hospital, the new buildings of which were lately opened by the Prince and Princess of Wales.

The Duke of Cambridge arrived at Kissingen on Aug. 11, and has taken up his residence in the Kurhaus. His Royal Highness will stay for several weeks, in order to take the waters.

The Duke and Duchess Paul of Mecklenburg-Schwerin left England on Aug. 11 for Germany.

Mr. C. S. Parnell, M.P., having served summonses in Scotland to found jurisdiction, has had the *Times* served with a writ in an action for libel, in which he claims £50,000 damages.

The paintings and other works of art selected by the prize-holders for 1888 of the Art Union of London are now on view at the new galleries, 122, Strand. There are forty-eight pictorial prizes, of which about one-half are oil paintings, the other water-colour drawings.

THE WAGHORN MONUMENT AT CHATHAM.

A handsome bronze statue of Lieutenant Waghorn, the opener up of the Overland route to India, has been erected at Chatham, the place of his birth. The statue stands about 8 ft. in height, and is stated to be an excellent likeness of the intrepid traveller, whose right hand points towards the East. Beneath the statue, on the pedestal, is the inscription: "Thomas Frederick Waghorn, Lieutenant R.N., pioneer and founder of the Overland route. Born at Chatham, 1800; died, Jan. 7, 1850." The statue was unveiled on Friday, Aug. 10, by Lord Northbrook.

OBITUARY.

THE HON. AND REV. CANON BAILLIE.

The Hon. and Rev. John Baillie, M.A., Canon Residentiary of York and Incumbent of St. James's, Cupar, died on Aug. 7. He was born on Jan. 3, 1810, the younger brother of George, tenth Earl of Haddington; was educated at Harrow and at Trinity College, Cambridge, and, taking holy orders, became Vicar of Lissington, in Lincolnshire. In 1852 he was appointed Canon of York, and was made a Residentiary in 1854, and in 1879 was appointed Incumbent of St. James's, Cupar. He married, in 1837, Cecilia Mary, eldest daughter of the Rev. Charles Hawkins, and leaves two sons and four daughters.

SIR W. BURTON.

Sir William Westbrooke Burton, Knt., late Judge of the Supreme Court at Madras, died at his residence, 54, Chepstow-villas, Notting-hill, on Aug. 6. He was born in 1794, the son of the late Mr. Edmund Burton, of Daventry, and served for some years in the Royal Navy. He became a barrister of the Inner Temple in 1824, was Recorder of Daventry from 1826 to 1827, Judge of the Supreme Court at the Cape of Good Hope from 1828 to 1833, at New South Wales from 1833 to 1844, and at Madras from 1844 to 1857, and was President of the Legislative Council of New South Wales from 1858 to 1862. Sir William Burton was twice married—first, in 1827, to Margaret, daughter of Mr. Levy Smith, which lady died in 1846; and secondly, in 1849, to Maria Alphonsine, daughter of the late Mr. John Beatty West, M.P. for Dublin. He received the honour of knighthood in 1844.

We have also to record the deaths of—

Mr. Thomas Woodward, J.P., of Hopton Court and Stepple Hall, Shropshire, on Aug. 4, aged fifty-two.

Mr. Stephen Burridge, of Shirle Hall, Sheffield, in London, on Aug. 10, aged sixty-five.

Lady Murray (Helen), wife of Sir Digby Murray, Bart., of Blackbarony, and daughter of Mr. Gerry Sanger, of Utica, U.S.A., at 34, Colville-road, W., on Aug. 9.

The Rev. William James Grundy, LL.D., formerly Incumbent of St. James-the-Less, Bethnal-green, at Richmond, on Aug. 6, aged seventy-six.

Mr. Samuel Theophilus Genn Downing, barrister-at-law, of Lincoln's Inn, and Deputy Warden of the Stannaries of Devon and Cornwall, at Kenegie, Cornwall, on Aug. 8, aged sixty-one.

Miss Margaret Campbell, of Dunmore, Argyllshire, on Aug. 7, aged seventy-five. She was the daughter of the late Mr. James Campbell of Dunmore, by Eliza Hope, his wife, fifth daughter of the Hon. William Baillie, Lord Polkemmet.

Major-General William Agnew, J.P. for the county of Middlesex, and one of the sitting Magistrates at the Hampstead Petty Sessions Court, on Aug. 12, from heart disease, at the age of sixty-seven years. He served in India for thirty-four years, and for the last eight or ten years of his residence there was Judicial Commissioner for Assam.

Lieutenant-Colonel Robert Campbell, late of H.M.'s Indian Army, sixth son of the late Mr. John Campbell, of Kilberry and Minard, Argyllshire, at Lausanne, on Aug. 4, aged sixty-nine. He served throughout the Indian Mutiny Campaign of 1857 (medal), in the Bhootan Campaign of 1864-65 (medal, with clasp), and in the Afghan War of 1879-80 with the Khyber Line Force (medal).

The Rev. Edward Burney, M.A., J.P., Head Master of the Royal Naval Academy at Gosport, on Aug. 9. He was born in 1816, and was educated at Magdalen College, Oxford, graduating B.A. in 1838 and M.A. in 1841. For some time he was Curate of Holy Trinity, Gosport, and chaplain to the Duke of Cambridge. Mr. Burney, who directed the education of Prince Louis of Battenberg, had for many years been Head Master of the Royal Naval Academy.

The Rev. Henry Bristow Wilson, Vicar of Great Staughton, Huntingdonshire, on Aug. 10, at Lee, Kent, at the age of eighty-five after an illness of sixteen years. He was a son of the Rev. H. B. Wilson, Rector of St. Mary Aldermary, London, and was educated at Merchant Taylors' School and St. John's College, Oxford, of which he became a Fellow and Tutor. He graduated B.A. with second-class classical honours, and in the course of about twenty-five years became successively a select preacher, public examiner, professor of Anglo-Saxon, and Bampton Lecturer. In 1850 he was preferred by his college to the Vicarage of Great Staughton. He was the author of several papers, the most important of which was that on "The National Church" in "Essays and Reviews." For this, in 1862, he was sentenced by the Judge of the Court of Arches to be suspended *one* year from his benefice; but on appeal to the Privy Council the judgment was reversed. Of the original seven Essayists the Bishop of London survives at the age of sixty-six, and Professor Jowett, who is seventy-one.

The Board of Trade have awarded a binocular glass to Captain G. Cocurullo, master of the Italian ship Ciampa Emilia, of Castellamare, in recognition of his kindness and humanity to the shipwrecked crew of the British schooner Wenonah, of Swansea, which was abandoned at sea on Oct. 14, 1886.

An appeal was made to the public some time ago for aid for the purchase of the Victoria Hall as a memorial to the late Mr. Samuel Morley; and the Duke of Westminster states that the sum (£17,000) has been raised, and that the purchase will soon be effected.

The closing match of the Royal Yacht Squadron regatta was sailed on Aug. 10 for squadron prizes amounting to £150, and open to all yachts of not less than thirty tons belonging to any recognised yacht club. The May took the first prize, the Foxglove (the first to save her time among the yawls) the second, and the Cetonia the third, having beaten the Egeria.—The annual general meeting of the members of the Royal Victoria Yacht Club was held at the Club-house, Ryde, on Aug. 13, the Commodore (the Marquis of Exeter) presiding. The principal events of the past year, in connection with the club, were detailed in the report of the committee. The annual house-dinner was held in the evening. Next day the regatta began with the match for her Majesty's Cup, Mr. Birchell's Neptune winning easily.—There was some good racing on Aug. 13 in connection with the Royal Albert Yacht Club for the Albert Cup, which was contested over a forty-five miles course in the Solent, and the Irex eventually won the cup, after trying unsuccessfully in six successive years.

THE PLAYHOUSES.

The acceptable appearance of genuine summer weather, better late than never, has occasioned a general rush out of town. Yet some few London managers, greatly daring, still keep their theatres open. Mr. Bandmann's grotesque burlesque of "Dr. Jekyll and Mr. Hyde" at the Opera Comique collapsed after a very few performances, avowedly by reason of the rigour of the law, but in reality, it is fair to presume, because of the superior attractiveness of the earlier version of Mr. Robert Louis Stevenson's grim story produced by Mr. Richard Mansfield at the Lyceum. When Mr. Lionel Brough comes to make fun of the dual representations of Mr. Mansfield and Mr. Bandmann in the parody of "Hide and Seekyl," by Mr. George Grossmith, a rich harvest of amusement may be looked for. In the mean time, Mr. Brough, compelled to quit Toole's in consequence of the "Pepita" rehearsals, transfers the lively farcical comedy of "The Paper Chase" to the Royalty, immediately. The sweetest comedy at present on the metropolitan stage, Mr. A. S. Pinero's "Sweet Lavender," in which Mr. Edward Terry's Dick Phenyl has become a prime favourite, was played at Terry's Theatre for the one hundred and fiftieth time on Aug. 14. Though the droll comedy Mr. Sydney Grundy skilfully adapted from the German—"The Arabian Nights"—has lost its original "Gutta Percha Girl," merry Mr. W. S. Penley is retained at the Comedy by Mr. C. H. Hawtrey, and the diverting piece causes as much mirth as ever.

Mr. Charles Wyndham appeared immensely relieved when, the marvellously successful run of "David Garrick" over at last, he enjoyed the rare experience of sitting in the stalls of his own theatre to witness a performance by his admirable Criterion company of comedians. It was the eve of Aug. 12. Yet the Criterion was crowded; and the admirers of Mr. F. C. Burnand's overflowing humour, and of this excellent dramatist's unrivalled power of creating grotesque types of character, were rewarded by a perfect performance of his exceedingly sprightly comedy of "Betsy." There can be no question that Mr. Burnand's "Betsy" is by far the most outrageously droll and genuinely comic play now being performed in London. The continual flow of high spirits, the ingenuity with which one natural misunderstanding is made to grow out of another, and the touch-and-go lightness with which the leading actors dash through their parts, combine to maintain for "Betsy" its pre-eminence as the masterpiece of its kind. Glance round the house as one facetious situation succeeds another, and admit that rows of smiling and laughing faces amply prove the triumph of the revival. After Mr. Herbert Standing and Miss Rose Saker had gaily tripped through the charming costume comedietta of "The Dowager," by Charles Mathews, "Betsy" was enacted with undimmed freshness. The unctuous and fleshy domestic politician of Mr. William Blakeley must have been an Alexander Birkett such as Mr. Burnand had in his mind's eye. A look at this genial comedian's play of feature sufficed to cause hearty laughter. The same remark applies to Mr. Alfred Maltby's Stiggins-like portrait of Mr. Samuel Dawson: the pliant, red-nosed tutor who is made by his scapegrace pupils to impart instruction to the tune of "Says Aaron to Moses," and the accidental visit of whose separated wife to Mr. Birkett's house makes confusion worse confounded, though it fills the pockets of that lucky "friend of the family," Mr. Samuel Dawson. The piquancy of Miss Lottie Venne as Betsy, the Hibernian gallantry of Mr. Herbert Standing as Captain M'Manus, the vivacity of pretty Miss Fanny Moore as Mrs. M'Manus and Miss Rose Saker as Madame Polenta, the amusing gravity of Miss Fanny Robertson as Mrs. Birkett, the youthful hilarity of Mr. George Giddens as Richard Talbot, and the perplexity of Mr. A. Boucicault as "Dolly" Birkett, with the grace and *chic* of Miss Ella Terriss and Miss Edith Penrose, all contributed to the remarkable success of this most diverting of comedies. Mr. Burnand's "Betsy" is certain of another long and prosperous run.

Whilst from across the seas comes news of Melbourne's cordial welcome to those recognised Gaiety burlesque favourites, Miss Farren and Mr. Fred Leslie, with Miss Marion Hood, Mr. George Edwardes is fortunate to find a good autumn tenant for the Gaiety in that exceptionally powerful actress, Miss Sophie Eyre. Pending the production of Miss Eyre's first daring novelty, Mr. Rider Haggard's "She," this accomplished *tragédienne* has successfully appeared as the Corsican heroine of a fresh dramatic edition of Mr. Archibald Gunter's bright novel, "Mr. Barnes of New York," adapted by Mr. J. Coleman. This version differs somewhat from Mr. Rutland Barrington's. The changes made are not for the better, however. The introduction of the Lady Charteris party into the opening duel scene hampers the first act of "Marina;" and Mr. Coleman's transformation of the English duellist and Marina's lover into twin-brothers is a decided mistake. But the dramatic elements of the novel and the play were too strong to suffer from these alterations. The intensity of Miss Sophie Eyre's acting as Marina, the native force with which she pursues the vendetta against the young English officer who slew her brother in the duel, and the softness of her clinging love for George Anstruther, with her powerful performance in the bridal-chamber scene, where the revengeful Count Dannella meets the death he had designed for the bridegroom, carried the audience away. Miss Sophie Eyre's Marina is a creation to be seen. She is well supported by Mr. Herbert Waring as Mr. Barnes, Mr. Fred Terry as George and Gerald Anstruther, Mr. E. D. Ward as Count Dannella, Mr. James East as the blithe and jovial naval officer, Charlie Phillips; and by Miss Carlotta Leclercq as Lady Charteris, Miss Edith Leslie as the tomboy Maude, Miss Lucy Buckstone as Enid Anstruther, and Mr. Julian Cross as the melodramatic Tommaso. "Marina," compressed judiciously, went better than ever a week after its production. The drama was preceded on Aug. 11 by a neatly-written, conventional domestic comedy in one act, "Polly's Venture," by Mr. Malcolm Watson. The heroine is a smart village milliner, who thaws the heart of a crusty old squire by making believe she has possession of certain papers which reflect on his integrity. By this device she unites a loving pair, the Squire's son and his gamekeeper's niece, and gains the hand and home of Reuben Gale for herself. Miss C. Elworthy made a lively Polly Prentice; Mr. J. East a manly gamekeeper; Miss Enid Leslie a winsome Chris Haseldene. The little piece would play better without the melodramatic musical accompaniment.

THE BRITISH MEDICAL ASSOCIATION.

In Glasgow University on Aug. 7 the fifty-sixth annual congress of the British Medical Association commenced, 2000 medical men and surgeons attending. Professor Banks, in retiring from the presidential chair, said that the membership had increased during the year from 1100 to 2000, the income being £28,000 and the expenditure £26,000. There were forty-five branches in all parts of the empire. Professor Gairdner, the newly-elected president, referred with regret to the death of Dr. Fergus. In the course of his address, he said, their whole experience was directed towards the demonstration of the enormous evils that had accrued to humanity and to the medical art from a blind reliance upon the tradition of the ages, and often upon the traditions wrongly interpreted. The abuses of blood-letting, of a senseless and obstructive polypharmacy, and of innumerable so-called remedies, either inert or positively mischievous, which have had to be cleared out of the way before medical science and practice could even begin to be reasonably simple and intelligible, have been a lesson to all of us as to the "dead hand of medical tradition." Dr. Gairdner, in referring to medical education, strongly urged the necessity of improved instruction in physics, quoting to this purpose the opinion of Faraday, who, in 1862, observed that the most highly educated minds in this country were often entirely undisciplined in the merest elements of the knowledge of natural things.

Twelve sections met on the 8th, some of them being crowded, and others but sparsely attended. In the Public Medicine Section a resolution was passed that an amended Public Health Act for Scotland was urgently required, the provisions to apply to both urban and rural districts.

The majority of the papers read on Aug. 9 were of a purely technical character. In the evening there was a conversazione in Bute Hall.

The business of the sections concluded on Aug. 10. Professor M'Kendrick giving the closing address, on the subject of "Physiology." Several of the leading members of the Association received the degree of Doctor of Laws. It is admitted the Association meetings have been remarkably successful, and professional knowledge has been distinctly advanced. There was a garden-party in the Botanical Gardens in the afternoon, and a conversazione in the Exhibition at night.

Excursions around Glasgow on Aug. 11 formed a pleasant termination to an important meeting.

MRS. H. M. BUTLER (MISS AGNATA FRANCES RAMSAY), BRIDE OF THE MASTER OF TRINITY COLLEGE, CAMBRIDGE.

EARLY MORNING IN VENICE.

Miss Clara Montalba, an artist often commended for her pictures of the fair city of the Adriatic, and its waters and skies, and its barges and gondolas that seem to hover between those waters and the lucid atmosphere, with picturesque edifices on shore in the background, has in this instance rendered the effect of early morning light on such a scene with much pictorial beauty. It is in the morning and in the evening, indeed, that Venice is most beautiful, at airy distance—

> Rising with her tiara of proud towers,
> A ruler of the waters and their powers;
> She was a fairy city of the heart,
> Of joy the sojourn, and of wealth the mart;
> The pleasant place of all festivity,
> The revel of the earth, the masque of Italy;
> And monarchs gazed and envied in the hour
> When Venice was a queen, with an unequalled dower.

The Very Rev. the Dean of St. Asaph, formerly head-master of Rossall School, has been unanimously elected Principal of Cheltenham College, in the room of Dr. Kynaston, resigned.

The Portraits of the Bishop of Oxford, the Right Rev. Dr. Stubbs, and of the late Dean of Chichester, the Very Rev. J. W. Burgon, are from photographs by Messrs. Russell and Sons, of 17, Baker-street.

MRS. H. M. BUTLER.

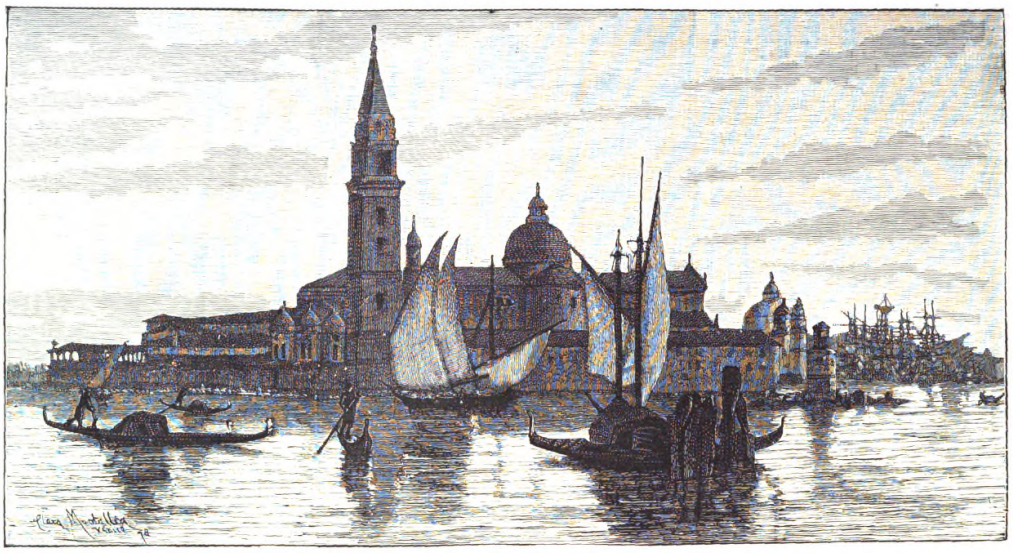
The marriage of Dr. Henry Montagu Butler, Master of Trinity College, Cambridge, and Chaplain in Ordinary to the Queen, till recently Head Master of Harrow School, to Agnata Frances, third daughter of Sir James Henry Ramsay, Bart., of Bamff, Perthshire, was solemnised in St. Margaret's Church, Westminster, on August 9. The church was filled by the wedding party and personal friends from Cambridge and Harrow. The bridesmaids were the bride's four sisters, Miss Susan Ramsay, cousin of the bride, Miss Mary Scott Kerr, Miss Maud Butler, and Miss Stewart. Master Nigel Ramsay, the bride's brother, who acted as page, was in Highland costume. Sir James Ramsay gave his daughter away. This accomplished young lady, whose portrait we are permitted to publish, has achieved the highest academical distinction within reach of female students, having been "Senior Classic" in the Classical Tripos of the University of Cambridge last year. Her father, Sir J. H. Ramsay, who succeeded to the baronetcy in 1871, was educated at Rugby and at Christ Church College, Oxford; was a student of that College, and held the office of Public Examiner in Law and Modern History at that University. One of her uncles is Professor George Gilbert Ramsay, of Glasgow University.

The Portrait is from a photograph by Messrs. Debenham, of Brighton.

FIRE IN THE DE BEERS DIAMOND MINE.

South Africa, rich in mines of diamonds, gold, and copper, experienced a shocking disaster at Kimberley on July 11, when one of the shafts of the De Beers Mine was on fire, and 700 workers in it, Europeans and natives, were apparently doomed to destruction, of whom above 200 perished.

The shares of the De Beers Company (Limited) have played an important part in the late active dealings for diamond stocks in London. It is not generally understood, however, that the four known diamond mines of South Africa are within a radius equal only to the extent of one of the suburbs of London, and almost within gun-shot of each other. The celebrated Kimberley mine is situated due west from the De Beers Mine about three-quarters of a mile; while those of Dutoitspan and Bultfontein are within a short walk. These mines have produced somewhat approaching £60,000,000 worth of diamonds since the year 1870, when they were discovered. In fact, there is no positive record, as so many have been stolen; but the estimate given may be fairly accepted as within the mark.



When diamonds were first found, what was known as "dry sorting" was the primitive method of "winning"; later, the hand rotary machine was introduced. This resembled the ordinary mortar-mill, with this difference—that, instead of rollers, it had arms, with spikes pivoted from the centre, to disintegrate the soil; and the diamond, by its greater specific gravity, would be found among the carbon, the garnets, the bastard rubies, and green stones, which carry weight. At that time, in the "early days of the Fields," only surface yellow soil was sorted and washed. Afterwards, when what was thought a "bed-rock" had been struck, individual claim-holders became chary; many sold out their claims, and are now "sadder and wiser men." This "bed-rock" eventually turned out to be the matrix of the diamond, and is locally known as "blue" ground.

Open working was resorted to, in the Kimberley and De Beers Mines, until heavy reef-falls blocked the diamondiferous claims. In the intervening years, new improvements had been introduced in the machinery, and hand-power was superseded by steam-power. At first, indeed, an engine of ten-horse power was regarded as a wonder. Other measures were proposed: one was the system of underground working, after the fashion of coal-mines in Lancashire and South Wales. Anxious as the directors were, both in the Kimberley and the De Beers Mine, to get at the "blue" ground, they accepted this suggestion. But it had unforeseen consequences. Unlike coal, diamondiferous ground is treacherous, by the "soapy seams" it contains. This is an objection to the underground system, compared with the open working on the "terrace system," as now carried out by the Bultfontein Mining Company.

The Central Company, therefore, the owners of the Kimberley Mine, have determined on spending nearly £13,000 per month in introducing the principle of open working; and the De Beers Mine will have to do the same. In our Illustration, overhanging ledges of stone will be seen, ready to slip away by the subsidence of the "crown" of the underground workings. When one chamber is cleared of "blue" or diamondiferous earth, the outside reef is allowed to fall in, and to fill the void space. These remarks are introductory to an account of the calamity which has befallen the De Beers Mine.

At 6.30 p.m. on July 11, the night "shift" was down the mine, and some of the day "shift" had yet to come up. By some means the woodwork of the shaft, which is seen in our Engraving, caught fire. There were no means of exit for the men, not even an ordinary air-shaft. A terrible death seemed imminent for seventy white men and above six hundred Kaffirs labouring in the mine. Of these, twenty-four white men and 160 natives actually lost their lives. The flames rapidly spread through the various workings. When the alarm was given a rush was made for the ladder ways and the "skep" (pulley car). The flames, however, mounted too rapidly to allow of an escape by the ladders and "skep." This started for the surface, but by the burning through of the wire rope was precipitated with its human freight into the blazing shaft. Many must have been crushed to death in the rush towards the shaft. The more experienced of the white men retreated in the other direction through the levels to the old workings of the Gem Company. The bulk of the natives followed the white men; and they remained until the morning, continually threatened by volumes of smoke drawn by the air-currents, and uncertain regarding the spread of the fire.

Finally, it was decided to endeavour to force a way to a higher level. The horrors of this journey through the length of the narrow ladder-ways and man-holes, choked with dead, and stifling with heat and the stench and smoke, are beyond description. The success of the attempt was mainly due to the courage and energy of Harry Paul and a few of his companions. One by one they reached the 380 ft. level, and thence

EARLY MORNING—VENICE.

FROM A DRAWING BY MISS CLARA MONTALBA.

made their way to the narrow crack, which is the only outlet from this part of the mine to the surface.

The discovery of this outlet—no thanks to the management—was made by a Kaffir. The whites and blacks wandered for hours hopelessly around the workings, from level to level, between the 700 ft. level and the 385 ft. level; but this native, like a cat, could see his way in the dark. By a subsidence of the "crown" of the mine, an old "sling gear" had fortunately left an opening; and the Kaffir boy, there getting a breath of fresh air, recovered from the stupor occasioned by the smoke which came from the blazing timbers of the shaft. He looked up and saw a star; he told his "brothers"; they watched till early morning, when the daylight showed them a way of escape. This gave a further lease of life to over forty white men and more than four hundred Kaffirs.

Among those unhappily lost was Mr. Clarence Stewart Lindsay, of Sunderland, a young engineer of great ability and merit, who had arrived at Kimberley a month before the disaster to take on the underground management. He bravely went down the No. 1 shaft to find out the extent of the fire, on its first becoming known; the wire-rope, hauling the ascending skep, then broke, and it is thought that he was hurled to the 700 ft. level. The portrait and memoir of Mr. Lindsay appeared in our last.

Rescue parties were energetically worked to attempt to save the others still below, under the direction of Mr. Gardner Williams, general manager. Mr. Armstrong, contractor, lost his life by returning to warn his men at the first outbreak. On July 13 the rescue parties were stopped by the inspector of the mines, to prevent useless sacrifice of life.

Much sympathy is shown in Kimberley, at Capetown, and generally in South Africa, for the widows and orphans, parents, and other relatives of those of our countrymen who have lost their lives in "winning" the gems which are so fashionable an ornament. The circumstances and cause of this disaster will occupy the Commission of Inquiry which is to be held by order of the Cape Colonial Government. Our Engraving is from one of the photographs supplied by Mr. B. Harvey, manager of the Kimberley Photographic Studio.

The mark + indicates the place of escape for the men during the disastrous fire of July 11.

SKETCHES AT ILFRACOMBE.

ILFRACOMBE.

The rocky coast of North Devon, overlooking the Bristol Channel and facing South Wales, the land of which, at a distance varying from ten to twenty miles, is clearly seen from many points on the Devon shore, has its peculiar attractions. There is very little sand or beach; one sits and strolls on heights above the waves, for the most part, though, by a steep and rugged descent, one may reach sequestered coves, and low shelves of smooth hard rock, permitting sport with the lively billows. The most charming feature of the country, seaward, is presented by the grassy "coombes," the hollows of meadow and woodland rapidly declining and opening to the sea, terminating either in a small cliff, or in a deep ravine, cut by some babbling stream, which eagerly fights its way through masses of stone to join the blue waters of the Channel. Ilfracombe, near the western extremity of the great range of hills that extends by Lynton, Minehead, and the Quantocks, along half the length of Somersetshire, rising behind those places to the romantic wilderness of Exmoor, is a good place to start from on a summer excursion through this interesting region. The town, indeed, does not look over the open sea, rather turning its back and sheltering itself on the inner slopes of the hills, beneath which, however, lies a pretty little harbour, with a fine promenade pier, and with access to the Capstone, a huge peninsular rock, or promontory, having a terrace road all round it, where the marine views and breezes are freely enjoyed. This is the favourite walk, and, with a fresh westerly or north-westerly wind, it is worth while to watch the sea battling the rocks directly below your standing-place. From the summit of the Capstone, especially at sunset on a fine evening, the prospect of sea, land, and sky, glowing in the ruddy splendours of that hour, is gorgeously beautiful. The height being about 200 ft., very extensive views are here obtained both up and down the Bristol Channel. Another eminence, called the Lantern Hill, of a picturesque conical shape, with an old turret lighthouse on its top, guards the entrance to the harbour. On the east side of the Bay rise the cliffs and great hill of Hillsborough, to the height of 440 ft., beyond which the uplands continue to Exmoor; and readers of "Lorna Doone," if they care to look for her haunts, should resolve not to be deterred by long and toilsome journeys over some miles of rather steep moorland. An Exmoor pony to ride—those clever animals know better than any horseman the way to get up hill easily by zigzag tracks across the path—is always to be recommended in preference to any sort of carriage. The party setting forth on a drag will find it necessary to spare their team by often getting down and walking, unless they mean only to drive to Barnstaple, or along the Combe Martin and Lynmouth road. Bathing at Ilfracombe is usually done in secure coves—one reserved for ladies, and one for gentlemen—to which there is a passage by a tunnel cut through a cliff; but there is also, in the grounds of the Ilfracombe Hotel, a large swimming-bath, constantly filled from the sea. In venturing out to sea from Ilfracombe and elsewhere on this coast, strangers ought to attend to the advice of the old boatmen, and to do nothing rash on their own account. What with strong currents, which are liable to sudden changes, with unexpected puffs of wind, that capsize a sailing-boat or a small yacht in half a minute, and with countless reefs of sharp rock, like fierce jaws full of teeth, ready to crunch a hapless vessel that is caught between them, or to imperil the life of a good swimmer, in the eddies and deep sucking-holes, this North Devon Sea is a dangerous playmate.

MUSIC.

COVENT-GARDEN PROMENADE CONCERTS.

On Aug. 11 (as already briefly intimated), Covent-Garden Theatre was re-opened for the usual series of Promenade Concerts, commencing three weeks after the termination of Mr. Augustus Harris's memorable season of the Royal Italian opera. Mr. W. Freeman Thomas's seventh annual series of these concerts bids fair to be one of the most successful of any. We have already drawn attention to the liberality of the arrangements made by the lessee, and have now to notice the opening performances. The programme on the first night was of very ample dimensions and infinite variety. The excellence of the orchestra, headed by Mr. J. T. Carrodus, was specially manifested in Rossini's overture to "Semiramide," ballet-music by Ambroise Thomas, a movement from Mr. Cowen's graceful series entitled "The Language of the Flowers," Gounod's "Saltarello," and other pieces too numerous for specification. In the march from Gounod's "La Reine de Saba," in a selection from Wagner's "Tannhäuser," and in other instances, the full effects were enhanced by the association of the band of the Coldstream Guards.

The orchestra comprises some of our most skilful solo instrumentalists. Mr. J. T. Carrodus gave a brilliant rendering of Ernst's "Otello" Fantasia (accompanied by Mr. Carrodus, jun.), and the programme included a flute solo by Mr. J. Radcliff, other eminent soloists having been announced for subsequent evenings.

The vocal performances on the opening night were also very successful. Mesdames C. Samuel and Antoinette Sterling, Mr. C. Banks, and Mr. B. Foote, contributed popular pieces, which were all enthusiastically applauded and mostly encored.

A special feature was Mr. Gwyllym Crowe's new vocal waltz, "The Rose Queen," in which Mr. Stedman's well-trained juvenile choristers were associated with the orchestra, the solo portions (for the Rose Queen) having been well sung by Miss A. Gruhn. The several movements of this piece are replete with genial melody, which bids fair to secure for it a popularity at least equal to that gained by its several predecessors of the same kind from the same hand.

The arrangements in the theatre give greater space for the promenade portion of the audience, by the removal of the orchestra nearer towards the back of the stage than heretofore, the surrounding decorations and paintings (in the Swiss style) being very tasteful and picturesque.

Mr. Gwyllym Crowe maintains his position as a careful and intelligent conductor; and Mr. F. Lewis Thomas contributes occasional valuable service as pianoforte accompanist.

A shock of earthquake was felt in Kilsyth, twelve miles from Glasgow, on the morning of Aug. 4.

The Irish Society of London, headed by Sir Whittaker Ellis, Bart., M.P., the Governor, visited their county Derry estates on Aug. 9. The society, with the Harbour Commissioners, inspected the navigation works of the river, and afterwards received several deputations, who solicited grants for various objects. The society next visited the schools in Beresford-place, where the pupils and their teachers were in readiness to receive them. At four o'clock Mr. Robert A. Taylor, the Chairman of the Town Commissioners, entertained the society, as well as the clergy, the gentry, and a number of the merchants of the town and neighbourhood, at luncheon in the Townhall. Mr. Taylor presided, having on his right Sir Whittaker Ellis and Sir Hervey Bruce, Bart.; and on his left Alderman Alexander and Mr. T. Layton, the Deputy Governor.

CHESS.

TO CORRESPONDENTS.

Communications for this department should be addressed to the Chess Editor.

B G Laws.—We have gladly availed ourselves of your contributions, and shall be pleased to receive a few more of your compositions equally clever and interesting.

E Holt (Rawtenstall).—We hope to be able to comply with your request at no distant date; in the meantime send a copy of "Free Press." Your problem admits of two solutions in two moves—by 1. R to B 5th or 1. Kt to Kt 3rd, &c.

J Dixon.—No. 1 is tolerably good, but too easy for publication; No. 2 has a second solution by 1. R to Q 5th. The diagrams just received are under examination.

J D Howard Taylor (Norwich).—The games are very welcome, and shall have early publicity.

Shiloh Area.—The last version is a decided improvement. It shall appear forthwith.

J Arvedalh (Trieste).—Your last contribution is not equal in merit to your former efforts. We shall be glad to hear from you again.

W M Pridgack.—Your problem is not forgotten. We hope to find room for it shortly.

J Breyley.—Many thanks; the position you refer to in "Abbott's Collection" is duly noted.

Manchester.—See notice in our last Number respecting Problem No. 2308.

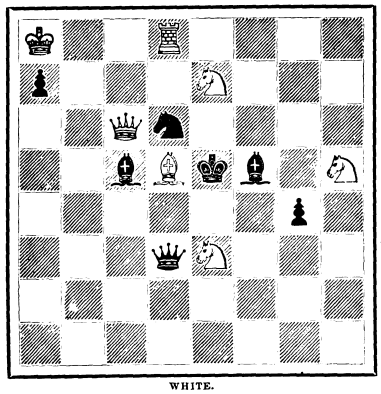
L Desanges.—The problem shall have immediate attention.

W L T.—We cannot offer an opinion. We have no space at our disposal for such discussions.

Correct Solutions of Problem No. 2308 received from G H Hewitt (Middle Colaba), T Mann (New York), O Smith (Moosomin (Canada), and E R Ellaby; of No. 2309 from W M F and W Wright (Cairo); of No. 2310 from E Bohnstedt, Peterhouse, E R Ellaby, F Holt, and W Wright; of No. 2311 from Hereward, F Holt, Peterhouse, T Ryder, E Bohnstedt, and J Bryden; of No. 2312 from A B (Naples), E Bohnstedt, H S B (Chesterfield), S Parry, W S (Sheffield), F Holt, Peterhouse, W P Wood, W H D (Woburn), S Rover, and Rev Leonard Watson.

Correct Solution of Problem No. 2313 received from E Von Korganzki, F Holt, Shakforth, R Worters (Canterbury), Junior Junior, Howard A, C E P, E Phillips, E Cacella (Paris), W Hillier, E Lacy, Alpha, Mrs. Kelly, Julia Short, R F N Banks, Dawn, Peterhouse, T G (Ware), T Roberts, W H Hollam, G O P, Thomas Chown, L Desanges, Dan Anderson, C Cole (Exeter), M Sharp, J Moore (Manchester), Hereward, J D Tucker (Leeds), G T Addison (York), Major Prichard, Dr F St, E Louden, R H Brooks, and J Bryden.

SOLUTION OF PROBLEM No. 2311.



WHITE.	BLACK.
1. Kt to K 2nd	P takes Kt
2. Q to K 3rd (ch)	K moves
3. Kt to Kt 6th. Mate.	

If Black play 1. B takes Kt, then 2. Q B 4th (ch); if 1. K to B 6th, then 2. Q to R 5th (ch); if 1. K to Q 4th, then 2. Q takes P (ch); and if 1. P to B 5th, then 2. Q to Kt 6th (ch), &c.

PROBLEM No. 2315.

By G. C. Heywood.

BLACK.

WHITE.

White to play, and mate in two moves.

BLINDFOLD CHESS.

One of ten simultaneous games played by Mr. Blackburne at the Manchester Chess Club in 1883. It has not hitherto been published.

(*Kings' Gambit declined.*)

WHITE (Mr. B.)	BLACK (Mr. P.)
1. P to K 4th	P to K 4th
2. P to K B 4th	P to Q 4th
3. Kt to K B 3rd	P takes K P
4. Kt takes P	Kt to Q 2nd
5. P to Q 4th	P takes P (en pass.)
6. B takes P	Kt takes Kt
7. P takes Kt	B to Q B 4th
8. Kt to B 3rd	P to Q B 3rd

A weak move, leading, as Mr. Steinitz's phrase goes, to a big hole for White at Q 3rd.

9. Kt to K 4th	Q to K 2nd
10. Q to K 2nd	P to K R 3rd
11. B to K 3rd	B takes B
12. Q takes B	B to K 3rd

Black can do nothing offensive. If Q to Kt 3rd (ch), 13. P to B 3rd, Q takes KtP; 14. Castles with a winning position.

13. Castles (K R)	Q to B 2nd
14. Q B to Q sq	Q takes P
15. B to B 4th	K to B sq

WHITE (Mr. B.)	BLACK (Mr. P.)
	Black's resources are limited to bad moves, that in the text being, perhaps, one of the least harmful.
16. Q to R 3rd (ch)	Kt to K 2nd
17. Q takes P	

Taken in conjunction with his preceding move this is very fine blindfold play on the part of White. The game is now practically over.

17.	R to K sq
18. B take, B	Q takes R
19. Kt to Q 6th	R to Q sq
20. Q to R 5th	Q to K 6th (ch)

If R takes Kt, mate obviously follows in two moves by Q to Q 8th (ch), &c.

21. K to R sq	P to Q Kt 3rd
22. Q to R 7th	K to Kt sq
23. Q R to K sq	Q to B 4th
24. Kt takes P	R to K sq
25. Q to Q 7th,	

and wins.

Game played between Mr. Wyke Bayliss, P.R.S.B.A., and "F. A." (*Evans Gambit.*)

WHITE (Mr. B.)	BLACK (F. A.)
1. P to K 4th	P to K 4th
2. Kt to K B 3rd	Kt to Q B 3rd
3. B to B 4th	B to B 4th
4. P to Q Kt 4th	Kt takes P
5. P to Q B 3rd	Kt to Q B 3rd
6. Castles	Kt to B 3rd
7. P to Q 4th	P takes P
8. P takes Kt	B to Kt 3rd
9. B to K Kt 5th	P to Q 3rd
10. Kt to B 3rd	B to K 3rd
11. P to Q 5th	Kt to K 4th

Unnecessarily losing a piece.

12. Kt takes Kt	P takes Kt
13. P takes B	B to Q 5th
14. P takes P (ch)	K to K 2nd
15. Kt to Q 4th (ch)	K to Q 3rd
16. Q to B 3rd	

Serving a double purpose—to support the exchanges, and then be ready to check at R 3rd.

WHITE (Mr. B.)	BLACK (F. A.)
16.	B takes R
17. Kt takes Kt	P takes Kt
18. B takes P	Q to Q 2nd
19. Q to R 3rd (ch)	P to B 4th
20. R to Q sq (ch)	B to Q 5th
21. P to R 4th	

The key-move of the combination, which is very pretty. It should have set Black thinking of something more than saving his Rook.

21.	K R to K B sq
22. R takes B (ch)	P takes R
23. B to K 5th (ch)	K takes B

There is no escape: K to B 2nd or K to K 2nd is equally fatal.

24. Q takes P (ch)	P takes P
25. P to B 3rd (ch)	K to K 6th
26. Q to K 5th.	

Mate.

INTERNATIONAL CHESS CONGRESS.

Play in the various competitions at Bradford has made considerable progress, and indications are not wanting of probable results. This is pre-eminently so in the masters' tournament, where the chances of several are hopelessly gone, especially among the new aspirants for tourney honours. The games so far have not been distinguished by brilliant strategy, a carefulness bordering on timidity being the leading feature. Messrs. Bird and Blackburne have shown a little of their usual dash in some the endings, and Mr. Hall has clung to the Centre Counter Gambit with a fidelity worthy of a better fate. At the time of writing Messrs. Weiss, Blackburne, Gunsberg, Bardeleben, Mackenzie, and Tarrasch have the leaders, and amongst them the principal winners will doubtless be found.

Dramatic recitals on "British Homes" have been given at the Alexandra Palace by Miss Yates, the able honorary secretary of the Bread and Food Reform League, in aid of its funds.

A Parliamentary paper shows that in England there are 44 municipal boroughs with a population of 50,000 and upwards, 118 with populations between 50,000 and 10,000, and 121 with less than 10,000. There are 18 boroughs which are counties of cities or counties of towns, 216 which have separate commissions of the peace, 19 which appoint their own sheriffs, and 121 which have no separate police establishments.

WILLS AND BEQUESTS.

The will (dated April 12, 1881), with a codicil (dated June 29, 1883), of the Rev. Charles William Giles, D.D., late of Milton Hall, near Cambridge, who died on May 12 last, was proved on July 3 by John Edward Giles, the brother, the Rev. Edward Giles, the nephew, and Samuel Knight, the executors, the value of the personal estate amounting to upwards of £71,000. The testator gives, in addition to other gifts to her, an annuity of £1000 to Mrs. Catherine Amy Passingham; £1000 to her husband; £2000 upon certain trusts for the benefit of each of her three daughters; and legacies to servants and others. The residue of his real and personal estate he leaves to his said brother, John Edward Giles.

The will (dated March 12, 1886), with a codicil (dated May 10, 1888), of Mr. John Pitt-Taylor, formerly Judge of County Courts, late of No. 58, Eccleston-square, who died on July 17, was proved on July 31 by Charles Pitt-Taylor, the son, one of the executors, the value of the personal estate amounting to upwards of £61,000. The testator leaves all his real estate and £4500 to his eldest son, Charles: £2000 to his son Arthur William and £6000, upon trust, for him; £9000 to his son Francis Henry; £3900 to his daughter Mrs. Harriet Battye; £15,000, and all his furniture and effects not specifically bequeathed, to his daughter Hester Louisa; and there are various specific bequests to children (including the despatch-boxes of his great-uncle, William Pitt, to his son Charles) and to friends, an annuity to his sister-in-law, and pecuniary legacies to his butler and cook. He appoints his son Charles and his daughter Hester Louisa residuary legatees.

The will (dated Nov. 2, 1881) of Mr. Capel Carter, formerly of Woodford, Essex, but late of No. 8, Vineyards, Bath, who died on May 24 last, was proved on Aug. 4 by Frank Crisp, the acting executor, the value of the personal estate amounting to ever £42,000. The testator bequeaths £3000 each to the London Hospital (Whitechapel-road) and the Charing-cross Hospital (Agar-street); £2000 each to the Dental Hospital of London (Leicester-square) and the Orphan Working School (Maitland-park, Haverstock-hill); £1000 to the Refuge for Homeless Boys (Great Queen-street); and he directs the duty on the said legacies to be paid out of his personal estate. There are a few other legacies, and the residue of his real and personal estate is to be equally divided between his nieces and nephew, Mary Anne Carter Simco, Charlotte Simco, and Samuel Sayer.

The will (dated April 8, 1879) of Mrs. Eliza Harriet Tudor, late of No. 26, Lansdown-place, Cheltenham, who died on July 3, was proved on Aug. 2 by the Rev. Charles John Martyn and Major-General William Bainbrigge Marshall, the surviving executors, the value of the personal estate amounting to over £42,000. The testatrix bequeaths £1000 to the Royal National Life-Boat Institution for the purpose of building and fitting out a life-boat to be called the "Elizabeth Mary," and a life-boat house on some dangerous part of the coast of Cornwall; and there are a good many other legacies. The residue of her real and personal estate she leaves, upon trust, for Langley Frederick Vernon Tudor, the son of her deceased husband, Colonel William Langley Tudor, for life, and then for his children, with a gift over in default of children.

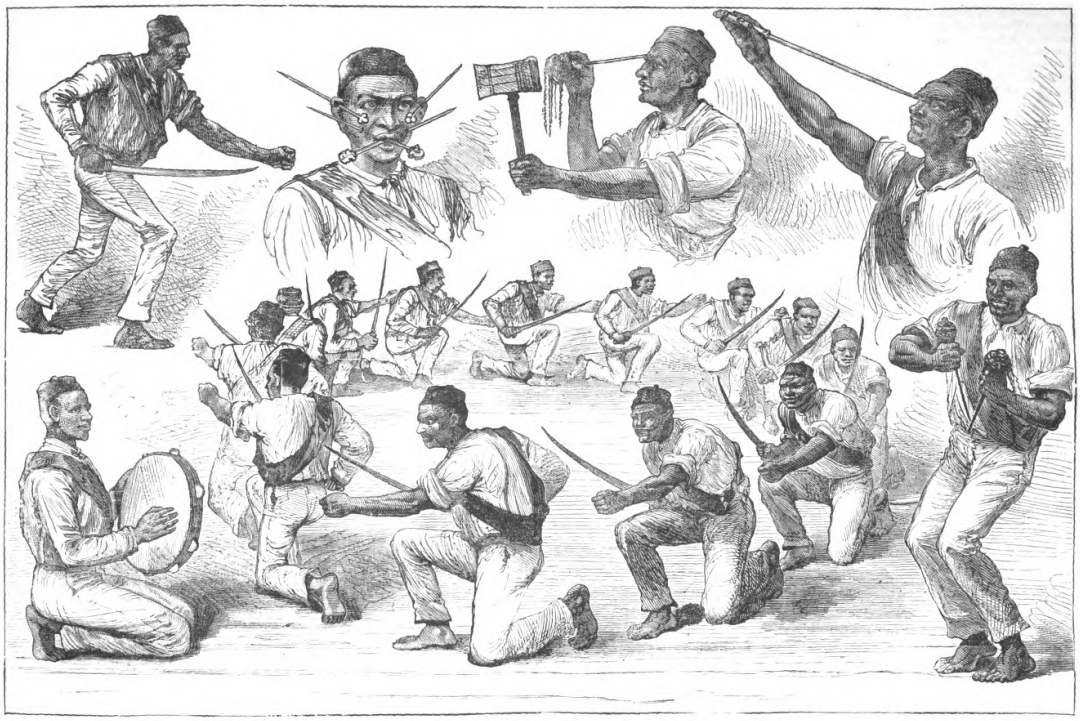
The Scotch Confirmation, under seal of Office of the Commissariot of Lanarkshire, of the deed of settlement (dated Jan. 18, 1881) of Mr. William Galbraith, residing at No. 3, Blythswood-square, Glasgow, who died on April 29 last, granted to Peter Galbraith, Mrs. Jessie Maclean or Galbraith, Mrs. Margaret Croom Galbraith or Tennant, Alexander Andrew Fergusson, and James Murray, the executors nominate, was resealed in London on Aug. 1, the value of the personal estate in England and Scotland amounting to upwards of £37,000.

The will (dated Dec. 6, 1878) of Mrs. Sophia Susanna Barnes, late of Upton Villa, Penge, who died on Jan. 23 last, was proved on Aug. 6 by John Adam and Arthur William Marriott, the acting executors, the value of the personal estate in the United Kingdom exceeding £27,000. The testatrix, after giving a few legacies, leaves one moiety of the residue of her real and personal estate, upon trust, for her daughter Mrs. Ann Pollett Dickinson, for life, and then for her three daughters; and the other moiety, upon trust, for her daughter Mrs. Elizabeth Marriott, for life, and then for her children.

The will (dated June 13, 1885) of Captain Hobart George Anderdon, formerly of No. 17, Gay-street, Bath, and late of Fernleigh High Park, Ryde, Isle of Wight, who died on June 14 last, was proved on Aug. 6, by Mrs. Mary Anne Anderdon, the widow, and John Stone, the executors, the value of the personal estate exceeding £23,000. The testator bequeaths £400 and his jewellery and consumable stores to his wife; £100 to his executor, Mr. Stone; and there are one or two other bequests. The residue of his real and personal estate he leaves, upon trust, for his wife, for life; at her death he gives £300 to the Nathaniel Ragged School, Liverpool; and £500 each to the Railway Mission (186, Aldersgate-street) and the London City Mission. As to the ultimate residue, he gives one fourth to each of his nephew and nieces, Linton John Hughes, Frances Harriet Hughes, Mary Thornburgh Anderdon Hughes, and Catherine Eliza Hughes.

The will (dated March 29, 1888) of Miss Susan Elizabeth Burgess, late of No. 5, Burgess-hill, Finchley-road, Hampstead, who died on May 22 last, at Argelès, Hautes Pyrenées, was proved on Aug. 3 by Major William Henry Burgess and Major Ardwick Burgess, the brothers, and Edward Burgess Weatherall, the nephew, the executors, the value of the personal estate amounting to over £18,000. The testatrix makes special gifts of ground rents, leasehold property, and money legacies, upon trusts, for several of her nephews and nieces; and bequeaths £100 each to her trustees and to two great-nephews. The residue of her real and personal estate she leaves, upon trust, for her said nephew, Edward Burgess Weatherall.

A meeting of the council of the National Rifle Association was held on Aug. 9 at the rooms of the association in Pall-mall, Lord Wantage in the chair. Earlier in the day the chairman had an interview with Mr. Smith, in Downing-street, with reference to the petition for the allocation of a part of Richmond Park for the purposes of the annual meeting. A news agency says that, although Colonel Wheatley, of the Office of Works, and Mr. Burton, of the School of Musketry, Hythe, reported that the proposed site was safe for all practical purposes, the Government does not see its way to grant the use of the ground for the camp. The meeting having this decision before them inspected several plans of alternative sites, notably two from Brighton. One of these was presented by a deputation from Brighton, and the other was a ground selected by Sir Henry Fletcher, M.P. This latter site lies on Dyke-road, a mile and a half from West Brighton station and a mile from Patcham. It is called Bletchington. The firing points would be under the Red Hill, and the targets at the base of the Round Hill; on the right is Skeleton Hovel, on the left Toads' Hole. No actual decision was arrived at.



THE "KALIFA," A MALAY RELIGIOUS CELEBRATION.

A large number of Malays, descendants of those brought from the islands of the Dutch East Indies in former times, when the Dutch ruled at the Cape of Good Hope, form part of the population of Capetown. They are chiefly employed as boatmen in the harbour. On April 24, not for the first time, these people of an Asiatic race, in the chief city of the British South African Colony, exhibited a public performance of their extraordinary revels and orgies, sword-dances, knife-dances, and tricks with a variety of dangerous weapons, called the "Kalifa," and originally connected with a religious festival. It took place in the Exhibition Building at Capetown, where the stage of the large hall had been fitted up for the occasion. Palm-trees stood on either side of the proscenium, and the stage was fitted with Mohammedan symbols and a miniature mosque-like structure, behind which were a number of Malay singers; while seated round the stage were the drummers, who with the tom-tom kept up a continual boom, from which the actors took their time. All the performers in the Kalifa were dressed in white, with green sashes across the chest. The whole representation was under the charge of Hadji Saydien, who also presided at the celebration twenty-five years ago. The proceedings opened with exhibitions of agility with knives. The Malays, about twelve in number, ranged themselves in two rows up the stage, facing each other. In each hand was a dagger, and, at a given signal, the tom-toms beat, the choir sang a monotonous lay, and the acrobats commenced a circular dance, at given intervals, and quite in unison, carrying the knives close to their bodies, and wielding them with rapid motion, without actually stabbing themselves. A loud round of applause greeted this effort. The next item was a similar exhibition, but with curved swords, and to six-eight time. The gambols were all thoroughly in unison, and the men seemed to be attempting to hack off their hands. One or two were actually wounded, and they dropped out, being disqualified from taking any further part in the Kalifa. The number gradually diminished, and only seven were left when two swords each were served out. Then the actors slashed away, seemingly, in the most reckless manner, dancing all the time. The sword-points were placed into their eyes and ears, and the edges round their throats, but not a scratch was sustained. This performance gained the loudest plaudits from the audience. Some pretty Eastern dances were given by Malay women; and the men went through the wonderful fire-dance. The intervals were pleasantly enlivened by the band of the Royal Inniskilling Fusiliers. Our Illustrations are from sketches by Mr. F. B. Ross, of Capetown.

NOVELS.

Fraternity: a Romance. Two vols. (Macmillan and Co.).—An intimate knowledge of the Welsh temperament and genius, and of rural life in Merionethshire, where the characteristics of that interesting Celtic race are best preserved, enables the authoress of this sympathetic and graceful story, herself a Welshwoman, to give it true local colour. She is also inspired with the true spiritual enthusiasm for human brotherhood, which displays itself less in democratic political agitation than in zeal for social justice and charity, and in spreading high mental culture, and promoting good morals and refined manners among all classes of the people. An earnest but modest worker in this cause, at first made known to us as Edmund Haig, the village schoolmaster of Llanfairydd, near Pengwr, is the hero of the story. He has been reared in ignorance of his parentage, having been left alone in his infancy by the death of his mother, a poor nameless wanderer in Shropshire, who could speak no English, and having been educated by the Fathers of an Anglican convent and school, from which he went to Oxford. Declining to take orders in the Church, he became a teacher and writer for a provincial newspaper in Wales. At Llanfairydd he gave private lessons to a sweet young lady, Blodwen Trevor, whose Christian name, meaning "White Flower," is doubtless more agreeable to Welsh than to English ears. She is an orphan, poor but of good family, living with an elderly maiden aunt; her elder brother, Mr. John Trevor, is a rising solicitor at Pengwr, and agent to an Earl who is the principal landlord of that neighbourhood. A strong and pure mutual affection has arisen between this girl and Edmund; but he, being some ten years her senior, refrains from wooing her, out of his chivalrous delicacy, and suddenly departs to his mission of teaching the neglected children of rude quarrymen in another district, and diffusing the principles of Christian fraternity among mankind. In a holiday mountain ramble, he chances to meet a young gentleman, Harold Price, a pedestrian tourist coming from the Midland shires, whose face, though he is a much younger man, bears a striking resemblance to that of Edmund himself. They become fast friends, and facts are presently revealed which make it almost certain that the father of Harold, Mr. Price, of The Oaks, near Blackton, who returned from Australia with plenty of money, is also the father of Edmund. He had disappeared a quarter of a century before, and had left his first wife and child in destitution, she being a Welsh peasant girl, and he the disinherited son of a petty squire who drove him away in anger. Edmund, a child of three years at the time when his forsaken mother died in a country workhouse on her road to follow her husband, was taken care of by two old ladies named Haig, who allowed him to bear their name. The discovery of his parentage, however, does not alter Edmund's views of life and duty; he resolves not to deprive Harold of the fortune to be bequeathed by Mr. Price, but to continue the labours which he loves, content with earning a simple livelihood. Harold, an amiable and generous youth, accustomed to the society of the rich and fashionable, is attached to Lady Alice, one of the Earl's daughters at Pengwr Castle, and the contract of marriage between them would be broken if he ceased to be the heir to his father's wealth. In the meantime, at Llanfairydd, Blodwen is pining for Edmund, having never yet received an express avowal of his love for her, and there is much secret unhappiness all round. But the most miserable of men is old Mr. Price, whose conscience torments him for the death of the lost wife of his youth, though he had not intended to desert her; and he spends many days in solitary journeys and searches for her grave, while cherishing a passionate desire to learn what became of his little boy Edmund, whether living or dead. These feelings and thoughts of the sorrowful father are long concealed from Harold, who is so unkindly treated as to cause a temporary estrangement, until the old man, being very ill, weak, and distracted in mind, lets out the truth by confusing the names of his two sons. Harold then perceives that Edmund is his elder brother, sends for him to their father's sick-bed, and proposes, when his identity is proved, to renounce the inheritance in his favour. But Edmund still refuses to have it, and their noble contest of generosity ends with his accepting £200 a year. Finally, the one marries Blodwen, and the other gains the hand of Lady Alice; but the bond of brotherly love is sure to grow ever stronger between them in life; and they will do all they can, in the spirit of universal fraternity, to advance the welfare of mankind.
